Preface

The present edition and commentary on the *Placita* has been a very long time in the making. In the case of Jaap Mansfeld, its origins go as far back as the research he did on ps.Hippocrates *De hebdomadibus* in the late 1960's.¹ David Runia first came into contact with doxographical texts when analysing Philo of Alexandria's puzzling work *De aeternitate mundi* in the late 1970's.² We made the decision to work together on the Aëtian *Placita* in 1989 and the project entitled 'Aëtiana: the Method and Intellectual Context of a Doxographer' was born. The present volume consisting of four parts is the project's culmination. Four preparatory volumes (in five parts) have preceded it.³ We will not again describe the project's origins and development. The interested reader is referred to the Introduction to Volume 4, where a full account is given.⁴

The authors firstly wish to thank the scholars who have been associated with the project in various ways throughout the years: Mareike Jas (Munich); Edward Jeremiah (Melbourne); Oliver Primavesi (Munich); James Royse (Claremont); Teun Tieleman (Utrecht). Other scholars to whom they are indebted for assistance of all kinds are Keimpe Algra (Utrecht); Han Baltussen (Adelaide); Dirk Couprie (Amsterdam); Hans Daiber (Frankfurt); Michael Champion (Melbourne); Tiziano Dorandi (Paris); Pieter van der Horst (Zeist); Katerina Ierodiakonou (Genève); Gérard Journée (Paris); André Laks (Mexico City); the late Jørgen Mejer; Constantin Macris (Paris); Glenn Most (Pisa); Lorenzo Perilli (Rome); Christian Vassallo (Cosenza); Theo Verbeek (Utrecht); Georg Wöhrle (Trier), as well as numerous scholars mentioned in the Prefaces to previous volumes. They also wish to acknowledge the contributions of their critics: the late Michael Frede; Heike Bottler; Jean-Baptiste Gourinat; Andrei Lebedev;

1 Mansfeld (1971).

2 Runia (1981).

3 J. Mansfeld and D.T. Runia (1997), *Aëtiana: The Method and Intellectual Context of a Doxographer*, Vol. 1: *The Sources*, Philosophia Antiqua 73, Leiden: Brill; (2009), *Aëtiana: The Method and Intellectual Context of a Doxographer*, Vol. 2: *The Compendium*, Part I: *Macrostructure and Microcontext*, Part II, *Aëtius Book II: Specimen Reconstructionis*, Philosophia Antiqua 114, Leiden: Brill; (2010), *Aëtiana: The Method and Intellectual Context of a Doxographer*, Vol. 3: *Studies in the Doxographical Traditions of Greek Philosophy*, Philosophia Antiqua 118, Leiden: Brill; (2018), *Aëtiana*, Vol. 4: *Towards an Edition of the Aëtian Placita: Papers of the Melbourne Conference 1–3 December 2015*, Philosophia Antiqua 148, Leiden: Brill. For reviews of these volumes see Mansfeld–Runia (2018) 1 n. 1; 2 nn. 2–3, to which can now be added for vol. 4 J. Warren, *Phronesis* 64 (2019) 524.

4 Mansfeld–Runia (2018) 1–3. For further reflections on the contents of these volumes see below the General Introduction, section 2.8.

Walter Leszl; and Leonid Zhmud. To these scholars they owe a debt for valuable analyses that have sharpened their thinking on many subjects. The authors remain very conscious that, despite all the assistance they have received, the resultant work will not be free of omissions, errors and defects, for which they accept full responsibility. For the division of labour between the two authors in the present work, the reader is referred to the General Introduction, section 6.1 and n. 345.

Over the course of the years, the authors were also fortunate to receive substantial institutional support, without which this long-term project could not have been undertaken. Jaap Mansfeld wishes to thank the Department of Philosophy and Religious Studies and the Library of Utrecht University for logistic and other support. The Fondation Hardt in Vandœuvres has year after year been a second home. Working at the Fondation has meant working in ideal circumstances. Drafts of quite a few chapters were written in Vandœuvres, and the wonderful library, helped out in rare emergencies by that of the University of Geneva, was never consulted in vain. Warm thanks for hospitality and friendship are due to Mme Heidi del Lago, Mme Monica Brunner, Mme Burdet, Mme Derron, M. Gary Vachicouras and M. Ducrey. When in 2020 the libraries of the universities were closed to the public, Mme Sabrina Ciardo helped with much-needed bibliographical information.

For institutional support during the course of the project David Runia wishes to thank the Free University, Amsterdam; the Universities of Utrecht, Leiden, and Melbourne; and the Australian Catholic University. In 1985–1990 The Netherlands Organisation of Pure Research (Z.W.O.) most generously funded the C & C Huygens post-doctoral research position which enabled a start to be made on the project. The Alexander von Humboldt Foundation supported a further year's research at the University of Münster in 1990. A crucial support was provided in the years 2005 to 2016 by the Australian Research Council through two Discovery Project grants, DP0557196 *Aëtiana: laying foundations for the study of the history of ancient philosophy*; and DP0985167 *Aëtiana: laying foundations for the study of the history of ancient philosophy Part 2*. This support enabled him to travel regularly to the Netherlands for consultation and also largely financed the Melbourne Colloquium on doxography held in December 2015. During this period he was able, as a Scaliger fellow, to make use of the excellent resources of the Leiden University library, for which he especially thanks Drs Kasper Ommen for his assistance throughout the years. He also wishes to thank the Council of Queen's College and its two Presidents, Mr John Castles AM and Prof. Ross Williams AM, for supporting his research so generously during his Mastership of the College in the years 2002 to 2016.

The authors express their appreciation to the publishing house of Brill Leiden and its staff for undertaking to publish the present work, and also for having previously published the four preparatory volumes. A special thanks goes to the firm TAT (Typographica Academica Traiectina) Zetwerk and its Directors, our former students Ivo Geradts and Johannes Rustenburg, for all their help, and to Cas Van den Hof and his colleagues for typesetting the intricate and complex manuscript of the present work. Both Brill and TAT continued working at full speed when circumstances changed dramatically during the corona crisis, for which a special vote of thanks is due. We are also greatly indebted to two younger scholars, the aforementioned Edward Jeremiah (Melbourne) and Stephen van Beek (Leiden), who gave us most capable assistance in the arduous task of correcting the proofs of the entire work. We also wish to thank Mrs Gonni Runia-Deenick for giving us the benefit of her typesetting skills at an earlier stage during the preparation of the final manuscript.

As authors we are quite well aware that we have differing styles of writing and that there are also some differences in the way that we have organized the findings of our research. Lovers of *Quellenforschung* may perhaps enjoy trying to determine the provenance of the differing parts of the book. For the division of labour in the present work, we refer the reader to the General Introduction, section 6.1. Above all we wish to express our satisfaction and indeed our joy that we have been able to complete this project together. When it started we lived within cycling distance of each other. During the last eighteen years we have lived at opposite ends of the globe. The remarkable advance of modern communications has allowed our collaboration not only to continue, but also to flourish in a spirit of harmony and friendship.

Bilthoven and Melbourne
April 2020

Sigla and Abbreviations

1 Abbreviations Relating to Aëtius and His Tradition

A	Aëtius
Ach	Achilles
AD	Arius Didymus
Ath	Athenagoras

General Introduction

1 Aim and Scope of the Edition

Ever since the German scholar Hermann Diels published his landmark text edition entitled *Doxographi Graeci* in 1879, the compendium of the *Placita* and its author Aëtius have been a familiar presence in the study of ancient philosophy. If the truth be told, however, the majority of scholars when using or referring to the *Placita* will have little idea about the nature of the work or the identity of its author. The main purpose of Diels' edition was to provide a foundation for the study of early Greek philosophy and he made copious use of its results for another great work of scholarship, *Die Fragmente der Vorsokratiker*, first published in 1903. It is no exaggeration to say that for many years afterwards, there was little progress in the understanding of the tradition to which the work belongs. During the past three decades or so, this situation has altered markedly. There have undeniably been considerable advances in the field of doxographical studies. But Diels' great works themselves have remained largely unchallenged.

The present study takes as its starting-point Diels' reconstruction and edition of the *Placita*. It undertakes to investigate that text anew and to replace the edition that he made of it. In so doing, it has two chief aims.

Firstly, it adopts a revised methodology, and on that basis aims to present a more accurate and serviceable version of the *Placita*. Its main innovation is that it reconstructs the no longer extant original of the work in a single column. It also includes the complete evidence available for that reconstruction, including important material not accessible to Diels, together with an English translation of the finalised text.

Secondly, it aims to place the contents of the compendium in the broader perspective of the long history of ancient philosophy. This includes the early period of Greek philosophy from Thales onwards, for which it is such an important source. It also includes the period from the Peripatos in the fourth century to the first century of the Common Era when the method of doxography on which the compendium relies was developed and the work itself received its final form. It then ends with the period stretching to the end of antiquity (and beyond), when the work in its various and often derivative forms was extensively utilised and thereby transmitted, albeit imperfectly, to us in the present. In order to achieve this second purpose, we furnish the text with a detailed commentary. Its aim is not only to elucidate the basis and method of our reconstruction, but also to cast a flood of light on its sources, witnesses and general

content. And in order to broaden the context even further, we also add a collection of additional texts which illustrate parallel traditions and demonstrate the place of the work even more fully within the development of ancient philosophy as a whole.

Through the totality of our scholarly labours, we wish to show that the *Placita*, often patronizingly regarded as a jejune introductory handbook, is in fact a seminal work for the study of ancient philosophy. It is the only reasonably complete extant example of a highly significant strand of doxographical literature. Its predominantly dialectical method goes back to Aristotle and his school and enables the incorporation of important material from the Hellenistic period and the beginnings of Imperial philosophy. It provides a comprehensive and remarkably compact presentation of the key questions and topics of natural philosophy, from its first principles to the physiology of the human body. With the aid of a recently developed detailed statistical analysis we can be confident that we possess about six-sevenths of the original work. It will now be possible to read and study it by means of a text and translation that is the closest approximation to the work when it was still available in its complete and original form.

The present *General Introduction* to our edition will proceed in five steps. In section 2 we introduce the compendium and its author, starting with an outline of the main features of its transmission and its contents. We also locate the present work in the context of earlier volumes that we have published in the course of our research. Next in section 3, we discuss the question of how the work should be reconstructed, first reviewing the method used by Diels, then explaining and justifying the method that we ourselves have chosen to adopt. In section 4 the witnesses to the text of the compendium, both primary and secondary, are more fully introduced, including information about the editions of their works that we have used. Section 5 analyses the doxographical context of the *Placita*, both the proximate tradition in which it stands and the earlier tradition initiated by Aristotle and his collaborator Theophrastus. Finally in section 6 we give a detailed explanation of the edition's contents, method and layout. It serves as a user's guide for all those who wish to make full use of the scholarly resource that we are offering.

2 The Compendium and Its Transmission

2.1 *The No Longer Extant Original Work*

It is deeply to be regretted that the compendium is no longer extant in its original form. We know that it was available to three writers in later antiquity: the author of the *Epitome* attributed to Plutarch, the anthologist Ioannes Sto-

baeus (John of Stobi, in today's North Macedonia), and the Church Father Theodoret, bishop of Cyrrhus (in Northern Syria). The most likely date for the production of the abridged version is in the second half of the second century. Stobaeus and Theodoret composed their works much later in the first half of the fifth. Due to the popularity of the abridged version, the original work disappeared from view. Based on the information that we now have, Theodoret—who informs us about the author's name and the title of his work—may have been the last known author to have had the compendium in his possession.

2.2 *The Three Chief Witnesses*

In our edition and commentary we make the crucial distinction between *sources* and *witnesses*. *Sources* are the authors and works that Aëtius used to compile his compendium, whether at first or, as will more often have been the case, at second or third hand. *Witnesses* are the ancient authors who through their extant texts inform us about the contents of the compendium.¹ The witnesses, which for every chapter are listed before the Greek text, differ in their proximity to the original. The three primary witnesses are, as mentioned above, ps.Plutarch, Stobaeus and Theodoret. Each of these three differs in turn in how they themselves have been preserved and in the scope of what they preserve.²

2.3 *Ps.Plutarch and His Tradition*

The practically complete Greek text of ps.Plutarch's Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις φυσικῶν δογμάτων ἐπιτομή, 'On the Physical Doctrines Accepted by the Philosophers, Abridged Version',³ is extant in several Byzantine manu-

1 In M–R 1 we distinguished between 'sources of' (now just called 'sources') and 'sources for' (now called 'witnesses'). See further the more detailed taxonomy below section 4.1.

2 Here we only provide a brief overview. For the three witnesses see Diels' pioneering observations at *DG* 45–69; for our detailed discussion of ps.Plutarch and his tradition see M–R 1.121–195, for Stobaeus M–R 1.196–271, for Theodoret M–R 1.272–318, the latter now to be supplemented by Mansfeld (2018a) at M–R 4.174–195. On the earlier volumes of the *Aëtiana* see below section 2.8 In section A of the Commentary of each individual chapter the contribution of each witness is analysed in detail.

3 The fullest title in the mss. of ps.Plutarch is cited at Books 2, 3 and 5 in the Mosquensis (M), the oldest ms. It is Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις φυσικῶν δογμάτων ἐπιτομῆς (τὸ Α' etc.) c.q. ἐν ἐπιτομῇ. Other titles are shorter: see the app. crit. in the chapter titulus et index for each book. Eusebius, who excerpted the book at *PE* 14.13.9, omits ἐπιτομή. Cyril's very brief title Φυσικῶν δογμάτων συναγωγῆς at *Jul.* 2.14 and 2.22 adroitly replaces Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις plus ἐπιτομή with the single word συναγωγῆς. Theodoret's shortened title Περὶ τῶν

scripts dating to the twelfth century and a little later, and also in a complete ninth century translation into Arabic. The final pages of the Greek archetype were damaged. Fortunately the translation has preserved lemmata that were later lost. In accordance with the law of the least effort, the abridged edition preserves the compendium's original structure in books and chapters with little change.⁴

On the basis of our reconstructed edition we are in a position to say that ps.Plutarch's 133 chapters and 563 lemmata preserve about 75 % of the extant remains and about 63 % of the estimated total contents of the work.⁵ Therefore, though it seems that a little under 40 % of the text was edited out, the macro-sequence of the chapters must have remained the same with only minor variations.

The crucial fact that the *Epitome* preserves the basic structure of the original work is proved by the corroborative evidence of Stobaeus. As we will note below in section 2.4, the order of themes from Aëtius in Stobaeus is basically the same as the chapter order of ps.Plutarch, although there are a few noteworthy differences.⁶ Even more remarkably, the order of the lemmata in the individual chapters he copied out in various ways, that is, either without interpolating other material, or with such material interspersed among the Aëtian lemmata, or again by coalescing these lemmata with selected lemmata from other chapters (which means disturbing the lemma order of these other chapters), is quite often the same as the order of the lemmata in ps.Plutarch. This also holds for the interior order of clusters of chapters that have been located elsewhere, as for example chs. 1.25–29 from the end of *Placita* Book 1 to the beginning of *Eclogae* Book 1. This shows that the chapter order as well as the lemma order of ps.Plutarch are a calque of those of in Aëtius. On statistical grounds it is

τοῖς φιλοσόφοις δοξάντων ἐπιτομή at CAG 4.3 replaces ἀρεσκόντων with δοξάντων and omits the words ψυχικῶν δογμάτων. The title of Aëtius quoted at Theod. CAG 4.31 is Περί ἀρεσκόντων ξυν-αγωγή, which confirms the word ἀρεσκόντων in most versions of title in ps.Plutarch's abridged edition. In references ancient titles are paraphrased and shortened for the sake of convenience, and key words are the rule, just as they are today. Shakespeare's *The Most Excellent and Lamentable Tragedy of Romeo and Juliet* is generally referred to as *Romeo and Juliet*, Goethe's *Die Leiden des jungen Werthers* as *Werther*, and Zeller's *Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung* as *Geschichte der griechischen Philosophie*. On this 'erosion of the title' see Genette (1987) 74–76, Engl. trans. (1988) 703–706; cf. further below, text at n. 37, and 1.titulus et index, Commentary C.

4 Cf. M–R 1.184–187.

5 Based on Edward Jeremiah's statistical analysis, on which see below section 2.7. Note that ps.Plutarch certainly omitted at least two chapters (2.5a and 4.7a in our reconstruction), and perhaps more (see the Appendix to ch. 2.2). For the figures see below section 7.3, Appendix 3.

6 See below, n. 14 and text thereto.

vanishingly improbable that, independently from each other, ps.Plutarch and Stobaeus would by chance have introduced the same sequences for more than 50 chapters out of total of about 135.

This is further confirmed by the evidence of Theodoret. As we shall see in section 2.5, Theodoret too excerpted Aëtius and not ps.Plutarch's abridged version. Moreover, he presents his aggregates of selected abstracts from Aëtius in thematic sequences that correspond exactly to different groups of chapter sequences in Books 1, 2 and 4 of ps.Plutarch. On statistical grounds it is no less improbable that, independently from each other, ps.Plutarch and Theodoret would by chance have introduced the same sequences for 25 chapters out of about 135. This confirms that the order of the ps.Plutarchean chapters which corresponds to that of these aggregates of Theodoret's abstracts derives from Aëtius as well, a most welcome result that—just as the corollary derived from comparing the sequences in Stobaeus with those of ps.Plutarch—may be safely extended to the *Placita* as a whole. Of course we have to bear in mind that individual chapters may have been misplaced by ps.Plutarch, or combined to form a new one, while others may have been edited out entirely. But the general rule is clear.

The introductory section of the *Placita* (procœmium plus chs. 1–8) is rather well preserved in the *Epitome*. The subject to be treated is announced and illustrated in the standard manner of a technical or didactic treatise. The procœmium and ch. 1.1, which define the subject of the treatise, naturally are not paralleled in Stobaeus and Theodoret, because these authors had their own agenda and wrote their own procœmia.⁷ Aëtian origins for other chapters or large parts of chapters of this section which are irreducible in the sense that they are not paralleled in either Stobaeus or Theodoret⁸ (namely chs. 1.4, 1.6, 1.7.1 and 1.8), can be made plausible because of strong connections with other chapters which *are* in fact paralleled in Stobaeus (the latter holds for ch. 1.4 in relation to chs. 1.3 and 1.5 and for ch. 1.8 in relation to ch. 1.7.2–25), or because the anterior and subsequent doxographical traditions do include them (this holds for ch. 1.4 in the similar position in Achilles and for chs. 1.6–1.7.1 together earlier in Cicero, then in Philo, and later in Sextus Empiricus). See further the Introduction to Book 1. Other chapters which appear to diverge from the usual method of the *Placita* are the purely Stoic chs. 4.11–12 dealing with cognition, but for these, too, cogent arguments can be brought forward in favour of the derivation from Aëtius; see the Introduction to Book 4. In these cases and oth-

7 This also applies to procœmial matter in Books 2–4. An exception is found at ch. 3.5.1, where Stobaeus (*Ecl.* 1.30.1, pp. 238.22–239.3 Wachsmuth) for once does write it out.

8 On irreducible texts see below section 3.3 and Runia (2020).

ers that are similar our commentary on the individual chapters and lemmata involved treats this question in full detail. We may therefore have every confidence that the *Epitome* reflects what the original compendium looked like and what purpose it was meant to serve. Because of the method the epitomator used, the abridged edition gives the most all-round picture of the original treatise. For some parts, as we shall see, Stobaeus is fuller, but unfortunately large swathes of his original anthology are lost,⁹ while Theodoret only provides a limited supply of parallels in his clusters of doxai drawn from successive chapters. As we shall see below, his importance lies in a different area of comparison.¹⁰

Abridgement was primarily carried out on the micro-level of the chapter.¹¹ The epitomator strongly reduced the number of the lemmata and often shortened their contents, but in general did so without changing the original order of the lemmata that remained. To further the process of slimming down, individual lemmata were occasionally (though not always successfully) combined. On the other hand, when selecting the lemmata to be preserved, care was usually taken to preserve the dialectical chapter structure.

Eusebius, Theodoret and the unanimous manuscript tradition ascribe the work to 'Plutarch'. For all we know the epitomator may have actually been called Plutarch, for the name occurs more often, but it is more likely that someone borrowed the prestigious name to enhance his product's cachet. That it was attributed to the famous Plutarch of Chaeronea certainly furthered its utilization,¹² and in the long run must have ensured its survival in the corpus of writings ascribed to the Chaeronean. It was still used by Byzantine scholars such as Psellus, Symeon Seth, and Tzetzes, and doubtless by numerous others (e.g. a scholion to Ptolemy's *Almagest* writes out all three doxai of ch. 2.31). Due to its concise and practical format, it became very popular and was a much used and abstracted or cited popular handbook. The resultant *traditio ps.Plutarchi* is quite complicated, as will be explained in some detail in section 4.2 below.

2.4 *The Contribution of Stobaeus*

The huge work entitled the ἐκλογῶν, ἀποφθεγμάτων, ὑποθηκῶν, βιβλία τέσσαρα,¹³ 'Selected Passages, Sayings, Precepts, Four Books', also known as *Anthologium*, the title found in the *Suda* lexicon, is usually divided into two parts. Books

9 See the following section 2.4.

10 Below section 2.5.

11 M–R 1.187–192.

12 Just as ascription to Galen ensured wide use and survival as member of the Galenic corpus in the case of ps.Galen's *Philosophos historia*.

13 Phot. *Bibl.* cod. 167, p. 112a.

3–4, devoted to ethics and political thought, are called the *Florilegium*. Books 1 and 2 are usually cited as the *Eclogae physicae et ethicae*, ‘Physical and Ethical Selections’. Of these the second begins with logic but is almost entirely devoted to ethics. The former, of which the beginning together with the prooemium and table of contents of the whole work are lost in the manuscripts, is almost entirely devoted to physics. In its present state it commences with the remains of a chapter on arithmetic.

Grosso modo the order of subjects and chapters, from macrocosm to microcosm, is the same as that of ps.Plutarch, and so of Aëtius. But this is not entirely the case throughout, since Stobaeus transferred the treatment of the divinity to a chapter before the chapter on the principles. The material from the chapters on necessity and fate was also reallocated to an earlier position. And the chapters on soul and cognition, which form the concluding section of the *Eclogae physicae*, follow on *after* those on physiology, whereas in the original treatise he excerpted this happens the other way round. But within these re-allocated groups of passages the original chapter order has for the most part been preserved.¹⁴

A section of an alphabetically ordered pinax of the entire anthology has been preserved in a Florentine codex and a reworked table of contents of the whole work, invaluable because it provides information on what has been edited out and lost in the course of transmission, is extant as cod. 167 of the *Bibliotheca* of Photius (ninth century).¹⁵ The sixty Stobaeian chapters are less in number, but they are substantially larger than Aëtian ones. They begin with a collection of poetical quotes (mainly in the earlier chapters), and proceed with a medley of prose passages from a multiplicity of named authors¹⁶ and also from secondary sources dealing with physics. Among these secondary sources are very substantial excerpts from Aëtius, but, just as is the case with other secondary material on physics that is often combined with the Aëtian excerpts, the author’s name and the title of his treatise are *never* mentioned. As a rule the original authors of the doxai included in these excerpts are identified by means of name-labels, though some of these have sometimes been lost in the course of transmission.

A major, though far from flawless result of Diels’ source analysis, useful for teasing out the Aëtian ingredients, is his division of the anonymous secondary material on physics into three different traditions: (1) the doxographical tra-

14 See M–R 1.213–217, with table juxtaposing the Stobaeian and ps.Plutarchean chapter numbers and themes, and 1.218–231 for what happens inside individual chapters.

15 M–R 1.195–202 and see further below sub-sections 4.3.2–3.

16 M–R 1.209.

dition proper represented by Aëtius, as evidenced through comparison with ps.Plutarch and Theodoret; (2) the literature on schools (*Peri Haireseon*) represented by Arius Didymus, who is identified through comparison with named fragments extant in Eusebius; and (3) the commentary literature dealing with Homer and Vergil, as appears through comparison with another ps.Plutarch's *De Homero*.¹⁷

The contents of approximately 115 of the 135 chapters of Aëtius had to be accommodated into 52 of the 60 chapters of the *Eclogae physicae*.¹⁸ Thus, each time, Stobaeus had to make room for on average two or three related Aëtian chapters in one of his own, often transcribing them in their entirety (or almost). In these transcribed chapters he sometimes interpolates other material, though at other times he does not. Thus for instance he sometimes coalesced his Aëtian abstracts with other anthologized passages, e.g. from Arius Didymus cited without identification, or with verbatim Plato quotations, which are labeled. Often these are found at the end of an Aëtian cluster. Sometimes he spreads out the content of a single chapter over more than one of his own. He also may avoid monotony and achieve the variety which is one of the objectives of an anthologist by coalescing doxai deriving from several original Aëtian chapters in newly arranged clusters sharing the same name-labels.¹⁹ In such cases the focus is less on doxai than on persons. Accordingly the order of the lemmata inside these chapters may have been considerably modified. Because of the difference in number between his own chapters and those of Aëtius he also could not avoid combining various Aëtian chapter headings as components of his own headings, often needing to abridge them. It is only through comparison with ps.Plutarch that we are able to identify these lemmata and headings, which we may need to de-coalesce or, as to the latter, de-abbreviate.

It is important to realize that such a Stobaeian cluster of coalesced Aëtian abstracts from several chapters constitutes an *enclave*, a micro-environment that is Aëtian. Typically terse doxographical lemmata concerned with the topic(s) at issue which are located in this environment can be safely attributed to Aëtius, even when they are irreducible in the sense that they lack parallels in ps.Plutarch and/or Theodoret. The case for a different origin has to be proved for every separate instance, which can happen for instance for passages that

17 M–R 1.210–213, and in detail on Arius Didymus 238–265; see also Algra (2018) and below at n. 48.

18 For these numbers, based on what is extant in the revised text of Stobaeus and not on what may have been present in the complete version, see M–R 1.217.

19 On coalescence see M–R 1.218–224.

are attributable to Arius Didymus. This *onus probandi* also holds for when Stobaeus transcribes an entire chapter, such as occurs at ch. 4.7a.

In contrast to ps.Plutarch who produced an abridged edition, Stobaeus, in spite of the rearrangements and combinations he had to introduce, in principle faithfully copies out his source in full. Though he often adds brief phrases to increase understanding, he only rarely resorts to abridgement. This is particularly evident in the case of Book 2, in which he retains 199 out of a total of 217 preserved lemmata, amounting to nearly 92 % of the whole.²⁰ The *Eclogae physicae* has, however, suffered from savage abridgement at other hands, when the Byzantine editors of this huge corpus cut out entire chapters, or edited away large chunks of the contents of individual chapters, especially in the second half of the *Eclogae physicae*. As a consequence, a substantial amount of his evidence for Aëtius has been lost entirely or for the most part, the latter in those cases where his Byzantine editors edited out all Aëtian lemmata apart from those with the name-label Plato or Aristotle (or occasionally also a single other one). These losses make themselves felt especially for chs. 6–16 of Aëtius Book 3, the second part of Book 4, and the whole of Book 5. There is compensation for some of these losses through the earlier borrowing of Stobaeian material from a complete copy in another anthology, the so-called Florentine sacro-profane florilegium (L). All in all, Stobaeus preserves 521 lemmata in our reconstruction, which is 68 % of the extant remains and 58 % of the estimated original text.²¹ Where available Stobaeus' evidence is of primary importance; where lost it is sorely missed.

2.5 The Crucial Role of Theodoret

The 'Ελληνικῶν ἰατρικῇ παθημάτων, *Graecarum affectionum curatio*, 'Cure of Greek Maladies', of the prolific Theodoret is a systematic apologetic treatise in twelve books, explaining Christian doctrine and holding forth against its pagan rivals. The 'Greek maladies' are the stories told in myth and the doctrines of the majority of the philosophers (Plato can be turned into an ally). It is mostly a crypto-anthology, deriving the bulk of its material from Eusebius' *Praeparatio evangelica* (only mentioned once) and Clement's *Stromata* and, possibly, *Protrepticus* (both never mentioned), and from a number of other sources. He is fond of name-dropping, taking over the titles of posh sounding early sources which his main informants provide, and also citing numerous other prestigious

20 This was an important reason that Book 2 was chosen as our *specimen reconstructionis* in M–R 2.2.

21 For these figures see below section 7.3, Appendix 3. The estimation is based on Jeremiah's statistical analysis, on which see below section 2.7.

names. His method is to collect the evidence he needed in a systematic way, abstracting information from various places in one and the same author which could be combined with abstracts from other authors into a small or a more extended cento, all centering on the same topic.²² We find both numerous verbatim quotations and passages as well as centos that are not cited verbatim, for Theodoret's method often differs from that of Clement or Eusebius or Stobaeus. He avails himself of the rules of the ancient techniques of paraphrase (παράφρασις, μετάφρασις)²³ and elaboration (ἐξεργασία),²⁴ the former being, as it would appear, often used, the latter only when it was needed.²⁵ Parts of the original wording or word-order are abandoned in order to present the contents in a clearer form. As long as the thought is preserved the paraphrase may even be much shorter. Paraphrase may be obtained by the addition or removal or substitution of words, or by a change of word order, or by some or all of these moves in combination. Elaboration, in the definition of the rhetorician Aelius Theon,²⁶ consists among other things in the supplementation of what is lacking by making clear what is (believed to be) incomplete or obscure, which is in fact a widespread ancient technique of creative interpretation already practised for instance by Protagoras in Plato's dialogue bearing his name.²⁷ The purpose of such instances or groups of reformulated abstracts, often described

22 For an example see below at ch. 1.7, Commentary A(3).

23 Aelius Theon *Prog.* c. 15, only preserved in Armenian; see French trans. Patillon–Bolognesi (1997) 117–110, English trans. Kennedy (2003) 70–71. Further discussion at Patillon–Bolognesi (1997) civ–cvii and 169 n. 553, and in general on ancient paraphrase Zucker (2011). It should be noted that μετάφρασις is also used for what we call 'translation'.

24 Aelius Theon *Prog.* c. 16, preserved only in Armenian, French trans. Patillon–Bolognesi (1997) 110–111, English trans. Kennedy (2003) 70–71; see Patillon–Bolognesi (1997) cvii–cxi.

25 See M–R 1.278–284. For this and other aspects of this practice see Whittaker (1989) 69–71, who aptly quotes from the preface of Porphyry's *Philosophy from Oracles* (fr. 303F.17–25 Smith at Eus. *PE* 4.7.1). Porphyry swears that he has preserved the 'meaning' (νοῦν), although he has occasionally corrected or clarified or abridged 'the text' (τὴν λέξιν). As Whittaker aptly points out, Theod. *CAG* 10.17–18 cites this passage (without doubt, we may add, from Eusebius) 'without a word of criticism ... for Porphyry's editorial procedure, which by his own standards he presumably found unexceptionable'.

26 Patillon–Bolognesi (1997) 110.

27 *Prot.* 316d–e; cf. *Phdr.* 270c σκόπει τί ποτε λέγει Ἰπποκράτης τε καὶ ὁ ἀληθὴς λόγος; Arist. *Met.* A.4 985a4–5 εἰ γὰρ τις ἀκολουθοίη καὶ λαμβάνοι πρὸς τὴν διάνοιαν καὶ μὴ πρὸς ἃ ψελλίζεται λέγων Ἐμπεδοκλῆς. And the happy formula of Syrianus in *Met.* 11.11–13: 'it will be our job to say what he [sc. Aristotle] does not say of his own accord but is necessarily entailed by what he posits' (ἃ δὲ μὴ λέγει μὲν αὐτόθεν, ἐπόμενα δὲ ἔστιν ἀναγκαίως οἷς τίθησι, ταῦτ' ἂν εἴη λέγειν ἡμέτερον). For creative interpretation or exegesis see Hadot (1957) and Mansfeld (1994a) 152, 155–161. Note however that 'explanation of what is obscure' is not the only meaning of ἐξεργασία, for it can also mean 'careful explanation', 'detailed exposition'.

as μαρτύρια, 'proofs', in the overall argumentation of each of the twelve Books is made clear by freshly written introductory and transitional passages. In many cases these 'proofs' occupy the first half of a Book, whereas its second half is devoted almost entirely to an exposition of the better Christian doctrine.

It is interesting to note that the two techniques of excerpting and paraphrasing are combined in a practice that is particularly prominent at the outset of the work. Theodoret uses compact paraphrases of lists of doxai in anticipation of later passages when he cites those lists, based on chapters in Aëtius, in a much fuller version.²⁸ This practice is especially relevant for the analysis of two lists of first principles, the former a more compact version at 2.9–11, the latter a more extended passage at 4.5–12. These texts are discussed in our analysis of ch. 1.3, the single most complex chapter in the entire compendium.²⁹

Theodoret, as was first seen by Diels,³⁰ is the third chief witness for Aëtius, whose name he mentions three times, in tandem with two other sources for the history of philosophical views, namely 'Plutarch' (i.e. the ps.Plutarch discussed above) and Porphyry.³¹ At CAG 4.31 he adds the titles of their treatises, and at 2.95 he puts 'Plutarch and Aëtius' on the same level qua 'teachers of the doxai of the philosophers', explicitly distinguishing their works from that of Porphyry, 'who added the biography of each philosopher to his doxai'. This shows that according to Theodoret the works of 'Plutarch' and Aëtius were similar in their structure, and differed from that of Porphyry. Ps.Plutarch is still in our possession, and we know that Porphyry did not go beyond Plato, whereas the phrase 'the philosophers' cited above does not impose this chronological limit. Aëtius dealt with doxai just like ps.Plutarch did.³²

But there is a complication. Eusebius, who as we have seen is one of Theodoret's chief sources, included substantial groups of passages from ps.Plutarch in his *Praeparatio*. In Book 14 he inserted selected abstracts from chs. 1.3 (though only 6 out of 14 lemmata) and 1.7 (written out almost in full, with significant changes in §§1, 2 and 7). In Book 15 he included virtually unchanged clusters of chapters and a few individual chapters in a somewhat erratic order.³³ These texts are explicitly attributed by him to 'Plutarch'.³⁴ There has been much discussion about Diels' argument that for his little abstracts from the beginning

28 For such anticipatory paraphrases see chs. 1.63, 1.96, 1.97–98, and 6.3. See further the discussion at ch. 1.3, Commentary A(5).

29 See the discussion at ch. 1.3, Commentary A(5).

30 DG 45–49; cf. M–R 1.77–84.

31 Quoted below at ch. 1.titulus et index, *Testes primi*.

32 See M–R 4.187–188. For Porphyry's lower limit see fr. 198T Smith.

33 For the details see M–R 1.132–134; see also further below, section 4.2.2.

34 PE 14.15.11 (on gods) is of particular importance in our context.

of ch. 1.7.1 at CAG 2.112 and 3.4, where he cites 'Plutarch', Theodoret used the text of ps.Plutarch as he found it in Eusebius, whereas for the other doxographical doxai he excerpted Aëtius.³⁵ Diels based his argument on the mistaken ethnicon of Diagoras in Eusebius and Theodoret, believing that ps.Plutarch had the correct version. But in actual fact it is impossible to be certain where he drew his epithet from, since we cannot tell when the mistake entered the tradition.³⁶ A better argument is furnished by the observation that Theodoret's version of the title of the work of 'Plutarch' at CAG 4.31 ends with the word ἐπιτομή. As we have seen, this crucial term is not found in Eusebius,³⁷ so it must have been based on autopsy. Accordingly, at CAG 2.112 ps.Plutarch himself may well be meant and not the incomplete version written out in Eusebius. In favour of the assumption that he abstracted the snippet from the beginning of ch. 1.7.1 from Eusebius' Plutarch is the fact that, as we saw, he is wont to cite the sources quoted by his informants, not these informants themselves. It is also true that material following after this first item of the cento comes from various places in the *Praeparatio*. We simply cannot be sure either way.

Where Theodoret includes abstracts taken directly from Aëtius he consistently fails to mention his name. Their identification, as Diels saw, is possible only through comparison with the other two chief witnesses, ps.Plutarch and Stobaeus. The Books of the CAG in which he includes this material are Book 2 'On the *archê*', Book 4 'On matter and the cosmos', Book 5 'On human nature', and Book 6 'On divine providence'.³⁸ All in all he makes use of doxai from 25 chapters, totalling 109 in all, which amounts to 14.2 % of the extant remains of the compendium and 12.2 % of the complete work as estimated by Edward Jeremiah.³⁹

Several scholars, who criticize Diels but then take his argument much further, have argued recently that Theodoret may have borrowed all or most of his purported Aëtian abstracts from Eusebius' ps.Plutarch, which would largely

35 Diels *DG* 45–49. We followed him at M–R 1.168, 178. For the discussion see Mansfeld (2016e) 153–154, (2018a) 176–177.

36 For the textual details see texts and apparatus below, ch. 1.7 *Testes primi, traditio ps.Plutarchi*. For Diels' argument see *DG* 14, 297 app. testim. ad [1.]7.1 T 2.112: 'ex Eusebio' (cf. app. crit. ad 297a14). The mss. of ps.Plutarch, Eusebius, Theodoret and Qusṭā all have the erroneous Μιλήσιος, but ps.Galen preserves the correct Μήλιος, which Diels and all later editors have restored in the text. Clearly Theodoret could have found his incorrect reading either in Eusebius or in his own copy of the *Epitome*.

37 Cf. M–R 1.122, 1.168, 2.1.18, and see above n. 3.

38 Overview at M–R 1.274–275.

39 The distribution is: Book 1, 27 lemmata from 7 chapters; Book 2, 46 from 12; Book 3, 36 from 6. The estimation is based on Jeremiah's statistical analysis, on which see below section 2.7.

exclude or entirely remove him as a direct witness for Aëtius.⁴⁰ But it is certain that this cannot be true, for there is no one-to-one overlap between the chapters copied out by Eusebius and the abstracts in Theodoret. Not only does he preserve material that is not found in Eusebius' ps.Plutarch, but there is also an interesting amount of material that is not in the original ps.Plutarch but only paralleled in Stobaeus, and occasionally not even there.

Because of the importance of this matter for the correct evaluation of Theodoret's evidence, it will be worthwhile to go into a little more detail. The sequences of anonymous abstracts in Theodoret which correspond qua order and contents to sequences of twenty-five chapters in ps.Plutarch, while also containing extra material compared with ps.Plutarch's contents, are the following:⁴¹ CAG 4.11–24 ~ Plac. 1.3, 1.9, 1.18, 2.1–4, 2.13–14, 2.22–21, 2.25, 2.27, and 2.29–31; CAG 5.17–24 ~ Plac. 4.2–5, 4.2.7; and CAG 6.13–15 ~ Plac. 1.25, 1.27–29. Theodoret here reports (unidentified) information corresponding both in sequence and contents with lemmata in ps.Plutarch which Eusebius did not include. For it is a fact that seven of these chapters are not present in Eusebius, namely chs. 1.18, 1.25, 2.1–2, 4.2–3 and 4.7. Remarkably, of the six lemmata of ch. 1.3 written out by Eusebius not a single one is found in Theodoret, while on the contrary material that Eusebius omitted, namely ch. 1.3.20 (Socrates Plato) and 1.3.21 (Aristotle), is paralleled at CAG 4.11 together with their highly significant name-labels. Accordingly, Theodoret cannot have found the matter for these excerpts in the *Praeparatio*.

A further consideration is the correspondence that exists between Theodoret and Stobaeus. For example, in the case of ch. 1.18.4 in our edition he includes a terse analogue not paralleled in ps.Plutarch but only in Stobaeus, for ch. 4.2.2 and 4.2.4 there are two more of such analogues, and for ch. 4.3.4 and 4.3.6 another two again,⁴² so he really *cannot* have used the original text of ps.Plutarch here. Quite a few more analogues are found which correspond qua sequence and contents to sequences of chapters in ps.Plutarch, but verbatim parallels for them are found not in ps.Plutarch but only among Stobaeus' generous abstracts. There are no less than 28 such parallels, including those just mentioned.⁴³

Of course no one (not even Dr Bottler) doubts that wherever ps.Plutarch and Stobaeus are in agreement a shared ps.Plutarchean/Stobaeian source has

40 Frede (1999b), Gourinat (2011), most emphatically Bottler (2014).

41 Cf. M–R 4.187–189. The Theodoretan abstracts from ch. 1.3 have been combined with other material; see below n. 46 and text thereto.

42 For these examples see M–R 4.183.

43 For detailed references to these passages see M–R 4.262 and 4.181–184.

to be assumed. Consequently a shared Theodoretean/Stobaeian source has to be posited too, namely wherever Theodoret and Stobaeus are in agreement. Moreover, it can be further proved that the ps.Plutarchean/Stobaeian source and the Theodoretean/Stobaeian source cannot be distinguished from each other, so are identical. Theodoret indeed proves to be a crucial witness.⁴⁴

What remains to be said, perhaps unnecessarily (but the relative chronology is uncertain), is that Theodoret did not abstract from the *Eclogae* the information shared with Stobaeus that is not matched in ps.Plutarch. We have seen above that he did not abstract his Aëtian material from ps.Plutarch himself but from a shared source. Such a shared source has also to be postulated for the Aëtian material shared with ps.Plutarch that is not matched in Stobaeus. There are five lemmata in Theodoret that are matched in the ps.Plutarch he did not use for which there are no matches in Stobaeus, although other clusters of lemmata from the four chapters that are involved (two in Book 1, two in Book 2, and one in Book 4) have been preserved in our Stobaeian manuscripts.⁴⁵ These must have been drawn from the earlier source shared by ps.Plutarch and Theodoret. A further reason why we can be sure that Stobaeus cannot have been Theodoret's source is the difference in order due to Stobaeus' coalescences of lemmata with the same name-label from various chapters, thus as we have seen modifying the chapter-and-lemma order of his source, or the changes that occur in those Aëtian chapters where he interpolated further material among his abstracts. It is not credible that Theodoret would have been able to intuitively perceive the ps.Plutarchean chapter-and-lemma order matching that of ps.Plutarch, and to abstract this from Stobaeus' coalesced clusters of lemmata. To give a single example (see further the chapters involved, each time at Commentary A): at *Eclogae* 1.25 Stobaeus coalesces lemmata from ch. 1.20 with lemmata having the same name-label from chs. 1.24, 1.21, 1.22, and 1.23, even modifying the chapter order (note that T does not abstract chs. 1.23–24). But at *CAG* 4.21–24 T cites the matching themes and lemmata in the regular order corresponding with that of ps.Plutarch's order for chs. 1.21–23, and here and there even with his sequence of lemmata.

44 For a full discussion see M–R 4.174–196, where we distinguish between P/S, P/T, and S/T parallels. For the statistics on these see section 7.3, Appendix 3.

45 Namely two for Book 1: chs. 1.9.5 and 1.28.4; two for Book 2: chs. 2.20.7 and 2.20.11; and one for Book 4: ch. 4.2.5. The sixteen further cases for Book 4, namely those in chs. 4.4, 4.5, and 4.7 cannot be checked because of the Byzantine abridgement. Ch. 4.5 is entirely absent. The headings of chs. 4.4 and 4.7 are extant, so the chapters once were there, but very few lemmata remain.

Like their counterparts in Stobaeus, clusters of chapter-wise abstracted lemmata in Theodoret constitute enclaves, or micro-environments, which are Aëtian. Typically terse doxographical lemmata concerned with the topic(s) at issue located in this environment, and even some extra name-labels, can safely be attributed to Aëtius, even when they are irreducible in the sense that they have no match in ps.Plutarch and/or Stobaeus. The case for a different origin has to be proved for every separate instance. Actually this can be done for a handful of lemmata pertaining to the principles that were abstracted not from ch. 1.3 in Aëtius but derived from a source Theodoret shared with another ps.Plutarch, namely the author of the *Stromateis* extant in Eusebius, who belongs with the proximate tradition. He can hardly have used only these Eusebian *Stromateis*, because apart from all differences as to details he at CAG 2.10 and 4.12 cites and includes Hippasus and Heraclitus (in an order that is the reverse of §9), and at 4.8 cites and includes Melissus, all of whom are absent in this other ps.Plutarch. Theodoret may well have wanted to include this information on the Eleatic Succession not found in Aëtius, because in the source which he used Xenophanes and Parmenides and Melissus so usefully contradict themselves. This was grist to his apologetic mill.⁴⁶

2.6 *The Name and Sitz im Leben of the Author/Compiler*

The existence of a source shared by the three main witnesses ps.Plutarch, Stobaeus and Theodoret can thus be proved beyond reasonable doubt. Taking Theodoret's distinction between 'Plutarch' and Aëtius into account, we attribute this work to an otherwise unknown author, or redactor, and we call him Aëtius, just like Theodoret and Diels did.

Though the name, as we have seen in the previous section, is cited no less than three times in the same context by Theodoret, the correctness of this quotation has been contested. The Russian scholar Andrei Lebedev has long argued that Ἀέτιος is a *lapsus calami* for Ἀρειος (sc. Ἀρειος Δίδυμος), another personage hardly better known than Aëtius.⁴⁷ This is no more than a bold guess, impossible to confirm and not difficult to disprove. For Arius Didymus, whose probable date would more or less fit, does not deal with pluralities of individuals of varying allegiance and their conflicting views on issues in physics, but

46 See further below at ch. 1.3 Commentary A and D(b)((3)(5). He does not say this explicitly here, but at CAG 5.16, introducing his Aëtian abstracts dealing with the contrasting views on the soul, which apparently he finds even more shocking than those on the principles, he argues that the philosophers are not only opposed to each other, but also contradict themselves (οὐ μόνον ἀλλήλοις, ἀλλὰ καὶ σφίσιν αὐτοῖς περὶ τῶν αὐτῶν ἐναντία γεγραφήκασιν).

47 Lebedev (1984), (1988), see M–R 1.333–338; most recently Lebedev (2016).

concentrates on Stoics and Peripatetics and provides detailed systematic overviews of their physical and especially ethical doctrines.⁴⁸ Continuing Lebedev's argument, the Dutch scholar Jan Bremmer, in a very learned paper, insisted that the personal name Ἀέτιος is unattested for a person living in the first century CE, and only occurs more often later.⁴⁹ But a list of proper names in the second century CE grammarian Aelius Herodian discussed by Bremmer contains, apart from Ἀέτιος, also the names Ὑπάτιος, Εὐστράτιος, and Ἀθανάσιος.⁵⁰ These names too appear here for the first time in the literary record, and like Ἀέτιος are only paralleled rather much later,⁵¹ though not very often as well. Accordingly, the arguments of Lebedev, Bremmer and others against the plausibility of the personal name Ἀέτιος in the first century CE context are not conclusive.

These arguments are also beside the point, for the existence of the source shared by ps.Plutarch, Stobaeus and Theodoret does not depend on the name of its author. It really does not matter by what name we call him.⁵² The best and simplest option, therefore, is to follow the tradition and to go on calling him Aëtius. This is also the most sensible, for this is the name under which the important evidence preserved by the treatise has been invariably and widely cited in the literature, especially since the appearance of the first edition of the *Fragmente der Vorsokratiker* in 1903.⁵³

The compiler's diaeretic and diaphonic mode of presentation of the doxai, and its background—especially in Aristotle's methodology, as also utilised by other philosophers—will be discussed in sections 2.8 and 5.1 below. In the *Placita* the material is so to speak presented in a neutral (which does not always mean an uncritical) way, without argument in favour of or explicit preference for the views of a particular philosopher or school. Apart from being a trea-

48 See now Algra (2018). There is some evidence for his interest in Platonism and logic.

49 Bremmer (1998), who emphasizes that the name belongs to a minor Troizenian hero. Another possibility is that it was a *nom de plume*, like Achilles for the author of the *De universo*, Alcinous for the author of the *Didascalicus*, or Diogenes Laertius for the author of the *Vitae philosophorum*.

50 Aelius Herodian *Pros.Cath.* p. 1.119.35–120.6 Lentz.

51 The first Athanasius listed in the TLG is Athanasius of Alexandria, the famous Church Father, b. 298 CE. The first Eustratius listed there is Eustratius Presbyter, sixth century, and the first Hypatius is Hypatius of Ephesus, also sixth century. The first Aëtius in the TLG (apart from our doxographer) is Aëtius of Amida, sixth century again.

52 As already argued at M–R 1.86, 3.177–178.

53 See further M–R 4.187–191. The ingenious last-ditch suggestion of Gourinat (2018) at M–R 4.17–52 that the original source was a larger work by Plutarch is not supported by Lebedev's purported *lapsus calami*. It is hard to explain why Theodoret called this other Plutarch by the name Aëtius and distinguished this Aëtius/Plutarch from the 'Plutarch' he cites.

sure trove and useful vademecum for professionals and semi-professionals, the treatise should also be seen as a significant cultural artefact. In Hellenistic and Early Roman times it was expected of an educated person not only to be versed to an acceptable extent in literature and rhetoric, but also to be in possession of information regarding the main currents and views of philosophy and philosophers. This is attested by Cicero, who saw it as his mission to inform and civilize his fellow-Romans in also this respect. And he explicitly tells us, *Tusculans* 2.4, that ‘in Greece philosophy would not have been held in such high honour, if it had not derived its vitality from the disputes and disagreements among its greatest practitioners’ (*in ipsa enim Graecia philosophia tanto in honore numquam fuisset, nisi doctissimorum contentionibus dissensionibusque viguisset*). Instruction in the various philosophical doctrines was also part of the curriculum of the ephebes at Athens, a city which by opening up the courses also to non-Athenians proudly demonstrated its awareness of its cultural reputation. Several ephebic inscriptions to be dated between 122/1 and 38/7 BCE are explicit on this part of their training, especially the first, *IG II² 1096.19–20*:

(the ephebes) also continuously followed the lectures of Zenodotus [a Stoic] in the Ptolemaeum and the Lyceum, as also of all the other philosophers in the Lyceum and the Academy, during the whole year.

προσεκαρτ[έ]ρησαν δὲ καὶ Ζηνοδότῳ σχολ[άζ]οντε[ς ἐν τε] τῷ Πτολεμαίῳ καὶ ἐν Λυκείῳ, ὁμοίως δὲ καὶ τοῖς ἄλλοις [φιλο]σόφοις ἅπασι[ν] τοῖς τε ἐν Λυκείῳ καὶ ἐν Ἀκαδημ[αίᾳ δι’ ὅλου τοῦ ἐνιαυτοῦ.

The references to the Lyceum and the Academy clearly presume the lectures of a Peripatetic and a Platonist. The Garden is not mentioned, but this does not mean that the Epicureans were excluded, since the inscription speaks of ‘*all the philosophers*’.⁵⁴

However, the compendium itself gives no indication whatsoever of the exact location where it was written. In Vol. 1 of our *Aëtiana* we noted that there might be some hints pointing to tenuous links with Alexandria, and an attempt was made by Jan Bremmer in the aforementioned article to strengthen them.⁵⁵ But we now think that such attempts must be regarded as no more than educated guesswork. As for the approximate date of the work, we retain the view that it was written in about 50 CE.⁵⁶

54 On these inscriptions and their implications see Haake (2007) 44–55. On this Zenodotus see also Goulet at *DPhA* 7.342–343.

55 Bremmer (1998) 157–160.

56 See the arguments at M–R 1.320–323, to which we have nothing more to add.

2.7 *The Extent of the Original Work*

We have seen above that Aëtius' original compendium has survived in an incomplete condition, since its main witnesses have sustained losses, either deliberately through epitomization, as in ps.Plutarch, or through small-scale abstraction, as in Theodoret, or by unfortunate subsequent redaction, as in Stobaeus. Using advanced statistical techniques Edward Jeremiah has demonstrated that nevertheless we still possess approximately 86% of the original work.⁵⁷ Most of the missing lemmata derive from chapters where ps.Plutarch is our only witness. For chapters where apart from ps.Plutarch the complete testimony of Stobaeus is still extant, we can be reasonably certain that very few if any lemmata are missing. Almost every ps.Plutarchean lemma has a match in Stobaeus. When Stobaeus copied out an Aëtian chapter he took over almost all there was. If it occurred often that he copied out less than the entire chapter, there would be many more ps.Plutarchean lemmata without a match in Stobaeus. This argument can also be extrapolated to the chapters for which Stobaeus is lost, for it is wholly unlikely that the relation would suddenly be different and that for the chapters thrown out by the Byzantine editors considerably more ps.Plutarchean lemmata would have lacked a match in Stobaeus than for those we still have. Consequently, for those 87 chapters for which we have multiple witnesses there probably are only about 42 lemmata missing.⁵⁸ For the remaining chapters, for which we have only the evidence of ps.Plutarch, the missing number is expected to be around a further 81.⁵⁹ Thus the grand total amounts to 123 missing lemmata yielding a total of 892 lemmata for the complete original work.⁶⁰ Furthermore, taken individually, all the chapters for

57 Jeremiah (2018) at M–R 4.284–295, paraphrased from 295.

58 Jeremiah emphasises that this result should not be taken to be more exact than it is. He also gives 68% and 95% confidence intervals for this estimate, these being 31 and 52 for the former, 23 and 62 for the latter. See table 9.4 on p. 292. (For the contents of this and the following two footnotes we are indebted to Edward Jeremiah.)

59 The confidence intervals for this estimate are 78 and 85 for the former and 75 and 89 for the latter. These bounds can be derived from the confidence intervals for the selective probability of ps.Plutarch in table 9.4 p. 292 and the number of lemmata for the chapters where we only have the evidence of ps.Plutarch (143, for which see pp. 293–294 and cf. the table in Appendix 1 p. 348).

60 The confidence levels for this estimate are 109 and 138 for the former, 98 and 151 for the latter. These bounds can be derived from the confidence intervals for the selective probability of ps.Plutarch in table 9.4 p. 292; the number of lemmata in ps.Plutarch for the entire work (566, for which see the table in Appendix 1 p. 348); and the number of lemmata in the new edition for the entire work (765, for which see the table in Appendix 1 p. 348). It is worth stressing that these are very conservative figures and likely *overestimate* the number of missing lemmata since they have been computed with a very conservative uniform prior. Cf. pp. 290–291 for less conservative alternatives. (The figures for the total number

which we have the testimony of S in addition to P (apart from those in which the transmission of S has been affected) are most likely complete.⁶¹ These are a remarkable and highly important results.

In its 135 chapters in five Books the *Placita* extend over the history of physical philosophy from the early sixth century BCE, beginning with Thales (named fifteen times) and Pythagoras (named twenty-six times), and ending with the Peripatetic Xenarchus of Seleucia in the second half of the first century BCE (named once at ch. 4.3.10). There are no chapters specifically devoted to individuals, or to schools, or to Successions. The focus is wholly on topics presented in a systematic order and on points of view in physical philosophy, not on persons. In the majority of chapters the topic is presented as an issue to be discussed, by means of a listing of more or less different or conflicting views of different persons or (sometimes) schools. The method is thus basically dialectical, not historical or purely descriptive.

The opening words of the prooemium of Book 1 define the purpose, later commonly called σκοπός, of the work: μέλλοντες τὸν φυσικὸν παραδῶσιν λόγον, ‘our objective is to teach the physical theory’, or alternatively ‘to hand down the account of nature’. The Latin translation of the substantive παράδοσις that belongs with the verb παραδῶσιν is *traditio*. The purpose of the treatise is to contribute to the continuation of the tradition of the study of nature by keeping this tradition alive.

As part of the *Introduction* to the treatise Book 1 continues with a discussion of the parts of philosophy and the nature of physics. It presents a selection of experts from Thales to Strato with their dissimilar views on the principles of physics, provides a brief account of the genesis of the single cosmos to be discussed in detail in Books 2 and 3, and in a slight detour touches on various views concerning the number of kosmoi that can be assumed. The remainder of Book 1 is a detailed presentation of foundational concepts of theoretical physics such as matter, body, motion, time, and necessity, all considered dialectically. Book 2 deals with cosmology, from the cosmos in general to the duration of the year via the heaven, the stars, the sun, and the moon, according to their nature and quantitative, qualitative and other categorical properties. Book 3 treats meteorology in the ancient sense of the word, i.e. the phenomena in the atmosphere above the earth, and then the earth itself and the sea. Book 4 begins with a chapter on the summer flooding of the Nile, but for the rest deals with

of lemmata in P and A have now been revised to 563 and 769 respectively; see the statistics in section 7.3, Appendix 3.)

61 See the P[C] column in the table on p. 348 (this column giving the probability that a chapter in the reconstruction is complete).

psychology, that is the soul and the senses, including sensation and cognition insofar as appropriate in the context of physics, and ends with a chapter on psychosomatic issues. Book 5 first contains a couple of chapters on divination and dreams, and then continues with a detailed presentation of spermatology and problems of heredity and embryology. It also presents a number of particular and more general issues concerned with living beings, concluding with some medical topics: fever, health, disease and—rather appropriately—old age.

By and large the movement from Books 1 to 5 is from periphery to centre and from macrocosm to microcosm, and there is a clear division between Books 1–3, dealing with the macrocosm, and 4–5, dealing with the microcosm. The pivotal prooemium of Book 4, which states, ‘The parts of the cosmos having now been treated systematically, I shall continue in the direction of the particular phenomena’, explicitly both separates and unites the two main parts.

Looking in somewhat more detail at the relations between these Books and between the sub-disciplines of physics displayed in them, we note that the brief final chapter of Book 1, 1.30 ‘On nature’, is an appendix (‘mantissa’, Diels *DG* 57) to ch. 1.1 ‘What is nature’. It has the same function for the Book as a whole, for as we leave the last of the theoretical chapters and return, at least formally, to nature qua process, this chapter forms a transition to the next Book on cosmology. This structural feature thus aims to demonstrate the unity of the Book, but also of the compendium as a whole. A similar transitional purpose may be attributed to the first chapter, ‘On the Milky Way’, of the meteorological Book 3 in relation to the cosmological Book 2, while the misplaced final chapter at ps.Plutarch ch. 3.18 may be seen as an attempt, however unfortunate, to emphasize the unity of the Book. The first chapter of Book 4, ‘On the flooding of the Nile’, links up with the penultimate chapter of Book 3 ‘On the tides’, which shows that the final position of ps.Plutarch ch. 3.18, however well intended, indeed creates a problem. (In fact we have moved ch. 3.18 in Diels to its rightful place earlier in the Book and renumbered it as ch. 3.5a.) That the first chapters of Book 5 could also have been the last of Book 4 (see the Introductions to Books 4 and 5) demonstrates that these Books, dealing not with nature in general like the first three but with (mostly) human nature, in a certain sense belong together.⁶²

To be sure, all five Books appear to be rigorously separated from each other by chapter numbers and Book numbers. But their contents are in fact more

62 Diels noticed some of these connections, but provided a different explanation: at *DG* 181–183, setting out the structure i.e. table of contents of a hypothetical *Vetusta placita* in six Books (*inter alia* removing the prooemia of ps.Plutarch) he adds ch. 4.1 to *VP* Book 4 *de terrestribus* and chs. 5.1–2 to Book 5 *de anima*. Cf. below, n. 95 and text thereto.

fluid and to some extent tend to mesh with each other. The cumulative effect of these janus-faced endings and beginnings is to underline the unity of the treatise, and correspondingly of our world. For a comparison we may for instance recall that the precise point where one book of an epic ends and another begins can be problematical—the tale goes on, as ancient commentaries attest.⁶³ Divisions between Books and allocation of contents will also have been imposed by the length of the papyrus scrolls on which they were written.

2.8 *A Retrospective Glance at Aëtiana Volumes 1–2*

In *Aëtiana* vol. 1 our first purpose was the critical evaluation of Diels' famous Aëtius hypothesis against the backdrop of nineteenth-century classical scholarship, exemplified in the stemmatology, or cladistic analysis of manuscripts, linked with the name of Karl Lachmann, and the source criticism linked with that of Diels' *Doktorvater* Hermann Usener. This helped to situate and even to improve upon Diels' overview of the doxographical traditions, as pictured by means of a chronological and genealogical stemma, or tree diagram, with several paths and lateral branches, illustrating the relations at successive stages between the most important manuscripts and/or sources or witnesses involved.⁶⁴ We have reproduced these two diagrams, one representing the Dielsian schema, the other our own, as appendices to this Introduction, in the latter case making one or two small improvements.⁶⁵

In order to provide the necessary background, we also looked at forgotten earlier scholarship from the Renaissance onwards concerned with the relations between ps.Plutarch and ps.Galen and Stobaeus, for it had long been noted that these witnesses present similar or even largely identical material.⁶⁶ Another philological method, very popular in the nineteenth century and beyond, but with a venerable history going back as far as antiquity, is the presentation of parallel texts side by side in two or more columns for comparative purposes. This comparison may lead to the conclusion that a common source has to be posited, and thus to the construction of a genealogical stemma. For these techniques, classical scholarship proved to be indebted to the philological study of the Gospels inaugurated by the eighteenth-century German theolo-

63 See Higbie (2010).

64 For Diels' diagram of the tradition of ps.Plutarch see *DG* 40; for a reconstructed diagram of Diels' view of the tradition from Theophrastus see M–R 1.81; and for our diagram of the tradition of the Aëtian *Placita* M–R 1.328.

65 See section 7.1–2, Appendices 1 & 2 below.

66 This section of Vol. 1 benefitted greatly from the research assistance of Dr (now Prof.) Teun Tieleman (Utrecht), and was further developed in Mansfeld (1998), reprinted M–R 3.3–31.

gian Johann Jacob Griesbach. Their combined and successful application to what till then had looked like a rough and unordered mass of data gave Diels' hypothesis its aura of quasi-mathematical and unassailable certainty.⁶⁷

However, Diels' approach to the sources for his tabular reconstruction of Aëtius in two columns, with some extra evidence in an apparatus parallelorum, was oddly prejudiced. He saw the development, from his postulated pure and unsullied *Urquell* Theophrastus—on whom see below, section 5.2.2—in the fourth/third century BCE, to Aëtius in the first century CE and the even later ps.Plutarch and his tradition, as one of progressive deterioration, increasing corruption and continuous decline. In his view later in time was equivalent to worse in quality. The Ciceronian motto that he placed at the very beginning of his *Doxographi Graeci* was telling: *tardi ingenii est rivulos consecrari, fontes rerum non videre*, which we might render 'it is the hallmark of a dull disposition to pursue the little streams and not to see the sources of things', the former by implication being muddled and of minor importance, the latter limpid and pure.⁶⁸ The focus of his interest was on the thought of the largely lost early Greek philosophers. So in Aëtius he looked in the first place for reliable evidence on the Presocratics, and he found what he sought. He was convinced of its reliability because he believed that, ultimately, it derived more or less unscathed from Theophrastus.⁶⁹

We disagreed with this evaluation then, and we still do. We chose to differ from Diels because we had a different understanding of the tradition. In our view it was a tradition that was essentially open, responding to changing times and circumstances, receiving the necessary updates from time to time, subject to rearrangement, catering to a variety of publics, and therefore losing material as well as regularly acquiring new content. The *Placita* belongs to the genre of functional literature (if genre is what it may be called), comparable to lexica and compendia of all kinds. In fact, as pointed out at section 2.6 above, a sort of vademecum or handbook is what it really is. Accordingly we presented an unprejudiced and full analysis of the three main witnesses (including, in the case of ps.Plutarch, his complicated tradition), and tried to understand their respective aims and to work out their methodologies before gauging their worth and setting out their respective contributions to the reconstruction of their common source. In the course of this analysis we came to the conclusion

67 See e.g. Regenbogen (1961) 545: 'Es braucht jetzt kaum mehr gesagt zu werden, daß eigentlich eine neue Wissenschaft, mit einem neuen Stoffgebiet und einer so noch nie gehandhabten Methode damit begründet war'.

68 *De orat.* 2.117; see the discussions at M–R 1.66, 97–101.

69 See further below at section 5.2.

that Diels' brilliant hypothesis regarding the role of the three chief witness and a few others was in general correct, but had to be revised in several important respects. In his critical review of *Aëtiana* vol. 1 Michael Frede showed that Diels' (and our) analysis of Theodoret's contribution had its vulnerable side. This lacuna in our analysis has since been closed.⁷⁰

The purpose of *Aëtiana* vol. 2 was to prepare the ground for the present edition of the Greek text of the *Placita* accompanied by a translation, commentary and apparatus of parallel passages. In vol. 2.1 we provided a full analysis of the treatise's macrostructure and the dialectical microstructure of its chapters,⁷¹ the results of which, occasionally updated, constitute the main rationale of today's edition and commentary. It also emerged that this macrostructure to a significant extent reflects the order of the principal themes and sub-themes in Aristotle's physics (including psychology) on the one hand, and on the sequence of topics according to the Stoic division of the *physikos logos* ('physical theory', 'account of physics', the term prominent as we saw in the opening line of the *Placita*), beginning with theoretical physics and ending with psychology and spermatology, on the other. The fused reverberations of these Aristotelian and Stoic examples comprise practically the entire extent of the *Placita*, from Book 1 to Book 5.⁷² Let us look at this feature in some more detail.

The descending order of subjects of the five Books of the *Placita* corresponds *grosso modo* to that of Aristotle as set out in passages which outline a programme of research and writing that turned out to be (and perhaps was meant to be) a collective undertaking, namely in the prooemium of the *Meteorology*, the prooemium of the *On Sensation*, and two passages of the *On the Generation of Animals*. At *Meteorology* 1.1, looking back, Aristotle states that the *Physics*, *On the Heavens* and *On Generation and Corruption* have been completed; the *Meteorology* is to follow now, and in its turn is to be followed by works dealing with animals (of course in the first place the human being) and botanical treatises (these works on plants, as we know, were written by Theophrastus). This order up to the *Meteorology* is that of the *Placita* Books 1 to 3. At *On Sensation* ch. 1, looking back, he states that the *On the Soul* has been completed; the present tract will be the first of what we have come to call the *Parva naturalia*, which are to be followed by a study of the principles of health and disease. This agrees

70 Frede (1999b); see section 2.5 text to and after n. 40.

71 Also using results reached in our earlier publications, many of which were collected in M-R vol. 3.

72 M-R 2.1.97–109, 135–138, 139–153, 158–172 on Stoic and Aristotelian precedents.

with the position of Books 4–5 and their order of subjects. At the beginning and the end of the *Parva naturalia*, namely at *On Sensation* 1 and *On Respiration* 21, he further points out that the more accomplished natural philosophers conclude their work with the principles of health and disease. The *Placita* follows suit, and so, in his grand style, does Lucretius with his description of the plague at Athens. At *Generation of Animals* 1.1 Aristotle looks back at the *On the Parts of Animals* as already complete, and in 5.1, discussing the eye, he says that certain matters ‘have earlier been spoken of in the *On Sensation*, and even earlier in the *On the Soul*’. Most of Book 5, the last of the *Placita* and coming after the treatment of the soul and its functions in Book 4, is devoted to themes treated in the *On the Generation of Animals*.

According to the hypothesis of Hecquet-Devienne the (incomplete) parallels for this order found in the two oldest manuscripts of Aristotle may go back as far as the library of the Lyceum.⁷³ But the detailed codicological analysis of ms. Parisinus gr. 1853 carried out by Ronconi proves that it is a *codex compositus*, comprising material of various provenance.⁷⁴ Comparing the contents of its oldest section with the relevant parts of the ancient catalogues of Aristotle’s works, as well as with the educational practices of the commentators, he dates such an ancient predecessor codex to the second century CE at the earliest, and limits its contents to the standard group of the five physical treatises, the *Physics*, *On the Heavens*, *On Generation and Corruption*, *Meteorology*, and *On the Soul*. What is significant in our present context is the fact that this agrees *grosso modo* with the contents of Book 1 to most of Book 4. These presentations of the research programme, mirrored in the ordering of the results of the research, have an underlying basis that is didactic in intent.

The layout of the *Placita* is also decisively influenced by the programme of physical research of the Stoics, which was itself to a degree a continuation of the Peripatetic programme. At Diogenes Laertius *V.P.* 7.132–133 this *physikos logos* is first divided according to species into the investigation of corporeals such as elements, principles, and gods, and incorporeals such as place and void. Such a double progeny compares well with the foundations of physics in Book 1. The two most important parts of the Stoic generic division deal with the cosmos, like Book 2, and with causal explanation. The aetiological investigations that are mentioned bring to mind themes in Books 4 and 5 of the *Placita*: the *hegemonikon*, what happens in the soul (including cognition), spermatology, vision, but also subjects in Book 3 such as explaining clouds, thunder, rain-

73 Hecquet-Devienne (2004), endorsed by Gutas (2012a) 12–14.

74 Ronconi (2012a).

bows and the like.⁷⁵ The chapters on the soul and the senses in Book 4 in the main follow the order of treatment of these topics in Aristotle's *On the Soul* and Chrysippus' *On the Soul*.

Here we must leave vol. 2.1 for a moment to consider an interesting side issue. Eight chapters begin with a nominal or conceptual definition, the same in both chief witnesses,⁷⁶ which illustrates the specific technical meaning of an everyday word: for instance ὕλη, 'wood' meaning 'matter' (ch. 1.9.1: 'matter is the substrate for all generation and destruction and the other (kinds of) changes'). Such a nominal definition is assumed to be generally acceptable. Differences begin with the attempts to formulate an essential (today we say 'real') definition, for this is what the experts disagree about—for instance about what matter 'really is', corpuscular or continuous (in ch. 1.9). But most of the time such an introductory definition is not needed, for there is no specific technical meaning of for instance the word 'moon' which would be different from everyday usage, even though the experts will still disagree about the nature of the substance of the moon (ch. 2.25), or about the question whether it shines by its own light or derives its light from the sun (ch. 2.28). At the time of publication of our vol. 2.1 a little more than a decade ago we were still insufficiently aware of the functional roles of these types of definition. In this respect we have indeed made progress.

The microstructure of the majority of chapters consists in a dialectical arrangement of doxai in such a way as to implicitly bring out their differences or even irreconcilabilities. The techniques involved here are the diaeresis and the diaphonia, with compromise views and maverick opinions thrown in as well.⁷⁷ This dialectical methodology, also practised in different ways and for their own ends by Epicureans and Stoics, and used somewhat differently again by the Pyrrhonists and Skeptical Academics, essentially derives from Aristotle's dialectical presentation of multiplicities of views in preparation of the inquiry into a problem in physics (or ethics), as we shall see in section 5.2 below. For the Pyrrhonists we may cite the tenth mode of Aenesidemus in Sextus Empiricus, *Outlines of Pyrrhonism* 1.151: 'We oppose dogmatic presuppositions to one another when we say that some people assert that there is one element, others infinitely many (cf. ch. 1.3); some that the soul is mortal, others immortal (cf. ch. 1.7)'. This is paralleled and expanded in Philo's unattributed version at

75 For the divisions of the Stoic *physikos logos*, its Aristotelian precedents, and the reverberations thereof in the sequential arrangement of (clusters of) chapters in the *Placita* see further M–R 2.1.97–109.

76 Chs. 1.9–12, 1.14–15, 2.32, and 3.1. See further at ch. 1.9 Commentary D(c)(1).

77 M–R 2.1.3–16, 173–195.

Ebr. 198–199 on the ‘so-called philosophers’, ‘some’ of whom ‘declare that the universe is infinite, others finite (cf. chs. 1.5 and 2.1), and some that it is created, others uncreated (cf. ch. 2.4)’, and some speak of providence, while others deny it (cf. ch. 2.3).

The fact should never be lost from view that the *Placita* merely provides material for instruction, discussion and reflection, possibly also for making one’s choice if that is what one wants to do (cf. section 2.6 above). Neither a suspension of judgement, *more sceptico*, nor a positive outcome, *more aristotelico* or *stoico*, is ever formulated, no explicit advice ever given either way. Only very rarely is there a critical note.⁷⁸

As a systematic overview of the methodology of the *Placita* this volume of *Aëtiana* is still recommended. Further issues that are discussed are the authenticity and role of chapter headings and their numbering, and the use and function of verbatim quotations.⁷⁹ In addition, a substantial section was devoted to ch. 1.3 in the context of the role of Successions and Sects and the absolute and relative chronology of name-labels.⁸⁰ Note however that the structural analysis now proposed at ch. 1.3 as a blend of arrangement according to number of principles and an ordering according to Successions (*Diadochai*) represents a noteworthy advance compared with that of eleven years ago. What is more, our understanding of the role of relative and absolute chronological ordering in relation to arrangement via diaeresis and diaphonia has now profited from the detailed inquiries of Edward Jeremiah.⁸¹ On the basis of a statistical analysis of the differences in this respect between the individual books he has argued that ‘the balance tipped towards dialectic as time went on, likely indicating the systematic importance of dialectical practice in the Hellenistic era’.⁸² We return to the subject of dialectic in Aristotle and Theophrastus below at section 5.2.

Aëtiana vol. 2.2 offered a detailed *specimen reconstructionis* of Book 2 of the treatise. Book 2 lends itself better to this exercise than the other Books, because our witnesses have preserved its chapters in an almost complete state. For each of its 32 numbered chapters and the three we saw fit to add (numbering them as 2a, 5a and 17a)⁸³ we printed and patiently analyzed the evidence of the individual witnesses in sequence.⁸⁴ First the doxai of the Greek text of ps.Plutarch

⁷⁸ At chs. 1.2.2, 1.3.1–3, 1.7.7, each time using the verb ἀμαρτάνειν; see further M–R 2.1.69–72.

⁷⁹ M–R 2.1.195–224.

⁸⁰ M–R 2.1.97–109.

⁸¹ Jeremiah (2018) at M–R 4.310–319.

⁸² Jeremiah (2018) at M–R 4.345.

⁸³ Of these postulated additional chapters only one, ch. 2.5a, is retained in the final edition. We have decided that the other two are too speculative to merit inclusion.

⁸⁴ For ch. 2.3, for instance, this consisted of the *Testes primi*, i.e. ps.Plutarch and his tradition

were numbered and printed, followed by an account of its structure and the differences of completeness and *variae lectiones* present in members of the *traditio ps.Plutarchi*. The text of Stobaeus came next. Its doxai, as a rule more numerous, were also numbered, and compared in respect of structure, completeness and *variae lectiones* with those of ps.Plutarch. The text of Theodoret, as a rule much shorter, came third and was scrutinized in the same way. The results were analysed in relation to evidence elsewhere in Aëtius. We also took care to compare parallels from the wider dialectical-doxographical tradition, both earlier and later, a selection from which was printed at the end of each chapter. These parallels did not as a rule pertain to the individual doxai but rather to the topic of the chapter as a whole and the interrelations of its lemmata. They often yielded important supportive evidence on the diaeretic and diaphonic structures of the Aëtian chapters as determined in our analysis and illustrated by a variety of diagrams.

Each chapter of our *specimen reconstructionis* ended with a preliminary reconstructed text, accompanied by a negative critical apparatus and English translation.⁸⁵ The entire procedure demonstrated, to our conviction, that our chosen method of reducing the two columns (and further material in the apparatus) of Diels' edition to a single text was viable and superior. It should be emphasized that the edited text was provisional and is now superseded by a text which is far superior again. Not only is it based on *all* the available evidence, fully accounted for in the list of witnesses and in a positive critical apparatus. It also benefits from increased insight, developed as our research progressed, into the respective value of the direct and indirect tradition of our main witnesses.⁸⁶

The analysis of the structure of each chapter, carried out by means of a step-by-step approach which is repeated in detail for each *Placita* chapter, required considerable time and space. Its study is still recommended because of its meticulous and detailed analysis. It has meant that we are in a much better position to present the cumulative evidence for the entire compendium, but now in a manner that is both more compact and more complete. The general analysis of *Aëtiana* vol. 2.1 has therefore been fully integrated into the present

(here Eusebius, ps.Galen, Cyril, and Qusṭā ibn Lūqā), Stobaeus and Theodoret, together with Achilles as *testis secundus*.

85 This text and translation was reprinted on facing pages for the sake of convenience at the end of the volume, M–R 2.2.664–715.

86 Particularly in the case of ps.Galen and Qusṭā for the tradition of ps.Plutarch, and to a lesser extent with regard to the information of the Laurentianus ms. for Stobaeus.

edition and commentary, and the same can be said, *mutatis mutandis*, for the results of the partial and preliminary analysis, text and translation published in *Aëtiana* vol. 2.2. It goes without saying that in the intervening eleven years that have been spent preparing the present edition, our understanding and insights have developed and progressed, aided by contributions and critiques of other scholars. Accordingly it not seldom occurs that on (mostly minor) points we have revised our views. Such changes and developments are noted wherever relevant.

3 Reconstructing the Text

3.1 *The Doxographi Graeci of Hermann Diels*

The extraordinarily impressive tome of the *Doxographi Graeci* is primarily devoted to two tasks: (1) reconstructing the text of the Aëtius resuscitated by its author; and (2) determining the position of this Aëtius in the context of the doxographical tradition which his *Doktorvater* Usener had postulated as deriving from Theophrastus.⁸⁷

As can be seen in the schema taken up as Appendix 1 to this Introduction, Diels' stemma or tree diagram of the tradition consists of a cascade of single principal sources with side branches. It begins with the lost doxographical treatise of Theophrastus,⁸⁸ written at the turn of the third century BCE, which Usener and he (followed by numerous other scholars) called Φυσικῶν δόξαι but we call Φυσικαὶ δόξαι. The next stage is the hypothetical treatise he called *Vetusta placita*, which is to be dated to the beginning of the first century BCE. The third stage is the *Placita* of Aëtius, an updated epitome of the *Vetusta placita*. This is also lost, but unlike its predecessors is capable of being reconstructed from its three main witnesses and incidentally from a few others, with some additional help from later authors who epitomized, cited or in one case translated the earliest of these witnesses, namely ps.Plutarch.

Diels postulated the *Vetusta placita* as an intermediary stage in this process. It enabled him to account for parallels between Aëtius on the one hand and

87 Usener in his 1858 dissertation on the fragments of Theophrastus cites parallels in various authors, many of whom are witnesses to Aëtius in Diels.

88 This was Usener's view already, but the detailed reconstruction and identification of what was supposed to come after Theophrastus was the work of Diels. For the title of the treatise see below, n. 330.

Philodemus, Cicero, and Soranus in Tertullian for the psychology of Book 4 on the other, and between Aëtius and Varro in Censorinus for the physiology of Book 5, to cite the most important evidence. The parallels are of course clearly present, and one is grateful for Diels' admirable exposition and comparison of the details. Before he set to work a shared source had been assumed for ps.Plutarch and these other authors. The *Vetusta placita* hypothesis is what remains of this earlier view once Aëtius, the new player who Diels introduced, is subtracted.⁸⁹ Diels later identified this intermediary work, 'more precisely', as he stated, as 'Poseidianische Ἀρέσκοντα'.⁹⁰ But this is pseudo-precision, and it had escaped his notice that Chrysippus had already used a version of ch. 4.5 on the regent part of the soul.⁹¹

Diels also set out to construct additional proof for the Theophrastean antecedents of Aëtius by isolating the postulated parallel Theophrastean evidence in other sources. For this purpose he adroitly exploited the fashionable technique of tabulation.⁹² In his rather overwhelming *Theophrasteorum apud excerptores conspectus* in five parallel columns, he placed side-by-side fragments of Hippolytus' *Refutatio omnium haeresium*, the *Stromateis* of the other ps.Plutarch whom we cited above in section 2.5, Diogenes Laertius, Aëtius, and finally Theophrastus.⁹³ He moreover believed that the disposition of Theophrastus' foundational treatise was mirrored in the compendia of ps.Plutarch and Aëtius and the *Vetusta placita*:⁹⁴ 'principles, God, cosmos, *meteora*, psychology, physiology'.⁹⁵ This seems to be, and in a way really is, spot on. But in fact the Theophrastean evidence that he had for this was quite limited. It is confined to the *De sensibus* on the one hand ('psychology'), and the fragments on the 'principles' from Thales to Plato in Simplicius' Commentary on the *Physics* on the other. Moreover, it is by no means certain that these texts belong with the so-called Φυσικῶν δόξαι. Nevertheless, he was right in positing a connection between the *De sensibus* and Aëtius Book 4, though it is rather more limited than he suggested, and there are also a few traces of Theophrastus on prin-

89 See our account of this earlier stage in M–R 1.49–63.

90 Diels (1893b) 101–102.

91 See M–R 3.125–157, a paper first published in 1989.

92 As noted above, text to n. 67.

93 *DG* 133–144.

94 *DG* 183.

95 Also see the summing up of the results of the *DG* in the preface to the first edition of *VS*, partly reprinted in all subsequent editions. But note the difference with the *Vetusta placita* in six Books at *DG* 181–183: he has dropped the fourth Book *De terrestribus* (cf. above, n. 62).

ciples in Aëtius Book 1. But there is no comparable Theophrastean evidence for ‘cosmology’ and ‘physiology’, unless one includes two references to him in the Aëtian doxai on the moon in Book 2.⁹⁶

Parallel evidence for a few medical lemmata included in the ‘physiology’ turned up later, when the newly found Anonymus Londiniensis was published by Diels in 1893, but the relevant section of this work could not be ascribed to Theophrastus.⁹⁷ In 1918 an Arabic translation of a *Metarsia*, attributed to Theophrastus in the manuscripts, was published and made accessible by Bergsträsser. This treatise contains parallels to several (but not all!) chapters of the *meteora* in Book 3, so it attests to Theophrastus’ limited influence also for this part of the *Placita*,⁹⁸ and there is also a small amount of evidence from Theophrastus’ *On Waters*. The relevance of the *Metarsia* is diminished by a conspicuous lack of name-labels, explained by the first scholars who studied the *opusculum* as due to abridgement by the translator, but this looks like an argument *pour le besoin de la cause*. Diels rather surprisingly appears to have paid no attention to this new evidence. There is at any rate not a single reference to it in his *Handexemplar* of the *Doxographi Graeci*.⁹⁹

A further consideration is that, as we saw in section 2.8 above,¹⁰⁰ the sequence of themes in the five Books of Aëtius derives from Aristotle and the Stoics, where in fact we do have evidence. ‘Principles’ and ‘God’ are treated in Aëtius Book 1. Such separate and prominent treatment of the divinity conforms to Stoic and not to Peripatetic doctrine.

Turning now to the actual reconstruction of Aëtius’ treatise, we should first note that at one time Diels toyed with the idea of providing a unified text.¹⁰¹ This was to be printed on the left page, with testimonia and an overview of differences between ps.Plutarch and Stobaeus underneath. Alongside this Aëtian text he thought of placing the source texts on the right page in parallel columns: to the left ps.Plutarch, with apparatus criticus and with the text of ps.Galen underneath (earlier in his dissertation of 1870 he had proved the *Philosophos historia* to be an epitome of ps.Plutarch). To the right there would be the text of Stobaeus, also with apparatus criticus. As we already noted above in section 2.8,

96 In chs. 2.25 and 2.29; see the use of the horizontal brace across ‘Aetii’ and ‘Theophrasti fragm.’ at DG 138 and 140.

97 See Diels (1893a) and (1893b); Manetti (1999) and (2011).

98 See Daiber (1992); also Bakker (2016), who however doubts the attribution to Theophrastus (we do not). See further below, Introduction to Book 3, section 6.

99 We have checked the publication of Diels’ *marginalia* by Oniga Farra (1985).

100 Cf. above, n. 72 and text thereto.

101 See M–R 1.19 for his letter to Usener of July 10 1872.

utilizing such immediately effective synoptic presentations for source-critical purposes was a current technique in those days.¹⁰²

In the end Diels dropped the left page with its unified text and devised a modified version of the right one. In the *Doxographi Graeci* of 1879 he printed on both the left and the right pages a synoptic text in two columns, with on each page the numbered chapters and lemmata of ps.Plutarch to the left and the lemmata of Stobaeus, also numbered, to the right, each with its own apparatus criticus.¹⁰³ On each page too, underneath the column on the left he placed 'testimonia' for ps.Plutarch's text,¹⁰⁴ and on the column on the right 'excerpts from Aëtius made by others', esp. Theodoret. The texts that could not be fitted in, that is, the complete texts of ps.Galen and of the other related doxographical authors: Arius Didymus, the purported *Urquell* Theophrastus for principles and senses, abstracts from Philodemus and Cicero in twin columns, Hippolytus *Refutatio omnium haeresium* Book 1, ps.Plutarch *Stromateis*, and abstracts from Epiphanius and Hermias, were printed separately further down.

It should also be noted that this text of Stobaeus in the right column is not always uncontaminated. Because Diels contended, correctly as one must admit, that ps.Plutarch had preserved the chapter-and-lemma order of Aëtius, he sometimes modified the order of the lemmata excerpted from Stobaeus to the right so that it conformed to the order of ps.Plutarch's chapter on the left, (re)numbering them in the process, for instance in ch. 1.3. He also found room in between or elsewhere in a chapter for lemmata not paralleled in ps.Plutarch. Again this was in general correct, as one must admit. Most of the time Stobaeus writes out the lemmata in their original order, even when he intersperses them with non-Aëtian material, or coalesces a chapter used as matrix (as for instance ch. 2.13) with material from other Aëtian chapters. It is the lemma order of these other chapters that is disturbed, and has to be reconstructed. The snag is that the impression can hardly be avoided that this reconstructed order actually is the original Stobaeian order, which of course it is not. In this shared sequence as reconstructed Diels also inserted the newly numbered excerpts from Theodoret, though without adding the text, for which the reader had to consult the apparatus in the right column below. So he achieved a complete numbers system for Aëtius, the numbers of the lemmata interlocking like the teeth of a zipper. The effect of this (re)arrangement is that the relationship in terms of microstructure between the chief witnesses is made to appear closer than it actually is. This, then, is the *Aëtius redivivus*, but there

102 See above text at nn. 67 & 92.

103 *DG* 273–444.

104 We have called this *traditio ps.Plutarchi*. Note that his collection differs in part from ours.

again it is not, for although the witnesses have been Aëtianized in the way we described, they still remain separate. Simply put, it is a brilliant but ultimately unsatisfactory compromise.

The first subsequent use that Diels made of his text collection in the *Doxographi Graeci* occurred in 1901. Among the testimonia or A-fragments in the *Poetarum Philosophorum Fragmenta* he included selected Aëtian lemmata (and fragments of Hippolytus and Diogenes Laertius etc.) in their purported Theophrastean order of topics. The next move was to reprint these and add others in the corresponding chapters of the single volume *Fragmente der Vorsokratiker* published in 1903 with of course entirely new selections included in the numerous chapters dealing with prose authors. These were then augmented here and there in the subsequent editions of the text in two volumes.¹⁰⁵ The crucial role played by the Aëtian evidence is unmistakable. In the *Index locorum* in two columns by Diels, with additions by Kranz, first found in the third volume of fourth edition of 1922 of the great work, the references stretch over no less than four-and-a-half pages.¹⁰⁶ From their basis in the *Poetarum Philosophorum Fragmenta* of 1901 and the *Fragmente der Vorsokratiker* of 1903 and later editions, the Aëtian fragments began to colonize other fragment collections and the ever-increasing secondary literature.

In Diels' two fragment collections the lemmata abstracted from either ps.Plutarch or Stobaeus, depending on who has more on offer, are invariably cited with the abridged author name 'Aët.', plus reference to the Aëtian numbers system conveniently followed by the page number of the *Doxographi Graeci*.¹⁰⁷ Occasionally lemmata from two witnesses are coalesced and the result then also cited as 'Aët'.¹⁰⁸ But it should be further noted that several lemmata abstracted from Theodoret are not cited as straightforward Aëtian texts but announced as 'Theodoret. aus Aëtios' (with reference to *DG* added).¹⁰⁹ There is no need to assemble full lists of these types of reference. It should be noted that printing the abstracts from Theodoret in the *Doxographi Graeci*

105 We generally limit our references to this work to the first 1903 edition and the final edition revised by W. Kranz (1951–1952).

106 There is no *index locorum* in Diels (1901a) and (1903).

107 E.g. for Thales 1A23 *PPF* = 1A23 *VS* and 11A23 *DK*, the reference is Aët. I 7, 11 (D. 301); cf. in our edition ch. 1.7.2 with the reference to *DK* given in the first apparatus under the text.

108 E.g. Heraclitus 12A15 fourth text *VS* = 22A17 *DK*, where a Theodorean and ps.Plutarchean lemma have been coalesced, not correctly in our view; cf. in our edition ch. 4.7.2 and app. crit.

109 E.g. at Xenophanes 11A36 *PPF* = 21A36 *VS* and 31A36 *DK* 'Theodoret. IV 5 aus Aëtios (D. 284 not.);' cf. in our edition ch. 1.3 *Testes primi* = Theodor. *CAG* 4.5 (i). The *Index locorum* of *Vors.* lists six separate references to Theodoret, five of which are to 'Aëtian' passages.

underneath the twin columns of ps.Plutarch and Stobaeus instead of placing them alongside in a third column could not have only been due to the fact that such a column would have been for the most part empty. It would surely have been possible to add narrower columns alongside the other two for those chapters where parallel texts were available.

The present-day digital resource, the *Thesaurus Linguae Graecae*, aware of the problem of multiple witnesses, presents ps.Plutarch as ps.Plutarch, and Stobaeus and Theodoret not only for themselves but also together as Aëtius, a not very satisfactory but not incomprehensible decision. Editors of texts and fragment editions have tried out various other solutions. Mansfeld in the Reclam *Vorsokratiker* of 1983–1986 added references to the witness(es) of selected Aëtian text fragments. Gemelli Marciano in the Tusculum *Vorsokratiker* of 2006–2010 added references to the witness(es), but not consistently. Graham in his *Texts of Early Greek Philosophy* of 2010 added abridged references to the witness(es) for the texts he printed.

Others have opted for printing the texts of the individual witnesses in full. Van der Eijk in his renowned edition of the fragments of Diocles of 2000 distinguishes between a, b and c fragments: e.g. under fr. 24a we find a reference to Aëtius 5.14 with the relevant page of the *Doxographi Graeci* but no text, under b the text of ps.Plutarch 5.14 with reference to Lachenaud and oddly not to the *Doxographi Graeci*, under c that of ps.Galen c. 118 with reference to the relevant page of the *Doxographi Graeci*.¹¹⁰ Note that there are no Stobaeian parallels for Diocles, since Stobaeus is almost entirely lost for Book 5.

The solution of Wöhrle in his very useful edition of the remains of Thales of 2009 as pilot volume of the *Traditio Praesocratica* series is to gather all the texts of ps.Plutarch together as frs. 146–165, those of Stobaeus as frs. 339–371, those of ps. Galen as frs. 391–405, and even four from Qusṭā ibn Lūqā (because of ‘relevant differences’ from the original) as frs. 488–491, thus separating them as far from each other in the edition as their source authors are chronologically.¹¹¹ The laudable motive behind this breakup is to reveal the

110 The same division is applied in Diocles frs. 42, 48, 51 and 51. Unfortunately Van der Eijk’s view of ps.Galen is a little inaccurate. He writes (2000–2001, 43): ‘Pseudo-Galen is believed to be derived from Pseudo-Plutarch and to have no independent value; he sometimes abbreviates the report (as here) and sometimes creates considerable confusion’. Then why include him?

111 Same procedure in Wöhrle (2012) for Anaximander and Anaximenes, and Strobel–Wöhrle (2018) for Xenophanes. On the methodology of this series see McKirahan (2018) at M–R 4.480–490. The elaborate cross-references at the end of many doxai are no more than a stop-gap measure.

particular nature of each of these contributors,¹¹² but this can better be realized by other means. To the uninitiated reader the dispersal will suggest that these texts are unrelated. The separation by almost 250 pages of the Arabic translation from its Greek original cruelly reveals the drawbacks of the system.

The cautious Sharples in the introduction to his useful collection of translated texts of the Peripatos (2010) writes as follows: 'I have ... given reference to 'Aëtius' only in cases where a passage occurs in both witnesses [i.e. ps.Plutarch and Stobaeus]; where it is found only in one I have given the reference to that witness first and then added the reference to 'Aëtius'.'¹¹³ Isnardi Parente in her edition of Xenocrates (second ed. by Dorandi 2012) prints both sources for ch. 1.3.22, Stobaeus by the name of 'Aetius' as her fr. 21, Theodoret by the name of 'Teodoretus' (sic) as her fr. 22, calling the latter a 'dull repetition' by 'probably the same doxographer Aëtius'.¹¹⁴ It is clear that such diagnostic solutions can only be provisional. They are not really helpful, both with respect to the traditions involved and to the relative value of these testimonia for the reconstruction of the project of a doctor or a philosopher.

Mansfeld–Primavesi in the revised Reclam *Vorsokratiker* of 2011 replaced the selected Aëtian lemmata deriving from Book 2 of the earlier edition with the reconstructed texts in a single column of *Aëtiana* vol. 2.2 of 2009, against the background of the analysis offered in that study. This was a limited first, since the evidence of the other Books was not yet available.

Returning to Diels, we should note in conclusion that in the *Doxographi Graeci* he also printed a few chunks of text in the Stobaeian column that should be ascribed to Arius Didymus, in spite of hesitations that he himself expressed in the *Prolegomena* and the apparatus criticus. These texts should have been incorporated in his pioneering collection of fragments of Arius Didymus further down.¹¹⁵ We note that his decision to put the Peripatetics before the Stoics¹¹⁶ obscures the fact that in one and the same Stobaeian chapter both schools are quite often cited, which for us may be a factor in assigning an anonymous passage to Arius Didymus rather than Aëtius.

¹¹² Wöhrle (2009) 5–6.

¹¹³ Sharples (2010) xvi.

¹¹⁴ Isnardi Parente (2012) 262.

¹¹⁵ See the analysis of Runia (1996b), reprinted in M–R 3.313–332, aspects of which are further advanced in the present edition.

¹¹⁶ He may have thought of the large fragments on ethics in the *Eclogae ethicae*, but there the order is not chronological, as the Stoics come first.

3.2 *A New Edition without Columns and with Commentary*

Diels' edition of Aëtius in the *Doxographi Graeci* is a magnificent and virtually exhaustive collection of the ingredients (in as far as they were available to him) which one needs to form a picture of the compendium and its text. In the end, however, his design does not work well, as one realizes when looking at the way he uses this documentation in both of his subsequent fragment editions. Where only a single witness is extant he had of course no choice, but where two or more witnesses are to be had, he as a rule chose the most complete version without revealing the existence of a parallel transmission. Occasionally he coalesced two witnesses. But as we have seen in the previous section, in all those cases apart from a few exceptions regarding Theodoret, he simply attributed these texts to Aëtius. The various contributions of the witnesses, including the representatives of the *traditio ps.Plutarchi*, remained invisible. To be sure, he always referred back to a page in the *Doxographi Graeci*, but looking this up would not help the average reader, who normally is blissfully unaware of the complicated tradition and of the hardly less complicated hypothesis behind the reconstruction.

Because we felt uncomfortable with this situation, we decided in the early nineties of the last century to try and see if a reconstruction in a single column, i.e. one without parallel columns, would be a possible and practicable undertaking. The result was vol. 2.2 of *Aëtiana*, the *specimen reconstructionis* of Book 2 in a single column, already discussed above in section 2.8. This *Lesetext* seems to have been little used.¹¹⁷ It has never been critiqued, apart from the misguided attempt of Bottler, who for her edition of Books 1 and 2 excludes all irreducible chapters and lemmata, and throughout refuses to accept Theodoret as the crucial third witness.¹¹⁸

In the present edition we now offer a unified text of the whole treatise, with a substantial commentary on the constitution of the text of each chapter, on its structure and contents and its relation to the various traditions, accompanied by generous selections of related doxographical and other evidence. We print the full evidence for the Aëtian text of Theodoret and the *traditio ps.Plutarchi*, but have decided not to include the far more voluminous texts of ps.Plutarch and Stobaeus.¹¹⁹ Actually the texts of these two primary witnesses are for the most part present in the single column of the Aëtian text as reconstructed in the present edition, and their readings are fully reported in our positive appar-

117 An exception should be made for the research on Presocratic cosmology by the Dutch scholar Dirk Couprie.

118 Bottler (2014).

119 On this decision see further below sections 4.2.15 and 4.3.4.

atus criticus. Whoever wishes to look at them separately as well as together *uno obtutu* will find them conveniently accessible in the parallel columns of the *Doxographi Graeci*, which it would be otiose to reproduce. The contribution of Theodoret to the reconstructed text is far less important. As we have seen in section 2.5 above, his worth is in his role as third witness for the original treatise. His less voluminous excerpts are always printed as the first of the *testes primi*.

Reference to the presence and location of lemmata in one or two or all of the three primary witnesses is also supplied by the presence of the numbered sigla P, S and T at the end of the Greek text and English translation of each individual lemma in all chapters.

We also print the textual evidence of the representatives of the proximate tradition in full, and in the final part of each chapter give generous selections from a wide array of source and other parallel material.

The positive apparatus criticus naturally signalizes all the relevant contributions of the main witnesses including the *traditio ps.Plutarchi*, and reports all *variae lectiones* that are significant. But it also records omissions, minor or not so minor *lapsus calami*, paraphrases that are elaborate but misleading or wrong, and downright mistakes. This evidence is essential for understanding the relations between the representatives of the unusually complex tradition. The extensive positive apparatus is a necessity, for there is a considerable difference between editing a single text from a multiplicity of manuscripts together with a few quotations, where a negative apparatus normally is all that is needed, and reconstructing a single text from a multiplicity of individual sources, each of which has its own manuscript tradition or tradition of indirect transmission.

Two further important differences between the Dielsian and our edition require further explanation. Whereas the two columns and apparatus of Diels' text, supplemented by his remarkably thorough and full *Indices nominum et verborum*, made the text itself very accessible (if not necessarily well understood), this cannot be said for the process of determining that text and placing it in its context both in the work itself and in the wider tradition of ancient philosophy. To achieve this understanding, the user was asked to delve into the complexities of the 263 page 'Prolegomena', to which Diels repeatedly refers in the apparatus to the text. But this was to ask for the well-nigh impossible. From the very outset it was recognized that this introduction, written in a rather pretentious scholarly Latin, is almost impenetrable for all but the most determined and knowledgeable reader. Susemihl's remark that it needs a Delian diver, echoing Socrates' comment on Heraclitus, is often quoted.¹²⁰

120 Based on Diogenes Laertius *V.P.* 2.22; see M–R 1.66 and on the 'Prolegomena' 1.73; as noted

It needs to be recognized that much in the *Placita* that requires explanation relates to the particular context of the doxa or chapter. Lacking a commentary, there was much that Diels was unable to explain. By attaching a commentary to each chapter, we are able to remedy this deficiency. To the extent practicable, we not only place each segment of the text in its context, both in the work itself and in the wider tradition, but we also explain every move that we make in our reconstruction. In addition, we analyse each chapter in relation to its structure and macro-content. As for the content of each doxa, we explain the more important features, but it is clear that at this point there are limits. The process of commentary is in principle endless and one has to draw the line somewhere. It cannot be our aim to give a comprehensive commentary on what amounts to a summary of the entirety of pre-Imperial natural philosophy.

A further feature of our edition is the placement of a collection of Further Related Texts at the end of each chapter. As already noted, the extent to which Diels was able to locate the contents of Aëtius' compendium in the tradition, not only of what he dubbed 'doxography' but also in the wider tradition of Greek philosophy as it developed up to the first century CE, was quite remarkable. But here too, as we touch on in more detail below in section 5.1, the evidence is both scattered in the rest of the *Doxographi Graeci* and hidden away in its 'Prolegomena'. In our edition we have linked this contextual material to each chapter where it is most relevant, usually citing the texts in full. This method also gives us the opportunity to give a much fuller picture of the sources that the doxographical tradition was based on, in Hellenistic philosophy, Aristotle and Theophrastus, as well as Plato and the philosophers before him. In so doing we always link this material to the concrete texts in the relevant chapters and their contents.

3.3 *Apologia for Our Method of Reconstruction*¹²¹

It seems that the *Placita* attributed to Aëtius occupies a unique place among the literary writings known to us from antiquity. There is no comparable work which has failed to survive in its original form but can be so fully reconstructed from ancient evidence.¹²² As was stated above in section 2.8, by using advanced statistical techniques it can be demonstrated that about 86 % of the original work is extant, distributed among the three witnesses. More precisely,

on p. 105, later in life Diels himself admitted that it needed to be 'übersichtlicher', but he never presented a more accessible version.

121 For the argument of this section in more detail see Runia (2020).

122 See the comparison with reference to six different kinds of incompletely extant texts in Runia (2020) §5.

the extant remains in our reconstruction amount to 769 lemmata distributed in 135 chapters. But the evidence for these lemmata is unequal. Only 7% are witnessed by all three witnesses; 41% by two of the three; and 52% by just a single witness. This statistic does not include the chapter headings of the work. Of the 133 headings in the *Epitome*, only 100 are witnessed by Stobaeus, who in turn provides evidence for two more which ps.Plutarch did not retain. This means that 35 headings are not attested by more than one witness.¹²³ Moreover, there are 18 cases where the entire chapter is witnessed only by ps.Plutarch. These include lengthy monolemmatic chapters such as 1.4 on how the cosmos was constituted and 1.6 on how human beings gain knowledge of the deity, and also 4.11 and 4.12 on Stoic epistemology, all of which deviate from the usual method of the *Placita*.¹²⁴

The state of affairs conveyed by these observations might give rise for concern. More than half the lemmata of our reconstruction, a quarter of the chapter headings and more than a seventh of all its chapters can be described as ‘irreducible’ texts. By ‘irreducible’ we mean, as the etymology of the term indicates, ‘what cannot be led back to’, i.e. back to a secure multi-witnessed text. The crucial innovation of our edition is that its text is presented in a single column. As noted above in section 2.8, the *specimen reconstructionis* that we made of Book 2 demonstrated that this was possible. What does the prevalence of such ‘irreducible texts’ mean for the status of the text that we have produced.

Much depends here, as we have already seen, on the decision made by Diels to base his reconstruction on the macro-structural framework supplied by the *Epitome*. To our knowledge this has never been questioned. Much of that framework is reinforced by the evidence of Stobaeus, who used it for the basic structure of his own Book 1 of the *Eclogae*. Importantly, it is also confirmed by Theodoret, not by his actual borrowings which are quite limited, but by the fact that when he does paraphrase, he always follows the sequence that we know from the *Epitome*.¹²⁵ It is theoretically possible that the Epitomator may have added material of his own, but not at all likely. His task was to convey the essen-

123 On some occasions Theodoret alludes to chapter headings, e.g. at CAG 4.22 to A 2.21–22 and CAG 5.22 to A 4.5. The latter text is the only place where he confirms a heading in P not attested by S.

124 The complete list of such chapters is 1.1, 1.4, 1.6, 1.8, 3.6, 3.12, 3.14, 4.1, 4.11, 4.12, 5.1–5, 5.22, 5.23, 5.29 (not including the four proemia which are only found in P). In the case of 4.12 the heading *Περὶ φαντασίας καὶ χρηρῆς* in Photius is probably an indication that S took up material from this chapter.

125 See above sections 2.3–5.

tials of the original work, not to create a new work (unlike ps.Galen).¹²⁶ It is easy to show that the ps.Plutarchean material not paralleled in Stobaeus has a legitimate place in the kind of compendium that Aëtius was putting together, including the important introductory passages.¹²⁷

It is also important to examine this question of irreducibility at the level of the individual lemmata, of which there are 769 in our reconstruction. From Diels onwards attention has been directed almost exclusively to the lemmata evidenced by both ps.Plutarch and Stobaeus (the P/S lemmata).¹²⁸ This has no doubt been inspired by his choice to present the reconstruction in two columns. But for the full legitimization of the Dielsian hypothesis and our development of it, it is no less important to look at the lemmata evidence furnished by Stobaeus and Theodoret together, that is, the S/T lemmata, which exclude any ideas that the bishop might have only excerpted the *Placita* via Eusebius or some other version of ps.Plutarch's *Epitome*.

In fact, as the table in Appendix 3 shows, there are no less than seven categories of lemmata. In addition to the P/S and S/T lemmata, there are also doxai recorded by all three witnesses (P/S/T). Then there are also a number of P/T texts, preserved by ps.Plutarch and also attested by Theodoret. Finally there are the doxai to which we have access through the testimony of a single witness only, of which of course there are three. The table confirms, as already noted, that only about 7 % of all lemmata are preserved (however fully) by all three witnesses (55 in total), 41 % by two (314), and the largest group of 52 % by one only (400).

The third (and largest) group are all, in terms of our definition above, 'irreducible' texts. But this is by no means as problematic as might appear at first sight. What must be done is evaluate the nature of the evidence that we have for each witness in the light of what we have come to know about the different methods that they used (and as we have summarised in section 2 above). It is apparent that by far the majority of lemmata stand in micro-environments (or Aëtian enclaves, as we have called them in sections 2.4 and 2.5 above) where there can hardly be any doubt that they go back to the original work. As argued above, ps.Plutarch will have, in all likelihood, not added lemmata of

126 It should be noted that ps.Galen does not call his work an *Epitome*, but introduces the new title Φιλόσοφος ἱστορία.

127 See discussions at M–R 2.22–26, 147–148 (where it is suggested that chs. 4.11–12 may be a conscious effort to update earlier Peripatetic discussions with Stoic material), and below at these chapters.

128 Notably by Lebedev (1988), (2016), and by Bottler (2014), who makes these the entire basis of her research.

his own. If the other two witnesses import foreign material within sections of text recording the *Placita*, as Stobaeus does with extracts from Arius Didymus and Theodoret on one occasion with an extract from Clement and on another one with an account of the Eleatic Succession, this is generally obvious to the careful reader.¹²⁹ Just because a text is only known to us through a single witness only, this does not mean that its Aëtian status cannot be considered quite certain (although there will always be some dubious cases).

An additional element of uncertainty is introduced when we order the lemmata within a single chapter. The two main witnesses, because of the methods that they use, quite often display variation. In most cases analysis shows that ps.Plutarch retains the original order in his abridgement. Moreover, this order is very often confirmed by Stobaeus who, as we have already seen,¹³⁰ generally retains it as the default option unless his anthological techniques determine otherwise. Ps.Plutarch's practice conforms of course to what we have above called the law of least effort.¹³¹ But this assumption should not always be made blindly, as Diels tended to do. There are cases where it makes sense to prioritise Stobaeian practice above what is found in the *Epitome*.

Importantly, however, there is another kind of textual material which differs from those just discussed, but is none the less irreducible to a single multi-witnessed text. These are texts for which there is more than one witness, but which contain textual variants that cannot be reduced to each other. A clear example of such texts is found in the chapter headings of the compendium.¹³² As can be readily seen in the apparatus criticus to each chapter, these contain a remarkable amount of variation in their formulation. In many cases there are shorter and longer variants, less often there are quite different alternative versions. For example, for ch. 2.20 on the nature or substance of the sun there are four different formulations spread out over nine witnesses (including manuscripts and a secondary witness).¹³³ Such variation illustrates the intrinsic fluidity of the doxographical tradition, in which no particular formulation has a unique authority and compilers, users and scribes have the freedom to alter

129 On passages of Arius Didymus in Stobaeus see M–R 1.238–265; Algra (2018) 62–64, who states that ‘the careful approach taken by Mansfeld and Runia has led to conclusions that are, in my view, on the whole persuasive’ (p. 64). On the text at Theodoret *CAG* 5.24–25 taken from Clement *Strom.* 8.10.3–4, see Mansfeld (1990a) 3188 and also above section 2.5.

130 See above section 2.3 text to n. 6 and section 2.4 text to n. 14.

131 See above section 2.3 text to n. 4.

132 On these headings see our preliminary treatment at M–R 2.196–204.

133 These are: short, Περὶ ἡλίου; fuller, Περὶ οὐσίας ἡλίου; and two extended variants (Περὶ οὐσίας ἡλίου καὶ ὅτι δύο καὶ τρεῖς εἰσὶν, Περὶ ἡλίου καὶ ὅτι καὶ δύο καὶ τρεῖς εἰσὶν); for more details see Runia (2020) section 4.

as they wish. In this situation the editors can do no more than select the variant that is best attested and/or makes the best sense, particularly in relation to the contents of the chapter. This is an entirely reasonable procedure in light of the considerable variation that book titles and chapter headings always displayed in ancient writings, particularly those in the non-literary and technical sphere.

Name-labels, which play a key role in the method of the *Placita*, can also display irreducibility, though this in most cases does not give rise to great difficulties. Ps.Plutarch often reduces the number of names in the original work, as can be seen when compared to Stobaeus' fuller version. A striking case is found in the chapter on the cosmos where extended lists of eleven and nine names are reduced to a single formula and three names respectively.¹³⁴ Of course, if there is only a single witness for a chapter, then any such reduction remains undetectable.

But it also occurs quite often that there is variation in the body of the doxa itself. Those cases where a witness expands an elliptic formula, as Stobaeus sometimes does on account of his practice of coalescing doxai from different chapters, are usually easily spotted.¹³⁵ Much more difficult is when the witnesses furnish texts of the same doxa which differ on essential points.¹³⁶ Theodoret's paraphrases can usually be discounted. But ps.Plutarch and Stobaeus are purportedly excerpting the same text. Here careful textual analysis, assisted by knowledge of the methods of each witness, has to point the way. As editors of a reconstruction of a single text, we cannot avoid making choices. But the necessity to make such choices is compensated by the fact that they are fully documented. All the textual variants are available for scrutiny in the apparatus criticus. Moreover, in our Commentary we often explain the reasoning behind our choices.

What status, then, do we claim for our edition? It cannot have the same status as a fully critical edition of the transmitted text of an ancient work. Because of its incompleteness and because of the irreducible texts that it contains, it necessarily exhibits a greater degree of uncertainty. We—and those who consult our edition—will have to be content if the text it offers bears a well-reasoned resemblance to the lost original. Our edition is intended above all to provide a text for practical use. It presents all the evidence available for the understanding of the extant remains of the *Placita*. The greatest benefit that it brings is that it will open up to scrutiny all the features of the doxographical

¹³⁴ See ch. 2.1.3–4. A more difficult example in ch. 2.3 is discussed in Runia (2020) section 4.

¹³⁵ On this practice see above sections 2.4 and 2.5 final paragraph.

¹³⁶ For some salient examples see Runia (2020) section 4.

work of Aëtius, together with the tradition that he drew on and that drew on him, doing this to a much greater degree than has ever been done before.

4 Introducing the Witnesses to the Text

In this section we now proceed to give an overview of the authors and texts that we have used in producing our reconstruction and edition of the *Placita* attributed to Aëtius. Our focus is now on the origin, characteristics and present state of the texts that are available for use. It is also important to indicate the textual editions that we use for our reconstructed text and commentary. But first it will be worthwhile to define more exactly the various kinds of texts that are available to us.

4.1 *A Taxonomy of Authors and Texts*

In our edition we distinguish between four different kinds of authors and texts. Of these only the first two are regarded as witnesses to the lost original text of Aëtius. The taxonomy that we shall now set out refines the earlier distinction that we made between witnesses and sources.¹³⁷

- (1) *Primary witnesses (testes primi)* are those authors and texts which in one way or another have a primary relation to the original text. Their texts *go back in a linear fashion* to the original version of the *Placita*, although not necessarily directly. As we described in some detail in section 2 above, there are only three authors of which we can be certain that they actually used that text at first hand, i.e. had a copy of the *Placita* on their desk as it were. These were ps.Plutarch, Stobaeus and Theodoret. They are the key witnesses to the work. Of these ps.Plutarch stands out, not only because he—writing in the second century—is by far the earliest of these witnesses, but especially because his *Epitome* of the original work enjoyed considerable success and gave rise to a copious secondary tradition of usage. Authors such as Eusebius, ps.Galen, Cyril, and Quṣṭā thus are primary witnesses, but their knowledge of Aëtius' compendium is at second hand via ps.Plutarch. There is even usage at third hand. Two examples are Nicolaus of Rhegium, who in 1341 made a Latin translation of the epitome of ps.Galen, and the late 15th cent. paroemiographer Arsenius, who cites a section from ps.Plutarch which he actually copies out from his text of Eusebius.¹³⁸ But he nevertheless qualifies in our sys-

¹³⁷ See above n. 1.

¹³⁸ On Nicolaus see further below section 4.2.4. For Arsenius see *Apophthegmata*, Cent. 8 100c

tem as a primary witness because his text ultimately goes back in a linear relation to the original text. Stobaeus also has a secondary tradition but it is much more limited, consisting only of the report of his work's contents by the Patriarch Photius, unless one wishes to regard as such the incomplete index of chapters in the Laurentianus ms. Theodoret does not have a secondary tradition that we have to take into account.

- (2) *Secondary witnesses* (*testes secundi*) are those authors and texts which contain material which is very similar, often also in its wording, to that of the primary witnesses, but is *not* derived in a linear fashion from the original compendium. These texts are clearly drawn from doxographical traditions which were very close to those on which Aëtius' work was based. In an earlier volume we described these works as 'cousin writings'.¹³⁹ The most important of them are Achilles and Nemesius. The number of such authors and texts is quite restricted and it is of the nature of their evidence that they make only a very limited contribution to the constitution of the text. They are, however, of value for the task of understanding the more general tradition of the *Placita* texts, of which Aëtius' work is by far the best surviving example. In certain cases, such as Athenagoras and ps. Justin, because of the way that they paraphrase their sources, it is very difficult to determine whether they may have used either Aëtius himself or his epitomator directly or not, i.e. whether they are primary or secondary witnesses. When such uncertainty exists, we place them in the second category.
- (3) The *Proximate tradition* is a step further removed from the original work. It contains all those authors and texts which record material derived from the broader dialectical-doxographical tradition, which includes not only the witnesses mentioned so far but also texts which present the doctrines of ancient philosophers, but do not necessarily use the particular method of recording doxai of the *Placita* type. For example authors using the Περὶ αἰρέσεων method, such as Arius Didymus, fall under this category. It has to be said that the difference between Secondary witnesses and the Proximate tradition is one of gradation. An interesting example is found in the evidence supplied by Philo of Alexandria, very likely an older contemporary of Aëtius. The summaries that he gives of key questions and doxai on the heavens and the soul clearly go back to material very similar

Von Leutsch, the text of 1.10 Περὶ ἰδέας which he copies out from Eusebius *PE* 15.45, cited among the witnesses of ch. 1.10.

139 See M–R 1.305, where we introduced the term, and also 331.

to that from which Aëtius drew his stock.¹⁴⁰ Similarly Cicero's account of theological doxai in *De natura deorum* Book 1 and the parallel text in Philodemus' *De pietate* reveal close parallels to the chapter on theology in Aëtius 1.7, and for this reason Diels included them in parallel columns in the *Doxographi Graeci*.¹⁴¹ These texts could have been placed among the secondary witnesses, but the fact that they are dependent on texts that clearly antedate Aëtius' compendium have led us to place them in the proximate tradition. This tradition will be further examined in section 5.1 below.

- (4) There remain *Sources and other related texts*. This category contains all the remaining authors and texts which can shed light on the contents of Aëtius' compendium, but have a more distant relation to it because they do not belong to the doxographical tradition narrowly defined.¹⁴² They include texts which provide the source-material for the doxai which the compendium records: very little from early Greek philosophy, more in Plato, and copious amounts in Aristotle. They also include many texts in the post-Aristotelian period up to the end of antiquity and beyond. We discuss aspects of this category of texts in sections 5.1–2 below.

It should be noted that in our edition we treat the first two and last two of these categories quite differently. The first two are listed together at the beginning of each chapter and to a considerable extent (but not completely, as will be explained below) they are printed in full. The last two are presented as Further Related Texts at the end of each chapter.

Finally, we point out that there is a very important distinction that must be understood in relation to these four categories of texts. The criterion for inclusion as a primary witness is *absolute*: a text either belongs to this category or it does not, depending on whether it has a linear relation to Aëtius' original text (though this can be at first or second hand, or even further removed). In the case of the other three categories inclusion is *relative*, depending on what kind of relation exists to the doxographical tradition, whether narrow or more broadly conceived. As already noted, however, for some texts it is not possible to determine with exactitude whether there is a linear relation to Aëtius, or more commonly, to ps.Plutarch. In these cases they can be regarded as either primary or secondary witnesses and their precise status in our scheme remains uncertain.

140 See our text and commentary on chs. 2.11, 2.13, 2.25, 4.2, 4.5.

141 See ch. 1.7 and Diels *DG* 529–550. His text of Philodemus is now obsolete.

142 For a current understanding of this tradition see Mansfeld (2016d).

4.2 *The Primary Witnesses: The Epitome of Ps.Plutarch*

The epitomator ps.Plutarch, as just noted above, occupies a special place because he is the earliest and because he bears witness to the most copious amount of the original text.¹⁴³ Moreover, there is an extensive tradition that depends on him, which probably led to the original work becoming a rarity. We thus commence with his work and its tradition.

4.2.1 The Papyrus and the Manuscripts

As noted above in section 2.3, an unknown author produced an epitome of the *Placita* at an unknown location probably in the second half of the second century CE.¹⁴⁴ He is certainly not to be identified with the famous Plutarch of Chaeronea, whose name was appropriated for the pseudonymous work. The earliest directly transmitted text of the work is the papyrus P.Ant. 85 & 213, found in Antinoopolis in Upper Egypt and dated to the third century CE by its editor J. Barns.¹⁴⁵ It consists of twelve small fragments from what clearly was a complete codex of the work. In all they contain about 800 letters of text from 20 chapters, spread out throughout the work with the exception of the first book.¹⁴⁶ They give fascinating information about the early state of the work, including a possible different book division,¹⁴⁷ and also interesting insight into often rather careless scribal practices, e.g. omissions and haplography.¹⁴⁸ In one case at ch. 5.1.1 the papyrus offers a fuller and superior text. It is also interesting that it appears to furnish a short chapter heading for ch. 3.16 in contrast to the remainder of the P tradition. For the most part, however, the textual material offered is too scanty to be of much assistance for the constitution of the text. The text of the papyrus as edited by Barns is presented for the relevant chapters under *Testes primi* and all variant readings of the papyrus are recorded in the apparatus criticus to the text.¹⁴⁹

143 For the exact statistics see above at n. 5 and text thereto.

144 See the fuller account at M–R 1.126–130.

145 Barns–Zilliaccus (1960), (1967).

146 Distribution per book is: chs. 2.23, 2.25 (2); 3.7, 3.11, 3.15, 3.16 (4); 4.8, 4.11, 4.22, 4.23 (4); 5.1, 5.3, 5.4, 5.7, 5.13, 5.15, 5.20, 5.21, 5.23, 5.24 (10).

147 The number 42 at ch. 5.4, on which see M–R 1.127 and ch. 5.4 Commentary C.

148 Omitted lemma A 5.1.2; name 2.25.10; and words at A 3.15.6, 5.10.1 etc. Haplography at A 3.16.5, 4.23.2–3, 5.7.2.

149 It should be noted that Barns very understandably takes Diels as his starting-point for filling in the missing gaps and often finds that the Dielsian text does not fit well. This suggests that the codex may have had many readings that differ from the manuscript tradition. But the editor could not work with an adequate text of the entire tradition. In one case we have been able to make use of a further reconstruction by O. Primavesi; see ch. 5.1 Commentary D(b).

The full Greek text of ps.Plutarch's *Epitome* is transmitted in almost complete form in about 20 Byzantine manuscripts, of which only five are of independent value.¹⁵⁰ The oldest and best is the Mosquensis 339 (12th cent.), complemented by the Marcianus 521 (13th/14th cent.). A slightly different interlinked tradition is the Planudean family, consisting of the Ambrosianus 859 (shortly before 1296), the Parisinus 1671 (dated 1296), and 1672 (dated shortly after 1302). Other mss. derived from these five are of almost no value. All these manuscripts have been shown to derive from a single archetype to be dated to about 1000.¹⁵¹ It cannot be said that the quality of the text preserved in this archetype was high. The text of the Byzantine mss. is riddled with errors and lacunae. In the edition of Mau—to be further discussed below¹⁵²—*obeli* proliferate with alarming frequency.¹⁵³ An egregious example is found in ch. 2.11 on the substance of the stars: the final three lemmata are fused into a single sentence which attributes a doxa to Aristotle that is a strange mixture of the familiar and the incomprehensible. Another example involving Aristotle is found at ch. 5.23, where the defective name-label becomes the adjective τέλειος, which forces the copyist to improvise, so that the succession of the first two doxai becomes obscured and a third disappears completely. But the text of the direct tradition at least has the virtue of being nearly complete. Through the indirect tradition of ps.Galen and Qusṭā we know of only six lemmata wholly missing, all but two of which occur towards the end of the work (5.19–29).¹⁵⁴ Evidently the archetype was damaged at the end, as often occurs. We return to the Byzantine text of ps.Plutarch below (section 4.2.15) after first surveying the extensive indirect tradition of the work.

4.2.2 Eusebius

The first writer to utilize ps.Plutarch's *Epitome* whom we can date with accuracy is Eusebius of Caesarea (c. 263–339).¹⁵⁵ In his *Praeparatio Evangelica*, writ-

150 For a brief discussion of the Byzantine manuscripts see M–R 1.171–173, with further references. A complete list of the mss. is given by Lachenaud (1993) 64–65.

151 As postulated by Diels in his stemma at *DG* 40; cf. also M–R 1.172.

152 Section 4.2.15.

153 There are 64 in total in a text of 104 pages.

154 Extra lemmata in ps.Galen are A 2.20.15; 3.1.10; 5.19.5; 5.23.3. One of these is also in Qusṭā: 5.19.5. But he alone also records 1.21.2a and 5.29.3, as well as fuller versions of 5.27.2 and 5.29.2 (and the name-label in 5.30.2). So six doxai in total are to be added to the 557 preserved in the direct tradition.

155 A lengthier account of Eusebius as witness for the *Placita* is given in M–R 1.130–141. On the Patristic authors Athenagoras and ps.Justin, who may have utilised the *Epitome*, see below 4.5.1 and 4.2.3.

ten in the early years of his episcopate which commenced in 313,¹⁵⁶ Eusebius includes copious extracts from the work. No doubt he will have found a copy in the famed Episcopal Library of the city, the contents of which he used prolifically in his extensive *œuvre*.¹⁵⁷ The compact volume of the *Placita* was an ideal resource for Eusebius when he wished to incorporate and exploit the doctrines of the Greek philosophy in his defence of Christianity. What better way to demonstrate the nefarious dissension (διαφωνία) and strife (λογομαχία) of the philosophers, as opposed to the unified truth of the Gospel.¹⁵⁸ The method for doing this is to use as evidence the testimony (μαρτυρία) of their own words.

Scholars are in general agreement that Eusebius' methodology involving the extensive use of *verbatim* citations as an integral part of his apologetic argument was highly innovative, even when the background of using excerpt collections in the Imperial period is taken into account.¹⁵⁹ By citing the very words of the author themselves, he could claim them as authentic witnesses, whether in a negative (Hellenic) or a positive (Jewish and Christian) perspective. But of course it was the organiser of the entire work who was pulling the strings.¹⁶⁰ In all Eusebius cites 187 lemmata from 41 chapters of the *Epitome*, amounting to a third of the doxai of the entire work. In Book 14 he uses limited extracts from Book 1 to illustrate first principles and theology.¹⁶¹ In Book 15 the citations are much more extensive, covering large sections of cosmology and meteorology, with just two chapters cited on psychology.¹⁶² He emphasizes in his connecting passages that he cites the very words of his source.¹⁶³ This *verbatim* method is of course most valuable for textual purposes. But we should not be deceived. Because the work is extant in other forms of transmission it is possible to keep a check on his citation practice. It is generally accurate, but there are cases of 'tampering' with the text, sometimes deliberately, at other

156 Barnes (1981) 278.

157 On Eusebius' library see Carriker (2003); on ps.Plutarch p. 114.

158 On Eusebius' articulately presented programme in *PE*, see M–R 1.130–132.

159 See discussion and references to scholarship in Inowlocki (2006) 33–73.

160 As Inowlocki, citing J.-P. Schreiber, states (2006, 58): '... it is precisely when the speaker (in this case Eusebius) withdraws in order to let another speaker express himself or herself, that his presence is most intensely felt, and that at that very moment, the power he exerts on the author cited is at its utmost'.

161 Excerpts from ch. 1.3 in *PE* 14.14, from 1.7 in *PE* 14.16.

162 Excerpts in a long section *PE* 15.23–61: 5 chapters from Book 1, 27 from Book 2 (out of 32!), 5 from Book 3 and 2 from Book 4. Most chapters are written out in full, though there are some lemmata missing. On the different methods used in the two books 14 and 15 see M–R 1.132–137. As noted above at n. 33 and text thereto, the order of the chapters cited is sometimes somewhat erratic, the result of the exigencies of his argument.

163 E.g. *PE* 15.31.2: ἐκ τῆς αὐτῆς μάθανε τοῦ Πλουτάρχου φωνῆς.

times perhaps accidentally.¹⁶⁴ He tends on occasion to reduce, particularly in the chapter headings. Apart from one or two brief phrases, there is no additional material to be gleaned from his excerpts. His references to the work in his connecting passages are also valuable, particularly for his references to chapter headings.¹⁶⁵

For our text we have used the excellent edition of Karl Mras, who faithfully records all the differences from the direct tradition of ps.Plutarch's text in his apparatus.¹⁶⁶ In our own apparatus we record all the variant readings in Mras' edition, but as a rule we do not record variants in the mss. tradition of the *Praeparatio* itself. Because the excerpts do not greatly differ from the text in modern editions, we have not taken them up separately among the texts of the *Testes primi*. They can be consulted in Mras' edition or on the TLG (Canon 2018.001).

4.2.3 Ps. Justin

Traditionally this pseudonymous work has been dated to the third century and regarded as an exhortation to the Greeks to embrace the true religion of Christianity. But research of Chr. Riedweg, based on TLG data, has shown that linguistic stylistic features support its attribution to Marcellus, bishop of Ancyra, a younger contemporary of Eusebius.¹⁶⁷ He also argues that its title was not the traditional Λόγος παραινετικός πρὸς Ἕλληνας, but rather Πρὸς Ἕλληνας περὶ τῆς ἀληθοῦς θεοσεβείας λόγος as indicated in its exordium (§1.2). Since the philosophers are the teachers of piety (θεοσέβεια), it is their views that need to be examined. For this purpose he will expound the δόξα of each of them on the subject, thereby showing their disagreement with each other. This is probably a covert reference to the *Placita*.¹⁶⁸ In ch. 1.3 he cites an extensive list of ten ἀρχαί. Since these are all in ps.Plutarch, who cites only 13 of the 24 in the reconstructed text of A, it is almost certain that he used the *Epitome* for this purpose. Similarly in ch. 1.7 his extracts contain nothing that could not come from ps.Plutarch. He

164 See Inowlocki (2006) 291–293, but only in relation to Jewish authors. She concludes that he resorts to textual changes only rarely and rather discreetly.

165 See esp. the long passage at *PE* 15.32.8–10. Worthy of note is also an earlier passage at 7.11.13–12.1 where in the context of Hebrew theology he suddenly interposes material on Greek theology, with reference to ch. 1.3 and to some chapters in Book 2. This passage was not noted in the discussion on Eusebius in M–R 1.

166 Mras 1982–1983, revised edition; first edition 1956.

167 Riedweg (1994) 167–184. He is not confident enough to attribute the work definitively to Marcellus (hence the question mark in the title of his book), but the evidence is strong.

168 See also below section 4.5.1 where a similar reference is made by Athenagoras, but in the plural. Other references to 'the doxai' at *Coh.* 3.1.8 (poets), 5.1.10 (Plato and Aristotle), 5.4.44 (Aristotle), 7.1.2 (Plato), 35.2.29 (philosophers in conflict).

then moves on to the subject of the soul and the disagreements on that topic. Here the situation is more complex. A number of his statements resemble doxai in chs. 4.2–7a of the compendium, but the verbal parallels are not close. The exception is in ch. 4.6 where the parallels are exact. It would appear that for this part of his work he mainly used material similar but not identical to the *Placita*, but also had his copy of ps.Plutarch at hand. It emerges, therefore, that ps.Justin is both a primary and a secondary witness.¹⁶⁹ For the text of this work we use the edition of Marcovich.¹⁷⁰

4.2.4 Ps.Galen

Like ps.Plutarch's work, the Φιλόσοφος ἱστορία attributed to Galen is an epitome that has found its way into the corpus of a major writer, in this case the largest literary corpus of pre-Christian antiquity. Nothing is known about the author, his date or his location. Diels argued on rather flimsy grounds for a rather late fifth century date,¹⁷¹ but it could just as easily be dated to an earlier date in the third or fourth century.¹⁷² We simply do not know.

The work divides into two parts. In the first part, §§1–24, which is a general introduction to philosophy, the author makes hardly any use of ps.Plutarch's *Epitome*, with just some limited material from chs 1.1, 1.2 and 1.30. The rest of this part, including chapters on motion, body and soul, is taken from a different proximate source. Then at ch. 25, without any formal introduction and not using the term ἐπιτομή, he proceeds to present an abridged version of ps.Plutarch's manual (which in contrast did include the term in its title). Together with the three chapters in the first part, the work includes 110 chapters (out of 133), of which 62 are cited with all their doxai intact. It is thus a very full epitome, with 65% of the doxai in the larger work taken over. Books 1 and 4 are used least; the other books are very fully abridged.¹⁷³

Ps.Galen's method of abridgement, however, is very different from that of his predecessor. He does not aim to preserve the words of his original, but in a man-

169 The same might be said of Theodoret who is nearly always a primary witness, but at 2.9–11 and 4.5–10 uses material that is similar to that in ch. 1.3 but not derived from it. We note too that ps.Galen (next sub-section) uses two kinds of material in his compendium.

170 Marcovich (1990b). See also the *Lesetext* of Riedweg (1994) 530–582, which deviates in a few details.

171 *DG* 16–17; cf. M–R 1.151–152. For a more detailed treatment of ps.Galen's evidence see M–R 1.141–152.

172 The material that he shares with Sextus Empiricus *P.* book 2 may point in this direction.

173 Book 1, 50 lemmata out of 123 = 41%; Book 2, 108 out of 148 = 73%; Book 3, 68 out of 91 = 75%; Book 4, 46 out of 89 = 52%; Book 5, 78 out of 109 = 72%.

ner not dissimilar to Theodoret¹⁷⁴ undertakes to rewrite or paraphrase them, using all manner of techniques, including substitution of synonyms, removal or addition of prefixes to verbs and nouns, and so on. His attempts to match or even improve on the original are far from always successful. Indeed we have called him the master of the *Verschlimmbesserung*.¹⁷⁵ This trait is of course not helpful when his text is being used as a witness to the original text of ps.Plutarch (and anterior to him Aëtius). These problems are compounded by the fact that the manuscript tradition of the work is restricted and transmits a text that is even poorer than of ps.Plutarch.

Nevertheless, for all its shortcomings, we should be grateful that we have this work. It goes back to an early version of ps.Plutarch and there can be no doubt that it contains many genuine readings, though it costs effort to identify them among the dross of the author's own interventions. A striking example is found at A 5.20.1, where the Byzantine mss. begin the lemma with the words ἔστι πραγματεία Ἀριστοτέλους ἐν ᾗ, a idiosyncratic reference which Diels rightly saw was foreign to the method of the *Placita*.¹⁷⁶ Ps.Galen reads simply Πλάτων καὶ Ἀριστοτέλης, and in this reading is supported not only by Qusṭā's translation, but also by Stobaeus. So ps.Galen's reading must be right, and goes back both to ps.Plutarch's original text and, preceding him, to Aëtius.

There is a difficulty, however, in that the most recent complete edition of ps.Galen's work is that of Diels in the *DG*, building on his earlier dissertation.¹⁷⁷ This edition, though better than its predecessors, is deficient on at least two counts. It is based on only two of the four independent mss.¹⁷⁸ and it also neglects to take into full account the evidence of the 1341 Latin translation of Nicolaus of Rhegium. Very recently a full investigation has been made of the stemma of the manuscript tradition by Mareike Jas.¹⁷⁹ She determines the relations of the four manuscripts and also demonstrates that a manuscript used by Nicolaus belonged to a transmission independent of the other four.¹⁸⁰ The

174 See above section 2.5 at n. 25.

175 M–R 1.148.

176 *DG* 14–15. He observes that the final part of the archetype was probably damaged, as noted in the text above, text after n. 154.

177 Diels *DG* 595–648; Diels (1870).

178 Diels used A and B (both in Florence), but neglected O (Oxford) and was unaware of C (Cheltenham, now in Provo Utah).

179 Jas (2018a), a Munich dissertation prepared under the guidance of O. Primavesi. She also attended a number of workshops organised by the Aëtius project.

180 See the stemma at (2018a) 70.

focus of Jas' study is on what we can learn from Nicolaus' translation, so she presents a very thorough edition of, accompanied by full philological commentary on, the 50 of the 94 translated chapters which can be shown to go back to a separate hyparchetype.¹⁸¹ The remaining chapters of ps.Galen that are based on ps.Plutarch have been collated, but not yet published in a new edition.¹⁸² In our presentation of the text of ps.Galen as a *testis primus*, therefore, we have included the text of the 50 chapters edited by Jas, but for the remaining chapters we had to fall back on the Dielsian edition. On some occasions we were able to benefit from work done on them by Jas and her *Doktorvater* Oliver Primavesi.¹⁸³

In the apparatus criticus, depending on the above-mentioned editions, we have included all the textual variants in the ps.Galenic epitome. Because he so often makes use of paraphrase, we have on numerous occasions had to resort to the tag *aliter*,¹⁸⁴ in order to indicate that he has rewritten the original text before him.

4.2.5 Julian the Arian

Brief excerpts from four chapters of ps.Plutarch are found in the *Commentary on Job* by an unknown Christian author, Julian, called the Arian because of subordinationist features of his theology and probably to be dated to the fourth century. They mainly derive from Book 3 and concern cosmological and meteorological subjects used to illustrate the text of Job 38:37–38 in the *Septuagint*.¹⁸⁵ They were unknown to Diels, but were identified by the treatise's editor Dieter Hagedorn.¹⁸⁶ The text is of little independent value, but we include the excerpts among the *testes primi* and any variants that they contain are included in the apparatus criticus of those chapters.

4.2.6 Cyril of Alexandria

In his polemical treatise against the Emperor Julian, the early fifth century (c. 380–444) bishop of Alexandria makes use of material from ps.Plutarch's

181 For the identification of these chapters see Jas (2018a) 14, 41–44.

182 I.e. the 44 remaining chapters of Nicolaus' translation and the remaining 15 which he did not translate.

183 Indicated in the app. crit. with the tag *per litteram*, or based on the edition of Empedocles' fragments in the Reclam² volume.

184 Usually abbreviated al.

185 Chs. 2.12; 3.2–5; 3.7; also possible references to chs. 2.2 and 2.11.

186 Hagedorn (1973); see the listing on p. 324. The text is also available in the TLG, Canon 4105.001. These texts were also overlooked in M–R vol. 1.

compendium. In Book 1 he paraphrases various doxai on theology from ch. 1.7; in Book 2 he cites chs. 2.1–4 verbatim and also later includes brief excerpts from ch. 1.6.¹⁸⁷ His method of citation resembles that of Eusebius, including twice indicating the title and location of the cited text.¹⁸⁸ Cyril is greatly indebted to his apologetic predecessors, including Eusebius. But since the latter does not cite chs. 1.6 and 2.1–2, it is certain that he had independent access to a copy of the work.

For Cyril's text we have been able to use the very recent edition of Riedweg, who makes all the necessary identifications.¹⁸⁹ The texts are cited among the *testes primi* and all variants are listed in the apparatus criticus. A few of these are not without interest, e.g. in chs. 1.6 and 2.1.

4.2.7 Theodoret

The bishop of Cyrrhus cites the title of the *Epitome* at CAG 4.31 and on two other occasions refers to Plutarch as its author (2.95, 5.16). In three other texts he cites information on Greek atheists that ultimately goes back to A 1.7.1.¹⁹⁰ Importantly he explicitly states in two of these texts that the information is drawn from 'Plutarch'. As already noted above in section 2.5,¹⁹¹ the *Praeparatio evangelica* of Eusebius is one of Theodoret's most important sources, so it might be possible that his knowledge of the *Epitome* is at second hand. But there are in fact good arguments to show that he did have direct access to it. Fortunately, however, he decided that all his other excerpts would be from the original work, the author of which, as can reasonably be deduced from the descriptions he gives of it, was named Aëtius.

4.2.8 Interpolations in Philo of Alexandria

Two passages from chs. 1.3 and 1.5 are cited in the Armenian translation of Philo's *De providentia* Book 1, the Greek text of which is almost wholly lost. Diels commenced the 'Prolegomena' of his *Doxographi Graeci* with these texts, because if authentic, they would have had severe implications for the dating of ps.Plutarch (and also Aëtius). He was able to demonstrate, however, that they were interpolated at a later date.¹⁹² This date cannot be determined, though it

187 For a more detailed discussion of Cyril's usage see M–R 1.166–168.

188 On the title see above n. 3.

189 Riedweg (2016); very brief comment on usage of ps.Plutarch on p. clxix (by W. Kinzig).

190 CAG 2.112–113; 3.4, 6.6.

191 And see also section 4.4 below.

192 Diels *DG* 1–4; on this text see further M–R 3.447, 461. His theory, however, that *Prov.* 1 as we

will almost certainly have been before the translation was made in the sixth century. We cite Aucher's Latin translation, which though nearly 200 years old is the only one available.¹⁹³

4.2.9 Ioannes Lydus

The learned early Byzantine civil servant Ioannes Lydus (490–c. 565) cites doxai from about ten chapters of the *Epitome* in his work *De mensibus*.¹⁹⁴ The extracts from chs. 2.25, 2.28 and 2.31 are virtually verbatim, the others are more in the manner of a loose paraphrase. Nevertheless they yield some interesting readings, notably πεπυρωμένον at ch. 2.25.3, θεοπνεύστους at ch. 5.2.3 and the words missing through haplography in the Byzantine mss. at ch. 2.31.3. Lydus uses these texts for antiquarian purposes and never discloses the name of his source.¹⁹⁵ We have cited the text of Wuensch and recorded all textual variants in the apparatus criticus.¹⁹⁶

4.2.10 Scholia

Direct utilisation of ps.Plutarch's *Epitome* by Byzantine scholiasts, writing in the margins of manuscripts, occurs to our knowledge relatively seldom. Ch. 2.31 on the distances of the moon is written out in full in a scholion to Ptolemy's *Almagest*.¹⁹⁷ Two of the mss. that contain it are older than those of the *Epitome* and the text is better, lacking the lacuna mentioned above on Lydus. Two further texts from Book 2, chs. 2.22 and 2.24, are used in a scholion on Plato *Rep.* 498a, which gives a brief doxography of views of Heraclitus on the sun, to which a further doxa of Xenophanes is added. The scholion is derived from the 9th cent. ms. Parisinus Graecus 1807 (A) and belongs to the group known

have it now is a reduced version of an original dialogue remains controversial; see Runia (2017) 172.

193 Aucher (1822); also available in Hadas-Lebel (1973). The work has not yet been translated directly from the Armenian into a modern language. Hadas-Lebel's French translation is based on the Latin. On this passage see further M–R 1.161–163.

194 Listed at M–R 1.169, to which can be added a brief excerpt from ch. 1.3 in *Mens.* 2.9 and some references to chapter headings in Book 3 in another work *De ostentis* (3.2, 3.3).

195 In contrast to his citation of doxographical material on the Nile from Seneca's *Naturales quaestiones* at *Mens.* 4.107. Seneca of course is a more famous name. On this material see ch. 4.1 Commentary B.

196 Wuensch (1898); the recent text and translation of Bandy (2013) do not represent an advance. For *De ostentis* we cite Wachsmuth (1897).

197 See Mansfeld (2000b) 177 (= M–R 3.448) and ch. 2.31 Commentary A. It was not known to Diels or discussed in M–R vol. 1. It is cited in the edition of Heiberg et al. (1898–1952), where it is noted in the apparatus at 1.350.

as the *Scholia vetera*.¹⁹⁸ We cite it in the collection of Greene.¹⁹⁹ For the scholia to Aratus and Basil of Caesarea see below under 4.5 Secondary witnesses.

4.2.11 Qusṭā ibn Lūqā

The Arabic translation of ps.Plutarch's *Epitome* by the Syrian Christian of Greek origin, Qusṭā ibn Lūqā (in Latin Constans Lucae filius, c. 840–912),²⁰⁰ is an important witness to its text. The existence of the translation was known to Diels, but he had no access to it.²⁰¹ The landmark edition of Daiber has made this work fully accessible, though unfortunately its title is in two respects misleading.²⁰² It contains an apparatus which constantly compares the Arabic translation with the original Greek as transmitted in the mss. and so allows its use for textual purposes.

As already noted above, Qusṭā's translation is more complete than that of the Greek mss., with four additional lemmata, mainly at the end.²⁰³ It is also basically a faithful translation of the Greek.²⁰⁴ There are, needless to say, numerous instances of paraphrase, explanations, simplifications, omissions, small additions and outright mistakes. For example, on four occasions Qusṭā explains an etymological derivation by adding an explanation 'in the language of the Greeks' for the benefit of his reader, who in ignorance of the Greek language, will not understand the connection between the terms.²⁰⁵ All of these variations can be readily identified, as Daiber has often done, through comparison with the Greek mss. Lesser-known name-labels are quite often garbled or mis-identified, but sometimes valuable evidence is supplied, notably the

198 See Boter (1989) 45–46, who argues against Diller's hypothesis that they may have been the work of Photius. On the *Scholia vetera* see Dickey (2007) 46, but she does not give a date. The Scholia on the *Republic* have not been edited in Cufalo (2007).

199 Greene (1938) 240–241. His note that it is probably derived from a commentator such as Proclus is beside the mark.

200 For biographical details on Qusṭā see Daiber (1980) 4.

201 It is mentioned at *DG* 27–28, but he thinks it is no longer extant.

202 Daiber (1980). The full title is *Aetius Arabus: die Vorsokratiker in arabischer Überlieferung*. It is of course not a translation of Aëtius, but of ps.Plutarch, and its contents extend far beyond the Presocratic tradition.

203 See above n. 154. The additional Aristotelian doxa at 1.21.2a is surprising but we have now, *pace* M–R 1.157, given it the benefit of the doubt. The doxai of ch. 2.27 (but not the title) are missing through a *saut du même au même*.

204 For a full discussion of the nature and value of Qusṭā's evidence see M–R 1.152–161. For more detail on the translation techniques used see Daiber (1980) 16–74. For the question whether the translation included the chapter heading lists at the beginning of each book see the discussion in ch. 1.titulus et index Commentary A and the Appendix in Part 4.

205 See comment at ch. 2.1 Commentary D(d)§1.

attribution of the doxa A 5.30.2 to Herophilus rather than as a continuation of the doxa of Alcmaeon, which is not found in any other witness and should be accepted.²⁰⁶ On many occasions Qusṭā's translation gives insight into alternative readings of the text which must be taken into account, whether supporting readings in other witnesses or (rarely) supplanting them. A striking example is the reference to Olympus in the Empedocles doxa at A 2.20.13[35], only found in Qusṭā, which is now finding acceptance by scholars.²⁰⁷

The copy of the *Epitome* used by Qusṭā for his translation must have been earlier than the archetype of the Byzantine mss. which, as we saw, is to be dated to about 1000 CE.²⁰⁸ It cannot be identified with any other ms. used by the witnesses to the tradition, but examination of the variants shows that is closest to the copy used by ps.Galen. Its evidence is thus most valuable. Using Daiber's German translation together with the apparatus which he includes in his Commentary, we have given a full report of Qusṭā's variants in our own apparatus, referring to his text as P^Q when we can be certain of its reading, but mostly citing his German translation in italics as indicated by the abbreviation Q.

4.2.12 Psellus

We now turn to later authors who made use of ps.Plutarch's *Epitome*. The work was readily available in the capital Constantinople, it would seem, where it was utilised by a number of authors, though in particular ways and not very extensively. Prime among these was Michael Psellus, the great 11th century scholar and publicist (1018–c. 1090). Evidence of the use of the *Epitome* is found in various writings, of which the *De omnifaria doctrina* is the best known.²⁰⁹ In this work he uses it primarily as a list of topics to be treated. 68 of its 201 chapters have a heading derived from ps.Plutarch, amounting to almost exactly half of all the chapters in the *Epitome*.²¹⁰ It is not used for the macro-structure of the work, since the order of the titles used overall bears little resemblance to the order in the earlier work.²¹¹ In the case of 39 chapters the title only is used, for the remaining 29 chapters Psellus also takes over some material from the

206 See discussion at ch. 5.30 Commentary D(b).

207 First by Mansfeld R¹, M–R 2.530; now by Primavesi R², and Laks–Most LCL 5.476.

208 See above, text to n. 151.

209 See also the brief account at M–R 1.170–171. We ignore here the two separate redactions.

210 There are 133 chapters in the *Epitome*, excluding the prooemia and two of Aëtius' chapter that are not included. Psellus takes over the headings of 25 chapters in Book 1, 21 in Book 2, 10 in Book 3, 2 in Book 4 and 10 in Book 5.

211 At M–R 1.170 we give the example of the first seven chapters of the *Epitome*, of which Psellus uses the headings at §§57, 82, 83, 151, 152, 19 & 15. He does tend to use the headings in clusters.

contents of the doxai, but almost never the name-labels.²¹² For this work we use the excellent edition of Westerink, who has made all the necessary identifications.²¹³ The chapter headings provide some interesting variants, which we record, but in the remaining passages only the occasional term or phrase is of interest for determining the text. Other references to ps.Plutarch's work are of little weight,²¹⁴ with the exception of an extended excerpt from ch. 5.30 fortuitously preserved in the Ἐπιλύσεις ποικίλων ἐρωτημάτων, which is particularly interesting because of the poor state of transmission of the final part of the treatise.²¹⁵

4.2.13 Symeon Seth

The use that the doctor, scholar and high-ranking Byzantine court official Symeon Seth makes of ps.Plutarch's *Epitome* resembles that of his younger-contemporary Psellus, but differs at essential points. Unlike Psellus, he refers to Plutarch explicitly at the beginning of his work and states that he disagrees with his method, which sowed doubt in the reader's mind through the outlining of various opinions.²¹⁶ What is needed is demonstrated science (γνώσις μετ' ἀποδείξεως), beginning *modo Aristotelico* with what is visible and advancing to the very ἀρχή of the universe. Like Psellus he makes extensive use of the *Epitome's* chapter headings. Unlike him he does make use of the structure of the work. His work too consists of five λόγοι, but in order to follow the outlined method he has to rearrange the contents.²¹⁷ All in all he retains or alludes to 49 of the chapter headings, which in 15 cases are accompanied by extracts (mostly very short) from their contents, almost never citing any of his name-labels or differing opinions.²¹⁸ We list these appropriations under the *testes primi*, using the

212 Only in the case of one chapter, 5.5, does he take over material without reference to the heading, adding it under the title of ch. 5.6.

213 Westerink (1948), his Nijmegen dissertation.

214 Chapter headings from Book 3 are used in treatises published in the *Opera logica* 20, 22–24 and 26 edited by Duffy (1992).

215 The text is close to the Byzantine mss. of ps.Plutarch and does not support the extra name-labels in §§2 and 6 supplied by Qustā and ps.Galen.

216 Cited in translation at part of our brief account of Symeon Seth at M–R 1.171–173. Symeon's use of the work was not known to Diels.

217 Logos 1 on the earth covers P 3.9–15; Logos 2 on what is between the earth and the heaven covers P 3.1–8; Logos 3 on the heavens covers P Book 2; Logos 4 on matter, form, nature, soul and mind covers themes from Books 1 and 4; Logos 5 treats theology, as in P 1.7.

218 6 chapter headings from Book 1; 23 from Book 2; 13 from Book 3; 7 from Book 4; Book 5 is ignored. In §30 the views of Aristotle and Plato on the cosmos, whether it is created or everlasting (cf. P 2.4), are briefly cited and confronted with his own Christian view.

edition of Delatte.²¹⁹ Some variants, mainly in the chapter headings, are listed in the apparatus criticus. But if the truth be told, Symeon's usage, though very interesting as part of the history of the reception of the *Placita*, offers very little of value for the establishment of the text.

4.2.14 Ioannes Tzetzes

The final witness to the Byzantine tradition of ps.Plutarch's *Epitome* is the prolific 12th century scholar and antiquarian Ioannes Tzetzes (c. 1110–c. 1180).²²⁰ In his exegetical works on the ancient Greek poets Homer and Hesiod he occasionally uses the work for information on the early philosophers. Three passages are of some interest.²²¹ We cite them in the most recent edition.²²²

4.2.15 Modern Editions and Translations of the *Epitome*

Having surveyed the direct and the extensive indirect transmission of ps.Plutarch's work, we are now in a position to evaluate modern editions. These are two in number, the edition of J. Mau in the Teubner edition of the *Moralia* of Plutarch (1971) and of G. Lachenaud in the Budé edition of the same large corpus (1993).²²³ Mau's edition suffers from two major defects. Firstly, it is essentially an edition of the Byzantine mss., scarcely taking the indirect tradition into account. The papyrus and Qusṭā are not utilised.²²⁴ Reference is made to the texts in Eusebius and ps.Galen in the apparatus testimoniorum and some of their readings are mentioned, but these are not adequately taken into account in the constitution of the text. The negative apparatus criticus is very compactly presented and by no means complete. Secondly, Mau's text is conservative in the extreme, on numerous occasions preferring to retain defective passages rather than print plausible or even very likely emendations.²²⁵

The more recent edition of Lachenaud follows its predecessor rather closely, but does improve on it to a limited extent. It offers a fuller apparatus criticus based on fresh collations of the mss. It is more aware of the indirect tradition. It mentions the papyrus in the introductory 'Notice', but does not record its read-

219 Delatte (1939) 1–125, who does not identify the correspondences with the *Epitome*.

220 On Tzetzes see Wendel (1948).

221 See chs. 1.3 (on §4[47–48]); 1.8; 5.26. They were included by Diels in his app.test., but not discussed in M–R vol. 1.

222 Papathomopoulos (2007); this edition supersedes Hermann (1812) cited by Diels.

223 The edition of G. Bernadakis (1893) in vol. 5 of the earlier Teubner edition of the *Moralia* (1888–1906) can safely be set aside.

224 He mentions Daiber's 1968 Saarbrücken dissertation, on which the edition of Qusṭā is based, but does not use it for his text. He may have been unaware of the papyrus codex.

225 For a more detailed analysis of Mau's edition see M–R 1.177–179.

ings.²²⁶ Lachenaud analyses the Arabic translation in some detail and notes that 80 of its readings according to Daiber furnish readings that differ from the mss. or support emendations made by earlier scholars.²²⁷ But these observations have little impact on the text. Admittedly Lachenaud is less conservative than Mau. He removes a number of obeli, introducing some emendations or regarding the transmitted text as satisfactory. Despite these improvements, however, it is hardly an independent work and remains in essence an edition of the Byzantine mss.²²⁸

How, then, do these modern editions relate to the text as edited by Diels in the *Doxographi Graeci*? Its manuscript basis is inferior, not taking all the relevant Greek mss. into account and not being able to benefit from the papyrus and the Arabic translation. But despite these limitations, in some regards it may be considered to be superior. It takes the indirect tradition seriously and uses it to improve the text on many occasions. Diels was not afraid to introduce conjectures and emendations into his text, and as a child of his time he goes further in altering the text than would be done today. The main difficulty, however, is that Diels produced his edition for a special purpose, namely to furnish a text of ps.Plutarch as part of the lost compendium of Aëtius. It is thus not a pure text of the *Epitome* on its own and for its own sake. The effect of this objective can be seen in Diels' inclination to take Stobaeus, together with the indirect witnesses, into account when determining the ps.Plutarchean text. There are grounds for doing this, since the correspondence could go back to the anterior common source, but it remains not without risk.²²⁹ A cautious hand is what is required.

The conclusion must be that there is no adequate edition of the *Epitome* available at present. In our apparatus criticus we give as complete an account of all the readings of the direct and indirect tradition as we can, not including trivial variants that have no effect on the meaning. All these readings must be taken into account when trying to determine what might have been Aëtius' text. It is perhaps fortunate that we have decided not to print the text of ps.Plutarch itself among our *testes primi*.²³⁰ Given the considerations above, it would

226 There is no siglum for it in the list on p. 65. The mention on p. 10 (where 'deux fragments' is a misprint for 'douze') appears to have been added at a late stage.

227 Lachenaud (1993) 12–14, also including some comments on the papyrus.

228 On this edition see further the comments at M–R 1.179–180.

229 See our analysis with examples at M–R 1.175–177.

230 See our comments above in section 3.2 at n. 119. In taking this decision we differ from the *specimen reconstructionis* of Book 2 in M–R vol. 2.2, where we printed the text based on Mau and Lachenaud at the beginning of the analysis of each chapter.

have also been very difficult to determine which text of the *Epitome* to print. The user of our edition is advised to have one of the above-mentioned editions within reach.²³¹

Apart from Lachenaud's French translation, the only translation into a modern language that we have consulted is the Italian version of Torraca.²³² This is part of a translation of all the texts in Diels' *Doxographi Graeci* and so translates the two columns of ps.Plutarch and Stobaeus side by side, presenting them together as the work of Aëtius just as Diels did. Its value lies above all in its rendering of difficult passages and its instructive notes, which often discuss textual issues. Other English and French translations available online are based on outdated editions and scarcely repay consultation.²³³

4.3 *The Primary Witnesses: Stobaeus*

The significance of John of Stobi as a *testis primus* to the text of Aëtius has been set out in some detail above in section 2.4. The task is now to examine the *Anthology* and discuss those aspects of its transmission that are relevant to our reconstruction and edition.

4.3.1 The Direct Transmission

Stobaeus made use of Aëtius' compendium almost exclusively for Book 1 of the *Eclogae* devoted to physics. Only in the case of the very last chapter of work, ch. 5.30 on health and disease and old age, are five lemmata used in Book 4 of the *Florilegium*. As was already noted, not all of Book 1 has been fully preserved. If it had been, we would have been in a much stronger position to reconstruct the whole of the compendium, since Stobaeus tends to cite the original work in full and not abridge it in the matter of ps.Plutarch. He in fact records 521 lemmata from 81 of Aëtius' 135 chapters, which amounts to 67.6% of the total extant remains and 58.3% of the original work as estimated by E. Jeremiah.²³⁴ These statistics give us some idea of the damage wreaked by the Byzantine abridgers.

²³¹ Mau's edition is also available as Canon no. 0094.003 in the TLG.

²³² Torraca (1961) 17–223, notes at 443–461.

²³³ French by J. Amyot (1574) 207–257; D. Ricard (1844) 261–362; English J. Dowel (1909) 104–193 (first published in 1694). All these versions can easily be located on the internet.

²³⁴ The distribution is: Book 1, 158 lemmata from 26 chapters; Book 2, 199 from all 33; Book 3, 60 from 7; Book 4, 94 from 10; and Book 5, 10 from 5 chapters, amounting to a total of 521 lemmata from 81 chapters (out of a total of 135). On Jeremiah's estimation see above section 2.7.

The direct transmission of the *Eclogae* is far from strong, represented by two manuscripts only, both of which are quite late: the Neopolitanus III D 15 (Farnesinus, 14th cent., abbr. F) and the Parisinus gr. 2129 (15th. cent., abbr. P). All other manuscripts are derived from these two, of which the former provides a much better text than the latter. Their common archetype was already much reduced compared to the full original text still available to Photius. Of the sixty chapters the first half, chs. 1–31, appear to be virtually complete (except the prooemium); of the second half six chapters are missing entirely and the rest survive only partially, having been severely reduced by Byzantine copyists.²³⁵ This has meant that Stobaeus' evidence for Books 3.9–16, 4 and 5 has largely disappeared, except for some sections which were preserved in the manuscript now to be discussed.²³⁶

4.3.2 The Laurentianus Manuscript

The third relevant manuscript, the Laurentianus Pluteus 8.22, is strictly speaking not a manuscript of Stobaeus' work, but contains substantial material from it, including material which is not preserved by the two mss. just described.²³⁷ It thus represents, together with the index of Photius to be discussed in the following sub-section, the restricted indirect tradition of Stobaeus' *Anthology*.

The Laurentianus is a highly complex document containing the remnants of three separate florilegia, of which the third contained extracts from Stobaeus. These remnants consist of two different kinds of material. (1) The full text of 44 chapters for the headings A α' to A μδ' and of 31 chapters for the headings N α' to Π ε'. These include nine chapters of the *Eclogae*, mostly with their headings. Of these, six contain text not preserved in the two mss. of Stobaeus.²³⁸ (2) The headings of the chapters of the *Eclogae* taken (a) from the incomplete alphabetically ordered pinax of the work covering the letters A to M, i.e. the first half;²³⁹ and (b) from the incompletely preserved headings of the chapters for the headings N α' to Π ε' mentioned above.²⁴⁰ A complicating factor is that in the case of the headings of *Ecl.* 1.42–43 there has been some contamination of headings from ps.Plutarch 5.11–19 and 5.20–23 respectively.²⁴¹

²³⁵ On the two manuscripts see further M–R 1.198–200.

²³⁶ On the Byzantine abridgement see M–R 1.202–203.

²³⁷ For this description we are indebted to Royse (2018) = M–R 4.158–167, which gives much more detail than the brief section in M–R Vol. 1 cited in the previous note.

²³⁸ Surviving are: *Ecl.* 1.38 (= A 3.17); 1.50 (= A 4.8–10); 1.51 (A 4.10); 1.52 (A 4.13–15); 1.53 (A 4.16); 1.54 (A 4.17). For further details see Royse at M–R 4.162–163.

²³⁹ The full pinax is printed and analysed at Wachsmuth (1882) 5–41.

²⁴⁰ The pinax of headings for these extracts is reconstructed by Wachsmuth (1882) 41–44 (many are missing since not filled in by the rubricator).

²⁴¹ As convincingly postulated by Elter (1880) 73–74. Taking his lead from Elter, Diels (1881)

4.3.3 The Evidence of Photius

The complete *Anthology* was still available to the learned 9th cent. Patriarch of Constantinople, Photius. In his celebrated *Bibliotheca* he devoted an extensive chapter (*Bibl.* 167) to it.²⁴² Of the two components of this presentation the first, a complete list of contents, is by far the most useful, since it enables the reconstruction of the basic structure of the work. Photius probably derived this list from a pinax which Stobaeus affixed to the beginning of the work when completed. We give references to these chapter headings in our list of witnesses at the beginning of each chapter and include readings of interest in the apparatus criticus. For this purpose we use the edition of R. Henry.²⁴³ The second component, the alphabetically ordered list of names divided into five groups of philosophers, poets, rhetors, statesmen and doctors, is much less useful. A multitude of name-labels from the Aëtian doxai find their way into these lists, most of course in the first group, with a few in the last.²⁴⁴ But in only a very limited number of cases are there names that are missing in the text as transmitted in the manuscripts.²⁴⁵

4.3.4 The Edition of Wachsmuth

The most recent edition of the *Eclogae* was published by Curt Wachsmuth in 1884.²⁴⁶ It is this edition that we use for the Stobaeian excerpts from Aëtius, though—as in the case of ps.Plutarch—we do not print the entire text.²⁴⁷ Wachsmuth was a very experienced and competent editor. He personally collated the relevant mss. and his text is generally reliable.²⁴⁸ All variants of any

349 argued that three doxai in S^L were also interpolated from P; see chs. 4.8, 4.13 and 4.15. As indicated at M–R 1.267–269, we disagree with the last two of these exclusions, but not the first.

242 On Photius' evidence see the discussion at M–R 1.200–202.

243 Henry (1959–1977), text in 2.149–159.

244 Its rationale was brilliantly elucidated by Elter (1880), but not all its conundra have been resolved.

245 For example Apollophanes on the parts of the soul in at A 4.4.5; Leophanes at A 5.7.5. The latter name-label was preserved by P, but not the former. We do not accept the proposed inclusion of the doctor Euryphon in A 5.18 as proposed by Diels *DG* 195, 429 but rejected by Wachsmuth.

246 This edition is in fact the oldest that we have to use, except for that part of ps.Galen not yet published by Jas, for which we resort to the edition of Diels in *DG* (1879). T. Dorandi, whose landmark edition of Diogenes Laertius we use extensively, is in the early stages of preparing a new edition of the *Eclogae*.

247 On this decision see above section 3.2 at n. 119. The text is available on the TLG (Canon 2037.001). Wachsmuth's edition is in the public domain and readily available on the internet.

248 We can cite the judgment of J.R. Royse who reached the following conclusion after

significance that emerge when compared to other witnesses have been recorded, including on some occasions different readings in the three Stobaeus mss. among themselves. Because of the rearrangements that Stobaeus habitually makes of the lemmata of the original source, he often introduces additional elements such as verbs of saying and phrases indicating the subjects of the relevant doxai. These can be readily identified when other witnesses are adduced (esp. ps.Plutarch's *Epitome*). In the absence of such evidence, there are still quite often strong grounds for suspecting such interventions and so they can be legitimately removed from the reconstructed texts.²⁴⁹

It is vitally important to note that Wachsmuth's edition is strongly influenced by the work of Diels, which had appeared five years before its publication. This influence is mainly felt in the organisation and presentation of the text, the chapters of which are subdivided in accordance with the Dielsian analysis (the influence of Diels' edited text is much less). Only rarely does he disagree with his younger colleague.²⁵⁰ We follow Wachsmuth's subdivisions when citing his text in the list of witnesses, but it must always be borne in mind that they are not independent of Diels' analysis. They are no more than a starting-point for our own analysis as set out in the Commentary, especially in sections A, C and D(a).

There are no translations of the *Eclogae* into modern languages. The Italian scholar L. Torraca has usefully translated the right-hand column of Diels' reconstruction, making valuable comments on the text and how it should be understood.²⁵¹

4.4 *The Primary Witnesses: Theodoret*

The amount of text from the Aëtian compendium that the third main witness Theodoret records is much less extensive in scope compared to the other two witnesses, and the method of utilisation preserves much less of the original wording. His contribution to our knowledge of the actual text is quite modest.²⁵² Nevertheless, as we have seen in section 2.5, his evidence is crucial in proving once and for all that a single document used independently lurks

sampling sections of the text relevant to our edition (2018 = M–R 4.172): ‘... on the one hand Wachsmuth's work is very accurate, and at times shows a remarkable attention to the fine details of the manuscripts, but ... on the other hand it does contain some errors in readings that are cited and failures to record readings that are (or at least seem to be) significant.’

249 On such phraseology see M–R 1.231–233.

250 Some examples are given at M–R 1.204 n. 31; see also above n. 245.

251 Torraca (1961) 20–223, notes at 443–461; see above n. 232 and text thereto.

252 See the statistics cited above in section 2.5 text to n. 39.

behind the convergence of the other two much more copious witnesses, a document to which it is also possible to give a title and a name for its author.²⁵³

For the passages from Aëtius we cite the edition of Raeder, dividing the text according to the lemmata of the original compendium and indicating the numbering of our edition in parentheses.²⁵⁴ Raeder's edition is dated and could be improved, but is certainly adequate for our purposes.²⁵⁵ He refers to the source material in Diels' *DG* rather summarily in his apparatus fontium under the name Aëtius Doxogr(aphus) plus page number of *DG*, not citing book and chapter numbers of Aëtius. The debt to Diels is acknowledged in the *Praefatio*, where he also refers to his own analysis in his dissertation, which contains a number of improvements on Diels.²⁵⁶ The analysis of Canivet in his monograph on Theodoret as a Christian apologist made no progress.²⁵⁷ In the Introduction to his very recent text and translation Scholten was able to take into account our analysis in *Aëtiana* vol. 1 and the critique of M. Frede,²⁵⁸ concluding that the question of the value of Theodoret's reception of Aëtius' text 'has not yet been definitively clarified'.²⁵⁹ This comment is unduly pessimistic.²⁶⁰

Finally it should be recalled that Theodoret also mentions ps.Plutarch's *Epitome* on six occasions, as noted above when discussing its indirect tradition.²⁶¹ One might suspect that he bases these references on knowledge derived from Eusebius' *Praeparatio*, which is one of the most important sources for his work. It is noteworthy, however, that, as we saw earlier, Eusebius never refers to that work as an *Epitome*, whereas Theodoret does so at *CAG* 4.31, so he most likely will have had access to a copy of that work and did not depend on Eusebius.²⁶²

253 For an analysis of Theodoret's evidence see M–R 1.273–275, 284–288, supplemented by Mansfeld (2016a) = M–R 4.175–193.

254 Raeder (1904). For the more recent edition of Canivet (1958b), see the following note.

255 See the extensive critique by Scholten (2015) 122–129, which also discusses the edition of Canivet (1958b) and the criticism of Morani (1979). Canivet's edition scarcely differs from that of Raeder, but his apparatus criticus does include many more variants in relation to the authors whose words Theodoret cites. Both Raeder and Canivet make no effort to compare the original of Theodoret's Aëtian extracts with his text. Scholten (2015) uses Raeder's edition as the basis for his text and German translation.

256 Raeder (1904) vii, referring to Raeder (1900) 78–90.

257 Canivet (1958a) 268–270.

258 Scholten (2015) 114–120; on Frede (1999b) see above section 2.5 at n. 40, and 2.8 at n. 70.

259 Scholten (2015) 118: 'ist ... noch nicht endgültig geklärt'.

260 But he reached his conclusion before the publication of Mansfeld (2016a) = M–R 4.175–193.

261 See above section 4.2.7.

262 The three doxai on the status of plants parallel to ch. 5.26 are drawn not from Aëtius but the *Stromateis* of Clement of Alexandria; see the Commentary ad loc., section D(e).

This independence is also apparent from the doxai that he shares with Stobaeus and not ps.Plutarch, and therefore must have transcribed from Aëtius.²⁶³

4.5 *The Secondary Witnesses*

Secondary witnesses (*testes secundi*) are those authors and texts which contain material which is very similar, also in its wording, to that of the primary witnesses, but is not derived in a linear fashion from the original work or the primary witnesses.²⁶⁴ They are limited in number and scope, but need to be taken into account as furnishing evidence, albeit indirectly, on the compendium.

4.5.1 Athenagoras

The speech addressed to the emperor Marcus Aurelius of the early Christian apologist Athenagoras can be dated to 176–178 CE.²⁶⁵ It is thus the earliest of all our secondary witnesses. Diels thought its author made use of the *Epitome* and thus regarded its date as the *t.a.q.* for that work.²⁶⁶ Athenagoras himself appears to tell us that he uses the *Placita*, for when introducing the theology of Plato and Aristotle he says that he has turned ἐπὶ τὰς δόξας, which may be taken to be reference to the doxographical tradition, but could also refer more specifically to the work itself, whether in its original version or its abridged form.²⁶⁷ The doxai that he records are confined to Book 1 and almost exclusively relate to theological subjects: chs. 1.3, 6–8. The only other references are to the subjects treated in 1.9–10 and 2.1, which could have been taken over from their headings.²⁶⁸ For the most part Athenagoras cites this material in the form of a loose paraphrase, so the question of his source, whether A or P, cannot *pace* Diels be definitively resolved. An exception might be made for the text on God, demons and heroes in *Leg.* 23.1, where he appears to cite P, but in the absence of S, this cannot be considered certain. There is no ‘smoking gun’.²⁶⁹ Strictly speaking, since Athenagoras’ evidence points to a use of either A or P,

263 See above section 2.5.

264 See above section 4.1.

265 For the dating of the work see Schoedel (1972) xi–xii, M–R 1.125 n. 21 (with further references).

266 *DG* 4–5; see the discussion at M–R 1.75, 125.

267 We may also, when he says at *Leg.* 13.1.2 that many of his opponents are ignorant of the φυσικός καὶ θεολογικός λόγος, see an allusion to the opening words of the compendium’s prooemium.

268 See the detailed analyses at M–R 1.312–314, with reference to earlier scholarly discussions.

269 At A 1.7.24 on Stoic theology there are three variants between S and P, with Athenagoras supporting P twice and S once; see M–R 1.313.

he should be regarded as a primary witness. Because, however, his evidence differs so markedly from what we find in the other *testes primi*, we have placed him among the secondary witnesses. For these passages we use the edition of Marcovich.²⁷⁰

4.5.2 Achilles and the *Aratea*

The most important of the secondary witnesses is Achilles, an Alexandrian writer who is probably to be dated to the early third century. The full title of his treatise is *Τῶν Ἀράτου Φαινομένων πρὸς εἰσαγωγὴν ἐκ τῶν Ἀχίλλεως Περὶ τοῦ παντός*, but is usually referred to as the *Isagoge* or the *De universo*. It has not survived complete. What we have are extensive excerpts from a lost original which appears to have been an introductory manual assisting the reader of Aratus' famous poem.²⁷¹ As befits such a purpose, its main contents treat the nature and structure of the heavens (chs. 5–31). It also includes a preliminary section (chs. 1–4), which bears a remarkable similarity to Aëtius' compendium,²⁷² a few chapters on meteorological phenomena (chs. 32–34), and finally some sections on the teaching of astronomy including the use of a model sphere (chs. 35–40). The work is a bit of a jumble, consisting of didactic material introducing the main features of astronomy, but it is interlaced with a significant body of doxographical material. This latter component is of great value for the understanding of the tradition of the *Placita*. The resemblance of some of this material to Aëtius' compendium is quite striking, so close in fact that Diels when composing his *DG* tried to demonstrate that it was dependent on ps.Plutarch's *Epitome* and even included some passages in the 'testimonia Plutarchi' under the left column of his reconstruction (he later realised his mistake²⁷³). In fact a detailed analysis of Achilles' doxographical material shows that his *Placita* material reveals strong parallels to Aëtius' compendium, but cannot be reduced to it. The two works are best seen as 'cousin writings, sharing the same ancestry, but not having the same parentage'.²⁷⁴ This description is suitable for a number of the secondary witnesses.

270 Marcovich (1990a). The edition has an unusually rich apparatus of sources and parallels.

271 On the little that we know about Achilles' life and writings see M–R 1.299–301.

272 Note ch. 2 *Τίτι διαφέρει μαθηματικὴ φυσιολογίας* (cf. ch. 1.1–2), *Περὶ τῆς τῶν ὅλων ἀρχῆς* (cf. ch. 1.3), and *Περὶ τῆς συστάσεως τῶν ὅλων* (cf. ch. 1.4). On these similarities see further the analysis at M–R 2.1.126–134.

273 As we learn from Pasquali (1910) 221; cf. M–R 1.303.

274 We cite here the terminology that we set out at M–R 1.305 and have used frequently in publications since then. On this terminology see above text at n. 139.

The parallelism between Achilles and Aëtius is confined to the first three books.²⁷⁵ In Book 1 we cite texts from Achilles for eight chapters, but in only one case, 1.3 on the principles, are the correspondences substantial (seven doxai) though quite oddly ordered.²⁷⁶ In the cosmological Book 2 Achilles is cited for 22 of the 33 chapters,²⁷⁷ in many cases showing at least some of the same name-labels and doctrines. Notable examples with both similar doxai and diaeretic structure are found in chs. 2.13 on the substance of the stars, 2.14 on their shape, and 2.20 on the sun. On rare occasions these texts even contain terms and name-labels that can help us decide between variants in our primary witnesses.²⁷⁸ In Book 3 we cite texts for 12 chapters, but most of these are again fairly insubstantial, which is not surprising given the limited amount of meteorological discussion in the work.²⁷⁹

For the citation of texts we have used the edition of Di Maria. It supersedes the earlier edition of Maass, which suffered from an excessive dependence on the researches of Diels in the *DG*.²⁸⁰

There are further doxographical snippets in four other texts which are related to the Aratean commentary tradition.

- (1) *Commentaria in Aratum* Anon. I, edited by Maass.²⁸¹ It is a very brief introductory treatise, similar to Achilles but much shorter. It yields some interesting parallel material for Book 2 on cosmology (chs. 2.1; 2.9; 2.12; 2.16).
- (2) *Commentaria in Aratum* Anon. II, edited by Maass. A similar work containing a text on meteorological phenomena cited in relation to the prooemium of Book 3.
- (3) *Scholia in Aratum, Prolegomena*, edited by Martin. This is another set of introductory notes consisting of 25 very brief chapters. The chapters on the sun and the moon, though just a few lines each, contain fascinating doxographical material clearly belonging to the tradition of the *Placita*.

275 See the list at M–R 1.303–304, but the claim that he offers parallel material for 22 chapters in A is a serious underestimation. In the present edition we draw the net wider, with material cited for 42 chapters.

276 Chs. 1.3; 1.5; 1.10–12; 1.14; 1.18; 1.23.

277 Chs. 2.1–3; 2.5–11 (excluding 5a); 2.13–15; 2.20–22; 2.24–25; 2.27–29; 2.32.

278 For example the name-label Stoics in A 2.6.1 shared between S and Ach, and the term $\psi\omicron\epsilon\iota\delta\acute{\eta}\varsigma$ at A 2.2.4.

279 Chs. 3.prooem.; 3.1–5; 3.7; 3.9; 3.11–12; 3.14–15.

280 Di Maria (1996); Maass (1898). On the former, which we were unable yet to use in M–R vol. 1 see the comment at M–R 2.1.126 and n. 269; on the latter M–R 1.303 and n. 29.

281 For the editions cited in what follows see the Sigla at the beginning of the volume and M–R 1.306.

An anonymous doxa on the moon as a kind of mirror supports a reading of S for the doxa of Pythagoras.²⁸²

- (4) *Scholia in Aratum*, edited by Martin. Among the scholia to the poem are quite a number of texts containing information on meteorological phenomena parallel to Book 3, proœm. and chs. 1–7 but lacking name-labels.

4.5.3 Hermias

The attractive little treatise Διασυρμός τῶν ἔξω φιλοσόφων was included by Diels in his *Doxographi Graeci* as the last of the doxographical texts.²⁸³ It certainly contains snippets of material from the same tradition as the *Placita*. Of particular interest are two extended series of anonymous doxai on the nature and the immortality of the soul (cf. chs. 4.2–3 and 4.7) which illustrate the *dis-sensio philosophorum* which the author wishes to ridicule. Later on he attaches name-labels to views on the cosmos (cf. ch. 1.5, 2.1) and some of the *principia* (chs. 1.3, 1.7 and 1.24). Its most recent editors, whose text we utilise, have made a detailed examination of these doxai and shown that they cannot be reduced to either Aëtius or ps.Plutarch, or for that matter Nemesius, but are best explained through a shared tradition.²⁸⁴ The work itself gives no clues about its author's location or time of writing. A date in third or fourth century may be surmised. The theme of διαφωνία and στάσις is shared with Eusebius, ps.Justin and Nemesius.

4.5.4 Nemesius

The treatise Περί φύσεως ἀνθρώπου, written in the manner of a philosophical handbook, is a virtually unique work among Patristic writings. We know nothing about the author except that he was bishop of Emesa (Homs) in Syria. Various indications point to a date in the last two decades of the fourth century.²⁸⁵ The work has a clear structure based on the nature of the human being which it describes. After the exordium (§1), there is a long chapter on the soul (§2), followed by chapters on the union of soul and body (§3), the body and its elements (§§4–5), the various psychical faculties ending with respiration (§§6–

282 See A 2.25.15, against the readings of the Byzantine mss. of ps.Plutarch, Qusṭā, Lydus, Eusebius and Theodoret.

283 DG 651–656. The Latin title is *Irrisio gentilium philosophorum*.

284 Hanson et al. (1993) 25–37. They make an exception for the relation between Hermias and ps.Justin: the fact that both authors list the same doxai on the nature of the soul in the same order (*Irr.* 2 and *Coh.* 7) suggests dependence, most likely of the latter on the former. See further the discussion at M–R 1.315–317.

285 On Nemesius' background and context see the introduction to the English translation of Sharples–Van der Eijk (2008).

28) and then a selection of topics on volition, fate and providence (§§29–43). Although the book is primarily descriptive and analytical, the author because of his Christian background does want to point out the dissension of the philosophers (after the exordium, διαφωνεῖται is the very first word in §2), so he is keen to include a considerable amount of doxographical material including numerous name-labels.

The relationship between Nemesisius' work and A's compendium shows some similarity to what we saw in the case of Achilles. The majority of the parallels relate to a single book only, Book 4 on psychology, which is the main subject of Nemesisius' treatise.²⁸⁶ For this book there are parallels in most chapters,²⁸⁷ but they vary in degrees of proximity. In the case of six chapters, 4.2–4, 4.6 and 12–13, the correspondences are so close that a shared origin must be postulated. It is unlikely, however, that Nemesisius made direct use of Aëtius (or the *Epitome*, as Diels thought²⁸⁸), even when for one lemma the verbal parallelism is almost exact.²⁸⁹ The differences are such that it is more probable that they both drew on a wider but narrowly related tradition. But for the above-mentioned chapters the parallels are close enough that in some cases Nemesisius can be used to support readings of some of the direct witnesses. The remainder of the passages in Nemesisius that are relevant to our edition are cited in relation to Book 1. These concern matters pertaining to the principles of nature and are concentrated in *De natura hominis* chs. 2, 3, 5, 39 and 41.²⁹⁰ They are not particularly close and only rarely include name-labels.

For citations we use the Teubner edition of Morani. His apparatus fontium is very useful, but does not pick up all the relevant parallels.²⁹¹

4.5.5 Isidore of Pelusium

The letter collection of the Egyptian desert father Isidore of Pelusium (c. 365–435) is perhaps an unusual place to find traces of the *Placita*. There are, however, two passages, both arguing that cosmological subjects do not contribute to the best way of life, which clearly summarise questions and doxai (but no

286 Bodily organs are closely linked to psychic powers or functions (cf. ch. 15, p. 72.4–7), so there are a few parallels for the physiological chapters in A Book 5; cf. Commentary section E in chs. 5.1, 5.5, 5.20, 5.25–26.

287 For all chapters except 4.1 (not on psychology), 4.5, 4.9, 4.11, 4.14–15 and 4.20, so 17 out of 24.

288 *DG* 49–50.

289 We revise our view in M–R 1.291–299. On A 4.3.14 see the Commentary ad loc., section A.

290 See chs. 1.proœm., 1.1; 1.3; 1.7; 1.9; 1.12; 1.16–17; 1.19; 1.25–29.

291 Morani (1987); see our comment at M–R 1.292. In his apparatus and index locorum he does not use Diels *DG*, but lists the witnesses ps.Plutarch, Stobaeus and Theodoret separately.

name-labels) from the *Placita* tradition.²⁹² The term λικνοειδής (like a winnowing fan) used of the earth is not found in Aëtius, but its formulation with the second part –ειδής is clearly analogous with shapes used in chs. 2.2, 2.14, 2.22, 2.27 and 3.10. No doubt Isidore came across this material during his education in Alexandria, where he was a fellow-student of Synesius and may have even sat at the feet of Hypatia.²⁹³

4.5.6 Scholia on the *Hexaemeron* of Basil

Basil's *Homilies on the Hexaemeron* was a very popular work in late antiquity and the Byzantine period. It contains many references to the cosmological doctrines of ancient philosophers, but these are all couched in anonymous terms. Scholiasts with knowledge of doxographical material explained these references in marginal notes on the mss. These were collected and analysed by Pasquali in 1910 and supplemented with a few more by Poljakov in 1982–1983. The scholia relevant to the *Placita* are limited in number and relate to first principles (chs. 1.3, 1.24), cosmology (chs. 2.2, 2.11) and the earth (chs. 3.11, 3.13, 3.15). They in fact show features closer to Achilles than to Aëtius.²⁹⁴ We cite the texts as edited by the two above-mentioned scholars.²⁹⁵

5 The Proximate Tradition, Further Parallels, and Sources

5.1 *The Dialectical-Doxographical Tradition*

Following in the footsteps of Hermann Diels, a major objective of our edition and commentary is to place its contents in the context of the ancient philosophical tradition, and particularly of the dialectical-doxographical handbook tradition of which it is the best-preserved witness. So far in the *Introduction* we have focused on the primary and secondary witnesses to the lost original text of Aëtius. But, as already adumbrated in our taxonomy of authors and texts in section 4.1, these witnesses by no means exhaust the relevant textual material that can shed light on the contents of the work. In the present section we

292 See ch. 2.11; 2.13; 2.15; 2.27; 2.31; 3.10; 3.11. For the text at *Ep.* 1435 we can use the text of Éviéux (1997–2000), but for the text at *Ep.* 2.273 we have to resort to Morel's 1638 text in MPG vol. 78. See further our earlier discussion at M–R 1.309–312 (with references to older literature). These passages were not noted by Diels.

293 Dzielska (1995) 42–44.

294 See the parallel columns at M–R 1.308–309.

295 Pasquali (1910); Polyakov (1982–1983). Remarkably, scholia nos. I 1–3 are also found in the ps.Clementine *Recognitiones*, translated into Latin by Rufinus, for which we use the edition of Rehm–Paschke (1965).

set out in general terms the contribution to our knowledge that is made by the remaining two categories, (3) the *traditio proxima* or proximate tradition (also *testes proximi*), and (4) *further parallels* and *sources*. These texts are listed fairly exhaustively at the end of the relevant chapters throughout our Commentary, divided into two sub-groups corresponding to the distinction between the two categories outlined above. It should be noted that, just as the demarcation between secondary witnesses and proximate tradition cannot always be precisely determined (already noted in section 4.1 above), likewise the distinction between categories (3) and (4) is by no means always clear-cut. Sometimes a report could with equal justification be classified as belonging to both of them. To avoid having to place it in both we have decided to limit inclusion in category (3) by means of the notion of proximity, i.e. a degree of closeness to what we call the broad dialectical-doxographical tradition. As for category (4), it goes without saying that writings later than the probable date of Aëtius can never be sources. But quite often there are texts of later authors which offer relevant and interesting material on the subject of the chapter and its doxai which cannot be situated within the *traditio proxima*. Good examples of authors in this category are the later Platonist and Aristotelian commentators, who almost never make direct use of the doxographical material, but do frequently cast light on material of Platonic and Aristotelian origin and/or inspiration which has found its way into Aëtius and other doxographical works.²⁹⁶

The polymorphous tradition comprising all the categories (including witnesses to the *Placita*) as outlined above, extends in time from its modest beginnings in the days of the Sophists Hippias and Gorgias all the way through to late antiquity, and also continues in Syriac and Arabic literature.²⁹⁷ A prime example of the length and breadth of this entire tradition is found in chapter 1.3 on the ἀρχαί ('first principles'). In our Commentary sections B and D(e), together with the further related texts in sections E(a)&(b), we assemble collections of evidence from Cicero in the first century BCE to Augustine in the fifth cent CE, and from the Hippocratic treatise *De natura hominis* around 400 BCE to the polymath Barhebraeus writing in Syriac in the 13th century CE. In terms

²⁹⁶ An exception must be made for Simplicius, though he too usually takes his diaereses and further information direct from Aristotle or from Alexander, rather than from the doxographical tradition. Porphyry and Iamblichus also update their psychological overviews with information drawn from the *Placita* or similar works. But it is surprising how relatively few parallels on cosmology are found in Proclus' *Commentary on the Timaeus*.

²⁹⁷ Our late friend Jørgen Mejer's concise study *Überlieferung der Philosophie im Altertum: Eine Einführung* of 2000 contains a wealth of information and deserves to be translated into English. For the next paragraphs see also the overview for online readers of the *Stanford Encyclopedia of Philosophy* in Mansfeld (2016d).

of methodology and contents, the proximate tradition as we understand it comprises not only dialectic deployed for a scientific purpose in a *status quaestionis* (as e.g. in Aristotle, an important source of Aëtius), or other doxographical works or texts per se (such as the *Epitome* of Arius Didymus, the *Stromateis* of ps.Plutarch, or the doxographies included in Diogenes Laertius), but more generally also literature using and quoting doxographical material for purposes of instruction and/or delectation (as in Plutarch, Lucian and Censorinus), or for showing off one's learning (as with the further parallels adorning Latin poetry). Christian authors (not just the *testes primi* Eusebius and Theodoret) used doxographical material on an abundant scale to show that the pagans contradict each other and sometimes even themselves and so are wrong, thus becoming *testes proximi* and unintentionally preserving for us a rich dossier of important and varied information.

Catalogues and lists are a popular feature of Greek literature right from the beginning. One may think for instance of the catalogue of ships in the *Iliad* or the *Catalogue of Women* attributed to Hesiod. A list of principles is a sort of catalogue. To mention only a few conspicuous early examples, we are aware that a useful collection of various views concerned with the summer flooding of the Nile was known to Herodotus, and that lists and overviews of alternative principles were familiar to Plato and Isocrates and Xenophon (name-labels were not always included).²⁹⁸ It was Aristotle who enlarged and transformed these narrowly circumscribed efforts into a comprehensive methodology, and who applied this novel technique over the entire spectrum of physics (and also ethics) in accordance with the rules of his dialectic and analytics. Subsequently it was practised for ends of their own by Epicureans and Stoics, and used somewhat differently by Pyrrhonists and Skeptical Academics, for whom the outcome had to be a stalemate, a *non liquet*.

Aristotle prescribed and practised this technique of assembling and testing the contrasting doxai of important poets (like Hesiod), of *sophoi* (experts like Empedocles), and even the reputable views of people in general (which cannot be entirely beside the point), with a positive outcome in mind. The *Metaphysics* and physical treatises, to limit ourselves to this part of his vast output, as a rule begin with dialectical overviews, but these also occur throughout on a smaller scale on the occasion of the treatment of particular topics.²⁹⁹ Problems posed and individual doxai mentioned find their way into the *Placita*. Aristotle's assessments of different theories were meant to (and did) prepare the

298 M–R 2.1.154–157.

299 See e.g. M–R 2.1.158–172.

path towards finding a solution. This positive purpose is not part of the method of the *Placita*. Dialectical argumentation was also practised by Theophrastus in several treatises, for some of which only fragments are extant. We continue our discussion of the contribution of Aristotle and Theophrastus below in section 5.2.

Epicurus' *Letter to Pythocles*, which can be placed alongside the *Metarsiology* ascribed to Theophrastus, also belongs to this tradition, though his purpose of furthering peace of mind differs from the scientific motivation of the great Peripatetics. He utilised the early dialectical-doxographical literature that was available, presumably also adding further data that he collected himself. In accordance with his well-known methodology, he offered pluralities of equally defensible alternative solutions of question in cosmology and meteorology. This approach was also adopted by Lucretius, who moreover profited from more recent doxographical literature in order to bring these overviews up to date.

The presence of Epicurus in the *Placita* has been exhaustively analysed in a study by Runia.³⁰⁰ Interestingly, his methodology is hinted at for those in the know in the final lemma of the chapter on the substance of the heavenly bodies, in which no less than fifteen doxai are listed: 'Epicurus does not reject any of these (views), holding fast to what is possible' (ch. 2.13.16). It is remarkable that this is the only remark pertaining to methodology to be found in the entire *Placita*. For further details on Epicurus and Lucretius see the Introductions to Books 2, 3 and 4.³⁰¹

There is less information available on how the Stoics stood in relation to this developing tradition. It has been shown that Chrysippus in his *On the Soul* assessed various topics, treated in an order like that of Aristotle and the *Placita* in a dialectical manner. He adduced and creatively interpreted the poets and also used other evidence.³⁰² He also unmistakably utilized a predecessor of ch. 4.5 on the *hegemonikon* ('regent part of the soul') and its location in the body.³⁰³ This is a unique and precious proof of the existence of at least one earlier version of the *Placita*, or of a very similar treatise, in the long period extending from Epicurus to Philodemus.

Between the late third and the mid-first century the dialectical-doxographical literature must have been gradually updated in order to include informa-

tion on Hellenistic philosophy and medicine, and on developments in Platonism in the direction of Neopythagoreanism. How, where, when, and in what stages this process occurred we do not know. We also have to reckon with the possibility, or rather probability, that individual writers and users of dialectical-doxographical literature added to the contents they reproduced from their own fund of knowledge, which might have even included going back to the original sources—a process we might regard as retrograde contamination.

Other developments can be better followed, even if the remains we have to be satisfied with are fragmentary. Plato, Aristotle and Theophrastus already gave some attention to master-pupil relations. The recording and description of unbroken chains of master-pupil(s) bonds became the chief objective of literature dealing with the *Diadochai* or *Successions of Philosophers*, of which the first known representative is the work of Sotion in the early second century BCE.³⁰⁴ Naturally this genre is person-oriented and not topic-oriented, although sometimes paying attention to doctrine could not be avoided. This other orientation also exerted influence on the *Placita*, most clearly in ch. 1.3 on the principles, which was restructured according to the Ionic Succession from Thales and the Italic Succession from Pythagoras. The date of Sotion gives us a t.p.q. for this reshuffling. The *Peri Haireseon* literature, another Hellenistic genre, dealt with the history of the parts of philosophy according to the different schools,³⁰⁵ and is of restricted relevance in our context. And so is the flourishing genre of biography,³⁰⁶ apart from the indispensable work of Diogenes Laertius,³⁰⁷ who in the third century CE added the doxai to the lives and thus, together with Porphyry, represents the genre of bio-doxography.

Setting aside the primary and secondary witnesses to the text of Aëtius, who contribute many parallels of undoubted significance to particular chapters or lemmata but have been sufficiently discussed in sections 2 and 4 above, we focus now on the proximate tradition as we have defined it. The first important representatives of this tradition are found in the first century BCE and a little later.³⁰⁸ The scene has moved to Italy, and the focus is on the expatriate Epicurean Philodemus in Naples, and to three others in Rome, namely the polymath Varro, another Epicurean, i.e. Lucretius, and Cicero, who claimed to

308 The *Doxographi Graeci* contains outstanding *Indices nominum* and *verborum*, but lacks an *Index locorum*, which is a handicap, though names of authors are found in the *Index nominum*. Perhaps someone should compose one, esp. to the *Prolegomena*.

be an Academic, and finally to an Alexandrian, Philo Judaeus, who flourished in the early decades of the first century CE (and also spent time in Rome). As we have already seen,³⁰⁹ Philodemus' *De pietate* and Cicero's *De natura deorum* Book 1 offer rich documentation parallel to chs. 1.6–7.2–25, on the origin of the concept of the gods and on views on their nature. Cicero, apart from offering a succinct overview of the principles of physics at *Lucullus* 118, also preserves precious documentation on views on the soul's substance (cf. chs. 4.2–3), its mortality vs. its immortality (cf. ch. 4.7), and the location of its regent part (cf. ch. 4.5) in the first Book of the *Tusculanae Disputationes*. Whether or not in the *De natura deorum* he is dependent on Philodemus or shares an earlier source, *mutatis mutandis* he is as invaluable qua source for the tradition leading up to the *Placita* as he has proved to be for Hellenistic philosophy. Varro as preserved in Censorinus *De die natali* is a *fons uberrimus* for the information in Book 5 (chs. 5.1, 5.3, 5.5, 5.10–11, 5.16–19) on spermatology and heredity that was previously drawn up in the Greek source(s) he must have used.³¹⁰ Lucretius certainly followed Epicurus, but understandably also updated his account of meteorology in *De natura rerum* Books 5–6 and those of psychology and physiology in Books 3–4, which prelude upon parallel sequences of chapters in *Placita* Books 3–5.³¹¹ In several treatises Philo of Alexandria importantly lists questions and doxai on the nature of the heavenly bodies and the soul/mind (without giving any names), which form a remarkable parallel to various chapters in Books 2 and 4, and he also elsewhere gives general lists of questions with a doxographical flavour.³¹²

The large assortment of texts constituting the *traditio proxima* comprises more than fifty authors or anonymous writings or collections of scholia or definitions. These report, process and utilize dialectical-doxographical material which differs from the *Placita* and its immediate tradition in a variety of ways, but is still recognizably related. The doxai can for instance be more or less copious in content and/or number, and can be arranged in accordance with a different pattern.

It will not of course be practicable to account for the character or contribution of each of these numerous *testes proximi*. Instead we have drawn up a selective list, in alphabetical order, of mostly familiar names and titles. It

309 See above text to n. 141.

310 Documented by Diels *DG* 186–198.

311 Not mentioned by Diels in the *DG*. See further Mansfeld (1990a) 3143–3154; Runia (1997) = M–R 3.255–270.

312 Not cited on such issues by Diels in the *DG*, but first noted in Wendland (1897). See further Mansfeld (1990a) 3117–3122; Runia (2008) = M–R 3.271–312.

excludes the names that have just been mentioned and the peculiar proximate tradition for ch. 4.1 on the Nile. This list contains both philosophers and medical writers, and also both pagans and Christian writers. In recognition of the pioneering research of Diels, we refer to his discussion in brackets after the names:

Alexander of Aphrodisias
 Ambrose of Milan
 Anonymus Londiniensis
 Arius Didymus (*DG* 69–88, text 445–472)
 Arnobius of Sicca (brief quotation at *DG* 172)
 Augustine (*DG* 173–174)
 Basil of Caesarea
 Calcidius (brief mention at *DG* 170)
 Clement of Alexandria (*DG* 129–132, 244–246)
 Diogenes Laertius (*DG* 133–134, 168)
 Diogenes of Oenoanda
 Epiphanius (*DG* 179–180, text 585–593)
 Eusebius (*DG* 5–10)
 Galen
 Heraclitus the Allegorist (*DG* 88–99)
 Hippolytus *Refutatio* Book 1 (*DG* 133–134, text 551–576)
 Iamblichus *De anima*
 Irenaeus (brief mention at *DG* 171)
 Isidore of Seville (brief mention at *DG* 199–200)
 Lactantius (*DG* 193–194)
 Lucian of Samosata
 Macrobius (brief quotation at *DG* 213)
 Olympiodorus the Alchemist
 Origen
 Pollux (brief quotation at *DG* 207–208)
 Porphyry *De anima*
 ps.Galen *Definitiones medicae*
 ps.Plutarch *De Homero* (*DG* 88–99)
 ps.Plutarch *Stromateis* (text *DG* 577–583)
 ps.Valerius Probus (*DG* 91–93)
 Seneca (brief mention at *DG* 19)
 Servius plus Servius auctus
 Sextus Empiricus (*DG* 91–93)
 Soranus of Ephesus (*DG* 193, 205–208)

Tertullian (important on the *De anima* at *DG* 203–207³¹³)

Themistius

Theophilus of Antioch (brief mention at *DG* 59)

Vitruvius (brief mention *DG* 94–95).

It will be agreed that Diels collected and discussed an astonishing amount of relevant parallels (we have omitted those he referred to only in passing), for which we can only be most grateful. But, true to his adoption of the methods of Lachmann and Usener,³¹⁴ the main purpose of his observations and comparisons was to ferret out the sources and the relationships between them. His argument was thus focused on the three stages of (1) the reconstruction of Aëtius, (2) support for the hypothesis of the *Vetusta placita*, and (3) validation of the decisive role (as he argued and believed) of Theophrastus. What he saw as subsequent corruptions and deformations and confusions had to be ruthlessly eliminated. As a consequence he failed to properly evaluate the sources he was able to cite. Though this is only a side issue, we further note that, in comparing Heraclitus *De Homero*, Servius, and Sextus Empiricus on the principles etc. with each other (and with *capita selecta* of the *Placita*), he placed this triad of quite important sources in a separate class of commentators on poetry that in his view deviated from the practice of doxography in the proper sense.³¹⁵ As we saw in section 2.4 above, this proved to be a useful ploy for fishing out non-Aëtian lemmata in Stobaeus. But when seen in a wider context, it is no more than an example of pseudo-precision which is of little value in accounting for the peculiarities and complications and affinities in the proximate tradition.

We too have to keep the discussion within bounds, so cite only a couple of noteworthy examples, even fewer than Diels in the ‘Prolegomena’. It should be noted, however, that the role of the *traditio proxima* (on which see also below section 6.3) is always discussed at the requisite length in the B section of the commentary of the chapters for which it is available.

The pseudo-Galenic *Definitiones medicae* are important for psychological and physiological matters.³¹⁶ Passages in Sextus Empiricus on the principles, as we saw, are quoted in the *Doxographi Graeci*, but the rich parallels for chs. 1.21–22 on time at *Adversus mathematicos* 10.170–181, 10.215–219, 10.227–229, and *Pyrrhoniae hypotyposes* 3.136–138, and at *Adversus mathematicos* 7.161–163, 7.244–245, 8.56–57 and 8.63–64 for ch. 4.12 on impressions and figments, are

313 But no mention of works such as for instance the *Ad nationes*.

314 See our discussion above in section 2.8.

315 *DG* 88–99.

316 Most regrettably the long-awaited edition by Prof. Jutta Kollesch is still not available.

not.³¹⁷ Diogenes Laertius provides a rich harvest of parallel topical material appended to his biographies, which often includes extra information. An even richer harvest is provided by Book 1 of Hippolytus' *Refutatio omnium haeresium*, which is for the most part devoted to the Presocratics. As is well known, Diels claimed the passages on the Presocratics in Diogenes Laertius and Hippolytus for his Theophrastean excerpts, but it has been less often observed that he omitted to include the later Books of the *Refutatio* in his inquiries. Contributions of two important philosophers, Porphyry's *De anima* and Iamblichus' *De anima* (fragments are preserved by Stobaeus) not only contain strictly parallel material, but also include selected views of later philosophers with a preference for Platonists, thus attesting the usefulness of the genre and the vitality of the tradition. The parallel material in Calcidius' *In Timaeum* is abundant, yielding parallels for the proemium to the *Placita* and (limiting ourselves to Book 1), for ch. 1.3 on the principles, chs. 1.6 on the origin of the concept and 1.7 on the nature of the divinity, chs. 1.9 on matter and 1.10 on form, ch. 1.16 on the cutting of bodies, and ch. 1.28 on fate. The same author, just like Porphyry and Iamblichus, is cited for parallels beyond the proximate tradition, as is only natural for a fourth century CE writer.

The last category to be briefly described here is that of the further parallels and sources, the textual material for which has been collected in commentary section E(b) at the end of each individual chapter. 'Sources' (a term that should not be confused with 'witnesses') refers here to the ultimate origin of the issues and opinions recorded in the compendium's chapters and doxai. Sometimes, when the original writings are available, these can be pinpointed with precision, as in the case of Plato, Aristotle and Epicurus, though this does not happen as often as might be expected. Many of the texts cited as sources are actually of later authors referring to similar source material which they use in their own way. Galen is a prime example of such usage in his citation of Presocratic authors.³¹⁸ The further parallels that we adduce are not only additional, but also further in the sense that though parallel, they stand at a greater distance from the *Placita* than those found in the *testes proximi*. They extend right to the end of the ancient philosophical tradition and indeed occasionally beyond it. In this section the two kinds of further texts are combined. Their placement in chronological order usually allows them to be distinguished from each other.

317 For a recent attempt to deal with Sextus as a provider of parallels for chs. 1.21–22 see ch. 1.21 Commentary A (5).

318 See for example his citation of Empedocles and Parmenides in relation to ch. 5.7 on the determination of the male and female sex.

A special role in the above described distillation of persons and doctrines that took place in the *longue durée* of the ancient philosophical tradition must be ascribed to the ground-breaking partnership of Aristotle and (to a lesser extent) Theophrastus. This has already been touched upon in our description of Diels' theory on the origin of the *Placita* in section 3.1. We now embark on a fuller analysis of their contribution, to the extent that it can be reconstructed on the basis of the limited evidence that is available to us.

5.2 *Aristotle and Theophrastus*

5.2.1 Aristotle

Usener and Diels, concentrating on Theophrastus, regrettably missed or perhaps preferred to overlook the incomparably more important Aristotelian heritage, this notwithstanding the fact that Ideler, in his wonderful commentary on Aristotle's *Meteorology*, had cited the echoes of Aristotle in authors for whom Usener and Diels claimed dependence on Theophrastus.³¹⁹ And Ideler was not the only one to point to Aristotle, for the great Zeller had illustrated the influence of Aristotle on Theophrastus' fragments on the principles.³²⁰

Aristotle is present in *three* different ways.³²¹ In the *first* place his name is cited no less than 59 times in the *Placita*, appearing in all five Books and not infrequently sharing a doxa with others.³²² Diels drew attention to a couple of accurate formulations of Aristotelian doctrine taken from the *Physics*, the *On Generation and Corruption*, the *On the Soul*, the *On the Generation of Animals*, and of a Pythagorean view from the *On Sensation*.³²³ He argued that these were added by Aëtius, for he believed—not unreasonably—that such precise information had only become accessible in the first century CE. The remainder, reformulated to a greater or lesser extent or even doubtful, could be attributed to the compiler of the hypothetical *Vetusta placita*, who in his view relied on the information of later Peripatetics, just as for instance Arius Didymus had done.

In the case of the Presocratics, who are so prominently present in the *Placita*, Diels emphatically insisted that their doxai were transmitted indirectly via the hypothetical *Vetusta placita*, which in turn had extracted them from Theophrastus, although the actual evidence for their presence in the latter is

319 Ideler (1834–1836) 1.409, quoted at ch. 3.1 Commentary B.

320 Zeller (1877). For Diels' expedient see immediately below.

321 For Aristotle in the *Placita* see Diels *DG* 215–216 and now Mansfeld (2016a).

322 Conveniently listed in Jeremiah (2018) at M–R 4.355.

323 Among other passages we may point to chs. 1.9.1, 1.15.2, 1.23.2, 1.29.2, 4.8.6, 4.9.3, and 5.3.1.

simply not available. What remains quite mind-boggling is that he was not prepared to make allowance for the transmission, via an anterior tradition descending from Aristotle, of many other topics and doxai which we can often still compare with what Aristotle himself wrote. One example out of many is the Pythagorean view on colour in ch. 1.15, which is taken from *On Sensation* and not from Theophrastus' *De sensibus*, the only source which Diels himself cited in this context.³²⁴

These doxai, quite numerous, which represent the *second* form of Aristotle's presence in the *Placita*, were in fact ignored by Diels, apart from a few references to parallels in the *pragmateiai* in the critical apparatus to the ps.Plutarchean–Aëtian columns of text.

Our commentary not only always discusses the contents of individual doxai of other people that were passed on in this way, but is also concerned with the contents of topics and issues descending from Aristotle, which are the theme of a particular chapter.

Here we only give a few telling examples, beginning with the theoretical chapters of Book 1. The theme and structure of ch. 1.19 on place (τόπος) derives from *Physics* 4.4, and three doxai are already present in 4.4 211b6–9. This is also the case for *Phys.* 4.10 218a31–b10 in connection with chs. 1.21–22 on time: the focus of 1.21.2–3 and 1.22.1–5 on the relation between time and motion is anticipated at *Phys.* 4.10 218b9–10. In ch. 1.21 the doxographer adds name-labels to two doxai left anonymous by Aristotle, and the final diaphonia at ch. 1.22.8–9 is already found at *Phys.* 8.1 251b10–19.

For details regarding individual doxai Aristotle is perhaps a bit less distinctly present in the cosmological Book 2, but the topics that correspond are convincing enough. The systematic connections between the questions treated ch. 2.1 were already clearly set out in *On the Heavens* 1.8–9. The famous theme of ch. 2.4 on the destruction of the cosmos is cited twice as a key dialectical πρόβλημα, namely at *Topics* 1.11 104b8 and 1.14 105a24, and also several times discussed elsewhere. And the subjects of chs. 2.13–16 on the heavenly bodies are very clearly marked out at *Cael.* 2.7–12.

The meteorological Book 3 is quite rich in problems and doxai deriving straight from Aristotle. The matrix of ch. 3.1 on the Milky Way comes from *Meteorology* 1.8, while lemmata 1.8.2–4 and 1.8.7–8 are cited virtually verbatim from this chapter. Chs. 3.2.1–3 derive from Aristotle's dialectical overview at *Mete.* 1.6, while ch. 3.2.4 summarizes Aristotle's own view at *Mete.* 1.7. For chs. 3.9–11 plus 3.13 on the earth the main source of the questions dealt with is *Cael.* 2.13 (also

324 See our discussion in the Commentary on ch. 1.15, section B.

for some name-labels and doxai). The issue and three lemmata of ch. 3.16 on the saltiness of the sea are found at *Mete.* 2.1–2 (so we do not have to link these doxai with Theophrastus).

The Aristotelian inheritance in the psychological Book 4 is for the most part present in chs. 4.2–4 on the incorporeal vs. corporeal substance and the parts of the soul. Ch. 1.2 of the *On the Soul* lists the chief questions that need to be answered, and provides a substantial dialectical overview of views concerned with the soul as principle of motion and of cognition, including treatment of the question of incorporeal vs. corporeal substance. In ch. 4.3 on the corporeal soul there is an abundance of material taken from this key Aristotelian chapter.³²⁵ In the physiological Book 5 the various questions there reveal numerous links to the biological treatises *On the Generation of Animals* and *On the Parts of Animals*. Questions relating to the semen of females of ch. 5.5 are discussed at *GA* 1.17 721a35 and 1.19 726a31–b1. For chs. 5.7–8 and 5.11 the general inspiration is the treatment of these questions at *GA* 4.1–4. The specific subject of sex differentiation of ch. 5.7 is discussed in *GA* 4.1, and four out of seven name-labels are already found there. Quite interesting is ch. 5.7.1–2, where first Empedocles and then, *more doxographically*, in second place the opposite doxai of Parmenides are cited. This association and the two doxai have been abstracted from *PA* 2.2 648a25–31, where the chronological order was preserved and it was Empedocles who represented the opposition.

The *third* form of Aristotelian presence in the *Placita* remains to be discussed. We refer to the dominant presence of the Aristotelian methodology in the work.³²⁶ The discussion of themes in an order determined by the categories of substance, quality, quantity, place etc., which is an important feature of the Aristotelian school treatises, is also a feature of large sections and numerous individual chapters of the *Placita*. The methodology of scientific enquiry formulated in the first chapter of Book 2 of *Posterior Analytics*, that is, the four types of questions τὸ ὅτι ‘how is it?’ (quality or attribute), τὸ διότι ‘why is it?’ (cause or explanation, also διὰ τί), εἰ ἔστι ‘does it exist?’ (existence), and τί ἐστὶν ‘what is it?’ (definition),³²⁷ the first and fourth of which coincide with the Aristotelian categories of quality and substance, is another determining factor.

325 The lemmata of ch. 4.3.1–2 derive from *de An.* 1.2 405a19–21 plus 1.2 405a29–b1; those of ch. 4.3–4 from *de An.* 1.2 404b16–30; those of 4.3–5 from *de An.* 1.2 403b31–404a5; 4.3.8 from 405a21–22; 4.3.13 from 405b5–6; and 4.3.14 from 405a25–27.

326 For dialectic as well categories and question types in this context see M–R 2.1.158–166, 168–172, and passim, and for this aspect of Aristotle’s presence in the *Placita* now also Mansfeld (2016a) 311–316.

327 *An.Po.* 2.1 89b24–35.

We list some of the more important examples, derived from all five books. Ch. 1.7.1 describes the views of those who deny that God exists, while 1.7.2–25 is a list of views concerned with definitions of the substance of the divinity on a gliding scale attributed to a sequence of individual philosophers. These approaches correspond to the types of question dealing with the issues ‘is it?’ and ‘what is it?’, sc. what is its substance (*ousia*). Chs. 2.11–12 on the heaven and 2.13–17 on the stars follow each other according to substance, shape (quality), arrangement (place), motion (action), illumination (being-affected); similarly also chs. 2.20–24 on the sun, 2.25–30 on the moon, 4.8–21 on sensation and the senses, and 5.3–14 on semen and insemination, all beginning with a chapter dealing with the category of substance. The heading of ch. 3.9 is ‘On the earth, and what is its substance and how many there are’, that of ch. 3.10 ‘On the shape of the earth’, that of ch. 3.11 ‘On the location of the earth’, that of ch. 3.12 ‘On the inclination of the earth’, and that of ch. 3.10 ‘On the movement of the earth’. Without difficulty we may distinguish, in succession, the categories of substance, quantity, quality, place, being-in-a-position, doing, and being-affected. In ch. 3.9 (extant in ps.Plutarch only) substance is not included, perhaps because the substance of earth is, well, earth.

Chapters 4.2–7 form a series dealing with the soul *per se* in a close-knit and ordered sequence according to question-types and categories. Chs. 4.2–3, ‘On the Soul’ and ‘Whether the soul is a body and what is its substance’, are concerned with the question-type of definition and the category of substance, but also with that of quantity because of the distinction between monists and pluralists, an ingredient already of *de An.* 1.2. Ch. 4.4, ‘On the parts of soul’, is about the category of quantity, and *ad finem* includes that of place. Ch. 4.5, ‘What is the regent part of the soul and in what place is it’, is about the categories of substance and, above all, place. Ch. 4.6, ‘On the motion of soul’, is about the categories of action and being-affected, and ch. 4.7, ‘On the indestructibility of soul’, about the category of time. The question of the regent part or its place in the body, an important question on the Hellenistic agenda, was of no interest to Aristotle. This did not prevent ch. 4.5 from being incorporated in the framework of the categories, and the same holds for other chapters dealing with subjects beyond Aristotle’s horizon. Ch. 3.17 on the tides, for example, falls under the question type of cause (διὰ τῆς).

The *Placita* does not define its methodology, though the prominent presence of Aristotle (and Theophrastus) in its prooemium and the definition and exemplification of problems in physics (and ethics) given there might be taken as a hint. That this methodology is in fact present and not just imposed on it by the interpreters (i.e. no *Hineininterpretation*) is clearly attested by Galen in his *Introduction to Logic*. He distinguishes between problems in physics accord-

ing to the category under which they occur and refers to question types. His examples correspond to chapter headings in the *Placita*:

- *Inst.Log.* c. 12.3 the size (cf. ch. 2.21) and distances (cf. ch. 2.31) of the sun: the categories of quantity and place;
- *Inst.Log.* c. 13.7–8 the position (cf. ch. 3.11) and shape (cf. ch. 3.10) of the earth: categories of place and quality;
- *Inst.Log.* c. 13.9 causes of voice (cf. ch. 4.19), respiration (cf. ch. 4.22), earthquakes (cf. ch. 3.15), and various kinds of thunderstorms (cf. ch. 3.3): question type of cause.
- *Inst.Log.* c. 14 reference to the question type of existence and that of substance as the ‘first and most important’ type of ‘problem’, illustrated by the examples: ‘does fate exist’ (cf. ch. 1.27–28), ‘does providence exist’ (cf. ch. 2.3), ‘do the gods exist’ (cf. ch. 1.7), and ‘does the void exist’ (cf. ch. 1.18).

This text demonstrates that our continual detection of the reverberations of Aristotle’s methodology in our Commentary is anything but fanciful. But we should again emphasize an important difference between two kinds of dialectical practice in the texts under discussion. As was already observed in the previous section, Aristotle’s purpose is to find a solution to a problem by collecting and testing other views, perhaps eventually revising one of them, or (more often) coming up with an acceptable alternative. In contrast, a typical chapter in the *Placita* offers an overview of contrasting doxai which is usually structured along dialectical lines, but crucially it refrains from criticism, even when the opinions it records are blatantly outdated or absurd. No choices are made and no solutions are put forward.

5.2.2 Theophrastus

Theophrastus’ name is cited on only three occasions in the *Placita*, so vastly less often than that of Aristotle.³²⁸ The first time is in the proœmium of the treatise, where he is cited not for a view that is specifically his own but together with Aristotle and ‘almost all the Peripatetics’ for a division of philosophy into two parts. The other two, both only witnessed in Stobaeus, also do not relate to doxai of his own, but are references to his recording of Presocratic views. One of them just tells us that Theophrastus is a source for a view of Anaxagoras on the cause of the lunar eclipse. The other at ch. 2.20.5 is more interesting, because here his *Physics* is cited for the doxa of Xenophanes on the substance of the sun (Θεόφραστος ἐν τοῖς Φυσικοῖς γέγραπεν). Now it is possible that we might be mistaken in attributing this information to the *Placita*, since the attribution

³²⁸ We attribute ch. 1.29.4 Diels to Arius Didymus.

is lacking in ps.Plutarch.³²⁹ At the very least, however, this is evidence that in the *Physics* Theophrastus quoted cosmological doxai—it will hardly have been the only case. This would mean that the doxographer simply had go to Theophrastus, because both these issues were not dealt with by Aristotle. Usener and Diels claimed that *Physics* here stands for Φυσικῶν δόξαι, ‘*Tenets of the Physicists*’ (as they called the work), but this is special pleading.

The principal extant examples of dialectical discussions by Theophrastus are the treatise *De sensibus*, the remains of the first Book of his *Physics* extant in Simplicius, together with the fragment from this work at ch. 2.20.5 extant in Stobaeus, the fragment plus book title of the Φυσικαὶ δόξαι cited by the Middle Platonist philosopher Taurus,³³⁰ and the *Metarsiology* (if correctly ascribed) preserved in Syriac and Arabic translations. The Taurus fragment is important because it also informs us *disertis verbis* that Theophrastus added ‘objections’ to the tenets he dealt with.³³¹ The *Metarsiology* attests that Theophrastus collected alternative explanations for meteorological phenomena, which he must have taken from the primary and secondary literature. Quite a few of these anonymous tenets are paralleled in chapters of Book 3 of the *Placita*, although some topics are lacking. In the *De sensibus*, doxai are sorted in accordance with the technique of diaeresis, dialectically opposed to each other and criticized. This bipartite opposition of doxai ends with a compromise position, the same as happens in quite a few *Placita* chapters. This feature is lacking in Aristotle’s overviews. But we do not know if there was a constructive sequel.³³² And though we are rather better informed about the *Physics*, here too we do not know how his constructive positions were linked with the dialectical introduction.

Both the discussion of the senses and sensation and that of the principles have left their traces in the *Placita*, but as far as we can tell given the state

329 In our commentary on ch. 2.20 we argue that the reference was most likely present in the *Placita*.

330 Taurus Test. 22B Lakmann ~ 23 F Gioè ~ 24 Lakmann = Theophr. *Phys.Op.* fr. 11(a) Diels ~ fr. 241A FHS&G at Philop. *Aet.* 6.8, p. 145.20–21 (repeated p. 223.14–15), Θεόφραστος μέντοι ἐν τῷ Περὶ τῶν φυσικῶν δόξων, which can only mean ‘in the *On the physical tenets*’, *pace* the translations of FHS&G (1993), Gioè (2002), and Lakmann (2017). Diels argued that this treatise was topic-oriented not person-oriented, for which Φυσικαὶ δόξαι as title would a better fit. Cf. below 1.titulus et index Commentary D(e)(3) for references to earlier discussions, and the evidence there at E(b) *Physical doxai/dogmata*. See also J.-P. Schneider at *DPhA* 6.1069.

331 καὶ οὕτω ποιεῖται τὰς ἐνστάσεις (*enstasis* is a technical term in Aristotle’s *Topics* and *Analytics*, also used by him elsewhere).

332 See Baltussen (2000a) and (2000b), and on diaeresis and the crucial difference compared with Aristotle, Mansfeld (1996), repr. at M–R 3.203–236.

of preservation of Theophrastus' writings, the impact and inheritance of the successor are far less important than of the master.³³³ But this does not really surprise, for Theophrastus is revising and filling the gaps in Aristotle's disquisitions, like he does on other occasions. The *De sensibus* provides more, and more detailed, information on specific theories than Aristotle's systematic and more general *On Sensation*, while his point that some early thinkers did distinguish between sensation and thought is an implicit criticism of Aristotle's view that none of them did.³³⁴ His account of the principles is a revised version of the foundational but largely name-label-less division in ch. 1.2 of the *Physics* and an enlarged version of Aristotle's famous account of progress in the first Book of *Metaphysics*. Theophrastus adds further details and includes Anaximander and Archelaus, the former not mentioned by Aristotle in *Met.* Book A, the latter never. So their presence in ch. 1.3 derives, ultimately, from Theophrastus' intervention.

The situation for ch. 1.15 on colours and chs. 4.13–19 on the senses is more promising.³³⁵ Individual antecedents are indeed present in the *De sensibus*, but these are not all equally complete or convincing, and their impact again is not as decisive as Diels made out, as we know thanks also to the pioneering contributions of Ax and Baltussen.³³⁶ For details see the Commentary on these chapters below.³³⁷ Our conclusion therefore is that, indeed, the *De sensibus* is an ultimate source of information on Presocratics and Plato for Aëtius, but nevertheless it constitutes not more than one important ingredient of the tradition(s), including Aristotle's influence, which ended up in the *Placita*.

This result amounts to a much tuned-down version of the original Usener–Diels hypothesis of a unique source that had been sadly corrupted in the later tradition. Diels, as is of course (or should be) common knowledge, claimed that doxography began with the Φυσικῶν [sic] δόξαι, in which he included the *De sensibus* and the fragments from the beginning of the *Physics* and a lot more, but the evidence does not bear him out. The available evidence suggests rather that, just is the case for Aristotle, so also for Theophrastus we must assume that several individual treatises actually bequeathed problems and doxai to the *Placita*, and not just one: apart from the *Physics* and the *De sensibus* and

333 Cf. Jeremiah (2018) at M–R 4.325–326, who, however, does not take into consideration the references in Book 2, no doubt because they are not name-labels attached to doxai.

334 See Mansfeld (1996) at M–R 3.203–236.

335 See on the senses more specifically chs. 4.13.1, 4.13.7–8, 4.13.12, 4.14.1, 4.16.1–4, 4.17.1–2, 4.18.1–2, 4.19.1a–b, and 4.19.5.

336 Ax (1986); Baltussen (1993).

337 The evidence is summarized and assessed in Mansfeld (2019d).

the name-label-less *Metarsiology* already mentioned above,³³⁸ one can give the example of the *On Waters* which is relevant to ch. 3.16 on the sea and its bitterness. In Alexander's Commentary on the *On Sensation* the title of this work is cited and we encounter explanations without name-labels of brackishness because of water having been filtered through a certain type of earth, or bitterness because of it having been filtered through ashes.³³⁹ Such views are also cited by Aristotle at *Mete.* 2.1–2, with name-labels and doxai that resulted in three paragraphs of ch. 3.16. Theophrastus also follows and improves on Aristotle's explanations of the saltiness of the sea in a passage quoted in Alexander's Commentary on the *Meteorology*, adding a couple of name-labels and doxai and as it seems omitting others.³⁴⁰ Diels attributed the latter quotation as fr. 23 to the *Physical Tenets*, but Alexander fails to cite a title. This does not imply that the Φυσικαὶ δόξαι provided nothing at all, but we really need more solid evidence and it is difficult to see where it is going to come from.³⁴¹ All in all, to sum up the results of our research on the origins of the dialectical-doxographical tradition, we will be pleased if it leads to an increased appreciation of the role of Aristotle and a diminution of scholarly fixation on the role of Theophrastus.³⁴²

6 The Edition's Contents, Method and Layout

6.1 *The Division into Four Parts*

A key result of our investigations into the transmission of the *Placita* is that ps.Plutarch's *Epitome* by and large preserves the structure of Aëtius' compendium.³⁴³ The sequence of our edition and commentary is based on this insight.

338 See above at n. 98.

339 Included in the fragments of Theophrastus as fr. 212 FHS&G.

340 The fact that Theophrastus revised and supplemented these overviews of his master robs the long forgotten hypothesis of Gigon (1969) that Aristotle used the (so-called) *Physikon Doxai* as a data-base for his dialectical exercises of all plausibility.

341 We may perhaps refer to the fragment cited by Taurus, quoted above at n. 330. It seems that, echoing Aristotle at *Cael.* 1.10 297b32–298a2, Theophrastus criticized the allegorical explanation of the generation of the cosmos provided by Plato's pupils. A possible trace in the *Placita* is at ch. 2.4.1, where this view is ascribed to Pythagoras (representing Plato's pupils) and, a bit surprisingly, Heraclitus. But how are we to distinguish here between a reception of Theophrastus and one of Aristotle? There is moreover no trace in ch. 2.4 of the arguments against the eternity of the cosmos criticized by Theophrastus according to Philo *Aet.* 117–150.

342 The promised volume on the doxographical fragments of Theophrastus by Han Baltussen is eagerly awaited.

343 See above sections 2.3 and 2.8.

Part One of the present work in four parts³⁴⁴ first includes the necessary preliminaries, including a detailed list of sigla and abbreviations, and also the present General Introduction.³⁴⁵ The remainder comprises Book 1 on the principles of nature, the lengthiest of the Books and also the one including the most complex chapters 1.3 on the ἀρχαί and 1.7 on theology. The edition of this Book and the concomitant commentary is primarily the work of Jaap Mansfeld. Part Two comprises Book 2 on cosmology and the heavens and Book 3 on meteorology and the earth. The former has been prepared primarily by David Runia and is a thoroughly revised version of the *specimen reconstructionis* produced in *Aëtiana* volume 2.2.³⁴⁶ The latter has been prepared by Jaap Mansfeld. Part Three focuses on the psychology and physiology of (mainly) the human being. Book 4 on psychology has been the work of Jaap Mansfeld and Book 5 on physiology has been prepared by David Runia. In the case of each of the five Books, the edition of its chapters is preceded by a compact Introduction which gives an overview of its witnesses, transmission, subject-matter, name-labels of philosophers and schools, method and sources (both anterior and proximate). The collaboration of the two authors is the same as in all previous volumes, as first outlined at M–R 1.xxi. Although the labour of producing the edition and commentary has been divided up between them, they have constantly read each other's texts and reached agreement on all the more important issues.

The parts of the work containing the reconstruction and edition do not have an accompanying translation. The usual method of text and facing translation was not practicable because of the copious amount of material that needed to be included in the apparatus of the edition. The remedy has been to gather the translation together in Part Four. It will be useful to have this volume at hand when using the other three. It also contains the bibliography and the indices.

For all 135 chapters of the entire work, the edition and commentary use an identical method and layout. Only the chapters on the pinakes at the beginning of each Book and the four proœmia to Books 1–4 differ in a few respects. This method and layout will now be explained in detail, commencing with the edition.

344 As in the case of *Aëtiana* Vol.2, we label the separate bound books of the entire work as 'Parts'. English lacks the useful German term 'Teilband'.

345 The General Introduction is a collaborative effort: sections 2.2–2.8, 3.1–3.2, 5, and 6.5 are mainly the work of Jaap Mansfeld, while David Runia wrote the remaining sections.

346 On this earlier volume of the *Aëtiana* see above section 2.8.

6.2 The Edition

Following the conventions of classical scholarship the edition of the Greek text and all its accompanying apparatus are in Latin. The many abbreviations and sigla that we use are set out at the beginning of Parts One to Three.

For each chapter we begin with a list of the relevant *testes* (witnesses). First in this list are the passages from the *testes primi* (primary witnesses) and the name of the editor of the text edition used. These witnesses are: ps.Plutarch (abbreviated P) and his tradition, Stobaeus (S) and Theodoret (T). Below them on the next line passages from the *testes secundi* (secondary witnesses) are listed when available, again including their abbreviation and the name of the editor used. They are always introduced with the capitalised Latin abbreviation Cf. (abbreviation of *confer*, i.e. 'compare' or 'see also').

The text of the chapter then follows. It begins with the titulus (chapter heading), followed by the numbered lemmata, each consisting of one or more name-labels (sometimes unspecified) plus a doxa. The lines of the text are continuously numbered, as indicated in the margin, beginning with the chapter heading. After the heading and each lemma of the chapter the primary sources for its text are indicated by the sigla (P,S,T) when all of them are present, or (P,S) when Theodoret is lacking, or (S,T) when ps.Plutarch is lacking, or (P,T) when Stobaeus is lacking, or only one of these when only one primary source is available. The numbers after the siglum in each case indicate the number of the doxa in the sequence of the text of the primary witness as indicated in the text used.³⁴⁷ This system gives the crucial information on the attestation of the lemmata at a single glance. The same information is carried over to the translation in Part 4.

Beneath the text we first cite the references to the collections of fragments of Presocratics, Academics, Peripatetics, Stoics and others where individual lemmata can be located. In the case of the Presocratics we refer only to the sixth edition of Diels–Kranz (abbreviated DK), not to collections of individual authors. Similarly for the Stoics we use where possible Von Arnim's collection (*SVF*). For other authors we use the most recent collections.³⁴⁸ In the case of authors whose original writings survive, we refer to passages from which the doxa is derived, whether directly or indirectly (as indicated with the abbreviation cf.).

347 These numbers are not found in the texts of Mau, Wachsmuth and Raeder. They have been supplied by us.

348 On rare occasions we list two collections when they are both current or complementary, e.g. for Strato (Wehrli, Sharples) and Posidonius (Edelstein-Kidd, Theiler).

Next we present the apparatus criticus to the text. Its aim is to give full and detailed insight to all the relevant variants of the primary and secondary witnesses. It is therefore not a *negative* but a *positive* apparatus.³⁴⁹ We do this because we are not editing a single text from manuscripts and indirect quotations, but rather are *reconstructing* our text from a multiplicity of witnesses both direct (*primi*) and indirect (*secundi*), each of which has its own relation to the lost original *Placita* as collected by Aëtius.³⁵⁰ Some of these, such as the fragments of ps.Plutarch in the Antinoopolis papyrus, the Arabic version of ps.Plutarch by Qusṭā ibn Lūqā translated into German by Hans Daiber, and the new critical edition of a large part of ps.Galen by Mareike Jas, have become available only quite recently. In addition we pay due attention to a variety of earlier editions and also note significant readings, conjectures and emendations when the texts of individual doxai are included in collections of fragments.³⁵¹ In general it is only in the case of the primary witnesses ps.Plutarch and Stobaeus (but not Theodoret) that we give the variants of the main manuscripts. For other texts we give the preferred reading of the relevant critical edition, only mentioning manuscript variants on rare occasions. The Arabic translation of Qusṭā is cited in Daiber's German translation. Based on these principles, the apparatus criticus not only strives to shed light on our choices, but also to inform about the peculiarities of the widespread tradition. Because this apparatus is necessarily often rather extensive, it proved impossible—as already noted above—to allocate room for the translation next to the Greek in a synoptic format without chopping up text, translation, and apparatus and creating a succession of blank spaces. For this reason the translations of the Greek text of all 135 chapters, forming a continuous English version of the treatise as a whole, have been printed in the final Part, *Aëtiana* 5.4.

Three more sections of the edition remain. First we print the texts of the *testes primi* (primary witnesses) for the reconstruction. In first place is always Theodoret when he has cited this text, followed—with its own sub-heading—by the *traditio ps.Plutarchi*, i.e. the bevy of representatives of the tradition of the *Epitome* available for the relevant chapter. First of these when available is the Antinoopolis papyrus. This is followed by the text of ps.Galen, the most important of the witnesses to this tradition. We also include texts from ps.Justin, Cyril,

349 Contrary to our previous practice in the *specimen reconstructionis* of Book 2 in M–R vol. 2.2; see above section 2.8.

350 For detailed accounts of these witnesses and the editions used see above section 4.2–5.

351 In particular the collections of Presocratic philosophers in Mansfeld-Primavesi's Reclam edition and the Loeb volumes of Laks-Most, but also editions of particular philosophers, such as Empedocles (Bollack, Viték), Diogenes of Apollonia (Laks) etc.

Ioannes Lydus, Psellus, Symeon Seth and others, all of whom excerpted ps.Plutarch. The texts of ps.Plutarch and Stobaeus themselves (and also Eusebius' verbatim excerpts) are not quoted separately. As already noted,³⁵² they can be readily found elsewhere. But it is important to remember that our debts to and differences from Diels' *DG* edition of Aëtius and to other editions of the primary witnesses are fully accounted for in the apparatus criticus to the Greek text, and often also further discussed in the Commentary.

Next is a section devoted to the *testes secundi* (secondary witnesses) who can also offer some assistance for the reconstruction and analysis of the text.³⁵³ They represent the doxographical traditions closest to Aëtius. Some of these, namely Athenagoras, Achilles, and Nemesius, were included by Diels in his apparatus among the *aliorum ex Aetio excerpta*. Because, unlike in the case of Theodoret, it is not certain that these authors actually did excerpt Aëtius, we have preferred to group them together with other passages in the *Aratea*, Hermias, and Scholia to various authors, regarding them as a collection of writings that are closest to the Aëtian tradition without being part of it. They are closer than the texts that we have placed in the proximate tradition, as we have explained above in sections 4.1 and 5.1. As already noted there, however, the distinction is somewhat fuzzy. Texts very close to Aëtius such as found in Varro, Philodemus, Cicero and Philo of Alexandria could be included. The difference is that these texts antedate Aëtius, whereas the *testes secundi* are all later than he is and so could have used his work, whereas this was of course impossible for the writers just mentioned.

The final subsection of the edition is a collection of parallel passages quoted from the reconstructed text for other chapters of Aëtius, which we have given the title *Loci Aetiani*. These passages contain various kinds of similarities: to name-label(s) plus doxa, or to parts of doxai, or to particular formulations of doxai or name-labels. They thus provide detailed information about such uniformities as are present in the *Placita* as a whole. Parallels in chapter headings or in the quaestiones (questions or topics) being treated, are generally placed first, followed by those relating to particular lemmata.

6.3 *The Commentary*

The second main section of each chapter contains the Commentary. It too follows a fixed and identical schema of treatment, as indicated by alphabetically numbered sections, some of which are further divided into sub-sections

352 See above section 3.2 at n. 119, and also sections 4.2.15 and 4.3.4.

353 For detailed accounts of these witnesses and the editions used see above section 4.5.

and sometimes even further subdivided. By consistently using this system of divisions,³⁵⁴ we aim to organise the mass of material involved with a maximum of clarity. Each of these sections and sub-sections will now be explained in turn.

A: Witnesses. In this section we present the evidence as preserved in the primary and secondary witnesses and discuss issues that it might raise. We generally commence with (1) ps.Plutarch and his tradition, since the *Epitome* mostly preserves the general structure of the work and its lemmata best. Sad to say, in the case of Book 5 this tradition is virtually all that we still have. Thereafter follows an analysis of the evidence as presented in (2) Stobaeus and (3) Theodoret. On rare occasions, however, we start with Stobaeus, notably at chs. 2.28–32 where he appears to write out an entire stretch of the compendium without change. In this section we often engage in a first sifting of the evidence for the reconstruction of the chapter, followed by further details in section D(b) below.

B: Proximate tradition and sources. This section gives an overview of the texts that can shed light on the subject and contents of the chapter. The first sub-section (1) discusses the proximate texts as defined above in section 5, i.e. the doxographical tradition which resembles the *Placita* in its focus on questions of the φυσικὸς λόγος, on philosophers and the answers they gave to those questions. These texts can be earlier than Aëtius and represent the anterior tradition from which he drew his material (though the evidence for the early period is rather thin). They can be contemporaneous with him or much later, even as late as Isidore of Seville and (rarely) authors writing in Arabic and Syriac. The passages discussed may relate to the chapter as a whole or to individual lemmata within it.

The second sub-section (2) turns the attention to the ultimate sources of the subject-matter of the chapter. For the doxai of some philosophers it is sometimes possible to pin down the exact texts on which the doxai are based, e.g. in the extant works of Plato, Aristotle and Epicurus. More often other comparative material will need to be brought to bear, again from Plato and Aristotle, but also from the Hellenistic, early Imperial and Late Ancient periods. Here too, passages discussed may relate to the chapter as a whole or to individual lemmata within it.

354 Occasionally not all the fixed elements will be represented in a particular chapter. Section D(e) Other Evidence is quite often passed over. Some early chapters in each book, e.g. titulus et index and prooemium, will not have some of the usual elements, e.g. B Proximate Tradition and Sources.

For both sub-sections it is the case that many or even most of the texts discussed will be printed in the third main section Further Related Texts below, to which we frequently cross-refer. Given the large quantity of texts involved, it is not possible to discuss all this material in great detail, but rather we will draw attention to the salient points to which it gives rise.

C: Chapter heading. In this section we give detailed discussions on the type and significance of the chapter heading, including how it relates to the standard question-types that were developed on the basis of the Aristotelian examples and used throughout antiquity. We note, where applicable, the variant readings for the heading in the witnesses and motivate our choice for the chosen formulation. We also give an overview of parallel headings that are embedded in texts or book titles elsewhere. These too are cited below in the section Further Related Texts.

D: Analysis. This section, which contains our interpretation of the contents of the chapter, consists of five sub-sections.

D(a): Context. Here we briefly discuss the place of the particular chapter within the group of chapters of which it is a member and the position of this group in the context of the Book as a whole. We also note possible analogies with the way other books of the *Placita* are structured and point out particular links that a chapter might have with chapters elsewhere and sometimes also with ancient traditions such as the Peripatos and the Stoa.

D(b): Number-order of lemmata. In this sub-section we return to the witnesses for the contents of the chapter and determine where possible the number of doxai and the order in which they were listed. For this we depend largely on the evidence of the witnesses themselves, as informed by the understanding that we have gained of their methods. But we are sometimes assisted by the secondary witnesses and indeed by texts in the proximate tradition and beyond. For determining the sequence of the doxai it is also important to understand the argumentative structure of the chapter, often revealed in its diaereses or diaphoniae (see also the following sub-section D(c)). Here we also note how our sequence compares with that established by Diels. Often the result is the same, but there are also many cases where we reach a substantially different result, which of course is fully explained and justified.

D(c): Rationale-structure of chapter. This sub-section contains the nucleus of our interpretation of a chapter. It is a distinctive feature of the *Placita* that its chapters have an argumentative structure which is determined by the contents and position of the individual lemmata but at the same time (at least to some extent) determines their selection. The task of this sub-section is to elucidate that structure. It may involve a listing of doxai in order of decreasing or increasing similarity according to the method of diaeresis, or it may

involve a contrasting of doxai or groups of doxai in order to emphasize the conflict between them. There is much variety among the 135 chapters and it will be clear that the examples used above will not apply at all to monolemmatic chapters and not necessarily to other chapters with a plurality of doxai.

D(d): *Further comments*. This sub-section is divided into General points, pertaining to the chapter as a whole (if pertinent), and Individual points pertaining to individual lemmata. These latter, presented in order of the place of the doxa/doxai in the chapter, may relate to the constitution of the text, and/or may enter into a detailed discussion of the interpretation of the philosophical or scientific view portrayed by the contents of the lemma concerned. It will be understood that, in the light of the astonishing breadth of topics and thinkers broached in the *Placita*, we have had to be necessarily selective in making such comments. References are frequently made to the secondary literature, but here too we have needed to be selective.

D(e): *Other evidence*. This final sub-section of the Commentary follows on from section B above. It embarks on more substantial discussions of evidence in the wider doxographical or anterior philosophical and scientific traditions, including some of the secondary witnesses (especially Achilles). These can be either of a textual or of a content-related nature, depending on what is relevant for the interpretation of the chapter and/or some of its individual lemmata.

In the early part of our Commentary, when treating chapters 1–9 of Book 1, we have included a number of introductory discussions of general topics relating to the method and organisation of the *Placita*. These are frequently referred to in subsequent sections of the Commentary. For the convenience of the reader we have drawn up a list of these introductory discussions in Appendix 4 to this Introduction.

6.4 *Further Related Texts*

Our presentation of each chapter ends with a third and final section entitled E: *Further Related Texts*. It too is further sub-divided into two parts.

E(a) *Proximate tradition*. Here, as the name indicates, we present an extensive collection of texts drawn from the proximate doxographical tradition, as outlined above in section 5.1. We print the texts in the original Greek and Latin (with occasionally some texts translated into German or English, for we have no Arabic or Syriac). These texts link up with the discussion in the earlier section B(1) of the Commentary. The selection begins with General texts dealing with the subject in question and/or covering the views of a plurality of thinkers. The next paragraph lists, where available, the texts that contain or illustrate the

chapter headings or sometimes the quaestio posed by that heading. Thereafter, texts are listed under the individual lemmata of the chapter. In order to facilitate the reader's orientation, the name-labels of the relevant lemma are printed in bold italics. For all three listings the texts are most often printed in full and are presented in approximate chronological order.

E(b) *Sources and other parallel texts*. In this sub-section we link up with the discussion in the earlier section B(2) of the Commentary and print a collection of texts relating to the wider tradition of ancient philosophical and scientific literature, including those texts that shed light on the sources that the doxographers may have used to formulate the doxai collected in the *Placita*. These follow the same basic method as in the previous sub-section. They are usually printed in full in the original Latin and Greek, are divided into same three groups in an approximately chronological sequence, and are highlighted in the same way. In the case of some texts, either very well known or somewhat tangential to the matter at hand, we give references only.

Users of our edition will observe that the selection of texts in this final section is *very* extensive and that these texts in the original languages are not accompanied by a translation into a modern language. In both cases we should explain why we adopted this course of action.

In citing the texts in full we have followed the example of outstanding works of scholarship, such as the multi-volume *Der Platonismus in der Antike* of Heinrich Dörrie and Matthias Baltes, the three volumes of his *Zenobii Athoi Proverbia vulgari ceteraque memoria aucta* by Winfried Bühler and the two volumes of the *Orphicorum et Orphicis similium testimonia et fragmenta* by Alberto Bernabé.³⁵⁵ In these works the practice of citing texts in full is preferred to the inclusion of bare lists of references to other ancient authors. The vast number of passages involved in our edition, from Homer to the late Byzantines and beyond, would make the task of looking them up and consulting them (even where they are accessible in electronic format) quite daunting. The electronic texts moreover are not always those of the best, or at least most recent, critical editions that we use, even if we have not always followed these *ad litteram*. Moreover, in the passages we print we have included full references to standard fragment and other editions as a supplementary resource. Such references are rarely available in the electronic or even printed editions, and may be obsolete or incomplete when found in early editions. It should be recognised too, that some authors or fragment collections, especially where only early editions exist, are not easily available.

355 Dörrie–Baltes et al. (1987–2006); Bühler (1982–1999); Bernabé (2004–2005).

6.5 *Rationale for the Collection of Further Related Texts*

It is our conviction that the full significance of the *Placita* tradition can only be appreciated when it is seen in the broad tradition of ancient philosophy and, to a lesser extent, science. The extent of the collection of texts in our edition demonstrates how seminal the formulation, study and utilisation of opinions was in antiquity. Not only do they distil the doctrines of more than five centuries of philosophy and close to ninety philosophers going back to the sixth century, but their influence and appropriation also extend far past the end of antiquity to the Byzantine period and beyond.³⁵⁶ For this reason we apologise neither for the extent of our collection of texts nor for the length of individual passages cited.

It should be added that in collecting these texts we are following the example of Diels, but doing it more effectively.³⁵⁷ As already noted earlier,³⁵⁸ Diels divided up the relevant parallels for the Aëtian text, placing them in three different locations: in the labyrinthine 'Prolegomena', under the twin columns of his text, and as separate documents in the rest of the volume (Arius Didymus etc.). We have collected together the same material, considerably augmenting it when possible. But we have attached it to the relevant chapters and lemmata of the work itself, whether as witnesses at the beginning of each chapter or as further related texts at its end. The end result sometimes resembles the A-sections of Diels' *Fragmente der Vorsokratiker*, though of course ordered on very different principles.

We are confident, therefore, that our edition will be able to serve as a useful tool of reference. When one is interested in a philosophical or scientific theme that is discussed in a *Placita* chapter, or in a lemma in such a chapter that is included in a collection of fragments or referred to elsewhere, our edition will be able to provide a treatment in some depth of the theme in the wider context of the history of Greek philosophy and/or science, and of the function of a fragment in its original dialectical environment. Wherever feasible our edition includes a discussion of the provenance and prehistory of these themes and tenets, as well as of their subsequent reception and afterlife. In this respect our presentation may serve a similar function as that of Arthur Stanley Pease's

356 Jeremiah (2018) 302 gives the total number of individual names as 86, with a further 32 labels of schools and anonyms.

357 This is a good place to acknowledge the indispensable assistance that we have received from the two magnificent databases of ancient texts, the Thesaurus Linguae Graecae (TLG) and the Brepols Library of Latin Texts (LLT). Diels' achievement is all the greater for not having had these modern digital instruments at his disposal

358 See above section 3.2 ad fin.

incomparable edition of Cicero's *De natura deorum*, with its extensive comments at the foot of the page containing copious references and quotations.³⁵⁹ When one knows where exactly in this treatise a theme or issue is dealt with or merely mentioned, one immediately has access to a fund of useful contextual information on that topic, in contrast to what obtains when one constantly has to look up texts for which only bare references are given. Regrettably it has not proved practicable to prepare an index of the totality of these passages. However, the reader with access to the digital version of the work will have no difficulty in locating any desired passage by means of electronic searches.

With regard to the absence of translations, our reasoning was of a different kind. Given the extent and the extreme diversity of the collection of texts, it was never going to be practicable to include both the original and a translation. Users of our edition will not find it difficult to locate good translations of the vast majority of texts, for example the Loeb Classical Library (now available online), the Budé and Sources Chrétiennes collections for readers of French, the series Ancient Commentators on Aristotle and so on. Here too we make no apologies for the choice that we had to make.

6.6 *English Translation*

As we outlined above in section 6.1, we have made an English translation of the reconstructed text, but it was not possible to place it beside the Greek text. It has therefore been placed in Part 4, where it can be consulted while the text is being studied in the other Parts.

The translation aims to give an accurate picture of the original Greek. It thus tends towards the literal side, while trying to avoid veering towards language that is artificial or unidiomatic. Users of the translation should note the following conventions and practices:

- (1) Words and phrases that have to be supplied in the Greek, when translated, are placed in parentheses.
- (2) Name-labels are rendered in the usual Latinate forms of the names. For collective names, e.g. schools and groups, we aim at a uniform translation. A note will be added when this is not possible. Note the following translations of standard Greek phrases:

οἱ ἀπὸ τινος	the successors of X
τις καὶ οἱ ἀπ' αὐτοῦ	X and his successors
οἱ περὶ τινά	X and his followers

359 Pease (1955–1958).

For multiple name-labels we follow the Greek and preserve all cases of *asundeta*, i.e. not using commas and only translating conjunctions when present in the original. This of course is quite unnatural in English, but helpfully conveys the telegram style of the *Placita*.

- (3) Conjectural additions to the transmitted text, when translated, are placed in angle brackets (just like in the text itself). Braces are also taken over from the text, indicating that we suspect that the text is not authentic. An obelus (†) indicates a crux in the text. Three asterisks indicate a lacuna.
- (4) Although we aim as far as possible to achieve consistent one for one renderings of Greek terms in English, this is not always possible because of the polyvalent meanings of certain words in both languages. Occasionally we add an asterisked note to explain a particular case.
- (5) On some occasions it is best to use a transliterated equivalent of the Greek term. In such cases an English rendering of the term is added in parentheses, unless this is not needed, as for example in the case of the term *pneuma*.
- (6) Only on rare occasions are alternative renderings are supplied. These are placed in square brackets.
- (7) Similarly, transliterated equivalents of Greek terms, indicated in parentheses, are usually only given for etymologies or plays on words.
- (8) Greek adjectives with the suffix *-ειδής* are usually translated by the phrase 'like a', e.g. *σφαίροειδής* is rendered 'like a ball'.
- (9) Passages which are only preserved in the Arabic translation of Qusṭā ibn Lūqā are printed in italics. These are confined to chs. 1.21.2α and 5.27 & 29.

6.7 *Editio minor*

The authors are committed to producing an *editio minor* of the new Aëtian text as soon as will be practically possible. Its main feature will be the reconstructed Greek text and English translation on facing pages, allowing quick and convenient consultation.

Aetius Placita
Book 1 The Principles of Nature:
Text and Commentary

Introduction to Book 1

1 Transmission¹

Book 1 is by far the longest in absolute terms (6558 extant words). The next is Book 4 (4246 words), the others in order of length are Book 2 (4038 words), Book 3 (2811 words), and Book 5 (3707 words). It has 30 chapters, each on a well-defined question in philosophy, i.e. slightly less than Book 2 (33), the same as Book 5 (30), and more than Book 3 (18) and Book 4 (24). In terms of doxai it has less (183) than Book 2, which has the greatest number of doxai of all the five Books (217). S preserves a higher number of doxai compared with P. The witnesses are PST = 16, PS = 82, ST = 9, PT = 2, S only = 51, P only = 23, T only none. G retains only 19 of the 30 chapters with 64 doxai, or 35 % of the whole.

As we have just seen, the number of doxai is 183, which is less than Book 2 (217), but in fact the number of words is much larger. This is a consequence of the presence in Book 1 of a relative high number of chapters and lemmata of considerable length. It is apparent that the prooemium plus chapters 1.1–7.1 differ stylistically from the majority of *Placita* chapters—though only to a certain degree. The latter as a rule comprise a number of terse lemmata consisting of a name-label (or -labels) plus doxa plus verb (often elliptical) of saying, often even omitting the theme stated in the chapter heading (another ellipsis). They are compact formulas which are quite different from the leisurely exposition found in the former, esp. in the prooemium (223 words over 3 lemmata) and chs. 1.1–2 (155 words over 3 lemmata and 111 words over 2 lemmata respectively), in quite a few lemmata of 1.3 (see below), and in 1.4 (251 words in the second lemma), 1.6 (595 words, monolemmatic) and 1.7.1 (521 words). This has led in the past to the drastic assumption that the excerptor tired of his job after ch. 7.1 (see M–R 1.44–46). Diels *DG* 59 too speaks of a caesura between 1.7.1 and the rest of the chapter. That only chapters 1.3, 1.5, and 1.7.2–25 are found in both primary sources (with considerable abridgement in S) and that the prooemium and chs. 1.1–2, 1.4, 1.6 and 1.7.1 are not paralleled there, certainly played a part in formulating this hypothesis as well.

There is, however, no need to deny these chapters to A, as Diels *DG* 57–60 also recognized, though he argued that what he saw as Aëtian addenda deviate

1 In this Introduction and also in those to the other four Books we make extensive use of the statistical analysis of Aëtius' compendium by Edward Jeremiah published in M–R 4.279–373. See also General Introduction, section 2.7–8, and Appendix 3.

from the genuine method of the (*Vetusta*) *Placita*. Our more charitable conclusion from this disparity is that, right from the beginning, we are faced with the kind of updating that is characteristic of the treatise *as a whole*. The proœmium, focusing on the views of the Stoics and the Peripatetics, suggests that what follows will be ‘of ongoing relevance’ (Edward Jeremiah, M–R 4.325), and caps this suggestion by insisting on the indispensability of physics for philosophy understood as a way of life.

The differences have in fact been exaggerated. Ch. 1.3 is a mixed bag of 24 lemmata, consisting both of lengthy expository and of quite short to telegraphically terse standard lemmata, while ch. 1.5 begins with 3 brief doxai.

The single lemma 1.3.7, the longest of the chapter and third longest of the treatise, perhaps even incomplete, counts 379 words. It describes a Neopythagorean system and constitutes solid evidence of updating. (So, of course, does the earlier restructuring of ch. 1.3 according to the system of Successions.)

Several other lemmata of ch. 1.3, on the other hand, belong with what may be believed to be early *Placita* material. There are 6 terse ones with early name-labels plus doxa (§§1.3.10, 3.12–15, 3.24), ellipsis of a *verbum dicendi* (cf. Jeremiah M–R 4.319–323), and of the theme stated in the chapter heading (cf. M–R 2.1.173–174). So these tenets are formulated as briefly as possible while still enabling differentiation. Of these additional pieces of information the first two are only mentioned the first time of a name-label’s occurrence in the treatise, so for these four they are found only in this chapter (thus incidentally being responsible for extra length). In the case of the other two they may have been lost in transmission. Yet together these six lemmata amount to no more than 42 words.

Long to very long expository lemmata are also found elsewhere in the *Placita*, so are not as exceptional as we are sometimes made to believe. We may think, for example, of chs. 2.20.13 (Empedocles, 69 words), 3.3.11 (Democritus, 80 words), 4.11–12 and 4.21 (not in S: Stoics, i.e. further evidence of updating; respectively 195, 220, and 173 words), or the chapter on respiration (4.22, where S is lost), with lengthy descriptive doxai not only of the Hellenistic physicians Herophilus (223 words) and Asclepiades (94 words), but also of Empedocles (112 words). Some of the lemmata in Book 5 are often quite lengthy as well, even though most of the time we there only have P’s *Epitome* too.

2 Subject Matter and Macro-structure

Book 1 has two different parts, namely the introduction to the physical treatise consisting of chapters 1.1–8, and the series of chapters 1.9–29 (plus 1.30). The

latter group, without exception introduced by headings of the umbrella type 'about χ ', $\pi\epsilon\rho\iota\ \tau\omicron\upsilon\ \delta\epsilon\iota\nu\alpha$, is concerned with the foundational concepts of theoretical physics. But note that the first part interlocks with the second. Since they are strongly connected with the theological chs. 1.6–8, the next chapters, 1.9–10, belong with both parts, so conclude the introduction and at the same time commence the series of foundational concepts. The brief final chapter 1.30, 'On nature', is an appendix ('mantissa', Diels *DG* 57) to ch. 1.1 'What is nature', as it raises a point absent in the earlier chapter. And it has the same function for the Book as a whole, for as we leave the chapters on necessity and fate, the last of the foundational theoretical chapters, we return, at least formally, to nature qua process. This structural feature thus aims to demonstrate the unity of the Book, comparable to the bridge function of chs. 1.9–10. It also aims at providing a transition to the next Book on cosmology. For parallel such demarcating and connective features in Books 2, 3 and 4 see the Introductions to these Books, and the General Introduction section 2.7.

The introductory part consisting of chs 1.1–8 forms a unity which is not immediately obvious, because, as has been argued at M–R 2.1.60–72, in the standard manner of the *Placita* the exposition after the proœmium has been divided up into separate numbered chapters provided with headings (though not yet into what Diels 1897, 112 aptly called 'kleine und kleinste Kapitelchen'). We also noted there that a definition of the subject at issue plus an analysis of the constituent parts of the discipline concerned is virtually *de rigueur* in scientific, technical and didactical treatises like the present one. Hence the definition of the *physikos logos*, 'physical doctrine', 'account of physics', in the proœmium, and of *physis*, 'nature', in ch. 1.1. Equally essential in this type of literature is an historical and systematic overview of its chief practitioners inclusive of their specific contributions, in the present case pertaining to the *archai*, i.e. the principles of physics from Thales to Strato of Lampsacus in ch. 1.3.

This overview of the principles and their proponents in ch. 1.3 has been expanded by three subsidiary chapters, namely the preliminary ch. 1.2 and the two exegetical chs. 1.4–5, so ch. 1.3 is the primary component of a *first cluster* of the four chs. 1.2–5. Ch. 1.2 defines and so distinguishes from each other principles and elements, quite useful for ch. 1.3. Ch. 1.4 describes in atomist terms the genesis of a *single* cosmos very much resembling ours (and rather like the potted cosmogony attributed to Heraclitus and Hippasus at ch. 1.3.9), thus taking up references to cosmogony in the previous chapter (1.3.2, 1.3.4, 1.3.9). Ch. 1.5 catches up by appending an ingredient missing in ch. 1.4, namely the standard divergence of views concerned with the uniqueness of the cosmos vs. a plurality or even infinity of kosmoi according to the Atomists (selectively anticipating treatment in ch. 2.1 in the cosmological Book).

A *second cluster* consists of five chapters, 1.6–10. We first have three chapters dealing with philosophical views concerned with the origin of the concept of the gods (1.6), their existence, or not, and nature or substance (1.7), and with daemons (1.8). The arrangement is comparable with that of the first cluster, for again we have a primary chapter surrounded by satellites. Ch. 1.6 is preliminary to ch. 1.7 just as happens in other literature discussing the origin of the concept and the existence and nature of the gods (see below section 5). The brief ch. 1.8 is, as it explicitly states, an addendum to ch. 1.7. That the gods are to be discussed together with but after the principles is stipulated in the Stoic definition of the *physikos logos* (Diogenes Laertius *V.P.* 7.132, see also below). That one needs such a discussion in physics, and precisely here, is moreover easily explained by the fact that physical principles may function as divinities, and divinities as principles of a physical sort.

The two chapters, 1.9–10, that come next in the second cluster are about the foundational concepts of ‘matter’ and ‘idea’ respectively, and as has been seen (cf. M–R 2.1.51–52 for references), together with God as represented by chs. 1.6–8, they constitute the familiar triad of principles according to Middle Platonist doctrine, conspicuously attributed to an updated Plato in precisely this order at ch. 1.3.20. The names of the two Stoic first principles, God and matter, coincide with those of the first two of the Middle Platonist triad (M–R 1.2.69). Accordingly, the introduction to the *Placita* and what immediately follows on has not only been upgraded according to Stoic precept, but also caters to a Platonist public. It is not an accident that the series of specific foundational concepts begins with ‘matter’ and ‘idea’. The redactor is a child of his time. The unobtrusive, but very intelligent and persuasive way, in which these clusters have been meshed with each other and strive at presenting an up-to-date introduction and access to the discipline, is an argument in favour of authenticity, that is, of attributing the whole of the prooemium plus chs. 1.1–8 plus 1.9–10 to A. And though chs. 1.4–5, as has been pointed out by Diels and others, would not be out of place in Book 2 (scholars even argued that they are misplaced in Book 1), their inclusion in Book 1 is in our view certainly defensible from a didactic point of view, since the reader’s attention is directed towards cosmology at this early stage, and the clues provided in the prooemium and ch. 1.1 are iterated. For the difference in style between esp. the lengthy and descriptive chs. 1.6 and 1.7.1 with the majority of *Placita* chapters consisting of an assemblage of staccato lemmata see also our comments above in section 1.

The second main part, chs. 1.9–29 (including the bridge chs. 1.9–10), presents the foundational concepts of theoretical physics in a plausible order. As argued at M–R 1.2.97–109 and in detail in the commentary to the individual chapters of Book 1, Peripatetic divisions and orders of presentation have been overlaid

and fused with divisions and orders of Stoic descent. After the concepts of matter and idea we first have causes (ch. 1.11) of both an abstract and a concrete nature, and then a group of six chapters (1.12–17) dealing with *bodies* and various kinds and properties and ways of behaviour of bodies. Chs. 1.9–15 all (with the exception of 1.13) begin with a nominal definition, because the technical meaning of certain terms is different from their everyday meaning. For instance ὕλη, ‘matter’, the subject of ch. 1.9, in normal parlance means ‘wood’ (see further at ch. 1.9 Commentary (D(c)1 & (e)(2))).

The group of chapters concerned with bodies is followed by one of six chapters (1.18–22) concerned with what the Stoics called *incorporeals*, namely the void, place, space and time. This order, incorporeals after bodies, is in agreement with the main division of physical doctrine according to the Stoics (again Diogenes Laertius *VP.* 7.132), though views of others are of course also listed. A cluster of two chapters (1.23–24) follows next, concerned respectively with motion in general and one of its subspecies, coming-to-be and passing away. The rear is brought up by a cluster of five chapters (1.25–29) dealing with themes important in Hellenistic philosophy, namely necessity, fate and chance. Necessity and chance are also important theoretical concepts in Aristotle, but fate in the context of physics only becomes really prominent in the Hellenistic period. For ch. 1.30 see above.

3 Name Labels

Most name-labels in Book 1 are of philosophers, with just two of scientists (Eratosthenes and Aristarchus) and one of a doctor (Asclepiades). We find very few collective name-labels: Peripatetics twice, only Stoics more often. Of the 183 name-labels twelve are anonymous, of which five are general and the others more specific, for three involve philosophers and the remaining four generic groups.

For the 171 non-anonymous doxai there are 64 distinct name-labels, the largest number in A, but relative to size this comes second to Book 4 (61 from 143 doxai). 30 doxai out of 171 have multiple name-labels, but there are no examples of the really long lists we find in Books 2 and 4. It is the only Book where Plato is the top figure, followed by Thales (and ‘his successors’), and Epicurus. Xenocrates and Strato are important as well. The richness of Book 1 is in fact as it ought to be, since it deals with indispensable introductory topics and with the foundational theoretical concepts which no account of physics can do without. See further Jeremiah at M–R 4.307–309, 327, and 329.

4 Successions and Historical Presentation

The Successions are prominent in ch. 1.3 on the principles, which because of its indispensable contribution to the subject of physics sets the tone for the treatise as a whole in an important way. This bias towards Hellenistic priorities, however, does not overrule the primary importance of the dialectical ordering of doxai according to diaeresis and diaphonia. Book 1 has the second highest level of chronological ordering according to name-labels, behind only Book 3. See further Jeremiah at M–R 4.310 ff., 323–325, 327 and 345.

5 Sources: Proximate Tradition

In analysing the Book's sources, its division into parts and clusters of chapters as described in section 2 above must be taken into account, since for each of these parts and subparts the situation is to some extent different.

Parallels in the proximate tradition for the part comprising the introductory chapters 1.1–8 are quite adequate for the prooemium and chs. 1.3 and 1.7, with their definition and demarcation of the subject matter and account of the principles of the discipline. Thus we cite Philo of Alexandria (various works), Pliny the Elder, Arius Didymus, Seneca *Naturales quaestiones*, ps.Galen *Definitiones medicae*, Athenagoras *Legatio*, Tertullian *De anima*, Diogenes Laertius, ps.Plutarch *Stromateis*, Hippolytus *Refutatio omnium haeresium*, Achilles *De universo*, Hermias *Irrisio gentilium philosophorum*, another ps.Galen's *Historia philosopha* (esp. the chapters not abstracted from ps.Plutarch), *Capitula Lucretiana*, *Scholia in Basilium*, and other authors and texts.

For chs. 1.6–7 together (on the origin of the concept, the existence, and the nature of the gods) we may adduce Cicero *De natura deorum* Books 1 and 2.44–71, Philo *De specialibus legibus* 1.32–44, and Sextus Empiricus *Pyrrhoniae hypotyposes* 3.2–12 and *Adversus mathematicos* 9.13–194. Cf. M–R 2.1.100.

For the part comprising the foundational theoretical chapters 1.9–30 the proximate material (including the wider doxographical tradition) is uneven. It is virtually or even wholly non-existent for chapters 1.13–15, 1.17, 1.18–20, 1.24, and 1.30.

For the specific Middle Platonist background of the cluster chs. 1.7–10 we cite Cicero *Lucullus* and Varro, Seneca *Epistulae ad Lucilium* 58 and 65, Athenagoras *Legatio*, ps.Justin *Cohortatio*, ps.Galen *Historia philosopha*, and Arius Didymus,

For the cluster of chs. 1.11–24 plus 1.30 we cite Achilles *De universo*, ps.Galen *Historia philosopha*, Hermias *Irrisio*, and Nemesius *De natura hominis*.

For the cluster of chs. 1.25–29 with their specific Hellenistic focus we cite sizeable portions of Nemesisius *De natura hominis*.

6 Other Source Material

Here too, in locating other source material, the division of the Book into parts and clusters of chapters, as described in section 2 above, must be taken into account, since for each of these parts and subparts the situation is to some extent different.

For the wider doxographical tradition, or use of this tradition, pertaining to the introductory chapters 1.1–8 we generously cite quite a few sources, namely Philodemus *De pietate*, Lucretius, Cicero *De inventione*, Lucullus, *Tusculanae disputationes* and *De natura deorum*, Varro *Antiquitates rerum divinarum*, Quintilian, Galen *Institutio logica*, *De placitis Hippocratis et Platonis*, *De locis affectis* and *De propriis placitis*, Diogenes of Oenoanda, Clement of Alexandria *Stromateis* and *Protrepticus*, Sextus Empiricus, Irenaeus of Lyon, Arnobius of Sicca *Adversus nationes*, Lactantius *Institutiones*, ps.Galen *Historia philosopha* (esp. the chapters not abstracted from ps.Plutarch), Basil of Caesarea in *Hexameron*, Epiphanius, Ambrose of Milan *Hexameron*, Augustine (various works), Calcidius in *Timaeum*, and other texts and authors.

For the second part of the Book the wider doxographical tradition is even less relevant than the proximate tradition. For the specific Middle Platonist background of the cluster chs. 1.7–10 we cite brief passages from Alcinous, Athenagoras *Legatio*, Achilles *De universo*, and Tzetzes in *Iliadem*. For the foundational chs. 1.1–30 it is almost wholly inexistent.

7 Other Parallels and Sources

(1) The division of the Book into parts and clusters of chapters, described in section 2 above, must be taken into account, since for each of these parts and subparts the situation is different.

A rich crop of parallels for aspects of the introductory chapters 1.1–8 (esp. the prooemium and ch. 1.3) can be harvested in scientific and didactic literature, which is chiefly—though not exclusively—of a philosophical, medical or historical nature. Here definitions of the subject matter and its divisions, and historical overviews of (Successions of) the main representatives and their contributions and discoveries are *de rigueur*. To cite only a few examples, Diogenes Laertius' prooemium, the introductory chapters of ps.Galen's *Introductio sive*

medicus and those of another ps. Galen's *Historia philosopha* can be rewardingly placed next to each other and to the introduction to Celsus' *De medicina* as well as to that of the *Placita*. The discussion of issues of a preliminary nature in the Commentaries of Late Antiquity on Aristotle (long continued in the Islamic world) provides impressive parallels, and attests the tenacity of the tradition. But Cicero's *Varro* and *De finibus*, hardly ever evaluated in this context, also provide very interesting material already, while that of Sextus Empiricus, quite influential in antiquity and better known in the secondary literature, is quite abundant.

For the cluster consisting of chs. 1.7–10 dealing with the god(s), matter, and idea specific parallels are found in (echoes of) Middle Platonist literature and the late Hellenistic and early Roman philosophical *koine*. Thus we cite Alcinous, Aspasius in *Ethica Nicomachea*, Alexander of Aphrodisias *De fato* and in *Topica*, Galen (various works), Clement of Alexandria (various works), and quite a few other authors, among which several late commentators.

For the foundational chs. 11–30 we cite Lucretius, Philo of Alexandria (various works), Alcinous, Atticus, Galen (various works), Sextus Empiricus, Dionysius of Alexandria, Diogenes of Oenoanda, Alexander of Aphrodisias *De mixtione*, Calcidius in *Timaeum*, Caelius Aurelianus, Simplicius in *Physica*, and other authors, among which several late commentators.

(2) For the ultimate sources of much of the material contained in the Book we must go back to the Peripatos, and think of the otherwise lost sources used by Aristotle, Theophrastus and their predecessors. The tradition goes back a long way. As Solmsen (1960) 51 points out, already before Plato 'a set of physical questions had become detached from the body of cosmological subjects. ... Aristotle has a goodly number of subjects that find a more suitable place in physics than in cosmology (some of them, to be sure, had only originated with Plato)'. Ibid. 7–9 Solmsen cites examples of such conceptual, or theoretical, subjects: *genesis* (cf. ch. 1.24), motion (cf. ch. 1.23), infinite divisibility (cf. ch. 1.16), void (cf. ch. 1.18), and mixture (cf. ch. 1.17).

These and other such themes, such as time and fate, appropriately find their place between the introductory chs. 1.1–8 of Book 1 and the cosmological chapters of Book 2. As we have argued in apposite detail in one of the earlier volumes (M–R 2.1.97–109) and do not need to repeat in the same form here, the macrostructure of the *Placita* and of its individual books conforms *grosso modo* to the diaeresis into primary and secondary parts and subparts of the Stoic *physikos logos*, known to us from Diogenes Laertius' account at *V.P.* 7.132, which seems to have been abridged by him or his source. In their turn, both this Stoic diaeresis and the sequential arrangement of (clusters of) chapters and of main topics treated in the *Placita* are much indebted to the choice of

subjects and their order of treatment in Aristotle's physical treatises, which to some extent differs from that on the Stoic list.

The first main division of the Stoic *logos* in the above-mentioned text as applied to Book 1 in particular, is one into seven subparts, namely (1) the part (τόπος) about bodies cf. chs. 1.12–17, (2) the part about principles cf. ch. 1.3, (3) the part about elements cf. ch. 1.2, (4) the part about gods cf. chs. 1.6–8, (5) the part about bounding entities cf. ch. 1.14.1, (6) the part about place cf. chs. 1.19–20, and (7) the part about void cf. ch. 1.18. Parts (1) to (4) pertain to Stoic corporeals, parts (5) to (7) to incorporeals. It is to be noted that the concept of nature (φύσις) does not figure in the diaeresis. Perhaps of more crucial significance to Aristotle than to the Stoics, it is discussed at *Physics* 2.2 and echoed at ch. 1.1. The account of the elements and protagonists in ch. 1.3 is ultimately dependent on similar accounts in the first books of Aristotle's *Physics* and *Metaphysics*, which are amplifications of Preplatonic lists in their turn. The prominent position of the theological chapters 1.6–8 is ultimately due to the Stoic agenda, while as we noticed above the link of these chapters with ch. 1.9 on 'matter' plus 1.10 on 'idea' reflects a Middle Platonist position. 'Causes', the subject of ch. 1.11, are treated in *Physics* 1.7, and in general terms are the theme of the αἰτιολογικόν, the third subpart of the second main division of the Stoic diaeresis. Ch. 1.19 on 'void' and 1.19 on 'place' recall the treatment of this subject in *Physics* 3.1–4 plus 6–9. 'Time', the theme of chs. 1.21–22, also not found in the extant version of the Stoic diaeresis, is treated in *Physics* 4.10–14. 'Necessity', the theme of chs. 1.25–26, and 'luck', that of ch. 1.19, are treated at *Physics* 2.8–9 and 2.4–6 respectively. Though important in Stoic philosophy they are not included in the extant version of the diaeresis either. And so is the to the Stoics even more important notion of 'fate', the theme of chs. 1.27–28, which is irrelevant for Aristotle. Thus, the Peripatetic treatment of physics has been adapted to fit the requirements of a Hellenistic *koine*, which goes back to the Stoa, but may no longer have been felt to be particularly Stoic.

Commentary

A *Witnesses*

(1) For all five Books a full title at the head of the Book is preserved in P^B. In the case of the first book the full title for the five Books is given, followed by the heading for Book 1. This general heading for all five Books and the additional heading for Book 1 are confirmed by Q. However, it must be borne in mind that the author of P, in making an epitome of the original compendium, will have adapted the title for his own purpose. In his most detailed reference to the titles of the works he uses at *CAG* 5.31 (text above), T makes quite clear that these two works had different titles. Given that our aim is to reconstruct A's original compendium, it follows that we must take over the title as formulated in T. At M–R 1.323–327 we present a detailed discussion of this title and parallels elsewhere in Greek philosophical texts. We conclude that T's words ἀναγνώτω μὲν Ἀετίου τὴν Περὶ ἀρεσκόντων ξυναγωγὴν are best interpreted as 'let him read the collection *'On Placita'*', i.e. the title of the work was simply Περὶ ἀρεσκόντων in five books. This is the title we use in our text.

(2) The *capitulationes*, or indices of chapter headings for each of the five Books, are also found in most mss. of P^B. Fortunately the oldest of the three mss. of Q used by Daiber in his edition, Zāhirīya (Damascus) 4871, contains a

translation of these indices, and thus provides valuable additional evidence on the manuscript tradition. Also see below, section D(3). Differently from what we find in the Greek mss. where the indices are found at the beginning of the individual books, this manuscript collects all the chapter headings together in a single list (just like Diels did at on *DG* 268–269, but of course quite independently of the Arabic transmission). Daiber (1980) 75–76, followed by Bottler (2016) 26 n. 59, argued that this list was compiled later on the basis of the Arabic translation and was not present in the Greek exemplar used by Q. This would be demonstrated by common mistakes in the list and in the translation itself. But it is no less possible that the translator used the same formulations when drawing up his list on the basis of the indices in his Greek exemplar and when he translated the chapter headings in the course of translating the main text. In any case, this evidence in Q is certainly not an argument for denying that the indices were not original to P's *Epitome*. Daiber did not include them in his edition and translation of Q, but he has kindly provided the editors with a translation (see Appendix Part 4, pp. 2155–2158). We have recorded the variants in this list in the apparatus of the indices at the relevant place in the five books. Not much value should be attributed to them, but they are part of the evidence of the transmission of the text.

(3) The indices are not paralleled in S (both the pinax in the Laurentianus ms. and Photius' index pertain to the whole *Anthology*) and T (who does not have indexes and chapter headings). Parallels for intratextual headings are found in both S and T. In S these are included, often in abridged form, in his coalesced chapter headings, while T cites the main concept at issue at the beginning of his abstracts from A. These parallels will be cited at the relevant chapters below. On tables of content in professional and didactic literature see below, section D(e)(1).

C *Treatise Title and Name of Author*

As noted above, the title of A's compendium must be based on the evidence of T, who is also the only witness for the name of its author. Depending on how one reads T's sentence at *CAG* 5.16, it can be taken to be either *Περὶ ἀρεσκόντων* or *Περὶ ἀρεσκόντων συναγωγῇ* (from an orthographical viewpoint *συναγωγῇ* is far more common than *ξυναγωγῇ* as in Raeder's text). Both titles are possible. The term *ἀρέσκον/ἀρέσκοντα* is of course extremely common as a *terminus technicus* for the view or doctrine of a philosopher or scientist (e.g. doctors) in ancient literature. It is found for example in the title of Diogenes Laertius' work as determined in Dorandi's edition: *βίοι καὶ γνῶμαι τῶν ἐν φιλοσοφίᾳ εὐδοκίμασάντων καὶ τῶν ἐκάστη ἀρεσκόντων*. Remarkably, however, there are no exact parallels for the phrase *Περὶ ἀρεσκόντων* on its own. According to the evidence

of the TLG, T's text is the only extant instance in Greek literature. The closest parallels to either of the alternatives derived from T's text are as follows (for fuller lists see M–R 1.323–325).

(1) *Περὶ ἀρεσκόντων συναγωγῆς*: cf. various titles in the catalogue of Theophrastus' writings in Diogenes Laertius: *V.P.* 5.43 *Τῶν Διογένους συναγωγῆς α'*; *V.P.* 5.44 *Περὶ τῶν Μητροδώρου συναγωγῆς α'*; *V.P.* 5.45 *Προβλημάτων συναγωγῆς α' β' γ' δ' ε'*; *V.P.* 5.47 *Λόγων συναγωγῆς α'*; *V.P.* 5.47 *Τῶν Ξενοκράτους συναγωγῆς α'*. The only extant combination of *συναγωγή* with *ἀρέσκοντα* is found in the reference to a work of Aristotle by Simplicius in *Cael.* 386.25, *ἐν τῇ τῶν Πυθαγορείοις ἀρεσκόντων συναγωγῇ*, but we cannot be sure that he refers to an actual title (at 392.23 the reference is *ἐν τῷ δευτέρῳ τῶν Πυθαγορικῶν*).

(2) *Περὶ ἀρεσκόντων* (not including the title of P): cf. Arius Didymus at Eus. *PE* 11.23.2 *Περὶ τῶν ἀρεσκόντων Πλάτωνι συντεταγμένων* (but probably part of his *Περὶ αἱρέσεων*, so probably not a separate title at all, cf. Algra 2018, 68); Albinus *Περὶ τῶν Πλάτωνι ἀρεσκόντων* cited in the colophon of Parisinus graecus 962, on which see Whittaker at *DPhA* 1.96; and (without *περὶ*) Alexander Philaethes at Galen *Puls.* 8.726.10 K. *ἐν τῷ ε' τῶν ἀρεσκόντων* (i.e. medical subjects).

None of these parallels allow a definite choice between the two alternative readings of T's text. The two best are D.L. 5.44 *Περὶ τῶν Μητροδώρου συναγωγῆς α'* and Albinus *Περὶ τῶν Πλάτωνι ἀρεσκόντων*. We have opted for *Περὶ ἀρεσκόντων* above *Περὶ ἀρεσκόντων συναγωγή* (or *συναγωγῆς* with book number) on stylistic grounds (cf. M–R 1.326). For the former the words *τοῖς φιλοσόφοις* must be understood, as can be seen from the Albinus title and from the adaptation in the titles of P.

The more copious evidence on the author (pseudonymous) and title of the reduced version of the work is thus of secondary value, but nevertheless deserves further scrutiny. The most complete titles, as found in the oldest ms. Mosquensis 521 (M), are:

Book 1: *Πλουτάρχου φιλοσόφου Περὶ τῶν ἀρεσκόντων φιλοσόφοις φυσικῶν δογμάτων βιβλία ε' : τὸ α'* (the colon : is present in the text as recorded in the manuscript)

Book 2: *Πλουτάρχου φιλοσόφου Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις φυσικῶν ἐπιτομῆς τὸ β'*

Book 3: *Πλουτάρχου φιλοσόφου Περὶ τῶν ἀρεσκόντων φιλοσόφοις φυσικῶν ἐν ἐπιτομῇ τὸ γ'*

Book 4: *Πλουτάρχου Τῶν ἀρεσκόντων φιλοσόφοις φυσικῶν τὸ δ'*

Book 5: *Πλουτάρχου φιλοσόφου Τῶν ἀρεσκόντων φιλοσόφοις φυσικῶν ἐν ἐπιτομῇ τὸ ε'*

There is, as can be seen, quite a bit of variation between the various books. The most noteworthy is the naming of the work as an *ἐπιτομή* in Book 2 and the reference to its *epitome* character in Books 3 and 5 (ἐν ἐπιτομῇ). Such reference is absent in Books 1 and 4. Parisinus 1672 (III:E) also has a full title but without reference to the *epitome* character. Marcianus 521 (m) only gives βιβλίον plus the cardinal number. Q vacillates between longer (Books 1, 3, 4) and shorter versions (Books 2, 5). The references to P's title in the witnesses also show much variation (full texts above):

E: PE 14.3.9 Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις φυσικῶν δογμάτων

C: *Juhn.* 2.14 τῆς τῶν Φυσικῶν δογμάτων συναγωγῆς

T: CAG 5.31 τὴν Περὶ τῶν τοῖς φιλοσόφοις δοξάντων ἐπιτομήν.

We note that C describes the work as a συναγωγή (cf. the description of A in T), and this character is also emphasized by E in his description (συναγαγών), whereas T points out its *epitome* character. It is apparent that (1) there was much variation in the titles of ancient works as transmitted in manuscripts; (2) that this variation also occurred when these titles were cited in other texts; and (3) that in such citations descriptive terms were added which were not present in the titles themselves (as we think T likely did in his reference to A's work).

Let us now examine more closely how P formulated the title of his work, comparing it with the title and contents of the original. We can discern the following steps that he took:

- (1) He commenced with the words of A's title Περὶ ἀρεσκόντων, though they are now not nominal but adjectival, describing the subsequent φυσικῶν δογμάτων. Because of this change, they attract the article τῶν.
- (2) The words τοῖς φιλοσόφοις are now included. As we noted earlier, in A's title they were understood. A actually only refers to φιλόσοφοι twice in the work as we have it, at A 1.6.1[36] διδάσκεται δὲ τὸ μὲν φυσικὸν ὑπὸ τῶν φιλοσόφων, and 1.7.1[2] ἔνιοι τῶν φιλοσόφων. But it is clear that almost all name-labels refer to philosophers. We note too that A speaks of τῆς φιλοσοφίας πραγματεία in the opening lines of the work.
- (3) The words φυσικῶν δογμάτων are in tune with the description τὸν φυσικὸν λόγον in the first words of the compendium. δόγμα here is regarded as a synonym of δόξα. In the work it occurs only at A 2.13.15 in relation to the Orphics. But δόξα too scarcely occurs in it. In the meaning of a view or tenet it is only found at A 1.3.20 stating that the views of Socrates and Plato are the same on every subject. Interestingly T in his reference to the title replaces ἀρεσκόντων with δοξάντων. It is to be noted that the phrase

φυσικών δογμάτων goes back not coincidentally to the origin of the tradition in Theophrastus' Φυσικαὶ δόξαι.

- (4) As we noted already, three of P's titles (though not the first) in the Mosquensis refer to the *epitome* character of the work. Of course P's treatise is an ἐπιτομή, i.e. abridged version, of A. But we should note that in the prooemium to Book 3, A himself states that he has 'gone through the account of the things in the heavens by way of an *epitome* (ἐν ἐπιτομῇ).' Here the method of doxography itself is regarded as a form of abridgement, i.e. reducing the views of the philosophers to a compact format.

P's much longer titles are thus clearly based on the title and contents of the earlier work, A's compendium. But we can go a step further. P has expanded and explicated what is implicit in A's title. As Bottler (2014) 493 rightly points out, in the titles that T gives for both A and P, the description that they deal with physical subjects (i.e. τὰ φυσικά or the φυσικός λόγος) is missing. It must be assumed that A wished the title to be read in conjunction with the work's opening lines, where its subject is made pellucidly clear. P modifies this approach and includes it in the information in his titles. But there is absolutely no need to conclude, as Bottler does, 'dass die von Theodoret erwähnten Kompendien [note the plural] noch um nichtphysikalische Inhalte, also ethische Inhalte erweitert waren.' After all, we have both compendia, and in the body of the *Placita* ethics plays a part only incidentally, see below ch. 1.0d Commentary D(c)3 and D(d)2. It is quite out of the question that T would be referring to other works, certainly with regard to P. This is a most curious use of an *argumentum ex silentio*, leaving aside her depiction of T as a problematic witness elsewhere, e.g. *ibid.* 511–512. We might also compare G's compendium, which is entitled Περὶ φιλοσόφου ἱστορίας or simply Φιλόσοφος ἱστορία. It too does not treat the ethical part of philosophy, although its importance is emphasised in the opening discussion on the nature and parts of philosophy §§1–8 (esp. §§1–2) and it does contain chapters on the logical or dialectical part of philosophy (§§9–15).

It must be emphasised that absolute certainty regarding the title of A's work cannot be attained. Book titles in antiquity were notoriously variable. This is apparent in T's text on which we depend. Just as he gave a paraphrase of P's title, similarly he may have done so for A's work. But it is the only mention of the title that is extant and must, as argued above, be our starting-point in reconstructing it.

In relation to the author's name there has been some discussion in recent years. After we accepted Diels' use of the name in M–R Vol. 1 and devoted a brief discussion to it at M–R 1.322–323, Bremmer (1998) responded with the argument that the name does not occur as a personal name in any documentary material. In Runia (2009) 465 and Mansfeld at M–R 4.187–191 we have respond-

ed to this view, arguing that there is no reason to reject the literary evidence in which the name occurs quite commonly as early as the first cent. CE (and the related name Ἀετίων much earlier still in the fourth cent. BCE). As a witness to the name we cite the Alexandrian grammarian Aelius Herodianus (second cent. CE), who twice includes Ἀέτιος in lists of words (including quite a few personal names) illustrating aspects of accentuation.

Just as in the case of the work's title, so we can also not be absolutely certain about the name of its author. Alternative theories that the name was Areius, i.e. Arius Didymus (Lebedev 1988), or that there were two works under the name of Plutarch, a fuller and a reduced version (Gourinat 2018), are not as plausible as the Dielsian hypothesis. The key given is that there was an original compendium on which P, S and T depend, and which had a named author. What the name of that author, and what its exact title was, are secondary. See further Mansfeld (2018a) at M–R 4.174–195.

D *Analysis of the Index*

(1) The indices in the *Placita* are lists of subjects, or themes of investigation and discussion to be treated, which function as chapter headings. Discussion of the indices therefore should not occur without reference to the intratextual headings. Headings *per se* are further discussed below at ch. 1.1, Commentary C.

(2) The snippets of the Antinoopolis papyrus of the third cent. containing the text of P not only contain fragments of lemmata but also of headings and heading numbers (but no fragments of tables of contents), see M–R 1.126–130. They will be quoted below among the *fontes* at the top and the *testes primi* placed directly under the apparatus criticus of the (regrettably few) chapters concerned.

(3) The presence of an index of chapter headings, which as we argue, goes back to the original text of the compendium, gives rise to an important methodological consideration. It may be considered virtually certain that in the case of the original compendium the author will have based his index on the chapter headings that he employed. As argued below at section (6), the intratextual headings are indispensable, which the pinakes are not, or not to the same extent. This will mean that there should be no discrepancy between the two headings for each chapter, the one in the index, the other in the text of the work. In the course of transmission, such discrepancies could easily arise. Since the task we have set ourselves is to reconstruct the original text of the compendium, there should thus also be no such discrepancies in our text. Accordingly, we have set out the contents of the index on the basis of the headings that we have determined for the individual chapters. Discrepancies between these headings and the readings of the index in the manuscripts are recorded in the

apparatus criticus. References to the intra-textual headings, e.g. 'tit. c. 1.6', mean that the reading has been taken over from those headings. References to mss. of P^B refer to readings of the pinax in those mss.

(4) In Book 1 there is only one case, ch. 1.6, in which there is an element of the chapter headings in the main body of the text which does not correspond to any readings for the index of headings, namely the plural θεῶν as opposed to the singular θεοῦ. In three other cases, chs. 1.2, 1.3, and 1.11, there are manuscript readings for the index of headings which correspond to the intra-textual headings, but also readings that differ from them. These latter are recorded in the apparatus criticus above. The reader is advised also to compare these readings with those for the intra-textual chapter headings set out in the corresponding chapter. For the other books see the appropriate chapters below.

(5) The readings in Q, based on the translation of the index in ms. Zāhirīya (Damascus) 4871 (see above section A(2)), are also recorded in the apparatus criticus. These readings never diverge from those of the index in the Greek mss. (or at least some of them). But given the methodology outlined above in (3), this will not affect the text of the Index printed above.

(6) Bottler (2014) 24–27 argues that the tables of contents are a later addition. She has failed to take the arguments in favour of the authenticity of chapter headings (inclusive of their numbering) and tables of contents at M–R 2.1.196–204 into account. Without headings chapters would often be hard to distinguish from each other, and often it would not be immediately clear what the (grammatical) subject of at least the first lemma(ta) is without the assistance of the heading, see e.g. ch. 1.20, 'On time' (Περὶ χρόνου). Also it would be hard to find one's way in this highly technical treatise. Ellipsis of the chapter theme is as typical a feature of doxographical language as the ellipsis of words of saying and thinking so rewardingly studied by Jeremiah at M–R 4.319–323. Scribonius Largus, the author of another professional treatise more or less contemporary with A, namely a collection of medical prescriptions, writes that he has added tables of contents and numbered chapter headings 'so that it will be easy to find what is being sought' (*Comp. ep. ded.* 15.6–9). So do quite a few other authors of professional and didactic treatises, see below, section D(e)1.

Bottler's further argument that a table of contents would be superfluous at the beginning of Book 1 because, as she claims, chapter headings are mentioned at 1.proœm. 3, is mistaken. This paragraph lists a couple of *problems* (ζητήματα, θέσεις, *quaestiones infinitae*) in physics as well as in ethics; note the terms ζητῶμεν, ζητεῖται and ζητῶν at Book 1.proœm. 2–3 (see further ch. §1.proœm., Commentary D(c)(4)). Ethical problems are only mentioned *exempli gratia* to illustrate the preliminary but also basic division of philosophy into a theoretical (i.e. physical) and a practical (i.e. ethical) part described in the proem. For

the merely incidental presence of ethical matters in A see below, ch. 1.proœm., Commentary D(d)(2). For *quaestiones* (ζητήματα) and *capitula* etc. see ch. 1. proœm., Commentary D(e)(3a–b) and (e)(4); *exempla physica* and *ethica* are cited and listed ch. 1.proœm. at *Testes secundi, Loci aëtiani*, section E(a) & (b).

Bottler also disregards the functional distinction between formulations of such *problems* on the one hand, and chapter headings ('Überschriften') on the other, both often, but far from generally, formulated as questions; see below, ch. 1.1 Commentary C. A formula or phrase formulating a problem can also be used as a chapter heading (cf. M–R 2.1.197–198, 203–204, with references to earlier discussions). But such a phrase is not a chapter heading when it is not identified explicitly as such, or found above a chapter or in a table of contents. 'The perfect man' (τέλειος ἀνὴρ) of the proem (ch. 1.proœm. 3[3]), who 'should both theorise about the things that are and perform the acts that must be done' and devote himself to the research that is involved, is not concerned with chapter headings but with problems. Bottler's suggestion amounts to a fatal misunderstanding of the nature of the *Placita* qua treatise containing systematic information about *contrasting* views on *problems* in physics. Only five examples of physical problems are provided in the proem, hardly sufficient as an announcement of the thirty chapters that are to follow in Book 1, even on Bottler's hypothesis. And what about the other four Books, which lack such proems listing examples of problems, but are preceded by tables of contents? The discrepancy between the small number of problems (for Bottler: headings) in the proem and the large number of chapter headings in the body of the treatise is wilfully interpreted by her as showing that its various remains cannot be used for a convincing reconstruction. We may further observe that there are of course no chapter headings or chapters at all in the body of the treatise corresponding to the examples of *ethical* problems provided in ch. 1.proœm. 3 *ad finem*. Bottler, to be sure, interprets this as a contradiction between the proem and the body of the work, which in her view again shows that the treatise is in poor shape. In fact the current state of the treatise can be estimated using statistical methods; see Jeremiah (2018), esp. 293–295, who estimates that we have 86 % of the original; see further General Introduction, section 2.7.

e Other Evidence

(1) *Tables of content and chapter headings.* It has been argued that a lack of assistance to the reader in the form of tables of contents and chapter headings made it much more difficult to find one's way in an ancient book than in a modern one; see Small (1997) 16–19: 'rare event', and Dickey (2017) 13–14: 'there (was) very little in the way of tables of contents, chapter headings ...'. This is true to some degree, but not in general, because professional and didactic treatises

and historical works are often provided with these appurtenances, and there are even several important cases which have, or had, tables of contents but no intratextual chapter headings. We include a brief overview; more is to be found in Mansfeld (2020a).

In his introduction to Eusebius' *Ecclesiastical History* Schwartz (1909) clii–cliii pointed out that '[i]n der Gattung Ἱστορίαι, in denen nicht fortlaufend erzählt, sondern Material zusammengetragen wird, ist die Sitte Inhaltsverzeichnisse vorzuschicken, hergebracht: eben weil der Stoff disparat ist, soll der Leser orientiert werden.' Mutschmann (1911) 95 speaks of a 'Litteratur, die weniger gelesen als eingesehen und nachgeschlagen wird.' Useful brief overview with references in Regenbogen (1950) 1472–1475: '10. Inhaltsangaben, Kephalaioseis, capitulationes'. Speaking of the Elder Pliny's tables in Book I of the *Naturalis historia* (see below), he says that such overviews were apparently 'bei großen Sammelwerken üblich'.

Scribonius Largus, Pliny, and Columella (all first century CE), and Aelianus Tacticus and Aulus Gellius (both second century CE) speak of their tables of contents *expressis verbis*. Schwartz also mentions Gellius and Diodorus Siculus (first cent. BCE). Mutschmann (1911) mentions Diodorus, Quintilian, and Arrian's Epictetus, and studies Sextus Empiricus and ps.Galen's *Historia philosopha*. Schröder (1999) discusses Varro, Scribonius Largus, Pliny, Columella, and other earlier and later authors, esp. those writing in Latin. The lists of themes for the entire *Naturalis historia*, supplemented with the names of source authors that have been used, constitute the main text of *Nat.* Book 1. As Pliny tells his dedicatee, and so us, these lists are indispensable for a rapid orientation, and this reason is also put forward by Columella introducing his lost table at the end of his Book 11, and by Aelianus Tacticus. And according to Jutta Kollesch (1966) 205 = (2019) 42, the mss. of the pre-Galenic ps.Galen *Definitiones medicae* contain 'Reste' of the 'Kapitelüberschriften' which provided the necessary 'Gliederung' of this systematic collection of *horoi* (the critical edition of the work has unfortunately not yet been published).

Pliny mentions a predecessor writing in Latin who is lost to us (Valerius Soranus, †82 BCE), but fails to mention Scribonius Largus. This contemporary of the emperor Claudius provided his book of prescriptions with what in fact is a table of contents (extant), and also tells us that he *numbered* them (*numeris notavimus*), all to help the reader find his way. These numbers correspond with those of the main chapters and their subdivisions in the body of the work (this double numbering system parallels that of Aëtius). It is far from certain that Pliny numbered the items on his lists himself, though Schröder (1999) 116 argues in favour. Columella, an important writer on agriculture and a near contemporary of Pliny, likewise advises us that his *argumenta*, i.e. tables of contents, are

indispensable for finding our way, because we cannot be expected to remember everything that is in the treatise (see section E(b)). The six-page index of headings of the medical author Soranus' *Gynaikeia* in Cod. Parisinus 2153 as well as the chapter headings in the body of the treatise are accepted and printed as genuine in the editions of Ilberg (1927) and Burguière & *alii* (1988–2000, cf. T. 4, pp. xii and 49 ff.). Soranus is to be dated to ca. 100 CE, so is somewhat later than Scribonius and a near contemporary of Pliny and Aëtius. In fact Ilberg (1910) and his Dutch predecessor Ermerins (1869) and (1872) used the index to weed out unauthentic material. For the texts of Gellius, Pliny, Aelianus Tacticus, Scribonius Largus and Columella, and interesting parallels in Cicero (at *Leg.* 2.18 and *Brut.* 164 he speaks of *summae rerum* or *capita rerum*, both translating κεφάλαια, which later are called *tituli* by the Younger Pliny *Ep.* 1.20.7, see Dyck 2010); see again section E(b) *ad finem*. For the *argumenta* and *capitula* (chapter headings) of Irenaeus of Lyon (translated from the Greek), writing in the second cent. CE, see e.g. Rousseau–Doutreleau (1982) 1.51–58.

The summaries, or inventories of contents, at the end of the introductory epistles of Apollonius of Perga (third cent. BCE) and Dionysius of Halicarnassus (first cent. CE) do not have the form of a table. They are discussed by Friderici (1911) 44–46, and cited below section E(b). One may compare them to the 'preambles' or 'summaries' (προεκθέσεις) described by Polybius Book 11 fr. 1a (see again section E(b)) safely incorporated in the main text, which, as he says, are to be distinguished qua position from the traditional but insecure preliminary προγραφαί, i.e. from the tables of contents, but are equivalent as to contents and function; see further Laqueur (1911) 177–183. For such προγραφαί cf. Aelianus Tacticus *Tact.* pr. 6 προέγραψα τὰ κεφάλαια (see section E(b) *ad finem*). In the Budé edition (Poznanski 1992) of Asclepiodotus (1st–2nd cent.) the numbered τακτικὰ κεφάλαια are printed before the text and the corresponding intertextual headings above their respective chapters. The Leiden Arabic translation of the *Physiognomy* of Polemon of Laodicea (a contemporary of the emperor Hadrian), which is argued to be a quite faithful translation of the lost Greek original (Hoyland 2007, 331), begins with a table of contents consisting of seventy numbered chapters and has no intratextual chapter headings. Parallel, and less good, versions of this work have no table of contents.

Note that Dionysius, whose προέκθεσις comes very close stylistically to a pinax, uses the word κεφάλαια, defines these as expressing in outline (ὡς τύπω περιλαβεῖν) what he is going to say, and that these short phrases begin with question words like τίς, τίνα, τίνων, τί, and πῶς. (On this terminology cf. below, ch. 1.1 Commentary C). Aelianus Tacticus uses the word κεφάλαια to refer to his (extant) pinax of no less than 113 items. Eusebius *PE* 15.32.8–10 (cited above, *Testes primi*) comes close to a table of contents of part of the *Placita*.

There are no intratextual chapter headings in Polybius, Pliny the Elder, Diodorus Siculus, Aelianus Tacticus, Polemon, or, for that matter, Dionysius of Halicarnassus (see below, section D(e)), but only a record of (to us lost) tables of contents plus some extant preliminary summaries in Polybius, an enormous table of contents of the entire encyclopedia comprising the whole of the first Book in Pliny, indices extant and indices lost in Diodorus, a substantial table of contents in Aelian, possibly a substantial table of contents in Polemon, and a quite full preliminary summary in Dionysius. It appears that tables of contents were current long before intratextual headings became fashionable. If these parallels mean anything, the tables of contents of Aëtius can quite safely be retained.

On the organization of esp. technical and professional literature by means of tables of contents, numbering and chapter headings see further Schröder (1999) 93–159, and the evidence collected by Zuntz (1945) 80–81. The Elder Pliny, Scribonius Largus, Columella, and Aulus Gellius are discussed by Riggsby (2007). There are useful overviews in Scherbenske (2009) 123–128, and Scholten (1996a) 28–35. On chapter divisions and headings—*kephalaia* (i.e. chapters) and *titloi* (i.e. chapter headings, from Latin *tituli*)—in mss. of the New Testament see e.g. Metzger–Ehrman (2005) 34–37, and Goswell (2009), (2010). On the injudicious neglect of this sort of evidence by earlier editors of classical texts see already Mutschmann (1911) and Birt (1913) 11.

(2) The large table of contents for *Nat.* Book 2 contains quite a few headings that are identical with or similar to headings in the *Placita*; we have cited these at the appropriate chapters below.

(3) *Physikai dogmata/ doxai*. The formula φυσικῶν δογμάτων of the ps.Plutarchean title is equivalent to the formula (Περὶ τῶν) Φυσικῶν δοξῶν, which has been transmitted as (part of) a title of a work by Theophrastus. This title should be translated (*On the*) *Physical Tenets* (*De physicis opinionibus*, *Physikai Doxai*) and not, as Usener and Diels believed and their followers still believe, as *On the Tenets of the Physicists* (*De physicorum opinionibus*), for this is precluded by the presence of Περὶ τῶν. The version in Theophrastus' bibliography at Diogenes Laertius V.P. 5.48, Φυσικῶν δοξῶν α' β' γ' δ' ε' ζ' η' θ' ι' ια' ιβ' ιγ' ιδ' ιε', does not allow the translation *Tenets of the Physicists* either. There is only one other indubitable reference to these *Physikai Doxai*, namely *Phys.Op.* 11a Diels = 241A FHSG (Θεόφραστος μέντοι ἐν τῷ Περὶ τῶν φυσικῶν δοξῶν). Some other fragments, too, may be attributed to this work. But the fragments in Simplicius' *Commentary on Aristotle's Physics* as well as several others Usener, Diels and their followers attributed to the purported *De physicorum opinionibus* most probably derive from Theophrastus' *Physics*; see Mansfeld (1989b) 148–150 = (1990) 253–255, with references. Fortenbaugh & alii (1992) collect these texts

under the cautious heading ‘Doxography on Nature’. For δόξαι and δόγματα as equivalent see also Theodoret CAG 1.62, quoted below at section E(b) *Doxography*.

The *Placita* not only contains doxai of physical philosophers, but also (physical!) doxai of doctors, of astronomers, of other scientists, and even of historians. The material in support, including parallels for the phrases φυσικὴ δόξα and φυσικὸν δόγμα, has been collected below section E(b). See further Mansfeld (1992a) 64–67 = M–R 3.34–37, (2002c) 278–283 = M–R. 3.163–169, Leszl (2002) 156–158, who also cites the Theophrastean book titles Περὶ φυσικῶν ἐπιτομῆς α’ β’ and Φυσικῶν ἐπιτομῆς α’ at Diogenes Laertius *VP*. 5.46 and 5.48 (which do not mean ‘Shortlist of Physicists!’), and points towards Galen’s reference ἐπιτομὴν ἐποιήσατο τῶν φυσικῶν δοξῶν (Thphr. *Phys.Op.* fr. 5a Diels, 231 FHS&G at Gal. *HNH* 15.25.13 K). The title of Book 10 of the ps.Aristotelian *Problemata*, the longest in the collection, is ‘Ἐπιτομὴ φυσικῶν. Galen clearly uses φυσικῶν δοξῶν in the sense of ‘physical tenets’ at *HNH* 15.25.10–26.6 K. ‘this has been shown in the work *On the elements according to Hippocrates*, where we have referred to virtually all the physical tenets which pertain to the first principles or elements (πασῶν σχεδὸν τῶν φυσικῶν δοξῶν ..., ὅσαι περὶ τῶν πρώτων ἀρχῶν ἢ στοιχείων γεγόνασιν)’.

Commentary

A Witnesses

(1) The only witnesses for the entire chapter are PB and PQ, so we have to follow the text as transmitted there. It is of course clear that this proem was of no use to S or T, who wrote their own proems.

(2) The Stoic definition of philosophy is paralleled verbatim as part of a somewhat confused phrase in G c. 5 (who also adds other material), but is most likely derived from a shared source rather than from P, so G is not a *testis primus* here. There are no other *testes primi* either.

(3) It is possible that we have lost a chapter dealing with the issue of whether or not the sun is alive (§3[15]) and/or the heavenly bodies in general are alive, for the view of Plato that they are is cited at ch. 1.7.22, and that of Plato plus Aristotle at ch. 5.20.1, where see Commentary D(c)2. Ach c. 13 moreover deals with this issue in appropriate diaphonic detail. We have cited the latter at section E(a) *exempla physica*, though perhaps it could be included among the *Testes secundi*. But it is also possible that A did not pick up this aspect of the earlier tradition.

B Proximate Tradition and Sources

(1) *Proximate and similar traditions*. The traditions are of a twofold nature and rather widely spread (see section E(a)). It is moreover not always easy to distinguish the traditions in the narrow sense of 'proximate' from the rich array of parallel presentations. There are numerous presentations of the nature of philosophy and its divisions up to Late Antiquity, often defined in relation to wisdom. We also have a great many presentations of sets of particular problems in physics and/or ethics (and sometimes in logic) in a multiplicity of authors both philosophical and (sometimes) rhetorical, many of which are quite late, though some authors of lost handbooks must have been earlier than A. We may include the parallel passages in the wider doxographical and commentary literature used, among others, by Cicero and Quintilian (*traditio proxima*). There are even parallels in Latin poets. We also have several examples of the relation between or combination of the *vita activa* and the *vita contemplativa* in the later Peripatos. See further below, sections D(e)(1) and (e)(2).

(2) *Sources*. For the definitions of philosophy and its parts and uses found in our chapter we have to think of the original works of the Stoics, no longer extant but generously quoted by Diogenes Laertius and others, and of the *pragmateiai* of Aristotle and the largely lost works of Theophrastus and other Peripatetics.

The aporetic and dialectical technique for the most part derives from Aristotle, who influentially distinguished between dialectical problems contributing to (a) choice and avoidance or (b) to truth and knowledge, i.e. between ethical problems on the one hand and theoretical/physical problems on the other, even giving concrete examples (*Top.* 1.11). He further provided a division of propositions concerned with physical, ethical, and (in its specific Aristotelian sense) logical problems, again with examples (*Top.* 1.14). Later the technique

was also practised by others, among whom some Stoics. For further details see below, sections D(a) and (c), and D(e)3.

C Chapter Heading

Not needed for a proem. We have added the word {*Proæmium*} to the text and translation for the sake of convenience.

D Analysis

a Context

The proem, describing and defining philosophy and exemplifying research in physics and ethics, aptly forms the first part of the introduction of the treatise together with chapter 1, 'What is nature', which defines the physical philosophy that is the subject of the treatise. The proem of Book 2 refers to what came before as 'the account of the principles and elements and what is closely associated with them', so alludes to the headings of chs. 1.2–3, 'In what way do principle and elements differ' and 'On principles, what they are'. Ch. 1.3 provides a potted overview of the main players in the fields of physical philosophy according to a somewhat disorderly arrangement of the main Successions, providing patronymic and/or ethnicon for the majority, and listing the doxai concerned with the principles for everyone concerned. For parallels of such a combination of introductory features in works by Cicero, in Diogenes Laertius, and elsewhere see below, section D(e)(1).

b Number–Order of Lemmata

P's three lemmata follow upon each other in a perfectly acceptable order, with §1 announcing theme and purpose (later called *skopos*) of the treatise. §2 and §3 would have changed places if the two schools had been presented in chronological order, and not in a descending but in the ascending numerical order of the parts of philosophy. From a systematic point of view this would have been equally acceptable. But from §2 to §3 a development takes place in that the general definitions of the three parts of philosophy in §2 are followed in §3 by concrete examples of particular issues (ζητήματα) in the two parts we end up with, viz. physics, relevant for the treatise, and ethics, cited traditionally, and here *exempli gratia*. Aristotle already did so by exemplifying two kinds of problems at *Top.* 1.11 and three kinds of propositions and problems at *Top.* 1.14, see section B above, and below section E(b) General texts. For the *specific* physical parallels see at chs. 1.18, 2.9, 2.20, and 2.21 (also cited at *Loci Aetiani* §3 above). Citing the Peripatetics last is rhetorically rather effective in leaving the impression that their approach is preferred.

c Rationale, Structure and Implications of the Proem

(1) *physikos logos*. The proem announces the subject of the treatise, the *physikos logos* or theory of physics, which the redactor wants to throw into relief. It cites a Stoic definition of philosophy linked to that of *sophia* ('wisdom'), which involves the category of substance or question type of 'what it is'. It describes and illustrates the two main ways of dividing philosophy into parts, viz. the Stoic division into the *three* parts of physics, ethics, and logic (or dialectic), and that attributed to the Peripatetics in general, a division into *two* parts dealing respectively with theoretical and practical issues, examples of which are given. This distinction according to the category of quantity amounts to an average diaeresis rather than a strong diaphonia. For doxographies beginning with a division of philosophy see e.g. the *Aristotelian* doxography at Diogenes Laertius *V.P.* 5.28 and the *Stoic* doxography *ibid.* 7.39–40. Examples of other types of division, in more parts (as in other sources on and for Aristotle), or in different parts, or by other Schools, e.g. those of Plato and the Platonists, are not provided. There is no reference to the views of the Stoic Ariston or the Cynics, who rejected logic as well as physics as 'useless' (Sextus Empiricus *M.* 7.12 ἀνωφελές) or even 'contrary' (Seneca *Ep.* 89.13 *contrarias*). As to other Stoics Diogenes Laertius *V.P.* 7.92 tells us that Cleanthes said there are more than four virtues, i.e. presumably six, corresponding to the number of parts in which he divided philosophy according to Diogenes *V.P.* 7.41 = *SVF* 1.482, while Apollonphanes said there is only a single virtue, 'prudence' (φρόνησις). Examples of problems in physics (and ethics) are only given in §3 on the Peripatetics, as in §2 no mention is made of the parallel procedure of the Stoics regarding problems in physics attested at Diogenes Laertius *V.P.* 7.132.

The redactor of the chapter appears to sympathize with the Peripatos, cf. above section D(b), but the Stoics are included as well. The second lemma (Stoics) may have been added to what is now the third (Peripatetics). Chapter 1.1, too, suggests that a Peripatetic approach to physics was favoured. As a matter of fact, evidence of the connection of the *Placita* with the Peripatetic school is to be found throughout the treatise, though the Stoics are also very much present. By focusing on the definitions and divisions of these two schools the redactor attempts to show that his work is 'of ongoing relevance' (Jeremiah, M–R 4.325).

(2) *Position of logic*. Perhaps surprisingly we are not told explicitly that unlike the Stoics the Peripatetics considered logic to be not a part of philosophy but its *organon*, or technical instrument, used by each of its two parts. Presumably this explains why it is not mentioned in §3, though a reference would have provided grounds for stipulating a diaphonia. The omission could of course also be a result of epitomizing. The issue is acknowledged in Diogenes Laertius' account

(*V.P.* 5.28) of the division of philosophy according to Aristotle. Moraux (1986) 268–269 points out that, surprisingly and oddly, logic together with physics in this passage belongs with theoretical philosophy, yet is said to be not a part but an instrument. For the discussion about logic as part or instrument see the texts quoted at section E(b) §3 *ad finem*, and e.g. Hein (1985) 153–162 and Hadot (1990).

(3) *Way of life*. What is quite interesting is the emphasis on philosophy here as also a way of life, of the good life, that is, and on the positive role of physics in this context, which lends an optimistic tone to the proem and advertises the usefulness of the treatise. For the Stoics practising the art of philosophy entails practising its three parts together, not the theoretical part, or physics, alone. For the Peripatetics as cited here living the life of the complete philosopher entails practising both theoretical and practical philosophy. The study of *placita* is not the first thing one thinks of in connection with the spiritual exercises made reputable by Pierre Hadot (e.g. Hadot 1993). One should not exaggerate. Some sort of affinity, however, is hard to deny.

(3a) *Stoics*. This emphasis on the way of life is to the point in the case of the Stoics, where each part of philosophy (when internalized in the soul) is said to be a most general, or comprehensive, *virtue* (or ‘excellence’: *arete*). Ethics in particular devotes itself to man’s way of life. We are not told in §2 what other virtues are comprised by the three main ones, but may conclude from a passage in Diogenes Laertius on dialectic (*V.P.* 7.46–47 = *SVF* 2.130) that these are connected with the subparts of the three main parts of philosophy. In §2 this triad of principal virtues is subsumed under the highest virtue, namely the actual practising and exercising (*askesis*) of the technical discipline (*techne*) of philosophy qua striving for wisdom. Cf. the glossema ‘the best life’ (ἀρίστης ζωῆς) explaining ‘philosophy qua pursuit of the appropriate art’ in G c. 5, *DG* p. 602.19.

According to the information provided by Diogenes Laertius *V.P.* 7.92 Panætius agreed with what, as we have seen, is (also) a Peripatetic point of view in stating that ‘there are two virtues, theoretical and practical’ (T 67 Alesse). This seems to exclude dialectic as third virtue and suggest that he divided philosophy into two parts (Alesse’s collection does not contain material on logic). Though Seneca as a rule speaks of three parts of philosophy, he sometimes comes down in favour of a distinction between theory and practice: *Ep.* 95.10 ‘philosophy is theoretical as well as practical: it contemplates and acts at the same time’, and *De otio, Dial.* 8.5.1 ‘nature has created us for both: for contemplation as well as action’. On the parts of philosophy as virtues see further Habets (1983) 72–78.

(3b) *Peripatetics*. This emphasis on philosophy as (also) a way of life characterizes the account according to the Peripatetics as well. The division that is

formulated does not constitute a theoretical distinction between formal parts of philosophy, but one between representative individuals, namely between the theoretical person (and philosopher) on the one hand and the practical person (and philosopher) on the other. The ‘perfect (or: complete) life’ of the ‘good person’ of *EN* 1.7 1098a12–20, who lives according to several virtues (including those of the active life) but in the first place according to the highest, or contemplative, virtue, has been simplified and reduced to the ‘perfect (or: complete) person’. The perfect human being must be both; he must be able to theorize about the things that are as well as capable of performing the acts that should be done. The way of life of the ‘perfect person’, or the best way of life, is the life that combines *vita contemplativa* and *vita activa*. In this way the familiar difficulty of the relation between the active and the contemplative life according to Aristotle is neutralized. On these issues in more detail see Mansfeld (2020a).

(4) *Theoretical inquiries and problems*. According to both Stoics and Peripatetics philosophy is essentially ‘zetetic’: it is concerned with the investigation of *problems*. For the Stoics in §2 this explicitly holds for physics: §2[8–9] *περὶ κόσμου ζητῶμεν καὶ τῶν ἐν κόσμῳ*, ‘we do research on the cosmos and the things within the cosmos’. For the Peripatetics in §3 this holds explicitly for both physics and ethics. For physics see §3[15–16] *ζητεῖται εἰ ... ἢ μή ... ὁ ἥλιος ...*, ‘research takes place on whether the sun is *x* or is not’, §3[16] *ζητῶν*, §3[17] *ζητεῖται ... εἰ*, ‘research takes place on whether ...’. For ethics see §3[18–20] *ζητεῖται ... πῶς ... καὶ πῶς ... καὶ πῶς*, ‘research is done on how ... and how ... and how ...’, §3[20] *ταῦτα γὰρ πάντα ... ζητεῖται*, ‘all these matters are the subject of research’. Accordingly the study of and approach to physics should and will be aporetic. Possibly this approach is furthered to some degree by the reputation of Aristotelian dialectic as the art of listing all possible arguments on either side of a given subject (e.g. Cicero *Fin.* 5.10), and by the influence of the dialectical exercises practised in the Skeptical Academy. In our *Placita physica* we are only concerned with ‘theoretical’ inquiries, or issues in physics (though a few of these comprise an ethical and even a logical aspect, see below, sections D(d)(2) and (d)(3)). Yet this ‘theoretical’ study will be a formative experience, or so, presumably, we should believe because of the abundant parallels in related literature, for which see below, section D(e)(3) and (e)(4). According to many, physics, or the study of reality, is indispensable for ethics.

That as to name-labels the company is limited to ‘the’ Stoics (no names of individuals, a purported majority view only) on the one side and Aristotle, Theophrastus, and ‘almost all the other’ Peripatetics on the other accords well with the preponderance of originally Stoic and Peripatetic concepts, approaches, and techniques in the body of the *Placita*.

d Further Comments

General Points

(1) *Division of ethics.* The examples of ethical issues in §3 pertain on the one hand to the private individual and on the other to the politician. For the distinction see the Aristotelian diaeresis of ethics at Diogenes Laertius *V.P.* 5.28, according to which the political part of ethics includes ‘not only the doctrine of the state but also that of the household’. It often occurs elsewhere, and is virtually *de rigueur* in the accounts of the division of philosophy in late Antiquity.

(2) *Role of ethics.* Ethics plays a part in the body of the *Placita* only incidentally. In ch. 1.27, ‘On fate’, the *liberum arbitrium* is acknowledged in §§2–3 on Plato and Stoics. In fact, the Stoic theory of fate is where physics and ethics meet, since you must know how the world is organized and directed to be able to take morally responsible decisions. In ch. 1.29.1–2 human affairs and conduct are given their due in the account of the Platonic and esp. Aristotelian tenets concerned with chance. Ch. 5.22.2 mentions the origin of the conception(s) of good and evil. To some extent, therefore, our φυσικὸς λόγος comprises some ethics, and does so even a little more (though by implication) if we include the sparse references to πρόνοια at chs. 1.25.3, 1.25.5 and 1.27.5, and to the divine origin of soul at chs. 4.3.14 and 4.7.2

(3) *Logic, too, is incidentally present.* In ch. 1.3.7[76–87] below, where see Commentary D(d)§7[76–87], a theory of definition *per genus et differentiam* plus a version of the Aristotelian definition of the syllogism are, most remarkably, attributed to ‘Pythagoras’ the archegete. In other chapters the distinction between conceptual and essential definition is acknowledged and applied, see at ch. 1.9, Commentary D(d), General points. In the present chapter we have scholastic definitions of ‘wisdom’ and ‘philosophy’ according to the Stoics, and ostensive definitions of ‘physics’ and ‘ethics’ according to the Peripatetics by means of descriptions of their perfect practitioner.

Individual Points

§1 (1) The meaning of φυσικὸς λόγος evolved from ‘physical argument’ (Aristotle *GC* 1.2 316a13 = Democritus 68A48b DK) or ‘argument of a physical philosopher’ (Aristotle *EN* 7.15 1154b7 = Anaxagoras 59A94 DK) to ‘account of physics’, or ‘physical part of philosophy’, as here. παραδῶσειν (λόγον) literally means ‘to hand over ... to someone else’.

(2) πόστον μέρος: namely, as appears from what follows, the *first* part of tripartite philosophy according to the Stoics, and (part of) the *first* part of bipartite philosophy according to the Peripatetics. The issue of what is the correct or preferred order, on which views were divided among the Stoics (see below, §2), is not mentioned. The order of the parts according to the history of their

invention, namely first physics, then ethics, and finally logic (see e.g. Diogenes Laertius *V.P.* 1.18, Sextus Empiricus *M.* 7.20) is not mentioned either.

(3) The final part of the sentence can be translated in two ways, depending on what one takes the subject of τί ἐστὶ to be, either the πραγματεία of philosophy from the previous clause or the φυσικὴ διέξοδος in the next clause. We opt for the former as already at M–R 2.1.62. For the latter option see Lachenaud (1993) 69.

§2 The order of the parts of philosophy according to the Stoics in §2 with physics in emphatic first position is noteworthy: physics, ethics, logic, different from the more usual orders logic, physics, ethics, or logic, ethics, physics (Diogenes Laertius *V.P.* 7.40–41, see Habets 1983, 64–71). According to Diogenes Laertius *V.P.* 7.41 Panaetius (fr. 129 Alesse) and Posidonius (T 43 E–K, 22 Theiler), too, began with physics. A obviously prefers this order because according to §1 his ‘objective is to teach the physical theory’.

§3 It appears that Q, reading *ob die Sonne größer ist als das Ausmaß, in dem er sie sieht*, emended μὴ ζῶν to μείζων (a brilliant *Verschlimmbesserung*), as he was aware of the debate about the size of the sun, needed a term referring to relative size, and anticipated μείζω at ch. 2.21.5, which he translated as *größer*. We interpret the corruption at §3[15–16] as †εἴπερ† *** ὁράται, obelizing εἴπερ and postulating a lacuna before ὁράται. To emend the text we have combined several earlier efforts, and now written (ζητεῖται εἰ ζῶν ἢ μὴ ζῶν ὁ ἥλιος,) εἴ π(ὐ)ρ, (εἴ τηλικούτος ἡλικός) ὁράται. In the parallel passages cited section E(a)§3 and section E(b)§3 the questions (a) whether or not the sun is a living being, (b) whether it is fiery, and (c) whether it is as large as it appears to be, not only occur separately but also in various combinations: a + b, a + c, b + c, a + b + c (or the other way round). The issue of the sun’s real vs. its phenomenal size was rather widely cited, and is the theme of ch. 2.21 below, see Commentary B. For Aristotle’s references in epistemic contexts to Heraclitus’ view (cited ch. 2.21.4) that the sun is as big as a human foot see at ch. 2.21 section E(b)§4.

e Other Evidence

(1) *Context: division and potted history of philosophy as introduction to a philosophical discipline* (cf. section D(a) above). A valuable earlier parallel is provided by the extant introductory section of Cicero’s *Varro*: hurried overview of *parts* of philosophy and views of various schools *Varr.* 5–8, *Successions* of schools from Socrates *Varr.* 15–18, then parts of philosophy again: 19–23 ethics, 20–29 physics, 30–32 logic, and finally further historical developments 33 ff. The account breaks off at the end of §46. A similar account is found in the introduction to the systematic presentation of ethics *qua philosophical subdiscipline*

according to Antiochus in Book 5 of Cicero's *De finibus*, §§9–14. Cicero's spokesperson Piso begins with the *division* of philosophy according to the Peripatetics, which he says is into physics, logic, and ethics (*triplex: una pars est naturae, disserendi altera, vivendi tertia*, cf. below section E(a)§2 *ad finem*), like in most other systems. A potted history of the discipline of (Peripatetic) philosophy in its three branches follows. The *way of life* these men preferred is that of study and contemplation (the *bios theoretikos*). The parallels with the Aëtian proem on the division of philosophy and the best way of life as followed by ch. 1.3 on Successions and doctrines in physics are striking. Some passages are quoted below at section E(a)&(b).

As a matter of fact an opening section such as constituted by A's proem plus chs. 1.1–3 is quite usual in technical, professional, or didactic treatises, e.g. in the works of Vitruvius and the Elder Pliny; see Fuhrmann (1960). The second part of the proem of Diogenes Laertius *V.P.* 1.13–21 is a substantial parallel from the field of philosophy: a definition of the subject and its parts, a short history of the discipline, accounts of differences between individuals and Schools and Successions, and various views concerned with its name and importance. Also compare the lengthy introduction of ps.Galen's *Historia Philosophica* cc. 1–7: c. 1 utility of the parts of philosophy, c. 2 ethical aims of treatise, c. 3 Successions, c. 4 'How they defined philosophy', c. 5 further definitions, c. 6 'How many parts of philosophy are there' and c. 7 'On sects'. A parallel from a related field is provided by the introduction of Celsus *De medicina* 1.1–74 (see M–R 2.1.61–62): a descriptive definition of the subject followed by a potted history of medicine, which lists its division (but in fact that of therapeutics) into three parts, mentions the archegete and other important names, gives relative dates, uses the concept of Succession, and at some length describes and compares the main medical Schools; text cited below, Ch. 1.3, section E(b)§2. For the background to Celsus in related Greek literature see Deuse (1993). We may also cite the introduction of ps.Galen *Introductio sive medicus*, a much more scholastic treatise than the genuine *De sectis ad ingredientibus*. Of this work chs. 1–2 deal with the origins of medicine, ch. 3 with the three medical *haireseis* (Schools), ch. 4 with Successions of doctors in the various *haireseis*, ch. 6 with the definition of medicine, and ch. 7 with its parts.

Impressive parallels are found at the far end of antiquity in the introductory passages of the Neoplatonist commentaries by Ammonius Hermeiou, Simplicius, Philoponus, Olympiodorus, and David (Elias) on Aristotle's *Categories*. The second isagogical question to be found there deals with the division of Aristotle's writings, in the course of which physics, ethics, and logic/dialectic are discussed in a systematic way. See I. Hadot (1990) 1.48–93. Further parallels are found in Ammonius' *In Porphyrii Isagogen* and the *Prolegomena philosophiae*

of Olympiodorus, David and Elias, namely detailed accounts of the various definitions and divisions of philosophy as well as statements concerning the connection between theory and action (see below). The title of the Armenian version of David's *Prolegomena*, viz. *'Definitions and Divisions of Philosophy'*, is a clear description of its chief contents. A generous selection of texts of these late authors from Ammonius to Elias (but for David only a reference) is printed by Gigon (1987) 60–90 as his Aristotle fr. 16. See further the overviews in Westerink (1990) 344–347 (French transl. xxxi–xxxviii), Wildberg (1990), and Mansfeld (2020a).

For the Greek tradition and its continuation in Syriac and Arabic literature see the pioneering pages of Baumstark (1900) 156–171, 179–180, and 186–192, the latter on Stephanus of Alexandria as intermediary; further Altmann–Stern (1958) 23–31 on al-Kindī and Isaac Israeli, and Daiber (1980) 326–330, Daiber (1985), Hein (1985), Daiber (1990b) on aspects of the Arabic tradition. On Stephanus see also Roueché (1990), (2011) and (2016).

(2) *The complete person* (cf. section D(c)(3a) and (3b) above). A good parallel is found in David *Proleg.* 71.3–4: 'the perfect (or: complete) philosopher [cf. A's τέλειον ἄνδρα] shall not only adorn himself with theory, but also take pride in action'. Similar statements are found in introductory writings and passages of other late Platonists, see details in Mansfeld (2020a). For this reconciliation of the *vita activa* with the *vita contemplativa* the reportage in the *Placita* belongs with the earliest evidence. In David, A's 'perfect (or: complete) person' (literally: 'perfect (or: complete) man') has been replaced by and restricted to the 'perfect (or: complete) philosopher' (but a late Neoplatonist would presumably believe that the philosopher is the best or most fully realized sort of human, thus capable of representing man in general). The phrase τέλειος ἄνθρωπος is not restricted to a philosophical context (though occurring in one at Anon. Diodori p. 234.12 Thesleff and *Ethical Doxography B* at Stob. *Ecl.* 2.7.11M, p. 112.7 = *SVF* 3.548; cf. Seneca *Dial.* 2.6.8 'this perfect man, full of divine and human virtues', Apuleius *D.Socr.* 17 'Socrates, a man perfect in the highest degree, and wise even according to the witness of Apollo'). But it may denote perfection, or completion, in a multiplicity of contexts, see e.g. Plato(?) *Hp.Ma.* 281b, Polybius *Hist.* 4.8.1 on Aratus, Galen *Pecc.Dig.* 5.14.9–10 K. on what each of us should strive to attain: 'each of us needs exertion during practically our whole life in order to become a complete man' (δεῖται γὰρ ἀσκήσεως ἕκαστος ἡμῶν σχεδὸν <δι>) ὅλου τοῦ βίου πρὸς τὸ γενέσθαι τέλειος ἄνθρωπος). The formula 'perfect (or: complete) philosopher' is mentioned as a current expression next to 'perfect (or: complete) doctor' by Clement of Alexandria *Strom.* 7.88.5.

(3) *Quaestiones*. (i) Several examples of ethical as well as physical *zetemata* are cited in rhetorical literature, see Von Arnim (1898) 94–96, Mansfeld

(1992a) 76–82 = M–R 3.49–56, Viano (1995b), and Woerther (2012) 81–91. Hermagoras, Cicero, and Quintilian, as well as Aelius Theon and ps.Hermogenes moreover divide the *theseis* or *quaestiones infinitae* into theoretical and practical questions *disertis verbis*, see below section E(a) *exempla physica*. The rhetoricians acknowledge the existence of these theoretical questions, adding the proviso that they are in the first place the province of the philosophers.

(ii) Galen was the author of a lost Commentary in four books on the first part of Aristotle's *Categories*. Here and there in his vast oeuvre one may find remarks such as 'that in inquiring into questions such as these one has to be trained in distinguishing the categories is in my view evident' (*Diff.Puls.* 8.622.3–5 K. ὅτι δ' ἐν τῷ περὶ τῶν τοιούτων σκοπεῖσθαι γεγυμνάσθαι χρή διαγινώσκειν τὰς κατηγορίας, ἡγοῦμαι πρόδηλον ὑπάρχειν). This is illustrated *inter alia* in his *Institutio logica*, see Kieffer (1964) *passim*. In ch. 2 of this work (cited below, section E(b) *exempla physica*) we have a list of propositions pertaining to questions of yes or no in all the categories; some of these questions coincide with issues treated in the *Placita*. Galen here follows Aristotle *APo.* 1.22, where (to paraphrase Mau 1960, 33) the terms of categorical statements are arranged according to categories, as the subject is said according to the first category, and the differentiae to one of the others.

(iii) In Galen's *Institutio Logica* chs. 12, 13, and 14 categories are linked with particular questions according to the various types of question (as first formulated by Aristotle *APo.* 2.1 89b24–25), most of which coincide with issues in various *Placita* chapters. We may mention, in *Inst.Log.* 12.3, the size (cf. A 2.21) and distances of the sun (cf. A 2.31)—categories of quantity and place—, in 13.7–8 the position (cf. A 3.11) and shape (cf. A 3.10) of the earth—categories of place and quality—, in 13.9 causes (question type of cause, categories of action and passion) of voice (cf. A 4.19), respiration (cf. A 4.22), earthquakes (cf. A 3.15), and various kinds of thunderstorms (cf. A 3.3)—all in the categories of action and passivity—, and in ch. 14 again the question type of existence, or category of substance. This 'first and most important' type of 'problem' (μέγιστόν τε καὶ πρῶτον ... ζήτημα(α)), namely 'that in relation to existence or substance' (τὸ κατὰ τὴν ὑπαρξιν ᾗτοι οὐσίαν), is illustrated by the questions 'does fate exist' (cf. A 1.27–28), 'does providence' (cf. A 2.3), 'do the gods exist' (cf. A 1.7, also dealing with their nature), and 'does the void exist' (cf. A 1.18). This distinction between 'existence' *simpliciter* (ὑπαρξις ἀπλῇ) and 'substance' (οὐσία) in the sense of material substance (cf. ch. 1.6 Commentary D(a)) is quite relevant in the *Placita*. On οὐσία (essence) in this particularly Stoic and but also widely accepted sense see Lachenaud (1998) 43: 'va de pair avec matière'. Most of these Galenic examples are quoted below at the relevant chapters. On the

order of inquiry (first the $\delta\tau\iota$, then, ‘as Aristotle said’, the $\delta\iota\acute{o}\tau\iota$) see Galen *UP* 6.17, 3.495.18–496.4 K.

For theoretical problems and question types ‘from Aristotle to Cicero and Aëtius’ see Mansfeld (1990a) 3193–3208. For the use of the Aristotelian question types and categories to structure series of chapters and even individual chapters see e.g. Mansfeld (1992a), repr. in M–R 3.33–97; M–R 2.1 passim, see Index nominum et rerum at p. 250 s.v. problem(s), Mansfeld (2016a), and cf. below, ch. 1.6 Commentary D(e)(1). For the use of the categories according to *Ethical Doxography A* at S 2.7.2, p. 42.1–6, and a list in Philoponus in *APo* 238.21–239.6, see M–R 2.1.12–13. Interesting is also ps.Plut. *Fat.* 586E–F. Also see the passages cited below, section E(b) *ad finem*.

(iiib) *Motion*. The concept of motion presents a difficulty, because according to our authorities its relation to the categories is disputed. Simplicius in *Cat.* 139.34–140.6 says that (1) some associate it with the relative, (2) others with four categories (quantity, quality, place, and substance), (3) again others qua ‘entelechy of the moveable qua moveable’ with all ten categories, whereas (4) others again associate it with action and passion. Theophrastus belongs with the third party, for in Book 3 of his *On Motion* (fr. 153B FHS&G) he wrote: ‘In our definition of motion we say that there are as many species as there are categories; for it is the actualization of that which is potentially, as such, (that we call) motion’. For these views see Simp. in *Cat.* 139.34–140.6 quoted below, ch. 1.23 section E(b) General texts *ad finem*. In the chapters that follow we have as a rule associated motion with action and passion.

(iv) *Further parallels*.

Alexander of Aphrodisias in *Top.* 218.13–219.1 deals with ‘inquiries concerned with comparison (or: confrontation, τὰ κατὰ σύγκρισιν ζητούμενα)’ in the nine categories other than substance, because, he says, comparison is ‘about attributes’ (κατὰ συμβεβηκός). Comparison as to the category of quality pertains to ‘whiter or hotter or heavier (cf. ch. 1.12) or more musical’. That of quantity pertains to questions such as ‘whether the earth or the moon is bigger’ (cf. A 2.21 and 1.26), that of the relative to ‘whether geometry or music is a better science’, ‘which is a better sense, touch or hearing’. The inquiry is according to the category of place (τὸ ποῦ) ‘when the question is whether the regent part is in the brain or in the heart’ (cf. A 4.5), and according to position (τὸ κείσθαι) when the question is ‘whether the sun or Venus is closer to the earth’ (cf. A 2.31). Comparison in the category of substance (he continues, in *Top.* 219.1–3) pertains to the distinction between primary and secondary οὐσία. We note in passing that Alexander’s exemplification of κείσθαι is not the same as Aristotle’s, for his example pertains to what is the Aristotelian category of the ποῦ. κείσθαι originally pertains to sitting or standing (Aristotle’s examples at *Cat.* 4 2a2–3, and Galen’s at

Inst. Log. 1.5, see below section E(a) *exempla physica*), i.e. to the posture of individuals. For Philoponus' list in *APo.* 238.21–239.6 (also cited below section E(a) *exempla physica*) see M–R 2.12–13.

Some further examples: In a helpful note on Propertius 3.5.25 ff. and *Aetna* 218 ff. Shackleton Bailey (1952) 309–310 points out: '[C]atalogues of "naturales quaestiones" are a stock motif in Latin poetry from Vergil (*G.* 2.475 ff.) and Horace (*Epist.* 1.12.16 ff.) onwards: cf. Man. 1.99 ff. [sc. 1.99–110], Sil. 14.344 ff., Stat. *Theb.* 6.360 ff., Claud. *Pan. Mani.* 95 ff., id. *Carm. Min.* 29.1 ff., also Sen. *Dial.* 10.19.1, 12.20.2 [see below at *exempla physica*], *De ben.* 7.1.5.' He does not mention the long excursus (lines 218–251) extolling the study of nature and its rewards in the *Aetna* poem, written by an unidentified contemporary of Seneca. Kiessling–Heinze (1957) 109 on Hor. *Ep.* 1.12.16 point out: 'Die naturwissenschaftlichen Fragen fesselten gerade damals die Geister sehr und waren Mode', and cite examples. A similar rather substantial list of physical issues is at Cicero *Tusc.* 5.69, followed *ibid.* 5.71 by a shorter list of ethical questions. Arnobius *Adv. Nat.* 2.56–58 lists a large number of themes, not all of which can be paralleled in A Books 1–5, and Lactantius *Inst.* 3.3.4 more selectively themes that do have analogues in A books 1–3. We may also cite a substantial list of physical questions in the fields of astronomy and meteorology, similar to subjects dealt with in A Books 2 and 3 and mostly in the same order, found at Themistius *Or.* 26, 394c–328a Harduin (p. 2.145.4–21 Schenkl & *alii*). They begin with 'why do not all the heavenly bodies move in the same direction as the heaven' (διὰ τί οὐχ ἅπαντες οἱ ἀστέρες συμφέρονται ἅμα τῷ οὐρανῷ, cf. A 2.16) and end with 'nor about the earth itself, how comes that its weight pulls it down and it remains stable on high' (μηδὲ ὑπὲρ τῆς γῆς αὐτῆς, ὅπως βρίθκει τε εἰς τὸ κάτω καὶ ἴδρυται ἐν μετεώρῳ, cf. chs. 3.11 and 3.13). Many of these examples will again be cited in the body of the present work.

(v) *Importance of theoretical/physical inquiry.* According to Aristotle, *Protr.* frs. 46–47 Düring at Iambl. *Protr.* 10, pp. 54.10–55.3, theoretical thought is important for human life, as is shown by the disciplines practised by doctors, trainers and lawmakers. For 'the statesman too must have certain landmarks taken from nature and truth itself by reference to which he will judge what is just, what is good, and what is expedient' (fr. 47, trans. Düring). This may well echo Pl. *Phdr.* 269e–270a, where the 'major disciplines' (*technai*), sc. Pericles' political rhetoric and Hippocrates' scientific medicine, are said to need 'meteorology on nature' (μετεωρολογίας φύσεως περί), i.e. physics. The Stoic *telos* formula in its first version attributed to Zeno defines this 'ideal' as 'living in agreement with nature, that is in accordance with virtue; for nature leads us to virtue' (Diogenes Laertius *V.P.* 7.87 = *SVF* 1.179). Chrysippus' definitions (Diogenes Laertius *V.P.* 7.87–88 = *SVF* 3.4) of the ideal are explicit, for 'to live

according to what happens in nature' (κατ' ἐμπειρίαν τῶν φύσει συμβαινόντων ζῆν) should involve the *study* of nature. And see *Tusc.* 5.68–72 (cited section E(a) General texts and *exempla physica*), where Cicero, starting from an in every respect accomplished person who is to study philosophy, and then switching from physics to ethics, argues from the tripartition of philosophy and the detailed study of nature and the gods to ethics and the virtues and then (briefly) returns to logic, and includes examples of problems in the fields concerned. Cf. *Luc.* 127 cited *ibid.*, and *Fin.* 3.73 (*SVF* 3.282), cited section E(b)§2, where Cicero argues that without physics one cannot pronounce judgement on good and evil, or understand the ancient maxims of the Wise Men (on Cicero's critical attitude towards physics in *De oratore* 3.56–57 and *De officiis* 1.18–19, where he condemns the study of matters that are difficult and not needed, and his appreciation in *Fin.* 3.73, see Reydam-Schils 2016). We may also think of the educational goal of Seneca's *Naturales quaestiones*, for which see, for instance, *Nat.* 6.32.1 'strength comes to the mind only from the liberal arts and the contemplation of nature' (*non enim aliunde animo venit robur quam a bonis artibus, quam a contemplatione naturae*), and Williams (2012). Also cf. Sen. *Ep.* 65.17, 92.6. In his *De otio*, *Or.* 8.4–5 (excerpts below at *exempla physica* and *exempla ethica*) Seneca eulogizes the study of (especially) nature, in the course of which he lists a large number of *quaestiones*, most of which can be paralleled in the *Placita*. Cicero *Fin.* 3.72–73 (quoted section E(b)§2) is explicit too. The hymnic conclusion of Sen. *Dial.* 12.20.1–2 is perhaps even more telling: '... my mind, free from all other engrossments, has leisure for its own tasks, and now finds joy in lighter studies, now, being eager for the truth, mounts to the consideration of its own nature and the nature of the universe. It seeks knowledge, first, of the lands and where they lie, then of the laws that govern the encompassing sea with its alternations of ebb and flow. Then it takes ken of all the expanse, charged with terrors, that lies between heaven and earth—this nearer space, disturbed by thunder, lightning, blasts of winds, and the downfall of rain and snow and hail. Finally, having traversed the lower spaces, it bursts through to the heights above, and there enjoys the noblest spectacle of things divine, and, mindful of its own immortality, it proceeds to all that has been and will ever be throughout the ages of all time' (tr. Basore LCL). These earlier writings, so to speak, announce the project of the *Naturales quaestiones*, and just as in the later work Seneca's mind voyages from the centre to the periphery, the opposite of the trajectory followed by the *Placita*.

For eloquent expressions of Epicurus' view on the uses of 'meteorology' (in the Epicurean sense of the word, so including astronomy and the unmasking of false ideas about the gods as responsible for these phenomena) as producing *ataraxia* and felicity, so serving his ethical purpose, see below, section E(b) Definition of philosophy.

We also recall the anecdote about Anaxagoras reported by Aristotle *EE* 1.5 1216a10–14 (59A30 DK), who claimed one is born ‘for the sake of contemplating the heavens and the whole order of the universe’ (tr. Rackham LCL), and its reverberation at Eur. fr. 910 Nauck / Kannicht (ap. Clem. *Strom.* 4.155.1, also 59A30 DK), ‘blessed is whoever has learned from research, ... who does not proceed to unjust acts, but seeks out the ageless order of immortal nature, where it came together, from what and how’, anticipating the Aristotelian question types of cause and origin. Also *Dialexeis* (*Dissoi Logoi*) 90.8.2 DK ‘and first, how would the man who knows about the nature of all things not be able also to act correctly about all things?’ (trans. Most LCL), also Philo *Aet.* 3–4 (quoted *infra*, ch. 1.6 at section E(a) §1[7–9]). Also generalized in as late a text as ps.Archyt. *de Sapient.* fr. 3 at Iambl. *Protr.* 4, p. 20.16–18 ~ 44.18–19 Thesleff ‘man is born to study ... the reason of the whole’ (γέγονε ... ὁ ἄνθρωπος ποττὸ θεωρῆσαι τὸν λόγον τᾶς τῷ ὅλῳ φύσιος, elsewhere attributed to Perictione). Euripides’ formula is anticipated by Empedocles 31B132: ‘blessed’ is, according to Empedocles, ‘who possesses the richness of divine wisdom; wretched, who prefers a dim view of the gods’. See also Cicero’s note on the *bios theoretikos*, *ND* 2.37 ‘man himself is born to contemplate and imitate the cosmos’ (*SVF* 2.1153—numerous parallels in Pease’s commentary ad loc.), as well as Vergil’s famous line *Georg.* 2.490 ‘blessed he who has been able go understand the causes of things’ (*felix qui potuit rerum cognoscere causas*; echoing Euripides and Lucretius and perhaps also Empedocles), on which see Norden (1974) 100–101 with n. 1. Quintilian *Inst.* 12.2.20 goes so far as to argue that ‘the physical part of philosophy comprises the whole of ethics’: *pars vero naturalis ... illam etiam moralem ... totam complectitur*. See further Gladigow (1967) on the macarism (i.e. beatification) of the *sophos*, esp. 419–421, and Betegh (2003). On the epistemic as well as ethical benefits of the study of nature see also Simp. *in Phys.* 4.17–5.26, partly quoted section E(b)§3.

Galen’s monograph ‘Whether the study of nature is useful for ethical philosophy’ (Εἰ ἡ φυσιολογία χρήσιμος εἰς τὴν ἡθικὴν φιλοσοφίαν, cf. below, section E(b) General texts) belongs with the group of writings concerned with the philosophy of Epicurus. It is unfortunately lost, but in view of his well-known attitude elsewhere one may hypothesize that (not unlike Cicero in some of his treatises) he scorned the study of questions that cannot be resolved, but accepted the existence and providence of the gods and argued against Epicurus’ rejection of providence. See also above, section D(d)(2), and Tieleman (2018) 459–462.

We note, finally, Diodotus’ assertion (at Diogenes Laertius *V.P.* 9.15) that Heraclitus’ book is not about nature but about the state, and that what is said about nature merely serves as illustration.

It has already been explained in the voluntary science, i.e. [the science] that inquires into voluntary actions, that the existence of man in his ultimate perfection and in his perfect essence is his being perfect in [the knowledge of] the theoretical sciences. His having achieved this state is the ultimate happiness and [the cause of] eternal life. ... Now in addition to what follows from a knowledge of the theoretical sciences, there is [the acquisition] of important qualities, for when the students of these sciences attain to what is natural for them, it will follow necessarily that they will be distinguished in all the kinds of important virtues, which are justice, temperance, courage, magnanimity, generosity, truth, faith, humility, and the other human virtues. Alexander has already explained in his foreword to this book how the existence of these virtues follows from a knowledge of the theoretical sciences. **Ptolemy** *Synt.* 1.1, p. 4.6–9 Heiberg α’. Προοίμιον. πάνυ καλῶς οἱ γνησίως φιλοσοφῆσαντες, ὧς Σύρε, δοκοῦσί μοι κεχωρικέναι τὸ θεωρητικὸν τῆς φιλοσοφίας ἀπὸ τοῦ πρακτικοῦ. *Iudic.* c. 10, p. 16.10–12 ὁ δὲ νοῦς τὴν μὲν οὐσίαν ἀμέριστος δυνάμεσι δὲ δυσὶ ταῖς πρώταις κεχρημένος τῇ τε θεωρητικῇ καὶ τῇ πρακτικῇ. *Harm.* 3.6 καὶ τοίνυν καθ’ ἑκατέραν ἀρχήν, τουτέστι τὴν θεωρητικὴν καὶ τὴν πρακτικὴν, τριῶν ὄντων γενῶν, ἐπὶ μὲν τῆς θεωρητικῆς τοῦ τε φυσικοῦ καὶ τοῦ μαθηματικοῦ καὶ τοῦ θεολογικοῦ, ἐπὶ δὲ τῆς πρακτικῆς τοῦ τε ἡθικοῦ καὶ τοῦ οἰκονομικοῦ καὶ τοῦ πολιτικοῦ (κτλ.). **Diogenes Laertius** *V.P.* 3.48 τοῦ δὴ (δια)λόγου τοῦ Πλατωνικοῦ δὴ εἰσὶν ἀνωτάτω χαρακτῆρες, ὃ τε ὑψηλῆς καὶ ὁ ζητητικός. διαιρεῖται δὲ ὁ ὑψηλῆς εἰς ἄλλους δύο χαρακτῆρας, θεωρηματικόν τε καὶ πρακτικόν. καὶ τῶν ὁ μὲν θεωρηματικός εἰς τὸν φυσικὸν καὶ λογικόν, ὁ δὲ πρακτικός εἰς τὸν ἡθικόν καὶ πολιτικόν. *V.P.* 7.87–88 διόπερ πρῶτος ὁ Ζήνων (*SVF* 2.179) ἐν τῷ Περὶ ἀνθρώπου φύσεως τέλος εἶπε τὸ ὁμολογουμένως τῇ φύσει ζῆν, ὅπερ ἐστὶ κατ’ ἀρετὴν ζῆν· ἄγει γὰρ πρὸς ταύτην ἡμᾶς ἡ φύσις. ... πάλιν δ’ ἴσον ἐστὶ τὸ κατ’ ἀρετὴν ζῆν τῷ κατ’ ἐμπειρίαν τῶν φύσει συμβαινόντων ζῆν, ὥς φησι Χρῆσιππος (*SVF* 3.4) ἐν τῷ (88) πρώτῳ Περὶ τελῶν· μέρη γὰρ εἰσὶν αἱ ἡμέτεραι φύσεις τῆς τοῦ ὅλου. διόπερ τέλος γίνεται τὸ ἀκολουθῶς τῇ φύσει ζῆν, ὅπερ ἐστὶ κατὰ τε τὴν αὐτοῦ καὶ

Aristotle's acromatic works] εἰς τε τὰ θεωρητικὰ καὶ τὰ πρακτικὰ καὶ τὰ ὀργανικά, ὅτι καὶ ἡ φιλοσοφία εἰς δύο ταῦτα διήρηται, εἰς τε τὸ θεωρητικὸν καὶ τὸ πρακτικόν, καὶ θεωρητικὰ μὲν εἰσιν ἐν οἷς ἐπισκέπτεται περὶ τῆς ἀληθείας καὶ τοῦ ψεύδους, πρακτικὰ δὲ ἐν οἷς ἐπισκοπεῖ περὶ τοῦ ἀγαθοῦ καὶ τοῦ κακοῦ. **Asclepius in Met.** 359.3–5 καὶ ἐντεῦθεν ἀναφαίνεται ἡμῖν ἡ διαίρεσις τῆς φιλοσοφίας, ὅτι εἰκότως εἰς δύο τμήματα διαιρεῖται εἰς τε τὸ πρακτικὸν καὶ εἰς τὸ θεωρητικόν. **Elias in Isag.**

26.7 διαιρείται τοῖνυν ἡ φιλοσοφία εἰς τὸ θεωρητικὸν καὶ πρακτικόν. **David Prol.** 17.1–17 ὅτι δὲ τέλειος φιλόσοφος ὁμοίος ἐστὶ τῷ θεῷ, δῆλον, ἐπειδὴ τοῖς αὐτοῖς χαρακτηρίζεται, οἷσπερ καὶ ὁ θεός· ὥσπερ γάρ ὁ θεὸς χαρακτηρίζεται τῷ ἀγαθῷ καὶ τῷ γνωστικῷ καὶ τῷ δυνατῷ, ... τὸν αὐτὸν δὴ τρόπον καὶ ὁ τέλειος φιλόσοφος τοῖς τρισὶ τούτοις χαρακτηρίζεται, λέγω δὴ τῷ ἀγαθῷ καὶ τῷ γνωστικῷ καὶ τῷ δυνατῷ· καὶ τῷ μὲν ἀγαθῷ, ὅτι ὥσπερ ὁ θεὸς προνοεῖται τῶν πάντων, οὕτω καὶ ὁ φιλόσοφος προνοεῖται τῶν ἀτελῶν ψυχῶν καὶ ἐπὶ τὸ τέλειον αὐτὰς ἄγει διὰ τοῦ ἀγνοοῦσας αὐτὰς ἐπὶ τὴν γνῶσιν μεταφέρειν· τῷ δὲ γνωστικῷ, ὅτι ὥσπερ τὸ θεῖον πάντα γινώσκει, οὕτω καὶ ὁ τέλειος φιλόσοφος ἐπαγγέλλεται πάντα γινώσκειν· τῷ δὲ δυνατῷ, ὅτι ὥσπερ τὸ θεῖον ὅσα δύναται καὶ βούλεται, οὕτω καὶ ὁ τέλειος φιλόσοφος ὅσα δύναται καὶ βούλεται. **Prol.** 55.17–21 οὕτως οὖν καὶ ἡ φιλοσοφία διαιρείται εἰς θεωρητικὸν καὶ πρακτικόν. καὶ διὰ μὲν τοῦ θεωρητικοῦ γινώσκει πάντα τὰ ὄντα, διὰ δὲ τοῦ πρακτικοῦ κατόρθωσιν ποιεῖται τῶν ἡθῶν. ἄξιον δὲ ζητῆσαι διὰ τί ἡ φιλοσοφία εἰς δύο διηρέθη, φημί δὴ εἰς θεωρητικὸν καὶ πρακτικόν, καὶ μὴ εἰς ἓν ἢ εἰς πλείονα. **Prol.** 70.29–71.4 ἀλλ’ οὖν τῷ ὅλῳ ὁμωνύμως λέγονται (sc. τὸ θεωρητικὸν καὶ τὸ πρακτικόν)· καὶ γὰρ καὶ τὸ θεωρητικὸν λέγεται φιλοσοφία ὁμωνύμως τῇ φιλοσοφίᾳ καὶ τὸ πρακτικὸν ὁμοίως. λείπεται οὖν λέγειν ὅτι ὡς τὰ ἀφ’ ἑνὸς εἰσιν· ἀπὸ γὰρ τῆς φιλοσοφίας ὠνομάσθησαν· καὶ γὰρ καὶ τὸ θεωρητικὸν ἀπὸ τῆς φιλοσοφίας λέγεται φιλοσοφία καὶ τὸ πρακτικὸν ὁμοίως. ὁ μὲντοι Ἀριστοτέλης λέγει (*Met.* α. 1.993b19–23?) ὅτι ὡς ἀπὸ ὅλου εἰς μέρη ἐγένετο ἡ διαίρεσις, καὶ καλῶς λέγει· καὶ γὰρ φησιν ὅτι τὸ θεωρητικὸν καὶ πρακτικὸν μέρη τῆς φιλοσοφίας εἰσιν· ὥσπερ (γὰρ) ἑνὸς τῶν μερῶν ἀπολιμπανόμενου ἀτελές τὸ ὅλον γίνεται (καὶ γὰρ χειρὸς ἀπουσίας ἀτελές τὸ ὅλον σώμα ἐστὶ), τὸν αὐτὸν τρόπον καὶ τοῦ θεωρητικοῦ ἀπόντος ἢ τοῦ πρακτικοῦ ἀτελὲς ἐστὶν ἡ φιλοσοφία· δεῖ γὰρ τὸν τέλειον φιλόσοφον μὴ μόνον τῇ θεωρίᾳ κοσμεῖσθαι, ἀλλὰ καὶ τῇ πράξει ἐγκαλλωπίζεσθαι. **Cassiodorus Inst.** 2.3.3–4 *consuetudo itaque est doctoribus philosophiae, antequam ad Isagogen veniant exponendam, divisionem philosophiae paucis attingere; quam nos quoque servantes praesenti tempore non immerito credimus intimandam. philosophia dividitur in inspectivam (haec dividitur in naturalem, doctrinalem (haec dividitur in arithmeticam, musicam, geometriam, astronomiam), divinam) et actualem (haec dividitur in moralem, dispensativam, civilem).* **Isidore of Seville Etym.** 2.23.3 *solent autem philosophi antequam ad Isagogen veniant exponendam, definitionem philosophiae ostendere, quo facilius ea, quae ad eam pertinent, demonstrantur.* **Etym.** 2.24.9 *philosophia dividitur in duas partes: prima inspectiva; secunda actualis.* **On the Elements According to the Opinion of Hippocrates**, the third work in the 6th cent. *Alexandrian Epitomes of Galen*, p. 134 Walbridge, 6. To which of the two parts of the art [of medicine] does it belong? This book belongs to the theoretical part of medicine. **Agnellus of Ravenna** in *Gal. De sectis* c. 5, p. p. 24.9–11 *dicamus nunc in quot partes dividitur medicina: in duas, theoreticon et practicon.* **Miskawaih Tartīb as-sa’ādāt** p. 58.2 ff. (tr. Gutas (1983) 232–233) Whoever wishes to perfect himself as a human being and reach the rank which is meant by ‘human nature’ in order to integrate his self and have the same preferences and intentions as those of the philosophers, let him acquire these two arts—I mean the theoretical and practical parts of philosophy; as a re-

sult, there will accrue to him the essential natures of things by means of the theoretical part, and good deeds by means of the practical part. As for the classification [of the parts] of these two arts and how they are to be followed toward the two goals mentioned above, this has to be done in accordance with what Aristotle the philosopher did. For it was he who classified and sorted [the parts] of philosophy and who established for it a method to be followed from beginning to end, as Paul (i.e. Paul the Persian) mentioned in what he wrote to Anûsirwân. **John of Damascus** *Dial.* c. 3.28 Kotter διαιρείται δὲ ἡ φιλοσοφία εἰς θεωρητικὸν καὶ πρακτικόν. **Eustratius** in *EN prim.* 1.1–2 τῆς φιλοσοφίας εἰς δύο διαιρουμένης, λέγω δὲ τὸ θεωρητικὸν τε καὶ πρακτικόν, περὶ ἅμφω ὁ Ἀριστοτέλης ἐσπούδασεν. **Psellus** *Or.Hag.* 8.343–344 Fisher δύο τὰ ἀνωτάτω γένη τῆς ἀρετῆς, θεωρία καὶ πράξις, ὧν αἱ παραφυάδες ἀσύνοπτοι. differently **Hippolytus** *Ref.* 7.19.4 καὶ γέγονεν αὐτῷ κατὰ τὴν διαίρεσιν τοῦ κόσμου καὶ ὁ τῆς φιλοσοφίας διηρημένος λόγος. Φυσικὴ γάρ τις ἀκρόασις αὐτῷ γέγονεν, ἐν ᾗ πεπόνηται περὶ τῶν φύσει καὶ οὐ προνοίᾳ διοικουμένων ἀπὸ τῆς γῆς μέχρι τῆς σελήνης πραγμάτων. γέγονε δὲ αὐτῷ καὶ Μετὰ τὰ φυσικὰ περὶ τῶν μετὰ (τὴν) σελήνην ἰδία τις ἄλλη οὕτως ἐπιγραφομένη πραγματεία λόγων. γέγονε δὲ αὐτῷ περὶ (τῆς) πέμπτης οὐσίας ἰδίου λόγος, ὅς ἐστιν αὐτῷ θεολογούμενος. τοιαύτη τις (ἐστὶ) καὶ ἡ διαίρεσις τῶν λόγων, ὡς τύπῳ περιλαβεῖν, (τῆς) κατ' Ἀριστοτέλην φιλοσοφίας.

On logic, whether part of philosophy or instrument: **Alexander of Aphrodisias** in *APr.* 1.7–8 (ἡ λογικὴ τε καὶ συλλογιστικὴ πραγματεία) τοῖς μὲν καὶ μέρος φιλοσοφίας εἶναι δοκεῖ, οἱ δὲ οὐ μέρος ἀλλ' ὄργανον αὐτῆς φασιν εἶναι. in *Top.* 74.29–30 ἡ ... λογικὴ πραγματεία ὄργανον χώραν ἔχει ἐν φιλοσοφίᾳ. **Galen** *Lib.Propr.* 19.39.8 K., p. 164.7–8 Boudon-Millot τὸ λογικὸν μέρος τῆς φιλοσοφίας. **Diogenes Laertius** *VP.* 5.28 (on Aristotle) τοῦ δὲ θεωρητικοῦ τὸν τε φυσικὸν καὶ λογικόν, οὗ τὸ λογικὸν οὐχ ὡς ὅλου μέρος, ἀλλ' ὡς ὄργανον προσηκριβωμένον. **Ammonius Hermeiou** in *Isag.* 23.23–24 ἡ δὲ λογικὴ οὐ μέρος τῆς φιλοσοφίας ἀλλ' ὄργανον, ὡς ἐν ἐτέρῳ δείξομεν. in *APr.* 8.20–25 οἱ μὲν Στωικοὶ (*SVF* 2.49) τὴν λογικὴν οὐ μόνον ὄργανον οὐκ ἀξιοῦσι καλεῖσθαι φιλοσοφίας, ἀλλ' οὐδὲ μόνον τὸ τυχόν, ἀλλὰ μέρος. καὶ τινὲς δὲ τῶν Πλατωνικῶν ταύτης ἐγένοντο τῆς δόξης, ὅτι κατὰ Πλάτωνα οὐκ ὄργανον ἡ λογικὴ ἀλλὰ μέρος καὶ τιμιώτατον μέρος ἐστὶν φιλοσοφίας. οἱ δὲ Περιπατητικοὶ ὄργανον αὐτὴν λέγουσιν ἀλλ' οὐ μέρος. in *APr.* 10.36–38 κατὰ γὰρ Πλάτωνα καὶ τὸν ἀληθὴ λόγον οὕτε μέρος ἐστὶν (sc. ἡ λογικὴ), ὡς οἱ Στωικοὶ (—) φασιν καὶ τινὲς τῶν Πλατωνικῶν, οὔτε μόνως ὄργανον, ὡς οἱ ἐκ τοῦ Περιπάτου φασίν, ἀλλὰ καὶ μέρος ἐστὶν καὶ ὄργανον φιλοσοφίας. **Sergius of Reshaina** *Commentaire sur les Catégories (à Théodore)* [III 1–13] Hugonnard-Roche. **Olympiodorus** *Prol.* 14.13–21 ἐπειδὴ τῶν Προλεγομένων ἀρχόμενοι πρὸς τρία τινὰ τὴν διδασκαλίαν ὑπισχνούμεθα ποιήσασθαι, πρὸς τε πᾶσαν φιλοσοφίαν, τὴν ἐπιστήμην φημί, καὶ πρὸς τὴν μέθοδον, τοῦτ' ἔστι τὴν λογικὴν, καὶ πρὸς τὸ σύγγραμμα, τοῦτ' ἔστι τὰς Κατηγορίας, φέρε διανύσαντες τὸ πρῶτον τῶν προτεθέντων ἡμῖν εἰς ἐξέτασιν ἐπὶ τὸ δεύτερον εὐτάκτως χωρήσωμεν, ἐπὶ τὴν μέθοδον φημι, ζητοῦντες εἰ μέρος ἢ ὄργανον ἡ λογικὴ τῆς φιλοσοφίας. δεῖ τοίνυν εἰδέναι ὅτι διάφοροι δόξαι γεγόνασι περὶ ταύτης, τῶν μὲν Στωϊκῶν (—) μέρος αὐτὴν εἶναι νομιζόντων, τῶν δὲ Περιπατητικῶν ὄργανον, τοῦ δὲ θείου Πλάτωνος μέρος ἅμα καὶ

ὄργανον. **Boethius** in *Isag.* ed. pr. 1.4, p. 9.24–10.4 *Brandt necessarius maxime uberrimusque fructus est artis eius quam Graeci λογικήν, nos rationalem possumus dicere. ... quam quidem artem quidam partem philosophiae, quidam non partem, sed ferramentum et quodammodo supellectilem iudicarunt.* in *Isag.* ed. sec. 1.3, p. 141.12–143.3 **Brandt.** **Elias** in *APr.* 134.4–13 **Westerink** εἰ μέρος ἢ ὄργανον ἢ λογικὴ φιλοσοφίας, Εὐτόκιος μὲν ζητεῖ τῆς Εἰσαγωγῆς ἀρχόμενος, Ἀλέξανδρος (in *APr.* 1.1sq.) δὲ καὶ Θεμίστιος τῶν συλλογιστικῶν πραγματειῶν ἀρχόμενοι. καὶ ἄμεινον οὗτοι· ἡ γὰρ λογικὴ κατὰ μόνην τὴν συλλογιστικὴν μέθοδον ζητεῖται εἰ μέρος ἢ ὄργανόν ἐστι φιλοσοφίας. τρεῖς τοίνυν γεγόνασι περὶ τοῦτου δόξαι, ἡ Στωϊκὴ, ἡ Περιπατητικὴ, ἡ Πλατωνικὴ ἢ τοι Ἀκαδημαϊκὴ. οἱ μὲν γὰρ Στωϊκοὶ μέρος οἶον τὴν λογικὴν φιλοσοφίας· τοιγαροῦν ἀντιδιαροῦσιν αὐτὴν τῷ θεωρητικῷ καὶ τῷ πρακτικῷ· οἱ δὲ Περιπατητικοὶ ὄργανον· Πλάτων δὲ τὰς ἀμφοτέρων νίκας ἀναδυσάμενος μέρος ἅμα καὶ ὄργανον τὴν λογικὴν φιλοσοφίας ἐκήρυξε (κτλ.). **Philoponus** in *APr.* 6.19–24. **David** in *APr.* 3.1, pp. 47.22–49.4 **Topchyan** (versio armenica).

exempla physica (ζητήματα sive προβλήματα φυσικά): **Xenophon** *Mem.* 4.7.7 (Anaxagoras 59A73 DK) ἐκείνος γὰρ λέγων μὲν τὸ αὐτὸ εἶναι πῦρ τε καὶ ἥλιον. **Plato** *Tim.* 40b–c ἐξ ἧς δὴ τῆς αἰτίας γέγονεν ὅς' ἀπλανῆ τῶν ἄστρον ζῶα θεῖα ὄντα καὶ αἰδία καὶ κατὰ ταῦτ' ἐν ταῦτ' στρεφόμενα αἰεὶ μένει· τὰ δὲ τρεπόμενα καὶ πλάτην τοιαύτην ἴσχοντα, καθάπερ ἐν τοῖς πρόσθεν ἐρρήθη, κατ' ἐκείνα γέγονεν. γῆν δὲ τροφὸν μὲν ἡμετέραν, ... (c) πρῶτην καὶ πρεσβυτάτην θεῶν ὅσοι ἐντὸς οὐρανοῦ γεγόνασιν (cf. ch. 2.13). **ps.Plato** *Epin.* 983a πρῶτον τὸ μέγεθος αὐτῶν (sc. τῶν ἄστρον) διανοηθῶμεν. οὐ γάρ, ὡς σμικρὰ φαντάζεται, τηλικαῦτα ὄντως ἐστίν, ἀλλ' ἀμήχανον ἕκαστον αὐτῶν τὸν ὄγκον. **Aristotle** *Top.* 1.11 104b1–8 see above §3. *Top.* 1.14 105b19–25 ἐστὶ δ' ὡς τύπῳ περιλαβεῖν τῶν προτάσεων καὶ τῶν προβλημάτων μέρη τρία· αἱ μὲν γὰρ ἠθικαὶ προτάσεις εἰσὶν, αἱ δὲ φυσικαὶ, αἱ δὲ λογικαὶ. ἠθικαὶ μὲν οὖν αἱ τοιαῦται, οἷον πότερον δεῖ τοῖς γονεῦσι μάλλον ἢ τοῖς νόμοις πειθαρχεῖν, ἐὰν διαφωνώσιν· λογικαὶ δὲ οἷον πότερον τῶν ἐναντίων ἢ αὐτῇ ἐπιστήμῃ ἢ οὐ· φυσικαὶ δὲ οἷον πότερον ὁ κόσμος αἰδῖος ἢ οὐ (cf. ch. 2.4). ὁμοίως δὲ καὶ τὰ προβλήματα. *Cael.* 2.7 289a16–18 οἱ πύρινα φάσκοντες εἶναι (sc. τὰ ἄστρα) διὰ τοῦτο λέγουσιν, ὅτι τὸ ἄνω σῶμα πῦρ εἶναι φασιν (cf. ch. 2.13). *Mete.* 1.3 341a35–36 ὁ ἥλιος, ὅσπερ μάλιστα εἶναι δοκεῖ θερμός, φαίνεται λευκὸς ἀλλ' οὐ πυρώδης ὢν (cf. ch. 2.20). *Met.* A.2 982b11–17 ὅτι δ' οὐ ποιητικὴ (sc. the discipline we are looking for), δῆλον καὶ ἐκ τῶν πρώτων φιλοσοφῶντων· διὰ γὰρ τὸ θαυμάζειν οἱ ἄνθρωποι καὶ νῦν καὶ τὸ πρῶτον ἠρξάντο φιλοσοφεῖν, ἐξ ἀρχῆς μὲν τὰ πρόχειρα τῶν ἀτόπων θαυμάσαντες, εἴτα κατὰ μικρὸν οὕτω προϊόντες καὶ περὶ τῶν μειζόνων διαπορήσαντες, οἷον περὶ τε τῶν τῆς σελήνης παθημάτων (cf. chs. 2.26–28) καὶ τῶν περὶ τὸν ἥλιον (cf. chs. 2.23–24) καὶ ἄστρα (cf. chs. 2.15–19) καὶ περὶ τῆς τοῦ παντός γενέσεως (cf. chs. 1.5, 2.4). *Met.* A.8 1207a4b1–10 (cf. ch. 1.6) παραδέδοται δὲ παρὰ τῶν ἀρχαίων καὶ παμπαικῶν ἐν μύθῳ σχήματι καταλελειμμένα τοῖς ὕστερον ὅτι θεοὶ τέ εἰσιν οὗτοι (sc. οἱ ἀστέρες) καὶ περιέχει τὸ θεῖον τὴν ὅλην φύσιν. τὰ δὲ λοιπὰ μυθικῶς ἤδη προσήκται πρὸς τὴν πειθὴ τῶν πολλῶν καὶ πρὸς τὴν εἰς τοὺς νόμους καὶ τὸ συμφέρον χρῆσιν· ἀνθρωποειδεῖς τε γὰρ τούτους καὶ τῶν ἄλλων ζώων ὁμοίους τισὶ λέγουσι, καὶ τούτοις ἕτερα ἀκόλουθα καὶ παραπλήσια τοῖς εἰρημένοις, ὧν εἴ τις χωρίσας αὐτὸ λάβοι μόνον τὸ πρῶτον, ὅτι θεοὺς ὦντο τὰς πρώτας οὐσίας εἶναι, θείως ἂν εἰρησθαι νομί-

σειεν. **ps.Plato** *Def.* 411a ἥλιος πῦρ οὐράνιον (cf. ch. 2.20)· ... ζῶον αἰδίδιον ἔμψυχον τὸ μέγιστον. **Epicurus** *Ep.Hdt.* at D.L. 10.76–77 καὶ μὴν ἐν τοῖς μετεώροις φορὰν καὶ τροπὴν καὶ ἔκλειψιν καὶ ἀνατολὴν καὶ δύσιν καὶ τὰ σύστοιχα τούτοις μήτε λειτουργοῦντός τινος νομίζειν δεῖ γίνεσθαι καὶ διατάττοντος ἢ διατάξαντος ... (77) ... μήτε αὖ πῦρ ἅμα ὄντα συνεστραμμένον τὴν μακαριότητα κεκτημένα κατὰ βούλησιν τὰς κινήσεις ταύτας λαμβάνειν. *Ep.Pyth.* at D.L. 10.88–116 on the more important issues (86 φυσικῶν προβλημάτων) in cosmology and meteorology, too long to quote. **Posidonius** (F 18 E.-K., 255 Theiler) in *Geminus' Epitome* at Alexander of Aphrodisias at *Simp. in Phys.* 292.3–5 πολλαχοῦ τοῖνυν ταυτὸν κεφάλαιον (cf. ch. 4.14.4) ἀποδείξεια προθήσεται ὃ τε ἀστρολόγος καὶ ὁ φυσικός, οἷον ὅτι μέγας ὁ ἥλιος (cf. ch. 2.21), ὅτι σφαιροειδὴς ἢ γῆ (cf. ch. 3.10.1). **Cicero** *ND* 2.41 *quare cum solis ignis similis eorum ignium sit qui sunt in corporibus animantium, solem quoque animantem esse oportet, et quidem reliqua astra quae oriantur in ardore caelesti qui aether vel caelum nominatur.* *Div.* 2.11 *quid? quae a dialecticis aut a physicis tractantur, num quid eorum divinari potest? unusne mundus sit an plures* (cf. chs. 1.5, 2.1), *quae sint initia rerum, ex quibus nascuntur omnia* (cf. ch. 1.3): *physicorum est ista prudentia.* **Ovid** *Met.* 15.67–72 *magni primordia mundi* (cf. ch. 1.3) / *et rerum causas et, quid natura* (cf. ch. 1.1), *docebat* (sc. Pythagoras), / *quid deus* (cf. ch. 1.7), *unde nives* (cf. ch. 3.4), *quae fulminis esset origo* (cf. ch. 3.3), / *Iuppiter an venti discussa nube tonarent* (cf. ch. 3.3), / *quid quateret terras* (cf. ch. 3.15), *qua sidera lege mearent* (cf. ch. 2.16), / *et quodcumque latet.* **Diogenes Laertius** *V.P.* 2.1 (Anaximander 11A1 DK) τὸν ἥλιον οὐκ ἐλάττονα τῆς γῆς καὶ καθαρώτατον πῦρ (cf. chs. 2.20–21). **Arius Didymus** fr. 10 Diels at *Stob. Ecl.* 1.25.4, p. 212.13–19 Ἀριστοτέλης ἐκ πέμπτῃς οὐσίας τὸν ἥλιον. ... οὔτε δὲ τὸν ἥλιον οὔτε τῶν ἄλλων ἀστρῶν ὅτιοῦν πῦρ εἶναι (cf. ch. 2.20). fr. 21 Diels at *Stob. Ecl.* 1.10.16c, p. 130.10 (*SVF* 2.413) ὁ γὰρ ἥλιος πῦρ ἐστὶν εἰλικρινές (cf. ch. 2.20). **Plutarch** *Fac.* 940C (*SVF* 2.677) καὶ γὰρ αὐτὴν τὴν σελήνην ὥσπερ τὸν ἥλιον, ζῶον ὄντα πύρινον καὶ τῆς γῆς ὄντα πολλαπλάσιον. *SR* 1053A (*SVF* 2.579) ἔμψυχον ἡγεῖται (sc. Χρῦσιππος) τὸν ἥλιον, πύρινον ὄντα καὶ γεγενημένον ἐκ τῆς ἀναθυμιάσεως εἰς πῦρ μεταβαλοῦσης. **Lucian** *Paras.* 11 ὁ ... ζητῶν περὶ σχήματος γῆς (cf. ch. 3.10) καὶ κόσμων ἀπειρίας (cf. ch. 1.5) καὶ μεγέθους ἡλίου (cf. ch. 2.21) καὶ ἀποστημάτων (cf. ch. 2.31) καὶ πρώτων στοιχείων (cf. ch. 1.3) καὶ περὶ θεῶν, εἴτε εἰσὶν εἴτε οὐκ εἰσὶ (cf. ch. 1.7), καὶ περὶ αὐτοῦ τοῦ τέλους αἰεὶ πολεμῶν καὶ διαφερόμενος πρὸς τινὰς οὐ μόνον ἐν ἀνθρωπίναις, ἀλλὰ καὶ ἐν κοσμικαῖς ἐστὶν ὀχλήσεσιν. **Diogenes Laertius** *V.P.* 7.144 εἶναι δὲ τὸν μὲν ἥλιον εἰλικρινές πῦρ (cf. ch. 2.20.2–6), καθὰ φησι Ποσειδώνιος (F 17 E.-K., 312 Theiler) ἐν τῷ ἐβδόμῳ *Περὶ μετεώρων* καὶ μείζονα τῆς γῆς (cf. ch. 2.20.1), ὡς ὁ αὐτὸς ἐν τῷ ἕκτῳ τοῦ Φυσικοῦ λόγου (F 9 E.-K., 261a Theiler). **Plotinus** 5.1[10].2 ἔστι δὲ καὶ ἥλιος θεός, ὅτι ἔμψυχος, καὶ τὰ ἄλλα ἄστρα. **Photius** *Bibl.* 212 (*Aenesidemus* fr. B8 Polito) ἐν δὲ τῷ β' (sc. τῶν Πυρρωνίων λόγων) κατὰ μέρος ἤδη ἀρχόμενος ἐπεξίεναι τὰ ἐν κεφαλαίῳ εἰρημένα, περὶ τε ἀληθῶν (ἀρχῶν *coni.* Pappenheim *prob.* Polito, cf. ch. 1.3) καὶ αἰτίων (cf. ch. 1.11) διαλαμβάνει καὶ παθῶν καὶ κινήσεως (cf. ch. 1.23), γενέσεώς τε καὶ φθοράς (cf. ch. 1.24) καὶ τῶν τούτοις ἐναντίων, κατὰ πάντων αὐτῶν τὸ ἀπορόν τε καὶ ἀκατάληπτον πυκνοῖς, ὡς οἴεται, ἐπιλογισμοῖς ὑποδεικνύς. καὶ ὁ γ' δὲ αὐτῷ λόγος περὶ

κινήσεως (νοήσεως coni. Natorp prob. Polito) καὶ αἰσθήσεως (cf. chs. 4.8–12) καὶ τῶν κατ' αὐτάς ιδιωμάτων, τὰς ὁμοίας περιεργαζόμενος ἐναντιολογίας. ... ἐν δὲ τῷ δ' ... ἐγείρει δὲ τὰς ἐξ ἔθους ἐφεξῆς ἀπορίας περὶ τε ὅλης τῆς φύσεως καὶ κόσμου (cf. chs. 1.1, Book 2) καὶ θεῶν (cf. chs. 1.6–7), οὐδὲν τῶν εἰς κατὰληψιν πεσεῖν ἐντεινόμενος. **Macrobius** in *Somn.* 2.17.16 *cum vero vel de sphaerarum modo vel de novitate sive magnitudine siderum deque principatu solis et circis caelestibus cingulisque terrestribus et Oceani situ loquitur* (sc. Cicero in the *Somnium Scipionis*) *et harmoniae superum pandit arcanum, physicae secreta commemorat; at cum de motu et immortalitate animae disputat, cui nihil constat inesse corporeum, cuiusque essentiam nullus sensus sed sola ratio apprehendit, illic ad altitudinem philosophiae rationalis* (sc. in the Neoplatonic sense) *ascendit*.

On the sun: **Aristotle** *de An.* 3.3 428b2–4 φαίνεται δὲ γε καὶ ψευδῇ, περὶ ὧν ἅμα ὑπόληψιν ἀληθῆ ἔχει, οἷον φαίνεται μὲν ὁ ἥλιος ποδιαῖος, πιστεύεται δ' εἶναι μείζων τῆς οἰκουμένης (cf. ch. 2.21). ad loc. see **Simplicius** (fort. **Priscianus Lydus**) in *de An.* 213.1–11 'φαίνεται δὲ γε καὶ ψευδῇ, περὶ ὧν ἅμα ὑπόληψιν ἀληθῆ ἔχει'. ἐναργές οἶμαι καὶ τοῦτο ὡς οὐ μόνον δεῖ ἀμφοτέρως καθ' αὐτὸ περὶ τοῦ αὐτοῦ εἶναι, ἀλλὰ καὶ μὴ διαστασιάζειν πρὸς ἀλλήλας. στάσις δὲ ἐν ταῖς γνώσεσιν ἢ κατὰ τὸ ἀληθές καὶ τὸ ψεῦδος. ὅταν οὖν ὡς ἐπὶ τοῦ ἡλίου ἢ μὲν αἰσθησις ἢ ψευδής, ἢ δὲ δόξα ἀληθής, συμβήσεται τὴν ἐξ ἀμφοῖν κατὰ συμπλοκὴν συστάσαν φαντασίαν τὴν αὐτὴν ἅμα τε ἀληθῆ καὶ ψευδῇ γίνεσθαι, εἰ μὴ ἄρα μεταπίπτειν τις καὶ γίνεσθαι ψευδῇ θεῖτο καὶ τὴν δόξαν' ὅτι γὰρ ἢ αἰσθησις οὐ μετατίθεται εἰς τὸ ἀληθές ἢ περὶ τοῦ ἡλίου, φανερόν. ἀλλ' οὐδὲ ἢ δόξα ἐπὶ τὸ ψεῦδος, μήτε ἡμῶν μεταδοξασάντων μήτε τοῦ ἡλίου ἄλλως νῦν ἢ πρότερον ἔχοντος. **Epicurus** *Ep.Pyth.* at D.L. 10.91 τὸ δὲ μέγεθος ἡλίου τε καὶ τῶν λοιπῶν ἀστρῶν κατὰ μὲν τὸ πρὸς ἡμᾶς τηλικούτον ἐστὶν ἡλικὸν φαίνεται. ... κατὰ δὲ τὸ καθ' αὐτὸ ἢτοι μείζων τοῦ ὁραμένου ἢ μικρῷ ἔλαττον ἢ τηλικούτον (cf. ch. 2.21). **Posidonius** (F 18 E.-K., 255 Theiler) at **Geminus'** *Epitome* at **Alexander of Aphrodisias** at **Simp.** in *Phys.* 292.3–5 πολλὰ τοῖς ταῦτον κεφάλαιον ἀποδείξει προθήσεται ὅ τε ἀστρολόγος καὶ ὁ φυσικός, οἷον ὅτι μέγας ὁ ἥλιος (cf. ch. 2.21). **Lucretius** *DRN* 2.1048–1050 *principio nobis in cunctas undique partis / et latere ex utroque (supra) superque per omne / nulla est finis* (cf. chs. 1.5, 2.1). **Cicero** *Luc.* 126 *solis autem magnitudinem (ipse enim hic radiatus me intueri videtur admonens ut crebro faciam mentionem sui) vos ergo huius magnitudinem quasi decempeda permensi refertis; ego me, quasi malis architectis, mensurae vestrae nego credere: dubium est uter nostrum sit, leviter ut dicam, verecundior? nec tamen istas quaestiones physicorum exterminandas puto*. **Cleomedes** *Cael.* 2.1.2–3 'Ἐπίκουρος (—) καὶ οἱ πολλοὶ τῶν ἀπὸ τῆς αἰρέσεως τηλικούτων εἶναι τὸν ἥλιον ἀπεφώνησαν ἡλικὸς φαίνεται (refuted at length by **Cleomedes**). **Galen** *Aff.Dig.* 5.67.11–13 K. οὐ μὴν εἰ γέγονεν ἢ ἀγέννητος ὁ κόσμος ἐστί (cf. ch. 2.4), δύναται τὸ πρᾶγμα αὐτὸ μαρτυρησά, καθάπερ οὐδὲ εἰ πεπερασμένον ἢ ἀπειρον τὸ πᾶν (cf. ch. 1.5) ἢ πόσος ὁ τῶν κυμάτων ἀριθμός. **Damascius** in *Phd.* §522.20–22 τρίτον δέ, εἰ μὴ τηλικούτος μόνον ὁ οὐρανὸς ἡλικὸς ὁράται—οὐδὲ γὰρ ὁ ἥλιος οὐδὲ ἡ σελήνη οὐδὲ ἄλλος ἀστήρ, ἀλλὰ πολλῶ τιμι μείζων ἕκαστος καὶ αὐτός γε ὁ οὐρανός. **Boethius** *Div.* p. 42.5–11 *Magee alio autem modo* (sc. divisionis) *secundum modum, haec enim non plura significant, sed multis*

modis, ut cum dicimus 'infinitum', unam rem quidem significat, cuius terminus inveniri non possit. sed hoc dicimus aut secundum mensuram, aut secundum multitudinem, aut secundum speciem: secundum mensuram, ut est infinitum esse mundum (cf. chs. 1.5, 2.1); secundum multitudinem, ut est infinitam esse corporum divisionem (cf. ch. 1.16). **Simplicius in Cael.** 202.11–13 οἱ μὲν ἓνα κόσμον καὶ πεπερασμένον ἔλεγον, ὅσοι μὴ ἐδέχοντο τὸ ἄπειρον ἐν ἀρχῇ, ὡς Ἀριστοτέλης καὶ Πλάτων, οἱ δὲ ἓνα ἄπειρον, ὡς Ἀναξιμένης (fr. 153 Wöhrle) (cf. chs. 1.5, 2.1). **Aristotle Phys.** 3.6 206b23–24 ὥσπερ φασὶν οἱ φυσιολόγοι τὸ ἔξω σῶμα τοῦ κόσμου, οὐ ἢ οὐσία ἢ ἄλλο ἢ ἄλλο τι τοιοῦτον, ἄπειρον εἶναι (cf. ch. 2.9). **Cleomedes Cael.** 1.1.55 οἱ λέγοντες ἔξω τοῦ κόσμου μὴδὲν εἶναι φλυαροῦσιν. 1.1.81–82 Ἀριστοτέλης δὲ καὶ οἱ ἀπὸ τῆς αἰρέσεως οὐδ' ἔξω τοῦ κόσμου κενὸν ἀπολείπουσι (cf. ch. 2.9). **Diogenes Laertius V.P.** 7.140 (SVF 2.543) ἔξωθεν δὲ αὐτοῦ (sc. τοῦ κόσμου) περιγεχυμένον εἶναι τὸ κενὸν ἄπειρον (cf. chs. 1.18, 2.9). **Simplicius in Phys.** 648.12–17 οἱ περὶ Δημόκριτον καὶ Λεῦκιππον (67A20 DK) ἔλεγον, οὐ μόνον ἐν τῷ κόσμῳ κενὸν εἶναι τι λέγοντες, ἀλλὰ καὶ ἔξω τοῦ κόσμου. ὅπερ δῆλον ὅτι τόπος μὲν οὐκ ἂν εἴη, αὐτὸ δὲ καθ' αὐτὸ ὑφέστηκε. ταύτης δὲ τῆς δόξης γέγονε καὶ Μητροδόωρος ὁ Χίος (70A8 DK), καὶ τῶν Πυθαγορείων τινές (—), ὡς μετ' ὀλίγον αὐτὸς (sc. Ἀριστοτέλης) ἐρεῖ· ὕστερον δὲ καὶ Ἐπίκουρος (fr. 274 Usener) (cf. chs. 1.18, 2.9).

Titulus α'. Τί ἐστι φύσις (P)

- §1 ἐπειδὴ πρόκειται ἡμῖν τὰ φυσικὰ θεωρῆσαι, ἀναγκαῖον ἡγοῦμαι δηλῶ-
σαι, τί ποτ' ἐστὶν ἡ φύσις· ἄτοπον γὰρ πειρᾶσθαι μὲν φυσιολογεῖν,
ἀγνοεῖν δ' αὐτὸ τοῦτο, τὴν τῆς φύσεως δύναμιν. (P1)
- §2 ἔστιν οὖν κατὰ τὸν Ἀριστοτέλην φύσις ἀρχὴ κινήσεως καὶ ἡρεμίας, ἐν ᾧ 5
πρώτως ἐστὶ καὶ οὐ κατὰ συμβεβηκός· πάντα γὰρ τὰ ὀρώμενα, ὅσα
μήτε ὑπὸ τύχης μήτε ὑπ' ἀνάγκης μήτ' ἐστὶ θεῖα μήτε τοιαύτην αἰτίαν
ἔχει, φυσικὰ λέγεται καὶ φύσιν ἔχει ἰδίαν· οἷον γῆ πῦρ ὕδωρ ἀήρ φυτὰ
ζῶα· ἔτι δὲ ταῦτα τὰ γινόμενα, ὄμβροι χάλαζαι κεραυνοὶ πρηστήρες
ἄνεμοι· ταῦτα γὰρ ἔχει ἀρχὴν τινα· οὐ γὰρ ἐξ αἰῶνος ἕκαστον τούτων 10
ἐστὶν ἀλλ' ἀπὸ τινος ἀρχῆς γίνεται· καὶ ταῦτα μέντοι, οἷον ζῶα φυτὰ,
ἀρχὴν γενέσεως ἔχει· ἐν δὲ τούτοις ἡ φύσις ἀρχὴ τὸ πρῶτόν ἐστι·
ἀρχὴ δὲ κινήσεως ἐστὶ, καὶ οὐ μόνον κινήσεως ἀλλὰ καὶ ἡρεμίας· ὅσα
γὰρ ἀρχὴν κινήσεως ἔλαβε, ταῦτα δύναται λαβεῖν καὶ τελευτήν. διὰ
τοῦτο οὖν ἡ φύσις ἀρχὴ κινήσεως ἐστὶ καὶ ἡρεμίας. (P2) 15

Commentary

A *Witnesses*

(1) The witnesses are only P and his tradition, including extracts in the Byzantine witnesses P^{Ps} and P^{Sy}, but not including P^E.

(2) S's ch. 1.41 'On nature and its causes' (heading only extant in the index of Photius) contains nothing but generous abstracts from the *Corpus Herme-*

ticum, ps.Archytas *On Principles*, and Plato's *Cratylus*. S anyhow was under no obligation to copy out A's treatise in full, as is already clear from the fact that he sometimes left out whole chapters and also individual lemmata preserved in P's *Epitome*. One of course does not know what may have been omitted by S's Byzantine editors. In S a very brief version of Aristotle's definition of *physis* is found at the beginning of Arius Didymus fr. 2 Diels at *Ecl.* 1.11.4, p. 132.10–11, in the chapter Περὶ ὕλης; cited below section E(b)§2.

(3) The remarkable division of the material on φύσις over two chapters in P^B, one at the beginning and the other, ch. 1.30 Περὶ φύσεως (a far more common phrase), at the end of Book 1, is confirmed by P^Q. One cannot exclude that originally there was only a single chapter on φύσις, and that the sub-archetype from which P^B and (one stage further) P^G derive, omitted from ch. 1.1 the material now in ch. 1.30, and added this at the end of the book. Compare the final chapter in the third Book of P (not copied out by G, however), which we have put back after ch. 3.5, giving it the number 3.5a. In ch. 1.30 φύσις is used in a sense that is different than in the present chapter, namely 'origin' or 'generation', and though the reality of generation is denied in that chapter (cf. also A 1.24.1–2), the outcome of this denial is not equivalent to 'the principle of movement and rest' of our §2. But the question of generation and its denial do play a part in (the history of) natural philosophy, so a reminder is appositely appended at the end of the Book. Apparently it makes better sense to introduce the doxai of Empedocles and Anaxagoras after mixture has been dealt with in ch. 1.17, and generation and corruption in 1.24.

(4) G begins with a lemma of Stoic provenance not paralleled in other representatives of P. His second lemma, very brief, is abstracted from P 1.30.2, his third, also very brief, from P 1.1.2. For a preliminary overview of extra lemmata in G see M–R 1.149–150. Because he occasionally preserves elsewhere unparalleled ps.Plutarchean material that should be accepted (the Antinoopolis papyrus sometimes supports G's readings, see M–R 1.126–130 and e.g. at ch. 5.1), we could feel justified in accepting it in the present case too, and in adding his first lemma to the present chapter (not, certainly, to ch. 1.30). Its contents, moreover, are diaphonically opposed to those of §2. But the eclectic way in which G has cobbled together his ch. 20 plus the fact that, with the exception of chs. 20 and 21 (the latter corresponding to P 1.2), the first section of his treatise (chs. 1–24), before he begins epitomising P and only P from ch. 25, has been derived from another source or sources, speaks against this inclusion. What is more, §2 follows on after §1 without a break and in a leisurely manner of address which is quite unusual in A. So we have decided not to include the extra lemma this time, and cite P only as a witness for §2.

(5) T could find no use for this chapter.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The proximate tradition for §2 is limited to later explanations in the commentators on the passages in Aristotle's *Physics* and on other works that are the source of the exposition in §2.

(2) *Sources.* §2 to some degree reads like a vague reminiscence of the famous prologue of Aristotle's *Meteorology*, see below, section D(a). It also echoes various passages in the *pragmateiai*.

C Chapter Heading

(1) *Headings formulated as questions.* The dominant umbrella type *περὶ τοῦ δεῖναι* (for which see ch. 1.3 Commentary C) is not used here, which is worth noting. The heading is formulated according to the question type/category of substance (*τί ἐστίν*) and aiming at a definition, cf. below, section D(c) ad init. The number of headings formulated as *questions* signaled by forms of *τίς* (including the important causal formula *διὰ τί*) in the *Placita* is not insignificant. Inclusive of the present chapter we have seventeen cases beginning with, or containing, forms of *τίς*, or about 13 % of the chapter headings of the treatise: chs. 1.3, 1.7, 2.8, 2.10, 2.11 (combined with umbrella type), 2.13, 2.30 (combined with umbrella type), 2.32, 3.8 (combined with umbrella type), 4.3, 4.12, 5.3, 5.9, 5.14, 5.17, and 5.18.

We may compare those headings which begin with, or contain, other words signaling *questions*, namely *πῶς* (chs. 1.4—where cf. Commentary C), 2.19, 3.16, 3.17, 4.11, 4.14, 4.20, 5.2, 5.6, 5.7, 5.8, 5.10, 5.12, 5.13, 5.16, 5.19 (combined with umbrella type), 5.24, 5.26, and 5.29; or *πόθεν* (chs. 2.5, 2.17, 4.21 (combined with umbrella type), 5.11, and 5.28); or *ἀπὸ ποίου* (ch. 2.6) / *ἐκ ποίων* (ch. 5.22); or *πόσαι* (ch. 4.10) / *πόσα* (ch. 5.20) / *ἐν πόσῳ* (ch. 5.21); or *πότε* (ch. 5.23); or *ποτέρου* (ch. 5.23); or *εἰ* (chs. 1.5, 2.3–4, 4.3, 4.9, 4.15, 4.20, 5.4–5, 5.15). For parallels in Dionysius of Halicarnassus see above, ch. 1.0, Commentary D(e)(1). A useful discussion of these interrogative formulas is found at Lachenaud (1998) 42–45, who *de facto* distinguishes between the various categories and question types involved. For a classification of headings see further below, section D(e)(3).

In the paragraphs of the chapters *answers* to these questions are provided. This elementary erotapocritic technique is evidence of the presence in the *Placita* of the well-known *dialectical* form of teaching by means of questions-and-answers, for which see e.g. Volgers–Zamagni (2004) and Taub (2015).

(2) *Categories and question types.* On categories and question types see M–R 2.1, index nominum et rerum and for the four kinds of question type see below, ch. 1.6, Commentary D(a). Aristotle did not present these analytical instruments primarily as didactic tools, though according to his actual prac-

tice they are so used again and again. In the *Placita* (and often elsewhere) their function is in the first place didactic.

(3) Note the minor discrepancy with the heading in the Index at the beginning of the Book, where the article has been added.

(4) Headings are also discussed above at ch. 1. *titulus et index*, Commentary D.

D *Analysis*

a Context

(1) *Introduction*. The chapter is part of the introduction of the treatise. Between the presentation of the *skopos* ('purpose') of the treatise and of the exemplification of the *physikos logos* in the proem on the one hand, and the chapters on the principles and that on cosmogony on the other, the meaning and denotation of *physis* that are to be applied in what follows are set out with some care. However a rival sense of *physis*, namely 'becoming', is reserved for a chapter at the end of the Book: 1.30 *Περὶ φύσεως*, since both lemmata of this chapter are concerned with denying the validity of φύσις in the sense of substance, or permanent essence.

(2) In §2 physics is described in a general way, and the four physical elements are listed, followed by plants (at the end in Aristotle *Mete.* 1.1) and animals, in their turn followed by a comprehensive list of meteorological phenomena, and concluded by a resumption of the general theme. This compressed sequence to some extent covers the contents of the work.

b Number-Order of Lemmata

There are two lemmata, §1 announcing that *physis* will be defined, §2 providing these definitions. That the announcement of §1 should come first is of course clear.

c Rationale–Structure of Chapter

(1) *Definitions*. The first lemma shows that the aim of the chapter is to determine *what* 'nature', φύσις, *is* (question type of the τί ἐστίν, cf. above at section C), i.e. to provide a definition. The author adds that it would be odd to discourse about nature without knowing the 'meaning', δῶναμις, of 'nature', i.e. of the word 'nature' (cf. Lachenaud's translation following that of Torraca). This implies that a nominal definition is intended to begin with.

In §2 we have a definition of the meaning of φύσις in the technical context of natural philosophy, viz. 'principle of motion and rest for the object in which it exists primarily and not incidentally'. Such a preliminary clarification is needed because in untechnical language φύσις means 'character', 'birth', etc. This is not

anonymous but explicitly attributed to Aristotle (briefly formulated e.g. *Met.* Δ.4 1014b16–20). It is followed and elucidated by a several ostensive, i.e. real, definitions pointing out examples, here naturally of natural things, also derived from Aristotle. We know ostensive definition was rejected by Plato, but not entirely successfully, as the present chapter and other cases demonstrate, e.g. the ostensive definitions of principle and element in the next chapter and the examples cited at Aristotle *Phys.* 2.1 192b8–23, *Met.* H.1 1042a7–11, and Eudemus fr. 50 Wehrli at Simp. in *Phys.* 263.18–30 (cited section E(b)§2). For definition in the *Placita* see further our detailed discussion at ch. 1.9, Commentary D(c) and (e)(2)).

(2) *Natural things.* Natural things according to §2 are ‘*not* the result of chance or necessity, they are *not* divine and do *not* have such a (divine) cause’ (our emphasis). That they are neither divine nor necessitated implicitly sets them off from the order of nature according to Platonism and Stoicism. The doxographer in this paragraph also anticipates a point made by Alexander of Aphrodisias at Simplicius in *Phys.* 264.18–22 (cited at section E(b)§2), namely that the divine is excluded because it does not have in itself a cause of rest. That what happens accidentally does not happen ‘by nature’ is a well-known Aristotelian view (e.g. *Phys.* 2.5 and below, ch. 1.27.1), while according to the Stoics chance is a predetermined event, the cause of which is hidden from us so chance is still natural in their sense of the word; see e.g. below ch. 1.29.7 (*SVF* 2.966). Aristotle himself at *Phys.* 2.2 192b8–23 (cited section E(b)§2) merely distinguishes between things that exist by nature and things that exist ‘through other causes’, without specifying these other causes, while in our chapter the author, presumably following the later Peripatetic tradition, feels compelled to spell these out.

(3) *Secular stance.* A thus emphasizes his secular stance at the very beginning of his treatise. This stance is also exemplified in ch. 1.6, *ubi vide* Commentary D(d)[43–52], and ch. 1.7, see Commentary B *ad finem*. Cf. Runia at M–R 3.268 with n. 56, Mansfeld (2013a). An implicit preference for the Peripatetic position is also clear at ch. 1.proœm., where see Commentary D(c) *ad finem*. By singling out Aristotle’s definitions, cited from e.g. *Met.* Δ.4 and *Phys.* 2.1 (quoted below, section E(b)§2) as the most important, in fact as the only, definition of nature, the author shows which allegiance he prefers.

Even so, Book 1 contains a chapter (1.7) ‘Who is the god?’, two chapters on fate (1.27–28), and one on chance (1.29), thus still giving some purchase to the opposite view. One should also take into account Stoic and Platonic reworking, which could have taken place later.

d Further Comments

Individual Points

Heading This is the earliest occurrence of the phrase τί ἐστὶ φύσις (but we need not believe it was coined by A). The next is at Alexander of Aphrodisias in *Met.* 196.28, who focuses on the distinction between physics and metaphysics. Epicetetus *Diss.* 1.20.16–17 (~ *SVF* 1.182) is somewhat different.

§2 (a) Because ἀρχή means ‘beginning’ as well as ‘principle’, *arche* has been added in brackets in the translation.

(b) The repetition of the gist of the first clause (the *probandum*) at the end (as a *q.e.d.*) is a noteworthy didactic ploy. A similar stylistic feature is to be observed at ch. 1.2.2.

(c) §2[13]. Against Diels and subsequent editors we have retained the majority text (supported by Q), which though unquestionably verbose makes good sense.

e Other Evidence

(1) The list of definitions of φύσις in ps.Galen’s *Definitiones medicae* (cited section E(b) General texts), with its preference for definitions of Stoic provenance (cf. ps.Galen *HPh* 20.1 cited at *testes primi*), does not contain any of the Aristotelian definitions of the present chapter. On φύσις see also ch. 1.30 below.

(2) The variously formulated chapter headings of ps.Galen’s *Introductio sive medicus*, listed in the indices in the manuscripts but also embedded in the body of the text (accessible in Petit 2009, cxxxv–cxxxviii), provide useful material for comparison with those of the *Placita*. The majority belongs with the umbrella type περὶ τοῦ δεῖναι, but there are three cases of τίνες as first word, two of τί, two of εἰ, one of πῶς, one of πόσαι, and one of πόσα. With one exception these headings beginning with a question word belong to the introductory chapters of the treatise.

(3) *Classification of headings*. Five types of heading are distinguished by Mutschmann (1911) 98–102, who revises Laqueur (1908) 221, namely: (1) those beginning with τίς or other interrogative pronouns such as πόσα, πῶς, ποσαχῶς; (2) those beginning with ὅτι or ὡς; (3) those beginning with περὶ plus genitive; (4) those beginning with εἰ; and (5) just a nominative. On the meaning and variety of reference of the simple (umbrella) ‘Titel περὶ τοῦ δεῖναι’ as well as its generality (‘allgemeine Beschaffenheit’) see Leo (1960) 2.390–392.

Commentary

A *Witnesses*

(1) The principal witnesses for this relatively brief chapter are P^{BQ} and S. They have the same two lemmata in the same order, which suggests that S wrote out the whole brief chapter and P refrained from abridging it. In S the phrase §2 [4–5] *πλείστον ... στοιχεῖα* has been the victim of haplography.

G provides a rather free but acceptable paraphrase, Ps has a bit more than the heading.

(2) S 1.10.16b, as noted by Diels in the apparatus, adds an excerpt from the *Timaeus* (30a) at the end of ch. 1.2 as transcribed by him, that is, immediately

after the Thales lemma. For the ignorant reader the standard Stobaeian introductory words λέγει γοῦν ἐν Τιμαίῳ (for the phrase λέγει γοῦν see Diels *DG* 216, Mansfeld 2016a, 301, Jeremiah at M–R 4.286 and 352) would make Thales the author of the dialogue.

T could find no use for this chapter.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition, apart from a passage on Plato's elemental figures, is limited to examples of the absence of the distinction between principle and element among the Presocratics.

(2) *Sources.* The sources for the distinction, accepted by many, are to be found in Plato and esp. Aristotle, see below, section E(b)§2. For the (Aristotelian) ἀμαρτάνει criticism see below, section D(d)§2, and ch. 1.3, Commentary D(c).

C *Chapter Heading*

It is difficult to determine whether A wrote the singular στοιχείον or the plural στοιχεῖα in his chapter heading. There is solid support for both readings. The singular is also found in the listing in the index at the beginning of the Book. The reason that we have opted for the plural is because that is the reading that occurs throughout the body of the chapter (four times), with the singular used only in the final sentence. The precise heading of P is to be preferred, as S's chapter with a more general heading (beginning with the umbrella formula) comprises the contents of, *inter alia*, both ch. 1.2 and ch. 1.3. For the dialectical aspect of the question word see above, ch. 1.1, Commentary C, and for the phrase τίτι διαφέρει the parallel in the heading of ch. 4.12 below.

D *Analysis*

a Context

Introduction. The chapter is part of the introduction of the treatise. The account of the difference between physical principle (ἀρχή) and physical elements (στοιχεῖα), continuing the introductory section of the treatise after the proem on φύσις, is a prelude of sorts to the long ch. 1.3 which according to its heading deals with the principles (ἀρχαί), some among which however also function as elements (στοιχεῖα). A returns to the question of matter and body (including the elements) in ch. 1.9 (Περὶ ὕλης) and 1.12 (Περὶ σωμάτων). There is no separate chapter Περὶ στοιχείων.

b Number–Order of Lemmata

P and S have the same two lemmata and have them in the same order, which there is no reason to change. Note however that G begins with a generalized version of the name-label of §2.

Ps partly takes over the contents of §2 but does not make reference to the name-label.

c Rationale–Structure of Chapter

(1) The chapter formulates a clear diaphonia between the view attributed to Plato and Aristotle that there is a fundamental difference between principle as primary and elements as secondary, and the view of Thales (representing the Presocratic materialists, as G probably saw), who failed to make this distinction. This particular criticism, or at least this way of formulating the criticism, goes back to Aristotle and became widespread (below section E(b)§2, which includes Aristotle's criticism). Element and principle are here first defined in opposition to each other, each being what the other is not. But, more importantly, elements as well as principles are then defined by *ostensive definition*, that is, by means of concrete instances: earth water air fire for the elements, matter and form, or entelechy, for the principles. This has implications with regard to the next chapter, 1.3 'On principles' (ἀρχαί). In everyday parlance ἀρχή means 'beginning', or 'command', etc. Its technical meaning in the context of natural philosophy is explained in the present chapter, so that ch. 1.3 does not need to commence with a nominal or conceptual definition expressive of this technical meaning. For definition in the *Placita* see below, ch. 1.9, Commentary D(c) and ((e)(2)).

Thales at ch. 1.3.1 posits Water as the principle into which and from which, so also there makes the 'mistake' announced and explicitly exposed at ch. 1.2.2; the criticism is not repeated. The other early materialists, Anaximander and Anaximenes at ch. 1.3.2–3, also fail to make the correct distinction by making their principle function as element; yet they are not criticized for this error, but for another one. We note the evaluative term ἀμαρτάνει found in the Thales lemma of the present chapter and in the Anaximander and Anaximenes lemmata of the next chapter, 1.3.2–3, see further below, section D(d)§2. We also note that in four doxai of 1.3 both ἀρχαί and στοιχεῖα are listed and so distinguished, viz. 1.3.19 (Empedocles), 1.3.21 (Aristotle), 1.3.22 (Xenocrates), and 1.3.23 (Zeno). In our present chapter the reasons for making the distinction are spelled out in considerable detail.

(2) The author, no less than four times using the first person plural of a verb, explicitly declares that this distinction is his own view (a rare phenomenon in the *Placita*), so comes down in favour of Plato and Aristotle. This authorial

‘we’ is not a pallid generalising plural, also because the principle(s) stated to be ‘ours’ are clearly Aristotelian: ‘matter which is without shape or form, and also form which we call ‘entelechy’ and ‘privation’’. Further compare ch. 1.3.21 below: ‘Aristotle, the son of Nicomachus, from Stagira (says that the) principles are *entelecheia* or form, matter, privation, but elements are four’. The four standard elements are the property of Plato, Aristotle, and others (the Aristotelian aether is presumably omitted for the sake of general acceptability and application). This preference for and emphasis upon an Aristotelian stance agrees with the position of the previous chapter, cf. Alt (1973) 135.

(3) *Stoics absent*. The Stoic view, entirely clear about the fundamental difference between principles and elements (see Diogenes Laertius *V.P.* 7.134 cited section E(b)§1), is surprisingly absent. Nevertheless a Stoic would hardly be in a position to dispute the argument of this chapter.

d Further Comments

Individual Points

§1 Plato in the *Timaeus de facto* distinguishes the demiurge, ideas, and receptacle from the physical elements, and at *Tim.* 48b–c and 53d hints that there are principles beyond the particles constitutive of the four elements. Aristotle distinguishes between principles (*principia realia*, Bonitz 112a41 ff.) and elements (e.g. in the context of his discussion of the Unmoved Mover, *Met.* A.3 11070b22–24), but occasionally still uses these terms interchangeably. See also below section D(e)(1). Also compare the distinction between transcendent and immanent causes in ch. 1.11.3.

§2 (1) In the *Placita* ethnicon (Μιλήσιος) and patronymic (not here, but see ch. 1.3.1) are as a rule provided by way of introduction and identification the first time—which even may be the only time—a name-label is cited (for clear examples see at chs. 1.7 and 4.1 below). Examples of the ethnicon often occur in Aristotle’s dialectical overviews already, and of ethnicon plus patronymic on a more systematic basis in the fragments, mainly in Simplicius, attributed by Usener and Diels to Theophrastus’ *Physicorum Opiniones* (frs. 224–230 FHS&G, better referred to as *Physicae Opiniones*; but we prefer to think of his *Physics* as the source). There is no need to assign these ingredients to the genre of biography. See below ch. 1.3, Commentary D(c) ad init. See also M–R 2.1.93 with n. 196, 174 with n. 361, 194.

(2) The elements, presumably, are said to be ‘composites’ because they are compounds of matter and form, or of sensible qualities, although Aristotle himself distinguishes between compounds and elements (e.g. *Cael.* 3 8.306b19–20, τὰ στοιχεῖα δεῖ νομίζειν ὥσπερ ὕλην εἶναι τοῖς συνθέτοις), or of triangles and squares, as in Plato’s *Timaeus*.

(3) For the critical phrase ‘is ... mistaken when he says’ (ἀμαρτάνει ... λέγων) see the parallels in *Loci Aetiani* ad fin., and some Aristotelian antecedents, e.g. at *Phys.* 4.6 213a24 ἀμαρτάνοντες λέγουσιν, or *Cael.* 3.5 304b11–12 κοινὸν δὲ πᾶσιν ἀμάρτημα τοῖς ἐν τὸ στοιχείῳ ὑποτιθεμένοις. Also the compositum in Theophrastus *Sens.* 24 Ἐμπεδοκλῆς μὲν οὖν ἔοικεν ἐν πολλοῖς διαμαρτάνειν, and 48 Διογένης μὲν οὖν, ὥσπερ εἴπομεν, ἅπαντα προθυμούμενος ἀνάγειν εἰς τὴν ἀρχὴν πολλὰ διαμαρτάνει τῶν εὐλόγων. Diels *DG* 58–59 believed that ‘a Placitorum certe instituto distat ... dialectica confutatio’ but in view of the Peripatetic background it is more surprising that examples are rare, cf. Alt (1973) 139, 143, and M–R 2.1.32, 2.1.69–72. For dialectical discussion in Theophrastus’ *Physikai Doxai* see *Phys.Op.* fr. 11a Diels = 241A FHS&G (ποιεῖται τὰς ἐνστάσεις—for the term cf. e.g. Aristotle *Top.* 8.2 157a38, *Rhet.* 2.25 1402a34–37), and e.g. Sedley (1998b) ch. 6. Also see ch. 1.7, Commentary D(d), individual points §1[38–39], and for the Peripatetic background cf. ch. 1.proœm., Commentary D(b) and D(c)(1).

(4) The general point of the first sentence, a mere affirmation concerned with ‘principle and elements’, is specified in its final sentence, where Thales is said to have erred in respect of the status of ‘water’ by declaring it to be both—this following upon the argument concerned with the elements ‘Water’ etc. that is in between. This sort of ring composition is also found in ch. 1.1.2, where see at Commentary D(d)§2.

e Other Evidence

(1) Plato’s refusal at *Tim.* 48b–c to identify what is primary may nevertheless have inspired Aristotle to be clear about the distinction between what is primary and what is not. For later Platonists on this issue and possible antecedents in the *Timaeus* and elsewhere see Bonazzi (2013) 392–395. Aristotle, again, followed by Theophrastus and echoed by others, insisted that his Presocratic predecessors failed to be aware of this unavoidable contrast. As to the general point they have been largely followed, as is clear from sources referring to the Stoics, and passages in Galen and elsewhere.

(2) *On the Elements According to the Opinion of Hippocrates*, the third work in the sixth cent. *Alexandrian Epitomes of Galen*, ch. 2.4, p. 139 Walbridge, also deals with the difference between element and principle.

§7 πάλιν δ' ἀπ' ἄλλης ἀρχῆς Πυθαγόρας Μνησάρχου Σάμιος, ὁ πρῶτος φιλοσοφίαν τούτῳ τῷ ῥήματι προσαγορεύσας, ἀρχὰς τοὺς ἀριθμοὺς καὶ τὰς συμμετρίας τὰς ἐν τούτοις, ἃς καὶ ἀρμονίας καλεῖ, τὰ δ' ἐξ ἀμφοτέρων σύνθετα στοιχεῖα, καλούμενα δὲ γεωμετρικά· 55

πάλιν δὲ τὴν μονάδα καὶ τὴν ἀόριστον δυάδα ἐν ταῖς ἀρχαῖς. σπεύδει δ' αὐτῷ τῶν ἀρχῶν ἡ μὲν ἐπὶ τὸ ποιητικὸν αἴτιον καὶ εἰδικόν, ὅπερ ἐστὶ νοὺς ὁ θεός, ἡ δ' ἐπὶ τὸ παθητικόν τε καὶ ὑλικόν, ὅπερ ἐστὶν ὁ ὁρατὸς κόσμος. 60

εἶναι δὲ τὴν φύσιν τοῦ ἀριθμοῦ δεκάδα· μέχρι γὰρ τῶν δέκα πάντες Ἕλληνες, πάντες βάρβαροι ἀριθμοῦσιν, ἐφ' ἃ ἐλθόντες πάλιν ἀναποδίζουσιν ἐπὶ τὴν μονάδα· καὶ τῶν δέκα πάλιν, φησὶν, ἡ δύναμις ἐστὶν ἐν τοῖς τέσσαρσι καὶ τῇ τετράδι· τὸ δ' αἴτιον, εἴ τις ἀπὸ τῆς μονάδος κατὰ πρόσθεσιν τιθεῖ τούς ἀριθμούς, ἄχρι τῶν τεσσάρων προελθὼν ἐκπληρώσει τὸν δέκα ἀριθμόν· ἐάν δὲ ὑπερβάλῃται τὸν τῆς τετράδος, καὶ τῶν δέκα ὑπερεκπεσεῖται· οἷον εἴ τις θεῖ ἕν καὶ δύο προσθεῖν καὶ τρία καὶ τούτοις τέσσαρα, τὸν τῶν δέκα πληρώσει ἀριθμόν· ὥστε ὁ ἀριθμὸς κατὰ μὲν μονάδα ἐν τοῖς δέκα κατὰ δὲ δύναμιν ἐν τοῖς τέσσαρσι. διὸ καὶ 70 ἐπεφθέγγοντο οἱ Πυθαγόρειοι, ὡς μεγίστου ὅρκου ὄντος τῆς τετράδος,

οὐ μὰ τὸν ἀμετέρα ψυχᾷ παραδόντα τετρακτύν,

παγὰν ἀενάου φύσεος ῥίζωμά τ' ἔχουσιν.

καὶ ἡ ἡμετέρα ψυχὴ, φησὶν, ἐκ τετράδος σύγκειται· εἶναι γὰρ νοῦν ἐπιστήμην δόξαν αἴσθησιν, ἐξ ὧν πᾶσα τέχνη καὶ ἐπιστήμη καὶ αὐτοὶ λογικοὶ ἐσμεν. νοὺς μὲν οὖν ἡ μονὰς ἐστὶν· ὁ γὰρ νοὺς κατὰ μονάδα θεωρεῖται, οἷον πολλῶν ὄντων ἀνθρώπων οἱ μὲν ἐπὶ μέρους εἰσὶν 75

(P₁₃) Zeno Menae filius aërem deum materiam et elementa quatuor.

Eusebius *PE* 7.12.1 (P₁) Θαλῆς μὲν ὁ Μιλήσιος ἀρχὴν τῶν ἀπάντων τὸ ὕδωρ εἶναι ἀπεφήνατο, (P₂) Ἀναξίμενης δὲ τὸν ἀέρα, Ἡράκλειτος τὸ πῦρ (P₈), Πυθαγόρας ἀριθμούς (P₇), (P₉) Ἐπίκουρος ἅμα Δημοκρίτῳ σώματα ἄτομα, Ἐμπεδοκλῆς τὰ τέσσαρα στοιχεῖα (P₁₀).

ps.Iustinus *Coh.Gr.* 3.2.12–4.1.10 (P₁) Θαλῆς μὲν γάρ ὁ Μιλήσιος ὁ πρῶτος τῆς φυσικῆς φιλοσοφίας ἄρξας, ἀρχὴν εἶναι τῶν ὄντων ἀπάντων ἀπεφήνατο τὸ ὕδωρ· ἐξ ὕδατος γάρ φησι τὰ πάντα εἶναι καὶ εἰς ὕδωρ τὰ πάντα ἀναλύεσθαι. (P₂) Ἀναξίμανδρος δὲ μετὰ τοῦτον, ἀπὸ τῆς αὐτῆς ὁρμώμενος Μιλήτου τὸ ἄπειρον ἀρχὴν ἀπάντων ἔφησεν εἶναι· ἐκ τούτου γάρ δὴ τὰ πάντα γίνεσθαι καὶ εἰς τοῦτο τὰ πάντα φθειρεσθαι. (P₃) τρίτος Ἀναξίμενης, καὶ οὗτος ἐκ τῆς Μιλήτου ὑπάρχων, ἀέρα τοῦ παντός ἀρχὴν εἶναι λέγει· ἐκ γάρ τούτου τὰ πάντα γίνεσθαι καὶ εἰς τοῦτον τὰ πάντα ἀναλύεσθαι φησιν. (P₈) Ἡράκλειτος (καὶ Ἰππᾶσος non necessarie Sylburg Maran, cf. P) ὁ Μεταπόντιος ἀρχὴν τῶν πάντων τὸ πῦρ εἶναι λέγει· ἐκ πυρὸς γάρ τὰ πάντα γίνεσθαι καὶ εἰς τὸ πῦρ τὰ πάντα τελευτᾶν. Ἀναξαγόρας ὁ Κλαζομένιος ἀρχὰς τῶν πάντων τὰς ὁμοιομερείας εἶναι φησιν (P₄). (P₅) Ἀρχέλαος ὁ Ἀπολλοδώρου Ἀθηναῖος ἀέρα ἄπειρον καὶ τὴν περὶ αὐτὸν πυκνότητα καὶ μάνωσιν ἀρχὴν ἀπάντων εἶναι λέγει. (P₆) οὔτοι πάντες, ἀπὸ Θαλοῦ τὰς διαδοχὰς ἐσχηκότες, τὴν φυσικὴν ὑπ' αὐτῶν καλουμένην μετῆλθον φιλοσοφίαν. (4) (P₇) εἴθ' ἐξῆς ἀφ' ἑτέρας ἀρχῆς Πυθαγόρας Μνησάρχου Σάμιος ἀρχὰς τοὺς ἀριθμούς καὶ τὰς συμμετρίας καὶ τὰς ἐν αὐτοῖς ἁρμονίας καλεῖ τὰ τ' ἐξ ἀμφοτέρων σύνθετα στοιχεῖα, ἔτι μέντοι (τὴν Marcovich) μονάδα καὶ τὴν ἀόριστον δυάδα. (P₉) Ἐπίκουρος Νεοκλέους Ἀθηναῖος ἀρχὰς εἶναι τῶν ὄντων σώματα λόγῳ θεωρητὰ λέγει, ἀμέτοχα κενοῦ, ἀγέννητα, ἀφθαρτα, οὔτε θραυσθῆναι δυνάμενα οὔτε διὰ πλάσιν ἐκ τῶν μερῶν λαβεῖν οὔτ' ἀλλοιωθῆναι, διὰ τοῦτο καὶ λόγῳ θεωρητὰ (εἶναι Riedweg). (P₁₀) Ἐμπεδοκλῆς Μέτωνος ὁ Ἀκραγαντίνος τέσσαρα στοιχεῖα (πῦρ ἀέρα ὕδωρ γῆν), δύο δὲ ἀρχικὰς δυνάμεις, φιλίαν τε καὶ νεῖκος, ὧν ἡ μὲν ἐστὶν ἐνωτικὴ, τὸ δὲ διαιρετικόν.

Coh.Gr. 5.4.31–6.1.8 (P₁) Θαλῆς γάρ ὁ Μιλήσιος, ὁ πρῶτος παρ' αὐτοῖς τῆς φιλοσοφίας ἄρξας, τὴν πρόφασιν παρ' αὐτοῦ (sc. Homerus, vid. infra; παραυτόθεν Riedweg) λαβὼν τὰς πρώτας αὐτοῦ περὶ ἀρχῶν ἀθετήσκει δόξας. αὐτοῦ γάρ Ἀριστοτέλους [sic; cf. Zeno P₁₃] θεὸν καὶ ὕλην ἀρχὰς εἶναι τῶν πάντων εἰρηκότος, (P₁) ὁ πρεσβύτατος τῶν κατ' αὐτοὺς ἀπάντων Θαλῆς ἀρχὴν τῶν ὄντων ὕδωρ εἶναι λέγει· ἐξ ὕδατος γάρ φησι τὰ πάντα εἶναι καὶ εἰς ὕδωρ ἀναλύεσθαι τὰ πάντα.

στοχάζεται δὲ πρῶτον μὲν ἀπὸ τοῦ πάντων τῶν ζώων τὴν γονήν, ἀρχὴν οὖσαν, ὑγρὰν εἶναι· δευτέρον δὲ ὅτι πάντα τὰ φυτὰ ὑγρῷ τρέφεται καὶ καρποφορεῖ, ἀμοιροῦντα δὲ τοῦ ὑγροῦ ξηραίνεται. εἴθ', ὥσπερ μὴ ἀρκούμενος οἷς στοχάζεται, καὶ τὸν Ὀμηρον ὡς ἀξιόπιστον μαρτύρεται οὕτως λέγοντα (P1a, II. 14.246): Ὁκεανός, ὃς περ γένεσις πάντεσσι τέτυκται!· πῶς οὖν οὐκ εἰκότως ὁ Θαλῆς πρὸς αὐτὸν φήσιν· δι' ἣν αἰτίαν, ὦ Ἀριστότελες, τὰς μὲν Πλάτωνος ἀναίρειν ἐθέλων δόξας, ὡς ἀληθεύοντι προσέχεις Ὀμήρῳ, ἡμῶν δὲ τὴν ἐναντίαν ἀποφηνάμενος δόξαν οὐκ ἀληθεύειν Ὀμηρον οἶσι; (6) ὅτι τοίνυν οἱ σφόδρα θαυμαστοὶ καθ' ὑμᾶς σοφοὶ οὐδ' ἐν τοῖς ἄλλοις συμφωνοῦντες φαίνονται, καὶ ἀπὸ τούτων γινώσκειν ῥάδιον. (P11) τοῦ γὰρ Πλάτωνος τρεῖς ἀρχαὶ τοῦ παντός εἶναι λέγοντος, θεὸν καὶ ὕλην καὶ εἶδος (θεὸν μὲν τὸν πάντων ποιητὴν, ὕλην δὲ τὴν ὑποκειμένην τῇ πρώτῃ τῶν γενομένων γενέσει καὶ τὴν πρόφασιν αὐτῇ τῆς δημιουργίας παρέχουσαν, εἶδος δὲ τὸ ἐκάστου τῶν γινομένων παράδειγμα), Ἀριστοτέλης τοῦ μὲν εἶδους ὡς ἀρχῆς οὐδαμῶς μέμνηται, δύο δὲ ἀρχάς, θεὸν καὶ ὕλην (vid. supra), εἰναί φησι.

Ioannes Lydus Mens. 2.9 αὐτῷ (sc. τῷ Ἑρμῇ) τοῖνυν τὴν τετράδα οἱ φιλοσοφούντες ἀνέθεντο ὡς ἐφόρῳ τῶν μιγάδων ψυχῶν· τὰ γὰρ τῆς ψυχῆς στηρίγματα τέσσαρά ἐστι, νοῦς ἐπιστήμη δόξα αἴσθησις. ἡ ψυχὰ γὰρ ἀνθρώπου, φησὶν ὁ Πυθαγόρας (p. 165.23–26 Thesleff), ἔστι τετραγώνον εὐθυγώνιον' (~ P7).

Psellus Omn.Doctr. c. 83 (~ tit.) Περὶ τῶν ἀρχῶν, τί εἰσὶν (~ tit.)

... ἀλλ' οἱ μὲν ἄλλοι τῶν φιλοσόφων διηρέθησαν· καὶ τοῖς μὲν ἔδοξεν ἀρχὴ τὸ πῦρ (~ P9), διὰ τὴν δύναμιν καὶ τὸ καταναλίσκειν πάντα εἰς ἑαυτὸ· τοῖς δὲ ὁ ἀήρ (~ P3, P10), διὰ τὴν τῶν ζώων ἀναπνοήν· τοῖς δὲ τὸ ὕδωρ, διὰ τὴν γόνιμον φύσιν (~ P1)· τισὶ δὲ τούτων καὶ ἡ γῆ ἀρχὴ ἔδοξε (—), διὰ τὸ τὰ πλεῖω τῶν ζώων ὑπὸ τῆς γῆς γεννᾶσθαι καὶ εἰς αὐτὴν ἀναλύεσθαι (~ P11)· ἕτεροι δὲ αὐτὰ τὰ τέσσαρα στοιχεῖα ἀρχαὶ τῶν ὄντων ἀπεφάναντο (~ P19). Πλάτων δὲ ἀρχὰς εἴρηκε τὸν θεὸν ὡς πατέρα καὶ ποιητὴν, τὴν ὕλην ὡς δεχομένην τὴν δημιουργίαν, καὶ τὴν ἰδέαν (~ P20). ... *Theolog.* opusc. 6.1–5 tit. κζ'. Εἰς τὸ ῥητὸν τῆς πρώτης ὁμιλίας τῆς Ἑξαήμερου τοῦ μεγάλου Βασιλείου τὸ λέγον (Exaem. 1.6.12–16)· διὰ τοῦτο οἱ μὲν ἐπὶ τὰς ὑλικὰς ὑποθέσεις κατέφυγον, τοῖς τοῦ κόσμου στοιχείοις τὴν αἰτίαν τοῦ παντός ἀναθέντες· οἱ δὲ ἄτομα καὶ ἀμερῆ σώματα καὶ ὄγκους καὶ πόρους συνέχιν τὴν φύσιν τῶν ὁρατῶν ἐφαντάσθησαν. 6.69–85 ἀλλὰ τίνες 'οἱ καταφυγόντες ἐπὶ τὰς ὑλικὰς ὑποθέσεις' (Bas. Exaem. 1.2); οἱ μὲν καθ' ἐν τῶν στοιχείων· Θαλῆς μὲν γὰρ τὸ ὕδωρ τοῦ παντός ἡτιάσατο (~ P1), τὸ δὲ πῦρ Ἀναξίμανδρος (sic), τὴν δὲ γῆν Ἰππων (—) (~ P19) Ἐμπεδοκλῆς δὲ μόνα τὰ τέσσαρα στοιχεῖα ὁμοῦ ἀρχὰς ἐπέστησε τῷ παντί, μεθ' ὧν τὸν παρ' ἐκείνου Σφαῖρον ὀνομασθέντα καὶ τὸ Νεῖκος καὶ τὴν Φιλίαν, περὶ ὧν εἰ ἀρξόμεθα λέγειν, πολὺν ἂν λόγον καταναλώσωμεν· συμβολικὰ γὰρ ταῦτα πάντα καὶ Πυθαγόρεια. (~ P4) Ἀναξαγόρας δὲ ὁ ἀπὸ τοῦ Μίμαντος τὰς ὁμοιομερείας ἀρχὰς ἡγήσατο τοῦ παντός· ὁ μὲν γὰρ Ἐμπεδοκλῆς, ἀπλὰ τὰ στοιχεῖα ἡγούμενος, ἀπὸ τούτων ἀπεγένην καὶ ξύλα καὶ λίθους, σάρκα τε καὶ νεῦρα καὶ αἷμα καὶ τᾶλλα τῶν ὁμοιομερῶν· ὁ δ' Ἀναξαγόρας τὰς ὁμοιομερείας μᾶλλον τῶν ὄντων τιθέμενος ἀρχὰς, ἀπὸ τούτων ἔλεγε τὰ στοιχεῖα συνίστασθαι, ὡς συμβαίνειν τὸν μὲν Ἐμπεδοκλέα ἀπλὰ ἡγεῖσθαι τὰ

στοιχεία, σύνθετα δὲ τὰ ὁμοιομερῆ, τὸν δὲ Ἀναξαγόραν ἀπλᾶ μὲν τὰ ὁμοιομερῆ, σύνθετα δὲ τὰ στοιχεῖα. ὅπως δ' ἂν αἱ δόξαι αὐτοῖς ἔχωσιν, ὕλिकाί πάντως εἰσίν. ἐνιαχοῦ δὲ Ἀναξαγόρας νοῦν ἐφιστάνει τῷ παντὶ καὶ ὑπὸ νοῦ λέγει κεκοσμηθῆαι τὸ πᾶν· ἀλλὰ βραχὺ κατιῶν, ἐπιλανθάνεται τῶν δογμάτων καὶ πάλιν ἐπὶ τὰς ὁμοιομερείας τὸν λόγον ἐγκαθορμίζει.

Ioannes Tzetzes *Exeg. in Iliad.* 1.5.29 φησὶ γὰρ ἐν ἀρχῇ τοῦ αὐτοῦ Ἀναξαγόρας· 'ὁμοῦ πάντα χρήματα ἦν, νοῦς δ' αὐτὰ διήρε (sic) καὶ διεκόσμησεν' (~ P5).

Testes secundi:

Achilles Univ. c. 3, p. 9.10–10.17 Περὶ τῆς τῶν ὄλων ἀρχῆς. (~ §23) Ζήνων ὁ Κιτιεὺς (*SVF* 1.85) ἀρχὴν εἶναι λέγει τῶν ὄλων θεὸν καὶ ὕλην, θεὸν μὲν τὸ ποιοῦν ὕλην δὲ τὸ ποιούμενον, ἀφ' ὧν τὰ τέσσαρα στοιχεῖα γεγονέναι. (~ §16) Ἐπίκουρος δὲ ὁ Ἀθηναῖος (fr. 267 Usener) ἐκ σωμάτων νοητῶν σμικροτάτων τὰς ἀρχὰς τῶν ὄλων εἶναι φησι, καλεῖ δὲ αὐτὰς ἀτόμους ἢ διὰ σμικρότητα ἀκαριαίας τινὸς οὐσας ἢ διὰ τὸ ἀφθάρτους αὐτὰς εἶναι καὶ μὴ τέμνεσθαι. (~ §21) Ἀριστοτέλης δὲ ὁ Σταγειρίτης (cf. *Phys.* 1.5–7, *Cael.* 1.3) ἀρχὰς λέγει τῶν ὄλων εἶδος καὶ ὕλην καὶ στέρησιν, ἐκ δὲ τούτων τὰ τέσσαρα στοιχεῖα, καὶ πέμπτον σῶμα ἀδιάφθαρτον καὶ καθαρὸν, ὃ δὴ αἰθέρα λέγουσιν. (~ §20) Σωκράτης δὲ καὶ Πλάτων (cf. *Tim.* 29e–30b) ἀρχὰς τῶν ὄλων καλοῦσι θεὸν καὶ ὕλην καὶ τρίτον τὸ ὑποκείμενον γενέσει καὶ φθορᾷ, ἐκ δὲ τούτων τὰ τέσσαρα στοιχεῖα γενέσθαι. (~ §19) Ἐμπεδοκλῆς (31B6 DK) δὲ ἀρχὰς φησι τῶν ὄλων τὰ τέσσαρα στοιχεῖα καὶ τὸ μὲν πῦρ καλεῖ Δία καὶ αἰθέρα, τὴν δὲ γῆν Ἥραν, τὸν δὲ ἀέρα Αἰδωνέα, τὸ δὲ ὕδωρ Νῆστιν, τὰς δὲ τούτων δυνάμεις Νεῖκος καὶ Φιλίαν, Νεῖκος μὲν τὴν διάλυσιν Φιλίαν δὲ τὴν σύνοδον. Ἀπολλώνιος δὲ ὁ Ῥόδιος ἐν τῷ πρώτῳ τῶν Ἀργοναυτικῶν εἰσάγει τὸν Ὀρφέα ταῦτα λέγοντα (*Arg.* 1.496–498)· 'ἤειδεν δ', ὡς γαῖα καὶ οὐρανὸς εὐρύς ὑπερθε / τὸ πρὶν ἐπ' ἀλλήλοισι μὴ συναρηρότα μορφή / Νεῖκος ἐξ ὀλοῖο διέκριθεν ἀμφὶς ἕκαστον· πάλαι γάρ ποτε ἀναμιξέμερον τῶν στοιχείων ὑπὸ τοῦ Νεῖκου ὕστερον διακριθῆναι αὐτὰ, παντὸς μὲν τοῦ γεώδους συστρέφοντος εἰς ἓν, ὄλου δὲ τοῦ πυρώδους περιελθέντος εἰς τὸ αὐτὸ καὶ τοῦ ὕδατῶδους συρρέοντος εἰς τὸ ὅμοιον καὶ τοῦ ἀέρος περιχυθέντος πρὸς τὸ ὁμόφυλον. Θαλῆς δὲ ὁ Μιλήσιος (fr. 232 Wöhrlé) καὶ Φερεκύδης ὁ Σύριος (7B1a DK) ἀρχὴν τῶν ὄλων τὸ ὕδωρ ὑφίστανται, ὃ δὴ καὶ 'χάος' καλεῖ ὁ Φερεκύδης, ὡς εἰκὸς τοῦτο ἐκλεξάμενος παρὰ τοῦ Ἡσιόδου οὕτω λέγοντος (*Th.* 116) 'ἦτοι μὲν πρώτιστα χάος γένετο· παρὰ γάρ τὸ χεῖσθαι, ὑπολαμβάνει, τὸ ὕδωρ 'χάος' ὠνόμασται (~ §1). Ἡράκλειτος (—) δὲ πῦρ πρῶτον φησι γεγονέναι (~ §9). εἰσὶ δ' οἱ τὴν γῆν πρῶτον λέγουσι γεγονέναι (~ §11), θλιβομένην δὲ καὶ σφιγγομένην οὕτως ἐνάψαι μὲν τὸ πῦρ, ἀναπέμψαι δὲ τὸ ὕδωρ, διαδοῦναι δὲ τὸν ἀέρα (~ §9).

Nemesius NH 5, p. 52.18–23 λέγουσι δὲ οἱ Στωικοὶ τῶν στοιχείων τὰ μὲν εἶναι δραστικά, τὰ δὲ παθητικά· δραστικά μὲν ἀέρα καὶ πῦρ, παθητικά δὲ γῆν καὶ ὕδωρ (~ §22). Ἀριστοτέλης δὲ καὶ πέμπτον εἰσάγει σῶμα τὸ αἰθέριον καὶ κυκλοφορικόν, μὴ βουλόμενος τὸν οὐρανὸν ἐκ τῶν τεσσάρων στοιχείων γεγενῆσθαι· (κυκλοφορικὸν δὲ λέγει τὸ πέμπτον σῶμα, ὅτι ἐν κύκλῳ περὶ αὐτὸ φέρεται (~ §21)). *NH* 5,

p. 54.12–20 Θαλής (fr. 324 Wöhrle), τὸ ὕδωρ μόνον λέγων εἶναι στοιχεῖον (~ §1), πειράται δεικνύναι τὰ ἄλλα τρία ὑπὸ τούτου γινόμενα· τὴν μὲν γὰρ ὑποστάθμην αὐτοῦ γῆν γίνεσθαι, τὸ δὲ λεπτομερέστερον ἀέρα, τοῦ δὲ ἀέρος τὸ λεπτομερέστερον πῦρ. Ἀναξίμενης (fr. 118 Wöhrle) δέ, ἀέρα μόνον λέγων, καὶ αὐτὸς ὁμοίως πειράται δεικνύναι τὰ ἄλλα στοιχεῖα ἐκ τοῦ ἀέρος αποτελούμενα (~ §2). (~ §9) Ἡράκλειτος (T 867 Mouraviev) δὲ καὶ Ἱππαρχος 9prob. Morani, leg. Ἱππασος ὁ Μεταποντίνος, τὸ πῦρ λέγοντες, ταῖς αὐταῖς ταύταις ἀποδείξεις κέχρηται, ἐξ ὧν τοῖνυν καὶ αὐτοὶ φασὶ τὸ πῦρ εἶναι τῶν ἄλλων στοιχείων γεννητικόν (~ §9), καὶ τῶν ἄλλων ὁ μὲν τὸ ὕδωρ (~ §2), ὁ δὲ τὸν ἀέρα (~ §3).

Hermias Irr. 10.1–7 ἀλλαχόθεν δέ μοι Θαλής (fr. 230 Wöhrle) τὴν ἀλήθειαν νεύει ὀριζόμενος ὕδωρ τοῦ παντός ἀρχήν. καὶ ἐκ τοῦ ὕγρου τὰ πάντα συνίσταται καὶ εἰς ὕγρον ἀναλύεται. ... διὰ τί τοῖνυν μὴ πεισθῶ Θαλῇ τῷ πρεσβυτάτῳ τῶν Ἰώνων; (~ §1). ἀλλ' ὁ πολίτης αὐτοῦ (sc. τοῦ Θάλητος) Ἀναξίμανδρος (fr. 230 Wöhrle) τοῦ ὕγρου πρεσβυτέραν ἀρχήν εἶναι λέγει τὴν αἰδίων κίνησιν καὶ ταύτῃ τὰ μὲν γεννᾶσθαι, τὰ δὲ φθείρεσθαι (~ §2). *Irr.* 11.1–12 καὶ μὴν οὐκ εὐδοκίμει Ἀρχέλαος (60A8 DK) ἀποφαινόμενος τῶν ὅλων ἀρχὰς θερμὸν καὶ ψυχρόν (~ §5). ἀλλὰ καὶ τούτῳ (sc. τῷ Ἀρχελάῳ) πάλιν ὁ μεγαλόφωνος Πλάτων οὐχ ὁμολογεῖ λέγων ἀρχὰς εἶναι θεὸν καὶ ὕλην καὶ παράδειγμα. νῦν μὲν καὶ δὴ πέπεισμαι (~ §20). ... κατόπιν δὲ αὐτοῦ (sc. τοῦ Πλάτωνος) μαθητῆς Ἀριστοτέλης ἔστηκε ζηλοτυπῶν τὸν διδάσκαλον τῆς ἀρματοποιίας. οὗτος ἀρχὰς ἄλλας ὀρίζει τὸ ποιεῖν καὶ τὸ πάσχειν. καὶ τὸ μὲν ποιοῦν ἀπαθὲς εἶναι τὸν αἰθέρα, τὸ δὲ πάσχον ἔχειν ποιότητος τέσσαρας, ξηρότητα ὑγρότητα θερμότητα ψυχρότητα· τῇ γὰρ τούτων εἰς ἀλλήλα μεταβολῇ πάντα γίνεται καὶ φθίρεται (~ §21). *Irr.* 12.9–13 ταῦτα γὰρ τοι πάντα ὁ Λεύκιππος (67A17DK) λήρον ἡγούμενος ἀρχὰς εἶναι φησὶ τὰ ἀπειρα καὶ ἀεικίνητα καὶ ἐλάχιστα· καὶ τὰ μὲν λεπτομερῆ ἄνω χωρήσαντα πῦρ καὶ ἀέρα γενέσθαι, τὰ δὲ παχυμερῆ κάτω ὑποστάντα ὕδωρ καὶ γῆν (~ §13 cf. ch. 1.4). *Irr.* 13.2–10 (68A44 DK) Δημόκριτος ἀπαλλάξει με τῆς πλάνης ἀποφαινόμενος ἀρχὰς τὸ ὄν καὶ τὸ μὴ ὄν, καὶ τὸ μὲν ὄν πλήρες, τὸ δὲ μὴ ὄν κενόν. τὸ δὲ πλήρες ἐν τῷ κενῷ τροπῇ ἢ ῥυθμῷ ποιεῖ τὰ πάντα (~ §14). ... Ἡράκλειτος (T 678 Mouraviev) ... ἀρχὴ τῶν ὅλων τὸ πῦρ, δύο δὲ αὐτοῦ πάθη ἀραιότης καὶ πυκνότης, ἡ μὲν ποιοῦσα ἢ δὲ πάσχουσα, ἡ μὲν συγκρίνουσα ἢ δὲ διακρίνουσα (~ §9). ... *Irr.* 14.1–9 ἀλλὰ με παρακαλεῖ κάκειθεν Ἐπίκουρος μηδαμῶς ὑβρίσαι τὸ καλὸν αὐτοῦ δόγμα τῶν ἀτόμων καὶ τοῦ κενοῦ. τῇ γὰρ τούτων συμπλοκῇ πολυτρόπῳ καὶ πολυσχηματίστῳ τὰ πάντα γίνεται καὶ φθίρεται (~ §16). ... ἀλλ' ὁ Κλεάνθης (SVF 1.495) ἀπὸ τοῦ φρέατος ἐπάρας τὴν κεφαλὴν καταγελά σου (sc. τοῦ Ἐπικούρου) τοῦ δόγματος καὶ αὐτὸς ἀνιμᾷ τὰς ἀληθεῖς ἀρχὰς θεὸν καὶ ὕλην. καὶ τὴν μὲν γῆν μεταβάλλειν εἰς ὕδωρ, τὸ δὲ ὕδωρ εἰς ἀέρα, τὸν δὲ ἀέρα (ἄνω) φέρεσθαι, τὸ δὲ πῦρ εἰς τὰ περίγεια χωρεῖν (~ §23) *Irr.* 16.1–6 ἄλλοι τοῖνυν ἀπὸ τῆς παλαιᾶς φυλῆς Πυθαγόρας (—) καὶ οἱ τούτου συμφυλέται σεμνοὶ καὶ σιωπηλοὶ παραδιδόασιν ἄλλα μοι δόγματα ὥσπερ μυστήρια, καὶ τοῦτο δὴ τὸ μέγα καὶ ἀπόρρητον {τὸ} (αὐτὸς ἔφα') ἀρχὴ τῶν πάντων ἡ μονάς· ἐκ δὲ τῶν σχημάτων αὐτῆς καὶ ἐκ τῶν ἀριθμῶν τὰ στοιχεῖα γίνεται (κτλ.) (~ §7).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

This chapter on the first principles of the φυσικὸς λόγος, the account or theory of physics, the most difficult in the work, plays a key role in the structure and organization of the *Placita*. It is the longest chapter in the treatise and is well attested, with no less than nine witnesses. We have been obliged to treat it at unusual and quasi-monograph length, because it is a ‘signature’ chapter, which will be consulted much more often than most others. Unfortunately, however, the transmission is rather chaotic and will not allow a reconstruction that accurately represents its original contents in every detail.

(1) The Byzantine mss. of P preserve fourteen doxai, as does Q’s translation. Some of the lemmata are of considerable length, esp. that of Pythagoras (§7). Only six of these fourteen doxai are written out by E, with numerous interesting textual variants, namely P1–3 Thales (plus Homer), Anaximander, Anaximenes, P8 Heraclitus/Hippasus, P9 Epicurus/Democritus (putting the latter first), and P10 Empedocles. Thus from P’s chapter he selects lemmata that designate material entities or quasi-material concepts as principles and omits those involving immaterial principles, and he does so on purpose, cf. M–R 1.132, 134–135. Of these six lemmata not a single one is paralleled in T (see below, section A(5)).

Following after his abstracts from P (from which *inter alia* §4 on Anaxagoras was omitted, as his Νοῦς was seen as immaterial) E adds a paragraph about this Νοῦς, including a paraphrase of the opening sentence of 58B1 DK, which is not derived from P. This is followed by a substantial chapter entitled Περὶ τῆς Ἀναξαγόρου δοξῆς (PE 4.15) containing Plato *Phd.* 97b–99b. So, by updating and highlighting (whether he was aware of this or not) what was the point of Aristotle’s eulogy at *Met.* A 1.3 984b14–18 (58A58DK, echoed at the end of P4 and elsewhere) through the inclusion of Epicurus and the addition of the *Phaedo* passage, he effectively introduces a contrast between a collection of P’s materialists with the first philosopher to add Intellect as a cause in nature.

(2) A brief list of ten name-labels plus corresponding doxai has been interpolated into the text of Philo *Prov.* 1.22 (extant only in an Armenian transla-

tion). Ps. Justin *Cohortatio ad Graecos* paraphrases ten doxai at greater length in his polemics against the Hellenic tradition, including a couple of valuable readings (Riedweg 1994 plausibly attributed the work to the mid-fourth cent. CE author Marcellus of Ancyra; if true then his textual evidence is just a little later than that of E). Given that there are only fourteen doxai in P and that not a single allusion related to the twenty-four doxai is present in A but is not to be found in P, we can be virtually certain that ps. Justin drew on P. Ioannes Lydus paraphrases a point of detail on Pythagoras. Much later Ps takes over the chapter heading in one work and makes use of its contents in another. In the case of the early Christian apologist Athenagoras, however, the source of the Homeric quotes cannot be determined with certainty. They may have taken directly from A or via P; see above General Introduction section 4.1.(2). We therefore do not list his text above together with the tradition of P.

(3) All the material that S preserves from this chapter is found in ch. 10 of Book 1, 'On the principles and elements of the universe'. It comprises twenty-three doxai, including all fourteen doxai found in P—except P14 as independent lemma (our §8)—but often in a reduced form, and instead of the prose part of §19 (Empedocles) providing other, quite dissimilar material on Empedocles. He has abridged several lemmata, namely §1 Thales plus Homer, §2 Anaximander, §3 Anaximenes, §4 Anaxagoras, §7 Pythagoras and the Pythagoreans (rather drastically, even omitting the entire final part, §7[74–89], on epistemology), §9 Heraclitus and Hippasus, and §16 Epicurus (rather drastically too). His order is in part bizarre, esp. the placement of doxai of Xenocrates and Xenophanes (no Milesian) in between the two Milesians Anaximander and Anaximenes at the beginning of S 1.10.12.

Because of this position Elter (1880) 19 n. 1 argued that these lemmata were abstracted by S from elsewhere: Xenophanes is included in the Ionic Succession where he does not belong, and the phrase *συνεστάναι τὸ πᾶν* in the doxa of Xenocrates is 'a little different' ('*paululum differt*') from what is in the other doxai of ch. 1.3. He therefore hypothesized a lost chapter 'On the All' (Περὶ τοῦ παντός) for A. We shall come back to this issue below in section A(5).

Summarizing the result of these inquiries in advance, we posit that the erratic position of the Xenocrates and Xenophanes lemmata and the particular contents of the Xenocrates doxa are not decisive. These lemmata are shared between T and S, which at a first glance is proof of their derivation from A. T provides a shorter version of S's Xenocrates lemma, while S's Xenophanes lemma with its a little garbled quotation of the verse 21B27 DK is paralleled especially in a few lines of T's far longer lemma on Xenophanes at CAG 4.5, but

also briefly in *CAG* 2.10. The Xenocrates lemma in S and T can be assigned to A for various reasons, not the least important of which is that it occurs in an Aëtian enclave in T at *CAG* 4.9–12. For these enclaves see the General Introduction, sections 2.4 and 2.5. In S the Xenocrates lemma occurs in such an enclave as well. But the situation of the Xenophanes lemmata in T differs from the position of their equivalent in S. It turns out that in T this lemma does not belong with the *traditio Aetii* but with one of the numerous proximate traditions concerned with the *archai*, excerpted by T and coalesced by him together with his excerpts from A at *CAG* 4.5–12. The reason for ascribing it to A is the fact that, though inappropriately placed, it still is firmly included in the Aëtian enclave enclosed within S 1.10–12. The Xenophanes lemmata in S and in T are false friends but full-blooded cousins.

(4) Because of the different locations of the line *Il.* 14.246 in P and S Schubert (2017) 53–54 argues for an irreconcilable difference between these two main sources, but fails to realize that S several times transfers lines or phrases from an Aëtian lemma on purpose to the cluster of poetic quotations found at the beginning of his composite chapters. As to lemmata of ch. A 1.3 included with other material in his own ch. 1.10, he (1) not only transferred the above-mentioned Homeric hexameter (part of P's text for A 1.3.1) from the prose lemma to S 1.10.2, but (2) also transformed the standard prose formula ἐκ πυρὸς γὰρ τὰ πάντα γίνεσθαι καὶ εἰς πῦρ πάντα τελευτᾶν λέγουσι (part of P's text for A 1.3.9) in the (quasi-)poetic line ἐκ πυρὸς γὰρ τὰ πάντα καὶ εἰς πῦρ πάντα τελευτᾷ at S 1.10.7. (3) The cento Emp. 31B6 (3 lines in P10) + 31B36 DK (1 line not in P) at S 1.10.11a is placed before the Empedocles lemma in prose following at S 1.10.11a, which as to contents differs to a degree from the Empedocles lemma in prose in P at A 1.3.20 (see further below, section D(d)§19). In P's lemma the first three of these Empedoclean hexameters (i.e. 31B6 DK) are found inside the prose text. This transfer of poetic or quasi-poetic ingredients from prose lemmata to a separate cluster of poetic quotations is a variety of S's crucial technique of *coalescence*, discussed and explained M–R 1.218–224 (and above, Introduction section 2.4). Note however that he must have considered the line 21B27 at §11, which does not scan, as prose (see below section A(5)(d)).

(5)(a) Considerable complexities arise when the evidence of T is taken into account. He treats the subject of the *archai* twice, in *CAG* Books 2 and 4. Both accounts are compressed, the former much more than the latter. The former list with fourteen brief doxai is in *CAG* Book 2 entitled 'On the principle' (Περὶ ἀρχῆς, 2.9–11). The latter list, with thirteen doxai, more clearly orientated towards cosmology, occurs in Book 4 entitled 'On matter and cosmos' (Περὶ ὕλης καὶ κόσμου, 4.5–12). Just like other doxographical passages in T these

two lists are connected with each other, since no less than *four* lemmata in the first list resemble abridged versions of lemmata in the second list (cf. M–R 1.274–275 and 4.242–249). As a matter of fact T was not averse to utilizing the same or similar quotations or abstracts several times (e.g. Plato *Crat.* 397c–d verbatim at CAG 2.27 and 3.7, abridged at 3.23), as is abundantly clear from Raeder’s useful *index scriptorum et philosophorum*. There are four more such anticipatory passages, to be discussed in detail below, namely CAG 1.63, 1.96, 1.97–98 and 6.3. The list at CAG 2.9–11 in relation to that at 4.5–12 is no exception.

The first important clue is that the doxai of Hippasus-cum-Heraclitus, Diogenes of Apollonia, Xenophanes and Parmenides in the first list briefly anticipate the four doxai with these name-labels in the second list, and that the order of the name-labels Hippasus and Heraclitus, which occurs twice, is the reverse of the order at ch. 1.3.9. The second clue is that the doxai of the Atomists Democritus and Epicurus on the first list (no doxa is cited for Metrodorus) are significantly different from the doxai connected with these name-labels in the second list, and close to those of the Eleatics. In the tables printed immediately below the name-labels found on both lists have been picked out in bold (we include ethnica and patronymics but omit doxai).

CAG 2.9–11

- T1 Thales
- (T1a Homer)
- T2 Anaximander
- T3 Anaximenes
- T4 (cf. Txiii)** Diogenes of Apollonia
- T5 (cf. Txii)** Hippasus of Metapontum and Heraclitus of Ephesus
- T6 Empedocles of Agrigentum
- T7 (cf. Ti)** Xenophanes of Colophon
- T8 (cf. Tii)** Parmenides of Elea
- T9 Democritus of Abdera
- T10 Epicurus son of Nicocles of Athens
- T11 Metrodorus of Chios
- T12 Zeno of Elea
- T13 Diogenes of Smyrna

CAG 4.5–12

- Ti (cf. T7)** Xenophanes son of Orthomenes of Colophon
- Tii (cf. T8)** Parmenides son of Pyres of Elea
- Tiii** Melissus son of Ithagene of Miletus (*sic* for Samos)

Tiv Democritus of Abdera son of Damasippus
 Tv Metrodorus of Chios
 Tvi Epicurus son of Nicocles of Athens
 Tvii Ecphantus of Syracuse the Pythagorean
 Tviii Plato son of Ariston
 Tix Aristotle of Stagira son of Nicomachus
 Tx Xenocrates of Carchedon (*sic* for Chalkedon)
 Txi Zeno of Citium son of Mnaseas
 Txii (cf. T5) Hippasus of Metapontum and Heraclitus son of Blosson of
 Ephesus
 Txiii (cf. T4) Diogenes of Apollonia

Apart from CAG 2.9–11 anticipating 4.5–12, the passages that anticipate other passages further down in the treatise are the following:

The first, at CAG 1.63, relates to five different subsequent presentations. T first summarizes the theme of the mortality vs. immortality of the soul of ch. 4.7, which further down at 5.23 he discusses at greater length. He next speaks of ‘what is visible’ as either generated or ungenerated, as it seems briefly formulating a general issue, for throughout his treatise he criticizes the philosophical majority for neglecting the invisible. Since the phrase ‘what is visible’ pertains to the visible world, the allusion applies in particular to the brief treatment of ch. 2.4 at CAG 4.16 on the indestructibility of the cosmos. He continues with generation from earth, briefly mentioned at CAG 2.10 and treated at greater length at CAG 4.5. He then mentions the contrast between generation from (continuous) matter and from atoms, anticipating the detailed abstract from ch. 1.9 at CAG 4.13. And he ends with the theme of ch. 2.3 that the All is ensouled or soulless, also acknowledged further down at CAG 4.16. This means that the very first time he speaks of differences of view among the philosophers his brief sample pertains to theoretical physics, cosmology, and psychology, the main themes in A he focuses on further down.

Secondly, at CAG 1.96 he summarizes the different views on the distances of heavenly bodies from each other found in ch. 2.31, and does so again at 4.24.

Thirdly, at CAG 1.97–98 he provides a detailed abstract of ch. 2.21 on the size of the sun, and a second detailed abstract of the same chapter subsequently at 4.22, where he omits the doxa of Anaximenes but includes that of Empedocles. One may of course also say that at 1.97–98 he omitted the doxa of Empedocles and included that of Anaximenes.

And finally, at CAG 6.3 he briefly summarizes the issues of chs. 1.25 and 1.27–28, namely necessity, fate and chance, treated in detail a few pages further down at 6.13–15.

In all these passages T's earlier presentation preludes exclusively on his own subsequent treatment of these matters. It is not so easy to explain the differences between these accounts or their mutual relationships, or such variations of phrasing and ordering as can be pointed out in these earlier occurrences. Perhaps the simplest explanation is that the more detailed passages are directly based on the *hypomnemata* T must have compiled before he carefully composed his work. But so of course may the brief passages, though these summaries may also have been abstracted from the longer passages relating to them we now find further down. At CAG 1.97–98 and 4.22 on the size of the sun he certainly relied on these *hypomnemata* both times.

(b) According to Diels *DG* 45, 170 and the apparatus ad loc. in the *DG* the material at CAG 4.5–12 should be assigned to A. He includes the Hippasus-cum-Heraclitus lemma in ch. 1.5, the rest in the apparatus of ch. 1.3. At M–R 1.274 we pointed out that the provenance of CAG 4.5–8 from A is doubtful, but in chapter 7 of M–R 2.1 we attempted to salvage the evidence for ch. 1.3. This approach has been abandoned by Mansfeld (2018b) at M–R 4.215–275. Diels' influential treatment of CAG 4.5–12 necessitates dealing with this difficult issue at some length. The argument of the long chapter in M–R 4 is summarized in what follows. It has been also been revised, because it has become clearer that only part of the second list derives from A. Earlier hesitations concerned with the assignment of the lemmata for Xenophanes (in S) and Xenocrates (in S and T) to A have been overcome,

The problem of the sources used by T on the principles has recently been discussed in detail by Journée (2018) at M–R 4.196–214. He provides an excellent and innovative overview of the primary and secondary literature, and of the various difficulties and prospects involved. Because some pieces of the puzzle do not fit with each other (the Hippasus-cum-Heraclitus lemma for instance is hard to place, see below) he discusses the possibility that not only A, but also another source or sources are involved. In the end, however, he tentatively concludes that the evidence at our disposal will go back to different stages in the development of the living text of the *Placita*. This is one of the reasons why he is not against accepting Diels' (or our earlier) attribution of lemmata from CAG 4.5–12 to A. In our view, however, he pays insufficient attention to the particular character of this material, and regrettably fails to deal with the crucial links between sections of CAG 2.9–11 and 4.5–12 summarily mentioned in section A(a) above, or with the parallels for several of T's lemmata to be discerned in the *Stromateis* attributed to ps.Plutarch. Mansfeld, for his part, argues that in CAG 4.5–12 T coalesced a cluster of lemmata abstracted from A with evidence deriving from a source shared with these *Stromateis*. Parallel material going back to this shared source pertaining to at

least Hippasus-cum-Heraclitus, Xenophanes, Parmenides and Epicurus is also present in the earlier overview at CAG 2.9–11 (cf. M–R 4.242–249 and section A(5)(a) above).

The lemmata at CAG 2.9 plus the matching lemmata at 4.5–9 dealing with the Eleatic Succession are found in T alone. Consequently they belong with the class of so-called irreducible lemmata (on these see General Introduction, section 3.3). We are certainly justified in attributing irreducible lemmata in T (or S for that matter) to A whenever they occur in an unmistakably Aëtian enclave or micro-environment, see the General Introduction at sections 2.3–5. This does not apply to the entirely or partly irreducible lemmata on the principles, whose nearest relatives are found in the *Stromateis* of ps.Plutarch.

We now turn to the list at CAG 2.9–11, but in the course of our analysis also have to adduce the evidence of the *Stromateis* and of the more detailed list at 4.5–12. The *conspectus parallelorum* over three columns at pp. 221–223 undergirds the complicated argument.

Conspectus Parallelorum:

Theodoret CAG 2.9–11	Theodoret CAG 4.5–12	Ps.Plutarch <i>Strom.</i> 4–11

At *DG* 170–171 Diels left room for a few points of resemblance between the list of *CAG* 2.9–11 and the contents of ch. 1.3: ‘nonnulla videntur Aëtianis cognata’. Nevertheless he declined to utilize its evidence (‘it seems to have been derived from a poor Successions compendium, and to have been beefed up with Theodoret’s own learning or balderdash’); and so did we at *M–R* 1. 284 with n. 36, while in *M–R* 2.1 we even neglected this passage entirely. But Diels saw that the contents of two brief lemmata, namely T7 Xenophanes and T5 Hippasus-cum-Heraclitus, anticipate the more substantial lemmata for these name-labels and doxai in the later list at *CAG* 4.5–6. He moreover spotted specific echoes of Aristotle’s famous preliminary overview of the principles, or elements, as material causes in the first Book of *Metaphysics*. The Homeric line (*Il.* 14.201 = 14.302 with Okeanos and Tethys) cited at T1a for Thales is not that of ch. 1.3.2 (where we have *Il.* 14.246 with Okeanos alone), but of *Arist. Met.* A.3 983b30–31. This Aristotelian echo also includes the combination *CAG* 2.9 T3–T4 Anaximenes-cum-Diogenes for air, and then *CAG* 2.10 and 4.12 Hippasus-cum-Heraclitus (T5)—with its name-labels, as we have seen, not in the reverse order of ch. 1.3.9—which in *CAG* 2.10 is immediately followed by T6 Empedocles. This, we may readily agree, indeed resembles an updated calque of Aristotle’s shortlist at *Met.* A.3 984a2–8, i.e. ‘Thales (sc. water), ... Anaximenes air plus Diogenes (sc. of Apollonia), Hippasus of Metapontum fire plus Heraclitus, and Empedocles the four ...’: monists for the elements water, air and fire, and the pluralist Empedocles to complete the full set of four with earth. This is a sequence that is not paralleled in P or S.

Diels also argued that T2 Anaximander plus the whole series from T7 Xenophanes to T11–13 Metrodorus, Zeno of Elea and Diogenes of Smyrna are foreign to Aristotle, though he grants T a recollection of the Aëtian Xenophanes’ doxa (presumably Ti at *CAG* 4.5, ch. 1.3.12 Diels). We also note—Diels surprisingly is not explicit on this point—that Anaximander, not in Aristotle in this context, ultimately goes back to Theophrastus’ account of the principles, and that, though the wording has been updated, the succession of the three Ionians also recalls the Eresian (*Phys. Op.* fr. 2 Diels = 226A FHS&G). Metrodorus (T11), never mentioned by Aristotle, ultimately goes back to Theophrastus too (*Phys. Op.* fr. 8 Diels = 229 FHS&G), while the obscure Diogenes of Smyrna (T13), elsewhere listed as a follower of Metrodorus, is only rarely mentioned, and only by late authors. And while the relative order of appearance of the Eleatics and Atomists as protagonists at *CAG* 2.10–12 and 4.5–11 is the reverse of that in *Metaphysics* A, the Eleatic triad is the same in T (we anticipate by including Tiii Melissus of *CAG* 4.8) as in Aristotle at *Met.* A.5: Xenophanes–Parmenides–Melissus.

Compared with what is in Aristotle and Theophrastus the theological doxa of T7 Xenophanes has been ‘Parmenideanized’ in a physicalist sense in T as τὸ πᾶν

ἄπειρον. Both Eleatics are moreover implicitly charged with self-contradiction: Xenophanes said ‘the All is everlasting, but all things (come to be) from earth’, and T8 Parmenides ‘confirmed this argument in the same way, and declared the criterium of the senses/sensations to be false’. This criticism resembles the well-known analysis of Parmenides (not Xenophanes) of Aristotle *Met.* A.5 986b27–33 and Theophrastus *Phys.Op.* fr. 6 Diels (= 227C FHS&G), but goes one crucial step further. We note in passing that in the VS Diels did nothing to help students to discover the linkage between Aristotle’s and Theophrastus’ statements, because he placed the Theophrastus fragment in the *Leben* and the Aristotle quotation at a considerable distance in the *Lehre* section of the Parmenides chapter in that work. This picture of Eleatic philosophy as fundamentally at odds with itself is also found in the second *archai* list in CAG Book 4, where it is set out explicitly and in more detail. It is also matched in the ps.Plutarchean *Stromateis*, and is a feature of the parallel accounts of Hippolytus, *Refutation of All Heresies* 1.14 (Xenophanes) and 1.11 (Parmenides), so clearly is a later development.

We should further note that according to Theophrastus on Xenophanes as cited by Galen *HHN*, CMG 9.1 p. 15.13–254 (= *Phys.Op.* 5a ~ 213 FHS&G, 21A36 DK), the work in which the Eresian ‘epitomized the physical doctrines (ἐπιτομήν ἐποιήσατο τῶν φυσικῶν δοξῶν)’ was silent about earth as element or principle (cf. Mansfeld 1987). Parmenides’ rejection of the senses at T8 cannot be attributed to Theophrastus either, see now Mansfeld (2018c); here Timon the Pyrrhonist, *Suppl.Hell.* 818 at Diogenes Laertius *V.P.* 9.23, is the first witness we know of. The inclusion of the Hellenistic philosopher Epicurus (T10) is further proof of updating. The hurried and rather contemptuous ending with T 11–13 Metrodorus, Zeno of Elea and Diogenes of Smyrna shows that T epitomized his source. Though here we are not told that Metrodorus is an Atomist, this will be the reason why he is included. He is explicitly cited as an Atomist at CAG 4.9 (Tv), but—as we shall see—in a section of this larger list T derived from A.

Other lemmata worthy of note are at CAG 2.11 for Democritus (T9), listed third after Xenophanes and Parmenides, and for Epicurus (T10): ‘Democritus of Abdera said the All is infinite and ungenerated, and Epicurus son of Nicocles of Athens (said) the All consisted of atoms from the beginning, yet is *without beginning*, and *everlasting*’. The doxa attributed to Democritus presented here is better known as one of Melissus (e.g. 30A10 DK). Because Melissus does occur in the other list at CAG 4.8 (Tiii), where however his infinite Being has been turned into an ‘infinite cosmos’, one could be tempted to argue that, in spite of the ethnicon, ‘Democritus’ is a banal doxographical error for ‘Melissus’. But the quasi-Melissean doxa can easily be interpreted as an emphatic rendering of an important aspect of Democritus’ doctrine of infinity. An illuminating paral-

lel is found in the *Stromateis* of ps.Plu. §7: 'Democritus of Abdera posited that the All is *infinite* because it was absolutely not manufactured by anyone ... And what sort of All this is he sets out verbatim, (saying) that the causes of things that are taking place now have *no beginning*'. In ps.Plu. *Strom.* 10 we moreover meet with a similar picture of Metrodorus of Chios, who 'says that the All is everlasting, because, if it were generated, it would proceed from what is not. It is *infinite*, because it is *everlasting*, for it has *no beginning* from where it began, nor any limit or termination'. This suggests what the doxa of Metrodorus that has fallen by the wayside at CAG 2.11 could have looked like.

Zeller (1919–1920) 1186 n. 1, who noticed the resemblance with the tenet of Melissus, argued that Metrodorus was influenced by Melissus, while Bicknell (1982) 197 believed that the *Stromateis* passage is mistaken and that the name-label Metrodorus plus ethnicon is a banal doxographical error for Melissus plus ethnicon. Palmer (2001) 9, who recognized the 'striking similarity' to Melissus' view too, argued that ps.Plu. *Strom.* 7 is fully compatible with the main doctrine of Democritus, so *Strom.* 10 would have to be compatible with the doctrine of Metrodorus as well. These scholars do not take into consideration the also indubitably 'Melissean' doxa which as we saw is attributed to the Atomist Democritus at CAG 2.11 (T₉).

As intimated above, we believe we are dealing with a non-standard picture of Atomist theory. This may have been prompted by the fact that Melissus posited that Being (in later reports modified to the All, or the cosmos) is infinite and everlasting, a view the Atomists maintained with regard to the totality of matter and void. This interesting interpretation brings the Atomists closer to the Eleatics.

Epicurus (T₁₀) is even made to contradict himself in exactly the same way as the Eleatics, for 'the All', though constituted from atoms 'from the beginning' (we note the conflict with the Democritean view of *Strom.* 7), is nevertheless 'without beginning', and everlasting. We may be faced with an *ad hoc* adaptation of Epicurus' doctrine to that of the Xenophanes and Parmenides who come before him on the list. To a large extent this surprising interpretation is paralleled in the Epicurus lemma at *Strom.* §8: 'Epicurus son of Nicocles of Athens ... says that nothing comes to be from what is not, because the All always was as it is and always shall be as it is, while nothing unusual will be brought about in the All in the course of infinite time, because the All is a body and not only *unchangeable*, but also *infinite*'. We note the 'Melissean' ingredients here too.

The Democritus doxa at CAG 2.11 (T₉) with its 'infinite and ungenerated All' is quite different both from its counterpart at 4.9 (T_{iv}) and from the match of the latter found at S 10.14, with their standard 'void and solids'. We of course accept that this doxa shared by S and T should be attributed to A (ch. 1.3.14). The

Epicurus doxa at CAG 2.11 (T10) with its ‘All consisting of atoms from the beginning’ that is yet ‘without beginning and everlasting’ is very different both from its counterpart at CAG 4.10 (Tvi) with ‘atoms’ that are explained in some detail while the void is left out, and also from the detailed Epicurean doxa common to P and S at ch. 1.3.16. The irreducibility of these two doxai to or incompatibility with doxai that are to be assigned to A is proof of provenance from a different source. The parallels in ps.Plu. *Strom.* §7 and §8, respectively, enable us to pinpoint this source as the one shared by T with this ps.Plutarch.

The Hippasus-cum-Heraclitus doxa at CAG 4.12 (Txii) is incompatible with the Heraclitus-cum-Hippasus doxa shared by P and S (ch. 1.3.9). See Journée at M–R 4.205–207, with table at p. 206, who correctly states ‘[l]a comparaison des textes est sur ce point sans appel’. Diels *DG* 45 had already noticed that this lemma at CAG 4.12 cannot be located in ch. 1.3, so he put it in ch. 1.5, entitled “Εν τὸ πᾶν. Where, as he admitted, it is not really at home because of the reference to fire the physical principle, which does belong in the context of ch. 1.3. He remained convinced, however, that it should be assigned to A, even if it remained unclear exactly where.

If now for a moment we forget about post-Theophrastean interpretations and accretions, we may conclude that the list at CAG 2.9–11 forms a unity with respectable Peripatetic, that is, Aristotelian-cum-Theophrastean antecedents, and is far from being as trivial as Diels believed. Its coherence is enhanced by the surprising proximity of the Atomists to the Eleatics as to doctrine and, in the case of Epicurus, through an implicitly self-contradictory position. A coherence that is not undermined by T’s exploitation of its skeptical colouring for his missionary purpose. The Hippasus-cum-Heraclitus lemma at CAG 2.10, a shorter version of the one at 4.12, is firmly part of this list because of its shared antecedents.

We do not know when the standard Successions template was first imposed here on the monists from Thales to Anaximenes, but the use of the terms διαδεξάμενος and διάδοχος certainly points to a date after Sotion, so after the beginning of the second cent. BCE. This provides a most interesting parallel for the dual origin of the macrostructure of ch. 1.3, for which see below at section D(c)(4).

(c) At CAG 4.5–8, not inaugurated by the Milesian trio, T immediately begins with the Eleatic Succession absent from P and S: Ti Xenophanes son of Orthomenes of Colophon, Tii Parmenides son of Pyrrhes of Elea, and Tiii Melissus son of Ithagenes of Miletus (a slip of the stylus). The long Xenophanes section is irreducible to what is in S, for the ingredient that is matched is a matter of coincidence rather than proof of a shared source. The line 21B27 DK, quoted at S 1.10.12 and CAG 4.5 (with incorrect γῆς) to attest generation from earth, also

occurs as an option in Sextus Empiricus *M.* 10.313 (~ fr. 89 Strobel–Wöhrle, with the correct γαίης), so is a *Wanderzitat* (see below). The Parmenides and Melissus lemmata are likewise irreducible.

At CAG 4.5–7 Ti Xenophanes and Tii Parmenides are provided with first principles, but these are metaphysical and cannot serve as principles in physics. Nevertheless physical principles are listed *next to* these sterile firsts (earth for Xenophanes, earth and fire for Parmenides). We are told explicitly that Xenophanes was inconsistent and ‘forgot about’ his ‘immobile One and All’, and that Parmenides acted like his inconsistent master, so is a physicist *malgré lui* as well. As we saw above in section A(5)(b), a downsized version of this purportedly deplorable state of affairs is already found in the earlier list at CAG 2.10 (T7–8). It should be noted that this Eleatic ontology with its unfortunate consequences is not part of the Xenophanes lemma we have included at ch. 1.3.11(S5), where the doxa is limited to physics with earth as the element or principle, and, as we have seen above, the line 21B27 is also quoted.

The metaphysical firsts of Parmenides and Melissus (and Zeno) cannot serve as physical principles, but they can be made to function as gods, see ch. 1.7.17, ‘Parmenides (says that the deity is) the unmoved and limited spherical (being).’, and 1.7.18 ‘Melissus and Zeno (say that the deity is) the One and All and solely everlasting and unlimited’. The divine first principles of the Eleatics are qualified in such a way that (unlike the divine principles of other philosophers) they cannot function in nature.

We note that at *Vors.* 21A36 and 21B27 (like in the *DG*) Diels attributes CAG 4.5 (Ti) on Xenophanes to A. But at *Vors.* 21A36 he attributes the parallel in S, which at *DG* 284 he had included in the right-hand column for A as his §12, to the ‘homerischen Allegorien’ (presumably because of the quoted line), so no longer to A; he moreover omits to refer to the parallel for this quotation in Sextus *M.* 10.133, which in *PPF* is still cited at Xenoph. B27. But it actually is the other way round. Only the lemma in S can be assigned to A, for it has successfully infiltrated the early Ionian phalanx after Anaximander, so most certainly occurs in an Aëtian enclave (see the General Introduction, sections 2.4 and 2.5). S refrained from lifting it from its position in the Xenophanes lemma and moving it to the collection of poetical quotes at the begin of his chapter (for which cf. above section A(4)), because with the incorrect γῆς for γαίης the line does not scan. The parallels in T CAG 2.10 and 4.5–6 (where the line is also cited with γῆς, but T knows the phrase is an ἔπος), firmly encapsulated in passages of different provenance, belong with a proximate tradition different from A.

CAG 4.8 does not mention a first principle for Tiii Melissus, but cites the opposition between those who hold the cosmos to be limited (i.e. Xenophanes and Parmenides) and those who hold it to be unlimited. This is a downsized

cosmological version of the well-known contrast between the Being of Parmenides and that of Melissus insisted upon by Aristotle (*Met.* A.5 986b18–21). There is no mention of Melissus in the extant remains of Theophrastus, so for this detail we seem to be closer to Aristotle.

(d) We now come to the cluster of doxai in *CAG* 4.5–12 derived from A. Most remarkably and usefully, there are also four lemmata or parts of lemmata, matched in S, for which there is no parallel in P (and so, of course, not in E either), namely the triad of Atomists: §14 Democritus at S 1.10.14 and *CAG* 4.9 (Tiv), §15 Metrodorus at S 1.10.14 and *CAG* 4.9 (Tv), and §17 Ecphantus at S 1.10.16a and at *CAG* 4.11 (Tvi), plus §22 the Academic Xenocrates at S 1.10.12 and *CAG* 4.12 (Tx). In S Ecphantus is called a Pythagorean ("Ἐκφάντος Συρακούσιος, εἷς τῶν Πυθαγορείων), he is the first to make the monads corporeal, and he follows immediately after the Atomists, just as in T's list. In his usual brief way T only says that "Ἐκφάντος ὁ Συρακούσιος Πυθαγόρειος 'followed', as to doctrine, that is, the Atomists just mentioned (τούτοις ... ἠκολούθησε), which *ad sententiam* amounts to the same thing. These lemmata for the three Atomists plus Xenocrates provide the first evidence in both our chief witnesses for the S/T source, of paramount importance for the reconstruction of A (see above, General Introduction section 3.2). This was not taken into account by Mansfeld (2016), but is argued for the three Atomist lemmata in the slightly revised version of this paper at M–R 4.251–262, together with the conclusion at 262–263.

Elter (1880) 19 n. 1 argued that the Xenocrates lemma Tx at S 1.10.12 does not belong with ch. 1.3, because the phrase 'the All is constituted' (συνέσταναι τὸ πᾶν) is different from similar phrases used in the other lemmata of A 1.3 according to the other evidence of S and P for this chapter, where τὸ πᾶν is not found. He acutely hypothesized a lost chapter 'On the All' (Περὶ τοῦ παντός), attested in his view by the heading of S 1.10, which he reads as: 'On principles and elements and the All' (Περὶ ἀρχῶν καὶ στοιχείων καὶ τοῦ παντός). On this 'chapitre fantôme' see also Journée at M–R 4.211–213. Against Elter, however, Wachsmuth *ad loc.* rightly pointed out that the καὶ before τοῦ παντός, though found in the main manuscripts as well as in Photius' index, is not confirmed in the Florentine florilegium which attests an earlier stage of the transmission, and he therefore preferred the more appropriate 'On principles and elements of the All' (Περὶ ἀρχῶν καὶ στοιχείων τοῦ παντός). The phrase τοῦ παντός without καὶ is also linked to στοιχεῖα at S 1.10.6, where Homer is said to have really meant 'the generative elements of the All' (τὰ γεννητικὰ στοιχεῖα τοῦ παντός) at *Il.* 7.99, 'may you all become water and earth!' The presence of τὸ πᾶν in the Xenocrates lemma in ch. 1.3 is not decisive. As we shall see below, it also occurs in the Xenophanes lemma in ch. 1.7.17.

We feel justified in adding the Xenocrates lemma of S 1.10.12 and CAG 4.12 (Tx) as a fourth witness to the S/T source. The doubts of Mansfeld (2018b) at M–R 4.256–258 were also occasioned by the fact that further down, at ch. 1.7.21, the name-label Xenocrates (in this respect the exception in that chapter) is accompanied by patronymic and ethnon: Ξενοκράτης Ἀγαθήνορος Καλχηδόνιος, just as is the case with 21 out of 24 name-labels in the combined evidence of P and S for ch. 1.3 (not all equally complete). With the exception of Θαλῆς δ' ὁ Μιλήσιος, already found ch. 1.2.2 (see above, ch. 1 Commentary D(d)§2), these make their first appearance in the present ch. 1.3. Thales had to be identified again as a Milesian because of his explicit role in the Ionic Succession. This identification (or some other information, e.g. affiliation, or profession) as a rule is supplied in the *Placita* by way of introduction the first time—which may be the only time—a name-label is cited, see Elter (1880) 18–20. For clear examples see at chs. 1.7 and 4.1 below. It would follow that the first time a doxa of Xenocrates appeared in A occurs at 1.7.21, and not at 1.3.22 (cf. M–R 2.1.93).

But we now believe that this anomaly does not tip the scales in favour of the exclusion of the Xenocrates lemma from A. The assumption that S and T did derive their Xenocrates lemmata from their common source A is supported by the presence in both of the florid term ἀένναον, 'ever-flowing' i.e. 'inexhaustible', or perhaps rather or with as sub-text 'negating unity' (ἀ-έν-αον). This is unparalleled elsewhere as standing for 'matter'. And Xenophanes' two principles are paralleled in divine form in ch. 1.7.21 (in S alone) Ξενοκράτης Ἀγαθήνορος Καλχηδόνιος τὴν μονάδα καὶ τὴν δυάδα θεούς, 'Xenocrates the son of Agathenor from Chalcedon (says that) the Monad and the Dyad are gods'. The cosmological One appears again as the theological Monad, just as, conversely, Plato's cosmological God of ch. 1.3.20 reappears as his theological Monad in ch. 1.7.22.

S's phrase συνέσταναι τὸ πᾶν ἐκ ... τοῦ ἀεννάου, ἀεννάον τὴν ὕλην αἰνιττόμενος is moreover both *ad sententiam* and *ad verbum* absolutely equivalent to T's terse phrase ἀεννάον τὴν ὕλην, ἐκ ἧς ἅπαντα γέγονε (not counting T's omission of S's τοῦ ἐνός). S's Xenocrates is a dualist with two principles, 'the One' and the 'ever-flowing', 'by which (term) he hints at matter', while T's is a monist, whose only principle is this 'everflowing matter'. The florid term in fact overrules this changeover to monism. That T's text is shorter is in character, since often enough his abstracts from A are shorter, or even much shorter, than those of the other two witnesses. The doxa is of course inferior to its Sto-baeian twin, because the derivation of all things from matter alone is hard to square with Xenocrates' doctrine. T's arbitrary abridgement turns Xenocrates into someone on the level of the earliest philosophers of nature, like T₁ Thales, T₂ Anaximander and T₃ Anaximenes cited in the earlier passage at CAG 2.9–

10, and T4/Txiii Diogenes of Apollonia and T5/Txii Hippasus-cum-Heraclitus, cited both in the earlier passage and at CAG 4.5–12. They generated all things out of a single material principle.

It should further be noted that the sequence Tvii Ecphantus, Tviii Plato, and Tix Aristotle at CAG 4.11 occurs in the same order at S 1.10.16a, and without Tvii Ecphantus at the beginning but ending with Txi Zeno of Citium at P 1.3.11–13, just as at CAG 4.12. This sequential communality beyond doubt indicates A as the common source for all four doxai. The passus in T is an Aëtian enclave, or micro-environment. This further supports attribution of the Xenocrates doxa, in this environment wedged in between Tix Aristotle (also in P and S) and Txi Zeno (also in P and S), to A. In S's array of abstracts, as we have seen in section A(3) above, Xenocrates has oddly strayed to the beginning of the Aëtian enclave, but this does not have sufficient weight to neutralize counter the arguments in favour of reduction to A.

The doxai of Tiv Democritus and Tv Metrodorus at CAG 4.9–10 (different as we have seen from what is at 2.11), not matched in P, are the same as those attributed to Metrodorus and Democritus (at some distance from each other) at S 1.10.14. Being shared by S and T they can safely be assigned to A. They are the first lemmata of the Aëtian micro-environment.

It is tempting to argue that the brief reference to Tvi Epicurus at CAG 4.9 between Tv Metrodorus and Tvii Ecphantus should also be included in the Aëtian enclave. And the compact comparison appended at CAG 4.10 of the various terms used to qualify the corpuscles (conflict again!) is not incompatible with the descriptions and explanations of the terminology of Democritus Epicurus in both P and S, and of Metrodorus in S. The original version in A must have been ruthlessly abridged by T. Following on after Tvii Ecphantus, the next set of lemmata at CAG 4.11–12, namely T viii Plato, Tix Aristotle, and Txi Zeno of Citium are shared by T with both P and S, and continue the Aëtian enclave.

The reminiscence of the simile visualizing atoms as motes in a sunbeam entering through 'windows' at Arist. *de An.* 1.2 404a.1–4 (= 67A28 DK) that concludes the section on Atomism is in this form unparalleled elsewhere, and we can no longer find out where T found this information. Sextus Empiricus *M.* 7.129 on the 'mind' (no atoms here) using the 'pores of the senses' as 'windows' to be able to perceive beyond the body is too different. Thus in the midst of the excerpts from A we find a passage of unknown provenance, which we can only assign to the wider proximate tradition.

T *ad finem* returns to the source shared with the *Stromateis* after these excerpts from A at CAG 4.12: 'Hippasus of Metapontum and Heraclitus son of Blosson of Ephesus (Txii) held that *the All* (τὸ πᾶν) is *one, unmoved* [ἀκίνητον, after Zeller generally amended to 'always in motion' ἀ(εὶ)κίνητον] and *limited*,

and that the principle is fire; Diogenes of Apollonia (Txiii) said *the All* has been composed from air'. As we have seen these lemmata are anticipated at CAG 2.9–10: T4 'Diogenes agreed (sc. with T3 Anaximenes) in addressing air as the principle', and T5 'Hippasus of Metapontum and Heraclitus of Ephesus assigned (being) the principle of all things to fire'. We have italicized the differences, which are less important than they have been believed to be. In fact the italicized words could simply be omitted in the earlier list.

Journée at M–R 4.197–199 and 205–207 provides an excellent discussion of the Theophrastean parallels for Txii, namely Theophr. *Phys.Op.* fr. 1 (= 225 FHS&G) "Ἰππασος δὲ ὁ Μεταποντίνος καὶ Ἡράκλειτος ὁ Ἐφέσιος ἐν καὶ οὗτοι καὶ κινούμενον καὶ πεπερασμένον, and Diogenes Laertius *V.P.* 8.84 Ἰππασος Μεταποντίνος (18.1 DK) ... ἔφη ... πεπερασμένον εἶναι τὸ πᾶν καὶ ἀκίνητον. Zeller's conjecture ἀ(ει)κίνητον in Txii is supported by these two passages. We note in passing, however, that T's (ἐν ... τὸ πᾶν) ἀκίνητον (πεπερασμένον) agrees with Ti Xenophanes' (ἐν ... τὸ πᾶν ... πεπερασμένον) ἀκίνητον and Tii Parmenides' ἀτρεμές. The ancient *Verschlimmbesserung*, if that is what it is, makes sense in T's context, for it proves Hippasus and Heraclitus to be guilty of self-contradiction. They posit a physical principle next to an immovable first, just as the Eleatics and some others.

In our view the considerations of Elter (a lost chapter) and Journée (various stages in the development of the *Placita*) unnecessarily complicate matters. The lemma T5 'Hippasus of Metapontum and Heraclitus of Ephesus assigned (being) the principle of all things to fire' is a false friend of ch. 1.3.9 'Heraclitus and Hippasus from Metapontum (say that the) principle of all things is fire'. This is confirmed by the different order of the name-labels, the fact that T5 is a shorter version of Txii with its extra reference to a 'finite and immobile All', the closeness to the Aristotelian-Theophrastean tradition, and the solid position of the shorter version in the coherent list of CAG 2.9–11. The simplest solution, surely, is the assumption of a related source, *proximate to but other than A*. And the particular and close relationship of two plus five irreducible lemmata, namely T7 and Ti for Xenophanes, T8 and Tii for Parmenides, Tiii for Melissus, T9 for Democritus and T10 for Epicurus with the sequence consisting of respectively ps.Pl. *Strom.* §4 Xenophanes, §5 Parmenides, §7 Democritus, and §8 Epicurus also points to the presence of a different source, which for the sake of convenience we designate as Σ. The doxa of T12 Zeno of Elea is not described, but a correspondence may perhaps be posited with the unspecified Eleatic stance of Zeno at ps.Pl. *Strom.* §6, between §5 Parmenides and §4 Epicurus. We assume that this source Σ, shared by T and the *Stromateis*, should be assumed for T5/Txii as well, and in the wake of this assumption for T9 Democritus and Tiii Melissus too, and probably also for the Milesians at T1–3 and

Diogenes of Apollonia at Txiii, which are false friends of ch. 1.3.1–3 and 3.10. *Fontes non multiplicandae praeter necessitatem.*

T cannot depend on the *Stromateis* in Eusebius, where T5/Txii Hippasus-cum-Heraclitus and Tiii Melissus are not found. At CAG 4.5–12 he carefully supplied ethnica and patronymics, and even a few details concerned with affiliations. For these adornments he was not dependent on the sources he excerpted, as is for instance clear from the patronymic and ethnicon of Democritus, added at CAG 4.1 in a passage quoted from Clement. He must have had, or known by heart, a list of Diadochai equipped with full paraphernalia.

Summarizing the above we may conclude that T has combined, or rather intertwined, material deriving from Σ with abstracts deriving from A, in the order Σ A Σ A Σ : first a large portion of Σ at CAG 4.5–9 (Xenophanes–Parmenides–Melissus), then A at 4.9–10 (Democritus–Metrodorus–Epicurus), followed by a short passage of uncertain provenance at 4.10, followed by a quite substantial chunk of A again at 4.11 (Ecphantus–Plato–Aristotle–Xenocrates–Zeno of Citium), and finally briefly Σ again (Hippasus-cum-Heraclitus and Diogenes of Apollonia). Switching between sources is not unusual with T. At CAG 4.9 he switched from one source to another one containing the information on the principles from Democritus to Zeno of Citium, just as at for instance CAG 5.24 (p. 129.3 Raeder) he switched from an analogue of P 4.2–5 on the soul (of which E only wrote out chs. 4–5) to an abstract from Clement of Alexandria *Strom.* 8.4.10.3–5 on the question whether or not plants are ‘animals’, ζῷα, preferring this *testis proximus* to an analogue to P 5.26.

T may well have decided to include his damning information on the Eleatics and Atomists and to add it to what he could find in A, because their views are not only in the usual way at variance with those of other philosophers, but as we have seen are also marked out as striking examples of self-contradiction. For T’s crusade against the philosophers of nature they are thus a boon and a blessing.

Finally, we should point out that our presentation of the Greek text of the passages from T corresponds to the above analysis and is thus divided between two different locations: CAG 4.9–12 (but not entirely) is printed above as the first *testis primus*; CAG 2.9–11 et 4.5–8 + 4.10 + 4.12 is printed below in section E(a) General texts among the *testes proximi*. For the distinction between these two kinds of witnesses see the General Introduction section 4.1. For both texts we include the numbering of the lists set out above in sub-section (5a).

(6) The *Testes secundi*, comprising substantial passages in Achilles, Nemesius, Hermias, and the *Scholia in Basilium* are particularly numerous and rich for this chapter, as is appropriate for its foundational theme.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition, beginning with Lucretius and Cicero and ending with Calcidius and Augustine, and echoed even later, e.g. in Epiphanius and Bar-Hebraeus, is also appropriately rich (for Cicero in this role see also below chs. 1.7, 4.2–7, 4.9, and 5.1). For the most part these texts provide overviews of the *archai*, sometimes with interspersed material. Equally or even more substantial passages are found, as already discussed, in the ps.Plutarch to whom a collection of abstracts in E entitled *Stromateis* is ascribed, and in Sextus Empiricus, Ambrose of Milan, Servius, ps.Valerius Probus and Theodoret. For these texts see below, section D(e). As has been noted above at *Testes primi* and been argued at some length at section A(5), *pace* Diels and others T CAG 4.5–10 and 4.12 (just as 2.9–11) belongs with the *testes proximi* and has not been included among the evidence for the *testes primi*. The text is printed below at section E(a).

(2) *Sources.* The traditions relevant for this chapter go back a long way, even before Plato and Aristotle (see also below, section D(e) and section E(b) General texts). The first Book of Aristotle's *Physics* and the first of *Metaphysics* as well as the fragments to be attributed to (the first Book of) Theophrastus' *Physics*—rather than to the so-called *Physicorum Opiniones*, better called *Physicae Opiniones*, see above, Book 1.titulus et index Commentary D(e)3—are important from the point of view of contents, structure, and dialectical criticism relating to the Presocratics and Plato. Aristotle had studied the originals and so had Theophrastus, though the latter in his exposition is much influenced by the former, whom he sometimes supplements or corrects. According to Burkert (1972) 53–66, followed by many (the present authors are no exception), the Early Academy is often supposed to be involved with most of the doxai of the Platonized Pythagoras; this has been called into doubt (Zhmod 2013b). The systematic account of Pythagorean philosophy with its echoes of the interpretation of Pythagoreanism in the Early Academy in §7 may be derived from one or more ps.Pythagorean treatises, see below, section D(d) individual points, §7. The Successions literature initiated by Sotion—more on which at section D(c)(4) below—also plays a decisive role in this chapter.

The ultimate sources for early Hellenistic doxai must be the writings of the individuals at issue, but these cannot be traced further than a hypothetical reworking of the chapter for which the name-label Strato provides a preliminary t.p.q. But see further section D(e) below.

C *Chapter Heading*

Umbrella headings. The majority of chapter headings in the *Placita*, like the first half of the present one, are patterned according to the bland 'on x' formula,

namely περί-plus-substantive(s)-in the genitive (περί τοῦ δεῖναι), which because of its lack of specification allows for the presence of a multiplicity of question types and/or categories in a chapter (or book, for that matter). See Mansfeld (1992a) 93: 'It is to be noted that the majority of chapter-titles in Aëtius has been simplified to the seemingly descriptive and innocuous 'περί x' type (e.g. ch. 1.9 'on matter', περί ὑλης); but study of their contents shows that they are concerned with problematic issues'. Numerous instances of this umbrella function are cited below, section D(e) individual points: chapter headings.

Leszl (2002) 174–175 suggests that the περί + substantive formula perhaps should apply to existence only, and the περί + οὐσία + substantive to essence; he is aware, however, that this is not the case for e.g. chs. 1.21 Περί χρόνου and 1.22 Περί οὐσίας χρόνου. He is followed by Bottler (2014) 229–230, 251, and 262. Leszl concludes, again followed by Bottler, that this makes the application of question types and categories as principles of organization uncertain, but fails to see that this is not a matter of the headings alone, because it is the contents and structure of the individual chapters that show what categories and/or question types are at issue, as is also pointed out in Lachenaud's discussion of 'la formulation la plus neutre', (1998) 42–43: 'il faut lire le chapitre pour se faire une idée de la question philosophique'. The formula περί τοῦ δεῖναι is not about the existence of whatever it is about, or at the very least not about its existence alone (often enough this is taken for granted), but about this something as a subject of description or a matter of inquiry, to be looked at from various angles.

In the present chapter this umbrella heading is further specified by means of an added phrase, τί εἶναι, which pertains to the question types/categories of substance and quality. An enlightening parallel for this dual denotation is found in the *Placita* itself: ch. 1.7 has the more specific heading Τίς ἐστὶν ὁ θεός, but is simply referred to in the next chapter (1.8.1) with an umbrella phrase, namely as τῷ Περί θεῶν λόγῳ.

The question-types/categories of substance and quality here pertain to the nature(s) of the elements and the corporeality or incorporeality of the principles (incorporeals are involved in §7, §20, §21, and §22). There is no need for a nominal or conceptual definition of ἀρχή in the technical sense required in the present context, as this has been taken care of in the previous chapter, for which see this chapter at Commentary D(c). Without ceremony we are confronted with a long haul of more or less, but often more than less conflicting real definitions proposed by individual philosophers or schools. For *types of* definition in the *Placita* see below, ch. 1.9, Commentary D(c) and ((e)(2).

The category of quantity is also involved, as we learn how many principles and/or elements are assumed each time. Perhaps unintentionally it also

includes the category of time, or the sub-question of origin (*πόθεν, ἀπό* ... — cf. the headings of chs. 1.6, 2.5, 2.17, 4.21, 5.11, 5.28 and 2.6; the question *unde*, a sub-sub-species of the theoretical *quaestio*, cf. Cicero *Top.* 82), because Successions are also about beginnings and ‘first finders’: thus 1.3.1 ‘Thales ... appears to have commenced (the pursuit of) philosophy’ (P), in S’s paraphrastic version coalesced with §6 as ‘the Ionian philosophy, given this name because a man from Miletus, Thales, began it’; and 1.3.7 ‘next, from another beginning, Pythagoras’ (P). See further at ch. 1.1 above, Commentary C.

D Analysis

a Context

Introduction. The chapter is part of the introduction of the treatise. Having explained the nature of the φυσικός λόγος and the purpose of the treatise (prooemium), the characteristics of φύσις which determine the objects of that λόγος (ch. 1.1), and the difference between ἀρχή and στοιχείον (ch. 1.2), A is now in a position to give the views of the philosophers on the ἀρχαί, since Aristotle traditionally the first subject of natural philosophy. Even in its currently mutilated form, it is the longest chapter in the work and is used by the doxographer to introduce the Successions and many of the main philosophers in the tradition. Such a combination of systematic and prosopographic ingredients is virtually *de rigueur* in the introductory sections of technical treatises; see above, ch. 1.1 Commentary D(e)(1) and (4).

That our chapter is followed by one on the origin of the world (1.4, Πῶς συνέστηκεν ὁ κόσμος), and then by the theological chs. 1.6–1.8 is not a coincidence, but *inter alia* due to the influence of Stoic and Platonizing procedures. The first subpart of the Stoic φυσικός λόγος at Diogenes Laertus *V.P.* 7.132 is further subdivided into among other things ‘a part about principles, one about elements, and one about gods’. See the quotation below at section E(b)§1. On the divisions of the Stoic φυσικός λόγος, its Aristotelian precedents, and their reverberations in the sequential arrangement of chapters in the *Placita* see M–R 2.1.97–109 and above, General Introduction sections 2.8 and 5.2.1. Also compare the slightly different order in the Platonist treatise Alcinoüs *Did.* c. 8, p. 162.24–27 H.: ‘Following on these topics [sc. introductory matters, logic, mathematics], let us turn to a discussion of the principles [cf. A’s present chapter] and of the doctrines of theology [cf. A 1.6–8], taking our start from above from the first principles [cf. A 1.3], and then descending from these to examine, first, the origin of the world [cf. A 1.4], etc. The schema essentially derives from Plato’s *Timaeus* (itself influenced by the writings of the early philosophers), the most influential philosophical work in the first century BCE and CE when the *Placita* tradition was developed in the form that we find in A chs. 1.6–9.

For further details see the Introduction to Book 1 section 2, and for ch. 1.4 after 1.3 also below at ch. 1.4, Commentary D(a).

The second part of ch. 1.7, §§2–25, which deals with the nature and substance of the divinity, is to some extent a counterpart and mirror reflection (*mise en abyme*) of ch. 1.3 on the principles (cf. M–R 2.1.87–88), and conversely, for the principle can be divine and the divinity a principle. For details see below at ch. 1.7 Commentary D(a)(2), and also the parallels listed in *Loci Aetiani* above. Furthermore, in the theological ch. 1.7 at §9 the two divinities attributed to Pythagoras, namely the (Platonic and Neopythagorean) Monad and the undetermined Dyad, are *disertis verbis* called *principles*. And Plato's θεός at §20 is a principle too, the first of the Middle Platonist triad.

b Number–Order of Lemmata

(1) *In the two main sources:* The (parts of) doxai preserved in P and S can be placed side by side, using the name-labels for identification:

		S[2a]	Homer (1.10.2)
		S[13a]	Heraclitus (1.10.7)
		S[1]	Empedocles (1.10.11)
P1	Thales	S2	Thales (1.10.12a)
P1a	Homer	S3	Anaximander (12b)
P2	Anaximander	S4	Xenocrates (12c)
P3	Anaximenes	S5	Xenophanes (12d)
P4	Anaxagoras	S6	Anaximenes (12e)
P5	Archelaus	S7	Anaxagoras (12f)
		S8	Archelaus (12g)
P6	Ionic Succession	S9	Ionic Succession (12h)
		S10	Philolaus (12i)
		S11	Strato (12j)
P7	Pythagoras	S12	Pythagoras (12k)
P8	Heraclitus and Hippasus	S13	Heraclitus and Hippasus (14a)
		S14	Metrodorus (14b)
		S15	Diogenes of Apollonia (14c)
		S16	Zeno Stoicus (14d)
		S17	Leucippus (14e)
P9	Epicurus (and Democritus)	S18	Democritus (14f)
P10	Empedocles	S19	Epicurus (14g)
P11	Socrates and Plato	S20	Ecphantus (16a1)
P12	Aristotle	S21	Plato (16a2)
P13	Zeno Stoicus	S22	Aristotle (16a3)
P14	Italic Succession	S23	Diodorus Cronus (16a4)

It is immediately apparent that there is a large agreement between the two witnesses, in spite of P's exclusion of a considerable number of mainly short doxai retained by S (who in turn abridges a number of the longer doxai written out in full by P). The only lemma in P that is wholly absent in S is the final comment on the Italic Succession (P14), while S provides different material on Empedocles instead of P10 (apart from the three shared lines of the verbatim fragment 31B6 DK he moved to the beginning of his chapter). This results in a total of 24 lemmata of which 23 contain doxai. The first fruit of this comparison is that we recognize 14 doxai which are shared by P and S and so have to be attributed to A, namely:

§1	Thales	(P1,S2)
§2	Anaximander	(P2,S3)
§3	Anaximenes	(P3,S6)
§4	Anaxagoras	(P4,S7)
§5	Archelaus	(P5,S8)
§6	Ionic Succession	(P6,S9)
§7	Pythagoras	(P7,S12)
§9	Heraclitus and Hippasus	(P8,S13)
§16	Epicurus	(P9,S19)
§19	Empedocles	(P10,S1) (<i>fr. 31B6 DK shared, explanations differ</i>)
§20	Plato	(P11,S21)
§21	Aristotle	(P12,S22)
§23	Zeno Stoicus	(P13,S16)

The order of these shared doxai in the two witnesses also largely corresponds, as we see. But Empedocles is brought forward in S because, as always, he commences his chapter with poetic quotes, among which are included three lines from Homer (1.10.2, 1.10.4, 1.10.6), the first of which has been abstracted from the Thales lemma, as well as a brief poeticized quote dealing with Heraclitus abstracted from the Heraclitus-plus-Hippasus lemma (cf. above, section A(2)). Although the earlier placement of Zeno the Stoic in S is puzzling when compared with P, it is nevertheless justified to retain the order in P as the basic framework for the chapter's reconstruction, as done by Diels, and as will become clearer as the result of our comparison of the three witnesses P, S, and T.

As we saw the one lemma in P not recorded by S is P14 on the Italic Succession. It was inserted (perhaps correctly) by Diels after P7 Pythagoras (his §8) in the left Aëtian column. Consistently, at S12 the anthologist also omit-

ted the words ‘We next have another beginning’ (πάλιν δ’ ἀπ’ ἄλλης ἀρχῆς, sc. next to that starting with Thales also acknowledged at S9), preserved by P as the opening words of P7. S thus obliterates every explicit reference to the Italic Succession. This may help explain the rather chaotic character of his presentation of the evidence. S appears to have interposed ten shorter lemmata (S4–5, S10–11, S14–15, S17–18, S20, S23) within the framework of the order as attested by P, the rationale of which is sometimes quite obscure. To achieve variety he also interposed other material, namely at 1.10.13 a fragment attributed to Theano (*de Piet.*, p. 195 Thesleff) between Pythagoras and Heraclitus-and-Hippasus, and one of a tract from the *Corpus Hermeticum* (4.10, p. 1.53 Nock–Festugière) at 1.10.15 between Epicurus and Ecphantus.

(2) As argued above in section A5, T at CAG 4.9–12 contains the following Aëtian enclave with eight lemmata:

Tiv	Democritus	(~ S18, cf. P9)
Tv	Metrodorus	(~ S14)
Tvi	Epicurus	(~ P9, S19)

(the words κατὰ Δημόκριτον φιλοσοφήσας in the Epicurean doxa P9 are omitted in S19. They presumably are an indication of the original sequence in A)

Tvii	Ecphantus	(~ S20)
Tviii	Plato	(~ P11, S21)
Tix	Aristotle	(~ P12, S22)
Tx	Xenocrates	(~ S4)
Txi	Zeno of Citium	(~ P13, S16)

For the natural cluster of Atomists cf. M–R 2.1.80. T’s lemmata for Democritus, Epicurus, Plato, Aristotle and Zeno which are paralleled in P are listed at 4.9–12 in the same order as in P’s chapter 1.3, so T and P follow the same original order. This order is also followed by S for Democritus, Epicurus, Plato and Aristotle, which confirms this order as original in A. The position of Ecphantus between Epicurus and Plato is matched in S, so is original too. The original position of the Xenocrates lemma, matched in S but found there in an irregular place, is only warranted by its position in T’s Aëtian enclave. The position of the Zeno lemma in S is also irregular, but its original place is warranted by the agreement between T and P.

If next we look for other clusters of lemmata with corresponding name-labels plus doxai in the same order in our main witnesses, the following partial Successions can be discerned (cf. M–R 2.1.76–81):

– Thales (P₁,S₂)

– Anaximander (P₂,S₃)

(in S Anaximander is separated from Heraclitus and Hippasus by two interpolated lemmata, namely Xenocrates and Xenophanes)

– Anaximenes (P₃,S₆)

– Anaxagoras (P₄,S₇)

– Archelaus (P₅,S₈)

– note on Ionic Succession (P₆, cf. S₉)

(in S separated from Pythagoras by two interpolated lemmata, namely Philolaus and Strato, not paralleled in either P or T)

plus

– Pythagoras (P₇,S₁₂)

(in S separated from Heraclitus and Hippasus by a pseudepigraphic Pythagorean text)

– Heraclitus and Hippasus (P₈,S₁₃)

(3) *Relative sequence and remaining problems.* This results in the following relative sequence of which we can be reasonably certain. *Mirabile dictu* it is the same as that of Diels in the *DG* (so we retract our critique of Diels at M–R 2.1.76):

- | | | |
|-----|--------------------------|--------------|
| 1. | Thales | 1.3.1 Diels |
| 2. | Anaximander | 1.3.3 Diels |
| 3. | Anaximenes | 1.3.4 Diels |
| 4. | Anaxagoras | 1.3.5 Diels |
| 5. | Archelaus | 1.3.6 Diels |
| 6. | note on Ionic Succession | 1.3.7 Diels |
| 7. | Pythagoras | 1.3.8 Diels |
| 8. | Heraclitus and Hippasus | 1.3.11 Diels |
| 9. | Leucippus | 1.3.15 Diels |
| 10. | Democritus | 1.3.16 Diels |
| 11. | Metrodorus | 1.3.17 Diels |
| 12. | Epicurus | 1.3.18 Diels |
| 13. | Ecphantus | 1.3.19 Diels |
| 14. | Plato | 1.3.21 Diels |
| 15. | Aristotle | 1.3.22 Diels |
| 16. | Xenocrates | 1.3.23 Diels |
| 17. | Zeno Stoicus | 1.3.25 Diels |

Only limited conclusions can be drawn and differences of opinion will occur regarding the location or relative position of the majority of the other lem-

mata (for details cf. Mansfeld 2018b at M–R 4.265–266), namely that referring to the Italic Succession (1.3.9 Diels) and those with the name-labels Philolaus (1.3.10 Diels), Xenophanes (1.3.12 Diels), Empedocles (1.3.19 Diels), Strato (1.3.24 Diels), Diogenes of Apollonia (1.3.26 Diels), and Diodorus Cronus (1.3.27 Diels). Positions in the Successions that may be preferred are Philolaus after Heraclitus and Hippasus and the note on the Italic Succession after Philolaus (or after Pythagoras), Xenocrates after Plato (in the Succession), or perhaps after Pythagoras (because of a similar dualism), Strato after Aristotle, and Diodorus Cronus after Ecphantus (and not, as in Diels, bringing up the rear). We may place Empedocles before Plato, as in P. Xenophanes and Diogenes of Apollonia belong in the first half of the list rather than in the second, but where one might prefer to put them remains unclear. Diels placed Xenophanes in the first half after Heraclitus and Hippasus and, oddly, Diogenes in the penultimate position of the second half.

Given these problems of our evidence we have in the end been forced to adopt the unsatisfactory procedure of placing the various additional ten doxai in S in the most logical sequence that can be built around the order of doxai in P and T. Fortunately the explanation of the present condition of the chapter, also works for P and T (who have preserved A's order) alone.

c Rationale–Structure of Chapter

(1) *Ethnicon and patronymic*. 21 out of 24 name-labels in the present ch. 1.3 are accompanied by ethnicon and patronymic, though by no means all of them are equally complete. Bottler (2014) 509, 517 and passim oddly believes that this signifies the complicating influence of the genre of biography.

To give only a few examples of passages where the issue is not the *bios* but doctrine: the patronymic plus a reference to the ethnicon is already found in Heraclitus fr. 22B39 DK (ἐν Πιρήνῃ Βίας ἐγένετο ὁ Τευτάμεω). Ethnica are prominently present in Plato's list of Wise Men (*Prot.* 343a); also cf. his remarks about the Eleatics (*Phdr.* 261d, *Sph.* 242d). The ethnica already occur in Aristotle's dialectical overviews, e.g. *Cael.* 1.10 279b16–17 Ἐμπεδοκλῆς ὁ Ἀκραγαντίνος καὶ Ἡράκλειτος ὁ Ἐφέσιος, *Cael.* 2.10 294a22–23 Ξενοφάνης ὁ Κολοφώνιος and 29–30 Θαλῆν τὸν Μιλήσιον, and—coupled with a relative chronology—*Mete.* 2.7 365a17–19 Ἀναξαγόρας τε γὰρ ὁ Κλαζομένιος καὶ πρότερον Ἀναξίμανης ὁ Μιλήσιος ἀπεφάναντο, καὶ τούτων ὕστερον Δημόκριτος ὁ Ἀβδηρίτης. The patronymic is added in Theophr. *Phys.Op.* fr. 1 Diels = 225 FHS&G (Θαλῆς μὲν Ἐξαμύου Μιλήσιος), *Phys.Op.* fr. 2 Diels = 226A FHS&G (Ἀναξίμανδρος μὲν Πραξιάδου Μιλήσιος, Ἀναξίμανης δὲ Εὐρυστράτου Μιλήσιος), *Phys.Op.* fr. 4 Diels = 228A FHS&G (for Ἀναξαγόρας μὲν γὰρ Ἡγησιβούλου Κλαζομένιος), and *Phys.Op.* fr. 6 Diels = 227C FHS&G (verbatim ἐν τῷ πρώτῳ Περὶ τῶν φυσικῶν—*Physics*, as we saw—,

Παρμενίδης Πύρητος ὁ Ἐλεάτης). Master–pupil relationships are already included in Plato, Aristotle, and Theophrastus.

(2) *Various diaereses/diaphoniae*. With regard to contents various diaereses or diaphoniae can be distinguished: (1) according to number (of principles, elements, or causes), viz. between monists and (several types of) pluralists, cf. M–R 2.1.83; (2) between those who accept and those who reject coming to be and passing away; (3) between those who posit corporeal principles or elements only and those who posit or include incorporeal elements; and (4) between those who fail to distinguish between principle(s) and element(s) (Thales, Anaximander, Anaximenes, Anaxagoras, Heraclitus and Hippasus etc.) and those who do (Empedocles, Socrates and Plato, Aristotle, Zeno). Some of these contrasts go back a long way (see also below, section D(e)).

(3) *The Successions principle*. According to Diels *DG* 178–180 the Successions principle, however confusedly applied, is the only (or at least the main) rationale of the present chapter, which as he allows, however, also contains Theophrastean ingredients. This analysis was endorsed by Schofield (1975) 3–4. Referring to Diels' view Lachenaud (1993) 209 too speaks of a 'confusion entre le schéma d'exposition propre aux doxographes et celui des διαδοχαί.' The comment is worthwhile, but he seems to misunderstand Diels' point and omits to tell us what this doxographical scheme would be.

At M–R 2.1.76 we admitted to being unable to provide a better or even an alternative reconstruction than that of Diels in the *DG*. So we limited the inquiry to the investigation of 'particular clusters of name-labels that occupy the same, or about the same, sequential arrangement in the three main sources' (for which see now also above, section D(b)). Most of chapter 7 of our earlier book, M–R 2.1.72–90, concentrated on this analysis. Cf. Journée (2014) 37, who points out that S's chapter on the principles, which 'abondamment utilise Aétius', results in 'un texte dont l'ordre général reste ... difficile à expliquer'. See also *ibid.* 46–53 his comparison of P, S and T. Since then, however, we have made considerable progress.

(4) *Successions plus diaeresis according to number*. On the basis of all the considerations above we now believe that the best explanation for the confused and confusing order of the lemmata in our chapter is that it is the result of the *interweaving* of a sequence determined by a diaeresis according to number with the other form of organization already mentioned above, viz. that according to Successions. This interweaving also took place in ch. 1.7.2–25, which deals with the principles qua divinities; see below, ch. 1.7 Commentary D(c). An earlier example of a sequence of physical principles according to number that has been reorganized according to Succession is Cicero *Luc.* 118 (cited below section E(a) General texts), for which see Mansfeld (1989b).

It is generally agreed that the chapter (at least explicitly as to its first part) is set out according to the Successions model originally designed by Sotion. This structure is explicitly assigned in §1 (P) and §6 (P and S) to the Ionic *diadoche/hairesis* beginning with its archegete Thales, and in §7 and §8 (P alone) to the Italic *hairesis* beginning with its archegete Pythagoras. Note that P uses the words διαδοχή (here only), αἵρεσις ('sect'), and φιλοσοφία interchangeably, while S does not use διαδοχή. The date of Sotion in the first third of the second cent. BCE gives us the t.p.q. for this crucial modification of the chapter, and for the whole of the *Placita* insofar as the Successions template plays a (relatively modest) part in the treatise (for the latter see Jeremiah at M–R 4.314–319).

Diaeresis according to number is first found in Gorgias. It was perfected by Aristotle and Theophrastus, and widely applied by later authors: varieties of monists versus pluralists, the latter divided into finitists and infinitists, and those who accept movement and those who do not. See e.g. Mansfeld (1989b) 138–148, Viano (1995) 112–126, M–R 2.1.154–157 (with references), and for more details also below, section D(e) General points. It also underlies the structure of the chapter dealing with corporeal theories, or the elemental constitution, of soul; see ch. 4.3 at Commentary (D)(c.). We posit that this was the original arrangement of ch. 1.3, before the application of the Successions scheme, though it is no longer entirely clear what it may have looked like. The presence of Peripatetic-sounding criticisms in several lemmata of ch. 1.3 will also date from the phase *before* it was reconstructed according to the pattern of the Diadochai.

As a result we have the following sequence, which from the point of view of the number of principles is irregular:

- §§1–3 Thales, Anaximander, Anaximenes: 1 material principle;
- §4 Anaxagoras: many material principles plus 1 efficient cause;
- §5 Archelaus: 1 material principle that splits up into two;
- §7 Pythagoras: many principles, viz. numbers and proportions, and (equally many?) elements, viz. the geometricals derived from these principles. Also 2 principles, viz. the Monad and the Indeterminate Dyad (the latter related to matter);
- §9–11 Heraclitus plus Hippasus, Diogenes, Xenophanes: 1 material principle;
- §12 Philolaus: 2 principles;
- §§13–15 Leucippus, Democritus, Metrodorus: 2 kinds of principles;
- §16 Epicurus: infinitely many material principles in the void (presumably qua other principle);

- §17 Ecphantus: 2 kinds of principles;
- §18 Diodorus Cronus: infinitely many material principles;
- §19 Empedocles: 4 elements, 2 principle-like powers;
- §20 Socrates, Plato: 3 principles;
- §21 Aristotle: 3 principles 4 + 1 elements;
- §22 Xenocrates: 2 principles/elements;
- §23 Zeno: 2 principles 4 elements;
- §24 Strato: 2 elements.

The arithmetic becomes a bit complicated because not only principles but also elements are counted. But things actually become quite simple as soon as we realize that §§1–3 + §§9–11 are about monists and §§4–5 + §7 + §§12–24 about pluralists, that is, are distributed in keeping with the standard diaeresis according to number. It is this primary diaeresis that is *disturbed* because of the combination with the Successions criterion.

The pluralist Pythagoras in §7 qua archegete of his *hairesis* simply *had* to be inserted before the (Pythagorean) monist ‘Hippasus of Metapontum’ in §9, who belongs with the Italic Succession also because of his ethnicon. Conversely, the pluralist Anaxagoras in §4 had to be separated from the other pluralists further down because of his firm position in the Ionic Succession, and moved upwards. Archelaus (§5) followed his master Anaxagoras upwards also because of the Succession. The single principle, air, namely that of Anaxagoras’ purported teacher Anaximenes, which is attributed to Archelaus here—for another tradition, which paradoxically enough makes his relation to Anaxagoras as his master clearer than the present one see below, section D(d)—splits up into two, viz. the elements fire and water. Therefore he may originally have occupied a position as a sort of *Übergangsfigur* between the monists and the pluralists, before the imposition of the Successions model.

These decisions apparently made it difficult or unattractive to separate the next Ionians, i.e. Diogenes and the Socratic line or lines, neatly from a line or lines of later Italians. Also note that Μιλήσιος, the only ethnicon here of Leucippus (no mention of the alternatives Ἐλεάτης or Ἀβδηρίτης as at Diogenes Laertius *V.P.* 9.30), may cause confusion. §8, which in retrospect tells us that ‘[t]he school of thought of these men has been named the ‘Italic’’, was placed by P at the end of his limited series of excerpts and omitted by S, which shows that both P and S did not really know where to put it in the doxai sequence (already jumbled in A). As a matter of fact the respective decisions of S and P were not such a bad idea in view of this fuzzy state of affairs. Diels relocated the lemma immediately after §7—certainly with some justification, because the Pythagoras lemma at line [71] also speaks of the Pythagoreans in the plural. We have followed his example for want of a better alternative.

As we follow the remaining doxai down, the block §§11–16, from Xenophanes via Philolaus, Leucippus, Democritus and Metrodorus to Epicurus, may be viewed as part of the Italic Succession, as in the account of the two Successions of Diogenes Laertius at *V.P.* 1.15. In other sources such as the one used by T for *CAG* 2.9–11 and important parts of 4.5–12, they may be included in a third, namely the Eleatic Succession beginning with the Xenophanes also found in T. §§20–24 present us with various branches of the Ionic Succession all descending from Socrates: Plato and Xenocrates represent the Early Academy, Aristotle and Strato the Peripatos, and Zeno the Stoa. The Hellenistic philosophers Zeno and Strato appropriately bring up the rear.

Accordingly the two main Successions break down into several sub-Successions and even individual master-pupil relationships, or διαδοχαί in the individual sense. This may explain why A at P1 (§1[4]) says that there ‘were quite a number of Successions of philosophy’ (ἐγένοντο γὰρ πλείσται διαδοχαί φιλοσοφίας), see M.-R. 1.2.74. ‘Succession’, strictly speaking, is from one person to another and only then applicable to a whole line. Compare the first sentence of Theophrastus *Sens.* 1 ‘the numerous different doxai concerning sense perception, when regarded from a general point of view, are two (sets)’ (περὶ δ’ αἰσθήσεως αἱ μὲν πολλαὶ καὶ καθόλου δόξαι δὴ εἰσὶν); or Sextus Empiricus *M.* 9.359 (full text quoted below, section E(b) General texts): ‘concerning the highest and most primal elements there are two primary positions, with several more subdivisions’ (δύο μὲν αἱ πρῶται γεγόνασι στάσεις, πλείους δὲ κατ’ εἶδος). A motive for placing the lemma with the backward glance at the Ionic Succession at §6, after Archelaus, is perhaps found in the remark of Diogenes Laertius *V.P.* 2.16 that ‘natural philosophy ended with him’ because Socrates (i.e. the next in line) introduced ethics. Also cf. *V.P.* 1.18, ‘The physical part (of philosophy) lasted until Archelaus’.

(5) *Content of doxai.* There are also traces of systematic arrangement based on content of doxai: §17 the Pythagorean Atomist Ecphantus has been tacked on to the Atomists of §§13–16 and not straightaway to the Pythagorean Succession (as represented by §7 Pythagoras or §12 Philolaus). Diodorus Cronus in §18, too, has been attached to the Atomists although, as a Socratic, he belongs with the Ionic Succession. §10 Diogenes and §11 Xenophanes perhaps follow each other in view of their material principles air and earth, not far from §9 Heraclitus and Hippasus with fire, though §19 Empedocles with all four elements is far away. Empedocles §19, as we have seen, introduces the block of doxai that alternate between principles plus elements and principles or elements alone.

(6) *The Milesians and Anaxagoras.* The first four lemmata moreover form a particular ensemble. A further structural arrangement in various ways characterizes each of §§1–4, the three Milesians (see Alt 1973, 139–140, 153–154) plus

Anaxagoras. At §§1–4 we in each case find (a) personal identification plus principle; (b) a formula for change from the principle and back to it (a maxim ultimately deriving from Arist. *Met.* A.3 983b6–13, cited section E(b) §§1–3); (c) an explanatory comment. §§2–3 add (d) a strong criticism, §4 the opposite of this criticism in the form of an eulogy. The greater part of this arrangement is paralleled at §9 (Heraclitus and Hippasus): (a) personal identification plus principle; (b) formula for change from the principle and back; (c) explanatory comment. No criticism or eulogy here. This structure is quite similar to that of the fragments of Theophrastus on the principles of Anaximander (*Phys.Op.* fr. 2 = 226A FHS&G) and Heraclitus (*Phys.Op.* fr. 1 = 225 FHS&G) and some related texts analyzed by Schwabl (1964) 61–64, where we also find the ingredients (a), (b) and (c). See also below, section D(d)§1.

(7) *Eleatic position of Anaxagoras.* An important diaphonia between the Milesians and Heraclitus plus Hippasus on the one hand and Anaxagoras on the other, amounting to a further structural element, is that the former explicitly accept coming to be and passing away, while the latter (as *de facto* the only representative of Parmenidean ontology in the chapter) rejects it: §1 Thales [5–6] ἐξ ... εἶναι + εἰς ... ἀναλύεσθαι, §2 Anaximander [15–16] ἐκ ... γίνεσθαι + εἰς ... φθείρεσθαι, §3 Anaximenes [24] ἐκ ... γίνεσθαι + εἰς ... πάλιν ἀναλύεσθαι, §9 Heraclitus and Hippasus [93–94] ἐκ ... γίνεσθαι + εἰς ... τελευτᾶν, versus §4 Anaxagoras [34–35] πῶς ἐκ τοῦ μὴ ὄντος δύνανται τι γίνεσθαι ἢ φθείρεσθαι εἰς τὸ μὴ ὄν; Elsewhere in this chapter hints at coming to be and passing away are only found in §16 Epicurus Democritus [111–112] ἀγέννητα, ἀδιάφθαρτα and §20 Socrates Plato [145] τὸ ὑποκείμενον πρῶτον γενέσκει καὶ φθορᾷ; hints at coming to be only at §21 Aristotle [149] τῶν γενητῶν.

(8) *Dialectical scrutiny.* The critique addressed at both §2 Anaximander and §3 Anaximenes is that they made the serious mistake of positing only the material cause and omitting the efficient cause. This ultimately derives from Aristotle *Met.* A.3 984a17–27 and 8 988b22–28 (where note ἀμαρτάνουσιν, cited section E(b)§3 and §2, and cf. below, section D(d)). We may however observe that Aristotle elsewhere (*GC* 2.3 330b9–13) argues that those monists who generate things through condensation and rarefaction in fact posit two principles, the rare and the dense, or the hot and the cold, ‘for these are the demiurgic forces, and the one underlies them as matter’ (ταῦτα γὰρ τὰ δημιουργοῦντα, τὸ δ’ ἐν ὑπόκειται καθάπερ ὕλη). This is tantamount to granting them, or at any rate the likes of Archelaus, a preliminary notion of the efficient cause. Also cf. *Mete.* 4.1 378b10–13, cited section E(b)§21. More clearly so Theophrastus *Phys.Op.* fr. 6 Diels (= 227C FHS&G, 28A7 DK) at Alexander of Aphrodisias *in Met.* 31.13–14 (verbatim) on Parmenides: δύο ποιῶν τὰς ἀρχάς, πῦρ καὶ γῆν, τὸ μὲν ὡς ὕλην τὸ δὲ ὡς αἴτιον καὶ ποιοῦν. It is brought against the leading Atomists by Cicero *Fin.*

1.18, quoted below, section E(a) §2 and §3. It must have been acceptable from a Stoic point of view as well, see §23 Zeno and cf. the texts quoted ad loc., section E(a)&(b). That a serious attempt was made to blunt this arrow by upgrading the doxa is clear from a note in ch. 1.7.4 below: ‘Anaximenes (says that the deity is) the air. Statements such as these *should be understood* as referring to the powers that pervade through all parts of the elements or the bodies’.

Alt (1973) 141–142 believes, perhaps correctly, that this censure is not leveled against Thales in §1 because Aristotle *de An.* 1.2 405a19–21 (Thales fr. 31 Wöhrle) cited the attribution to him of the idea that the soul is a ‘motive force’. But the ‘statements’ in ch. 1.7.4 include that of Thales at ch. 1.7.2 (though not that of Anaximander at 1.7.3). We recall that another dialectical arrow had already been shot at Thales in ch. 1.2, and may add that at ch. 4.2.1 below he is said to have been ‘the first to declare that the soul is a nature that is ever-moving, or rather self-moved’—which however does not yet turn it into the efficient cause (τὸ ποιῶν) required here.

The specific criticism addressed at Anaximander in §2 of the present chapter is that he fails to tell us which of the standard elements the Infinite should be identified with (that is, he fails to tell us τί ἐστὶ: question type of substance), which derives from Aristotle *GC* 2.1 329a8–13, cited section E(b)§2. In Theophrastus *Phys.Op.* fr. 2 Diels (= 226A FHS&G) we also read that he fails to identify the Infinite with one of the standard elements (λέγει δὲ αὐτὴν μήτε ὕδωρ μήτε ἄλλο τι τῶν καλουμένων εἶναι στοιχείων), but here the explicit criticism of *GC* 2.1 329a8–13 as well as that concerned with the efficient cause are lacking.

Anaxagoras at §4 on the other hand is applauded for adding the efficient cause. This ultimately derives from Aristotle’s eulogy at *Met.* A.3 984b15–20 followed by Theophrastus *Phys.Op.* fr. 4 Diels (= 228A FHS&G), both cited section E(b)§4. Alt (1973) 139 posits that the majority of the lemmata of 1.3 contain a hint (‘Hinweis’) at the efficient cause, but this is true of only six among twenty-three, viz. §7 and §§19–23. However the reference to the missing cause or principle (which could have been added in §9–11) makes the diaphonia between monists and pluralists even more explicit.

(9) *Interpretative techniques.* Interpretation, in Antiquity, often entails eliciting the ‘real’ intention or meaning of a statement or view believed to be insufficiently clear, or in need of exemplification. Aristotle applied this interpretative technique to the tenets of, for instance, Thales, Anaximander, and Empedocles. The Aëtian explanatory comment (c) at §1 (Thales) derives with certain modifications from his not implausible but hypothetical explanation at *Met.* A.3 983b622–628 (sperm is moist etc.), followed by Theophrastus *Phys.Op.* fr. 1 Diels (= 225 FHS&G), both cited at section E(b)§1; cf. Alt (1973) 140–141. (A similar but Stoicized comment on Thales is found at Heraclitus *All.Hom.* 22.3–

5). The explanatory comment (c) at our §2 (Anaximander) derives from one of Aristotle's suggestions at *Phys.* 3.4 203b18–20 (coming to be should never fail), cited at section E(b)§2 (cf. Alt 1973, 142–143). There is no evidence or proof that Anaximander provided this comment himself.

But the explanatory comment (c) at §2 (Anaximenes: 'just as our soul, being air, holds us together and dominates us, so air contains the whole cosmos') cannot be derived from such a remark of Aristotle or Theophrastus. Though both the wording and the thought are disconcerting (the overworked compositum συγκρατεῖ is late and somewhat unusual; for ψυχή and κόσμος in something like the sense required here we apparently have to wait till Heraclitus at the earliest; the idea that the soul holds the body together is first paralleled in Aristotle; a form of the microcosm–macrocosm analogy is first attested for Democritus), the statement or its separate halves are widely believed to go back in some way to Anaximenes himself (this is of course true for air as the principle). It has been argued (e.g. Alt 1973, 155–156) that the reference to the soul is awkward because it is generally seen as a motive force, so the criticism based on the absence of the efficient cause loses its point. One could also argue that the comment is unfortunate because the cohesive and containing, i.e. preserving, impact of soul and air fails to illustrate coming to be from and passing away into the principle. But the aim of the comment is merely to prove by analogy that air is the principle: as it is in our bodies, so it is in the universe. See further below at section D(d) individual points, §3.

What follows is that, just as in §§1–3, the elucidation of the ontological maxim derives from Aristotle, or rather from an upgraded version of what is in Aristotle.

d Further Comments *General Points*

The chapter is a mixed bag. Quite a few lemmata are quite lengthy and are written in an expository style, namely §§1–5, 7, 9, 16, 20–21, and perhaps 19. §7, expounding a Neopythagorean system, is even the third longest of the whole treatise (see at (d)§7 below). But §§10, 12–15 and 24 are typically terse and elliptic 'oneliners' consisting of name-label in the nominative plus tenet in the accusative plus (only in the present chapter, four cases) ethnicon and/or patronymic or affiliation-label. And five of these belong to early philosophers: §10 Diogenes (tenet deriving from Theophrastus, see at §10 below), §12 Philolaus, §13–15 Leucippus–Democritus–Metrodorus, §§17–18 and 20–23 are very terse, consisting of elliptic first sentences with name-label etc. and tenet followed by concise explanations of terminology. Also noteworthy is that the latest philosophers listed are Zeno the Stoic, Diodorus Cronus and Strato.

Date. Alt (1973) 153 argues that the chapter cannot be much later than the early Hellenistic period, since the last physicists to be listed (Zeno Stoicus and Strato of Lampsacus) provide a t.p.q. But such a relatively early casting is found in quite a few other *Placita* chapters without entailing an early date for the chapter itself. The synchronism of Pythagoras and Polycrates in §8, first mentioned by Aristoxenus, probably derives from Apollodorus (second half of 2nd cent. BCE), cf. Mosshammer (1979) 278. The use of αἵρεσις to denote a Presocratic school of thought can hardly be posited before works bearing the title Περί αἱρέσεων, such as those composed by Clitomachus (Diogenes Laertius *V.P.* 2.92, fr. 10 Mette) or Panaetius (*V.P.* 2.87, T 141 Alesse) had become part of the standard literature. The combination Ἰωνικῇ αἵρεσιν at §1[3] is a *hapax*, while §8[90] αἵρεσις Ἰταλική is only duplicated at T CAG 1.55. Several rare words are not paralleled earlier than the first centuries CE, viz. §3[25] συγκρατεῖ, §7[82] χρεμετιστικός in a standard definition, §16[112] διαπλάσμός, and §16[120–121] ἀγκιστροειδής, τριαινοειδής and κρικοειδής (for such words on –ειδής see below, chs. 2.2.2, 2.17.2, 3.15.9). The final version of the chapter as a whole cannot be earlier than its most recent vocabulary.

The phrase ἀρχή or ἀρχαὶ τῶν ὄντων, applied to §1 Thales, §2 Anaximander, §3 Anaximenes (twice), §4 Anaxagoras (twice), and §16 Epicurus, is originally Aristotelian (e.g. *Met.* A.3 983b11 the majority of the early philosophers, A.4 985b25 the Pythagoreans, A.5 986b3 the Pythagoreans and Alcmaeon; *Phys.* 1.6 189b13 an ‘early view’, 2.3 203a3–4, the Pythagoreans and Plato). Then once in Theophrastus (on Anaximander, *Phys.Op.* fr. 2 Diels = 226A FHS&G at Simplicius in *Phys.* 24.14–15). Among the *testes proximi* it is paralleled at Hippolytus *Ref.* 1.6.2 (Anaximander). In A ὄντα in the required sense are only paralleled at ch. 1.7.13 (Heraclitus, S only).

Individual Points

§1 We have kept P’s text, rejecting Diels’ bracketing of ὅς and addition of S’s γάρ in the text of P, an intervention in support of his view that the mini-biography of Thales which in this form is absent in S, but still part of the revision according to Successions of this chapter, should be attributed not to A but to P. The absence of ὅς from S and the presence of γάρ in S are necessary because of S’s abridgement of §1. S inserted part of the material he omitted here in his version of §6 (see also below), which proves that the mini-biography was to be found in A after all. The whole of §1[2] δοκεῖ ... [5] ὅς will have been interpolated in an earlier version of the lemma when the chapter was revised to accommodate the Successions template. Because of the parallel formula for change from the principle and back to it in §2[15–16] (Anaximander), §3[24] (Anaximenes), §9[94] (Heraclitus and Hippasus) the part of the sentence from [5] ἐξ to [6] ἀναλύε-

σθαι may derive from A. The formula ultimately derives from Aristotle *Met.* A.3 983b6–13, who applies it to the ‘majority of the first philosophers’ (τῶν ... πρώτων φιλοσοφησάντων οἱ πλείστοι), and continues with Thales. But we note that Theophrastus applies it to Anaximander (*Phys.Op.* fr. 2 Diels = 226A FHS&G) and to Hippasus and Heraclitus (*Phys.Op.* fr. 1 Diels = 225 FHS&G) but not to Thales. Extending it to Thales must be a later development. See also above, section D(c).

Bottler (2014) 68, who apparently fails to see where P₁ is paralleled in S, adverts to a purported similarity of P’s paragraph with Porphyry’s custom (according to T CAG 2.95–96) of providing both doxai and bios, and recalls T’s remark that A and P provided (only) doxai. Nevertheless she is prepared to grant the passage to P, who then would be more than a mere epitomator, namely an author adding material of his own accord. But this again is to neglect the striking parallels in S. We may add that S abridged several other lemmata as well, namely §2, §3, §4, §7, §9 and §16 (see above, section A(2)); so he also abridged §1.

We have also refrained from following Diels’ example in giving Homer a separate lemma, as this would clearly interrupt the chronological sequence of Ionians, as noted at M–R 2.1.77. For S’s location of the line see above, sections A(2) and D(b).

In earlier publications we have made various suggestions about the provenance of these passages on Homer in P and S (cf. also Diels *DG* 95, 170). We now believe that the evidence of P is sufficient and reliable, because a Homeric line is included as part of the tradition ever since the authority cited by (and so via) Arist. *Met.* 1.3 983b30 (cf. Alt 1973, 142). Aristotle’s paraphrastic Ὠκεανὸν τε γὰρ καὶ Τηθὺν ἐποίησαν τῆς γενέσεως πατέρας refers to *Il.* 14.201 (= 14.302), subsequently cited in relation to Thales in Iren. *Haer.* 2.14.2, S.E. *M.* 10.314, Calc. in *Tim.* c. 280 and Prob. in *Buc.* 6.31, p. 344.14–15 Hagen. But P cites the other line, *Il.* 14.246 Ὠκεανοῦ (changed, as in the parallel passages, to nominative Ὠκεανός) ὃς περ γένεσις πάντεσσι τέτυκται, found in relation to Thales also Heracl. *All.* 22.3–6, ps.Iust. *Coh.* 5.42, and ps.Plut. *Vit.Hom.* 2.93. These passages have been quoted below, section E(a)§1 and section E(b)§1; a glance at the apparatus of West (2000) *ad locos* shows that *Il.* 14.201 is cited more often than 14.246.

The first reason why A prefers *Il.* 14.246, we believe, is that Oceanus *alone* qua ‘origin for all things’ can with greater likelihood be claimed as being similar to, or even anticipating, Thales’ monistic principle. Secondly, *Il.* 14.201 is too mythological, or theological. In the present lemma, A and the tradition he depends on and/or shares, are not concerned with so undeniably a mythological figure as ‘mother Tethys’, but with water as the *arche*. For A’s secular preferences see above, ch. 1.1, Commentary D(c) *ad finem*. Note the formula διὰ τοῦτο καὶ Ὅμη-

πος. The reasons for Thales' assumption originally hypothesized by Aristotle are here attributed to Homer, too, which gives further point to the latter's πάντεσσι: Oceanus, too, is a general principle. T CAG 2.9 (T1) cites the other text, *Il.* 14.201, so here is closer to the Peripatetic tradition, as noted by Diels *DG* 170.

§§2–3 For ἀμαρτάνει ... οὔτος and explicit dialectical argument in the *Placita* see above at ch. 1.2, Commentary D(d)(3); also ch. 1.7, Commentary D(d), individual points §1[35].

§2 Here and in the next two lemmata S records the patronymics of the philosophers Anaximander, Anaximenes and Anaxagoras. Given that P (who abridges here) reverts back to giving a patronymic to Archelaus in §5, it is as good as certain that he left them out rather than that S added them (but in this chapter S too abridges elsewhere, most extensively in §7).

Anaximander was first inserted into a proto-Succession by Theophrastus, see *Phys.Op.* fr. 2 Diels (= 226A FHS&G), where he is the pupil of Thales and then himself the teacher of Anaximenes.

§2[16] ἀπείρους κόσμους: a garbled version of Anaximander's view, for which see e.g. Mansfeld (2011a).

§2[17–18] λέγει γοῦν διότι ἀπέραντον ἐστίν, ἵνα μηδὲν ἐλλείπη ἢ γένεσις ἢ ὑφισταμένη. The formula λέγει γοῦν, here both in P and S midway a paragraph, as a rule introduces verbatim quotations, so we may interpret what follows as the paraphrase of a purported quotation. In S it is as a rule used to tack on such quotations, for instance from the *Timaeus* (cf. Diels *DG* 75, 216, Jeremiah at M–R 4.286, 353). Aristotle too uses it a few times to announce verbatim quotations, though once what follows is a paraphrase, see *GC* 1.1 314a13–15 (Anaxagoras 59A52 DK); cf. e.g. Plutarch *CN* 1077D (*SVF* 2.1064). The quasi-Anaximandrian paraphrase ἵνα μηδὲν ἐλλείπη ἢ γένεσις ἢ ὑφισταμένη derives from Aristotle *Phys.* 3.4 203b18–20 (cited below section E(b)§2), while ἀπέραντον (first found Pindar *Nem.* 8.38) varies the standard ἀπειρον already paralleled in Homer.

§3 The contrast with the previous lemma indicated by the particle δ(έ) is between Anaximenes' air and Anaximander's inability to say whether the principle is air etc. S omits καὶ οὔτος because he interpolated Xenocrates Xenophanes between the two Eleatics.

The striking parallels with this purported Anaximenes fragment as to content and structure found in later authors show that this particular form of parallelism between human soul and cosmos should not be dated before the early Hellenistic period. These authors are Chrysippus and Posidonius cited at Diogenes Laertius *V.P.* 7.138, Diogenes of Babylon cited by Philodemus, Varro cited by Tertullian, and Cornutus (Varro and Philodemus, to the best of our knowledge, are never mentioned in this context); they are cited at section E(b)§3

below. What we have here is a routine explication of what was believed to have been left unexpressed by the early physicist. On φησιν as not introducing formal quotations or even as introducing bogus quotations see the material collected by Kerschensteiner (1962) 76–77 n. 4, and cf. §7[74] καὶ ἡ ἡμετέρα ψυχὴ, φησὶν, ἐκ τετράδος σύγκειται (our emphasis), which likewise focuses on the parallel between the human soul and something constitutive of reality in general. The phrase ἡ ἡμετέρα ψυχὴ (§3[24–25] and §7[74]) is only paralleled as late as Plotinus *Enn.* 5.1[10].10.11 and later. One of the best parallels for the Aëtian pseudo-quotation of the Anaximenean doxa is provided by Philoponus, a phrase (cited section E(a)§3) that cannot count as independent evidence. The suggestion of Alt (1973) 157–161 that Anaximenes was confused with Diogenes of Apollonia has not been successful. As a matter of fact Anaximenes is very safe because of his unassailable position in the Ionic Succession, which is operative also here. But we note the absence of the theory of condensation and rarefaction attested elsewhere for him, which in our present chapter has been shifted to Archelaus (§5) and Heraclitus and Hippasus (§9). See further Mansfeld (2018e).

§4 We have not followed Mau and others in converting the Anaxagorean quote into archaic language. The verbal form διήρε is not standard Greek. The quote has been modernized by A or a predecessor. For further examples see Sextus Empiricus *M.* 9.6, Diogenes Laertius *VP.* 2.6, and Hippolytus *Ref.* 1.8.1 (59A42 DK) cited section E(a)§4.

Just as in §§1–3, an ontological maxim is followed by an explanatory passage, here dealing with foodstuffs as the source of a generous collection of parts of the human anatomy. In support of the genuine Anaxagorean origin of this maxim a purported ontological fragment (verbatim) extant in a late scholion on Gregory of Nazianzus (59B10 DK) used to be quoted widely, but the doubts of Schofield (1980a) 106 and 136–107 have now been vindicated by a discovery of Gemelli Marciano (2010) 155–159. This so-called fragment has been formulated by Psellus, who turns out to be an important source of the scholion and the originator of the pseudo-quotation. At best there is Aristotelian precedent for part of its contents, viz. of the opposites black and white and of soft *homoiomere* ('uniform parts') such as flesh and of hard *homoiomere* such as hair. Aristotle provides this information when discussing Anaxagoras' main doctrine in the *Physics*, and when discussing spermatology in the *De generatione animalium*. We prefer the translation 'tendons' for νεῦρα instead of 'nerves' (which would produce an anachronism comparable to the presence of entities only 'discerned by reason'), because the νεῦρα are listed together with the bones (ὀστᾶ), not with the arteries and veins. Veins, arteries and tendons are already mentioned together in ps.Aristotle *De spiritu*, e.g. 3 483b12–16. A remarkably similar

doctrine concerning the *homoiomere* of the body as ‘discerned by reason’ is provided by the Anon. Londiniensis, who attributes it to Erasistratus. The texts at issue are cited below at section E(a)§4 and section E(b)§4.

§5 Archelaus is never mentioned by Aristotle, but added to the early physicists by Theophrastus at Simplicius in *Phys.* 27.23–26, who briefly cites him and attributes ‘the same principles’ to him as to Anaxagoras, whose ‘pupil’ he is (*Phys.Op.* fr. 4 Diels = 228A FHS&G). The attribution of air as principle, not in Theophrastus, is also found at ch. 1.7.5 (and cf. ch. 4.3.2, where Anaximenes, Archelaus and others declare the soul is air-like). This attribution is paralleled at Sextus Empiricus *M.* 9.360, so A is not alone. According to Theophrastus—who presumably corrects a general statement of Aristotle (*Met.* A.4 985b10–12) and in his turn is contradicted by Simplicius who refers to this statement—compression and rarefaction are valid for Anaximenes alone (cf. above, section D(d)§3, and below, texts at section E(b)§5). ‘Fire’ and ‘water’ are presumably paralleled at Diogenes Laertius *V.P.* 2.16, δύο αἰτίαι εἶναι γενέσεως, θερμὸν καὶ ψυχρόν. The link with Anaximenes is not confirmed by Theophrastus, Hippolytus, and Augustine, who posit that Archelaus followed Anaxagoras in assuming the *homoiomereiai*. These two traditions are difficult to reconcile with each other, though attempts have been made. Betegh (2013) 8 n. 18 prefers the version of A. For Aristotelian precedent for the attribution of a notion of the efficient cause to Archelaus see above at section D(c).

§6 The fact that οὔτοι μὲν οὖν ... φιλοσοφίαν is identical in P and S, and that S continues with a paraphrase of part of §1 omitted in his own abridged version of §1, proves that these references to the Successions were already to be found in A.

§7 The Pythagoras lemma with its 381 words is the third largest of the *Placita* and by far the largest devoted to a single philosopher and his immediate following. It is also exceptional in providing a brief overview of the physics of a philosopher and his followers as a whole, i.e. including epistemology, rather than of the principles of physics in a narrow sense. This makes Pythagoras the protagonist of the chapter. The reason probably is not that A felt attracted to Pythagoreanism (in chs. 1.titulus et index & 1.1 we have noticed a preference for the Peripatos), but because Platonizing Pythagoreanism had become an unavoidable factor on the philosophical scene from the time when the traditions on which he depends took shape. These began with the Early Academy, as presumably already attested also by Theophrastus, and are very much present from the second century BCE, see e.g. Gaiser (1963a) 475, Burkert (1972) 15–96, Dillon (2003) 56–59, Dillon (2010), (2014), A.A. Long (2013) 145–146; contra Zhmud (2013b).

That the *Placita* tradition accepts and applies this unhistorical but creative and highly influential construction is very clear from ch. 2.6.5–6, where A at P comments on the relation, established as we know at *Tim.* 53c–55c between the five regular bodies and the elements plus the sphere of the All, but here attributed to Pythagoras with the words ‘Plato in these matters too Pythagorizes’ (Πλάτων δὲ καὶ ἐν τούτοις πυθαγορίζει). This, by the way, is the first time the verb occurs in relation to doctrine rather than lifestyle. The attribution of Plato’s view to Pythagoras at A 2.6.5 is paralleled at Ach p. 17.10–13, who however speaks of ‘the Pythagoreans’. See M–R 2.2.386. Also cf. *Ethical Doxography A* at *S Ecl.* 2.7.3f, p. 49.18–21 εἴρηται (sc. ὁμοίωσιν θεῷ) δὲ παρὰ Πλάτωνος κατὰ τὸ τῆς φιλοσοφίας τριμερές, ἐν Τιμαίῳ (90a–d) μὲν φυσικῶς, προσθήσῃ δὲ καὶ Πυθαγορικῶς, σημαίνοντος ἀφθόνως τὴν ἐκείνου προεπίνοιαν. See also M–R 2.1.85–86.

The long lemma may be subdivided into five sections: (1) §7[54–55 (προσ-)αγορεύσας] Pythagoras as archegete, name patronymic ethnicon; first finder motif; (2) §7[55 ἀρχᾶς—57] numbers doctrine similar to that attributed to the Pythagoreans by e.g. Aristotle and Cicero; (3) §7[58–61] Neopythagorean, i.e. Platonized account (One and Indefinite Dyad as principles), cf. above, this section ad init., and below, this section §7[55–89] and the very similar passage ch. 1.7.9; (4) §7[62–73] continuation and illustration of the numbers doctrine of §7[55 ἀρχᾶς—57], ending with the oath and thus commencing psychology and epistemology; and (5) §7[74–89] Neopythagorean, i.e. Platonized interpretation of the oath in epistemic terms. The transition is signaled by §7[58] πάλιν δέ.

At a first glance section §7[74–89] dealing with the soul and epistemology will surprise in a chapter *disertis verbis* dealing with the *archai*. But the excerpt of ps.Archyta’s Περὶ ἀρχῶν, *On Principles* (*de Princ.*) cited S 1.41.5 ~ p. 36.13–37.12 Thesleff, is also about epistemology—which is why Thesleff adds this excerpt to ps.Archyta’s Περὶ νοῦ καὶ αἰσθήσεως, *On Intellect and Sense-Perception* (*de Intell.*) cited by S further down at 1.48.6. But a few pages up in the same chapter, at 1.41.2, S cites another excerpt from the Περὶ ἀρχῶν, this time dealing with ‘two principles of the things that are, one containing the *systoichia* of what is orderly and limited, the other the *systoichia* of what is disorderly and unlimited’. Ps.Archyta’s macro-structure, physics followed by psychology in the ancient sense of the word i.e. including epistemology, is not unusual. It is paralleled in the *Pythagorean Hypomnemata* of Alexander Polyhistor at Diogenes Laertius *V.P.* 8.24–33. See Laks (2013b) 379 on the ‘organized series of all the topics you can expect from a philosophical treatise—a doctrine of principles, a cosmology’ [lacking in our §7, but amply represented elsewhere in the *Placita*], ‘a psychology [including a paragraph on perception], a theology, and a code of moral and religious practice’ [of course also lacking in our physical *Placita*], to

be found there. For epistemology included in psychology see also below, Introduction to Book 4 at section (6). The present lemma is the only one in ch. 1.3 comprising a section dealing with epistemology. In the *Placita* other references to Pythagorean epistemic views are scarce. Those at chs. 4.9.1, 4.13.5–6 + 4.14.3 and 4.20.1 are hardly significant in themselves. Only ch. 1.10.3, ‘Pythagoras’ on ‘the so-called εἶδη and the ἰδέας’ is more or less consistent with our §1.3.7. The ps.Archytean order: principles of reality followed by principles of knowledge (based on the principles of reality), is precisely parallel to that of the present Aëtian paragraph.

The theory of principles in our §7 places the two principles One and Indefinite Dyad on the same level. This means that this Aëtian version of the Pythagorean first principles is earlier than, or at least not influenced by, one of Eudorus in the first cent. BCE, according to whom the Monad produces the Dyad (Eud. frs. 3–5 Mazzarelli, in part verbatim, at Simplicius in *Phys.* 181.7–30). For further details see Mansfeld (2020a).

§7[54] ἀπ’ ἄλλης ἀρχῆς links up well with §6[53] ἀπὸ Θάλητος. Philosophy is believed to have begun with Thales (§1[2–3] δοκεῖ δ’ ὁ ἀνὴρ οὗτος ἄρξαι τῆς φιλοσοφίας) and gets a ‘second beginning’ (ἄλλη ἀρχή) with Pythagoras. For the expression cf. e.g. Galen in *Prorrh.* 16.750.9–10 K., ἀπ’ ἄλλης ἀρχῆς κελεύοντας ἀναγινώσκειν τὰ μετὰ ταῦτα, in *Epid.* vi 17a.980.10 K. καὶ πάλιν ἀπ’ ἄλλης ἀρχῆς, Sextus M. 5.106, Origen C.C. 6.42 ἐξῆς δὲ τούτοις ἀπὸ ἄλλης ἀρχῆς ὁ Κέλσος τοιαῦτα φησι καθ’ ἡμῶν. One also finds ἀπὸ ἐτέρας ἀρχῆς.

§7[54–55] The πρῶτος εὐρετής (‘first finder’) motif is quite frequently encountered elsewhere in the *Placita*, see M–R 2.1.94–96, and e.g. chs. 2.1.1 with Commentary D(d)§1, 2.12.2 and 3.14.2. The attribution of the first use of φιλοσοφία to Pythagoras goes back to Heraclides of Pontus, e.g. fr. 87 Wehrli = 84 Schütrumpf at Diogenes Laertius *V.P.* proœm 12. See further Kleingünther (1933), Thraede (1960).

§7[55–89] The One and the Indeterminate Dyad, attributed to Plato’s Unwritten Doctrines by Aristotle, are already attributed to *both* Plato *and* the Pythagoreans (*not*: Pythagoras) by Theophrastus. These two principles were widely attributed to Plato, but next, as we see, also to the Pythagoreans, and then to the Pythagoreans alone, e.g. in the *Pyth.Hyponemata* cited by Alexander Polyhistor, and finally to Pythagoras himself, as in our chapter. Baltes (1976) 96 points out that Speusippus and Xenocrates (like Aristotle and Theophrastus) still speak of Pythagoreans—not of Pythagoras, which is what Heraclides of Pontus appears to have been the first to do (frs. 87–88 Wehrli, 84–85 Schütrumpf).

The (of course originally and exclusively Platonic) monadic Ideas produced from these principles will be based on a creative interpretation of *Phlb.* 15a–b,

where ‘monads’ (μονάδας) and ‘henads’ (ἐνάδων) refer to Ideas. In what follows at *Phlb.* 16c–17c Plato, speaking of the limited and the unlimited (πέρας and ἀπειρία), uses concepts that are inspired by Pythagorean thought, esp. what are held to be the genuine fragments of Philolaus (see Huffman 2001). The view that the Platonic Ideas are numbers is several times attributed by Aristotle to Xenocrates, at least one of whose doctrines (soul as moving number, cf. ch. 4.2.3–4) came to be attributed to Pythagoras as well. Thus not only the two Platonic principles (the One or Monad, and the Indefinite Dyad), but also the Ideas derived therefrom came to be attributed to Pythagoras. For the interpretation of *Phlb.* 15a–b in later authors from Alexander of Aphrodisias to Damascius (and possibly ps.Ammonius) see below section E(b)§7[76–82]. As far as we know the ‘Pythagorean’ doctrine at ch. 1.3.7[76–82] has not played a part in the discussion of these later passages in the secondary literature.

Aristotle’s cryptic phrase at *Met.* A.5 987b20–22, ending with the harsh ἐξ ἐκείνων γὰρ κατὰ μέθεξιν τοῦ ἐνὸς τὰ εἶδη εἶναι τοὺς ἀριθμούς, can also be interpreted as referring to Ideas qua numbers (not: ideal numbers!), and so supports the reading of the *Philebus* passage. Aristotle’s text at 987b22 has been emended in various ways, most recently by Primavesi (2012), who athetizes τοὺς ἀριθμούς. But as Steel (2012a) 186 points out, the awkward ending of the sentence is supported by virtually the entire textual tradition. One may also appeal to *Met.* A.9 991b9 ‘if the forms are numbers’ (ἐτι εἴπερ εἰσὶν ἀριθμοὶ τὰ εἶδη), a phrase that also joins these crucial terms up with each other. Ambiguous or difficult texts provoke interpretative ingenuity—this time *more pythagorico*, hardly surprising in a much-visited contexts such as *Phlb.* 15a–17c, or chapter 5 of *Metaphysics* A, where Aristotle compares Plato with the Pythagoreans, but also insists on the differences. This Platonizing picture of Pythagoras (two principles) is notably different from the Middle Platonist account of Plato at §20 (triad of principles).

‘Man’ and ‘horse’ as examples of Ideas, or general concepts, or substantives, are found remarkably often, namely in Plato, Eurytus, Aristotle, the Stoics, etc. A few cases are quoted at section E(b)§7[76–80] below.

§7[71–73]. This is the earliest attestation of the famous oath. We note that P has ψυχᾷ, while S has κεφαλᾷ. The transmission elsewhere is also divided between these terms, or even has γενεᾷ (the latter in Nicomachus, Porphyry and Iamblichus). Here of course we need ψυχᾷ in view of the exegesis concerned with the structure of *soul* that follows in P; so S, who omits this exegesis, was able to modify the quotation. Kranz (1938) 438 argued that Empedocles must have known the oath, for he calls the elements ῥιζώματα and uses πηγὴ in a cosmological sense (31B23.10 DK). Burkert (1972) 186–187 suggests that though the first line of the oath may originally ‘have stood by itself’, the second, that is, the line παγὰν ἀενάου φύσεως ῥιζώμα τ’ ἔχουσιν, ‘cannot be older than Empe-

docles', since ῥιζώματα and πηγὴ will derive from Empedocles, and 'the general idea of φύσις is scarcely likely to have existed before the second half of the fifth century'. If this is correct, the second line shows that Empedocles was seen as a Pythagorean, or at least as a kindred spirit, by other Pythagoreans. References to earlier discussions and the usual balanced judgement are found at Zeller–Nestle (1920) 1025–1026 with n. 2. On the oath see also below, ch. 1.15 Commentary D(d)§7. It serves as epigraph of Schopenhauer's dissertation.

§7[75] The series νοῦς ἐπιστήμη δόξα αἴσθησις is originally Platonic (according to Aristotle, see section E(b)§7[25–43]); the Aristotelian and Stoic concept of φαντασία is notably absent.

§7[76–87] Each individual monadic entity can be defined (i.e. a *horos* be formulated) in the proper way *per genus et differentiam*, here man as 'rational living being' and horse 'as living being that neighs'. This adds a Platonic-cum-Aristotelian ingredient that had become common property. In Alcinous' *Didascalicus* c. 5 this theory of definition is attributed to Plato. We also read that 'every syllogism deduces what is in dispute and effortlessly demonstrates something else from agreed premises', which is nothing more or less than a version of Aristotle's famous definition. In Alcinous' *Didascalicus* c. 6 this definition is attributed to Plato. Essential features of Aristotle's logic that we find integrated (at far greater length) in a standard Middle Platonist handbook, are in §7 already part of a Neopythagorean synthesis. The τινων ὁμολογουμένων are the premises of the syllogism taken as a unity, so the deduction is from this unity to the other unity, the conclusion, see Themistius' paraphrase of a passage in Aristotle quoted section E(b)§7[84–87].

§7[77] The reading θεωρεῖται as the *lectio difficilior* should be retained rather than the conjecture of Usener and Diels θεωρεῖ, esp. since it is supported by Q.

§7[89] It is possible, as surmised by the editors, that there is a lacuna at the end of the doxa, because A does not deal with the tetrad of sensation. But it is perhaps also possible that P has abridged the last part. S does not help us, since (hard to see for what good reason) he omitted all of section (5) §7[74–89], i.e. the epistemic interpretation of the oath (he did preserve the epistemic section of ps. Archytas *de Princ.*).

§9 T gives the ethnicon for Heraclitus in T5 and both patronymic and ethnicon in Txii. In general he gives more of these than we find in P/S (e.g. Xenophanes T7, Democritus T9–Tiv), but may have added these himself, see above section A(5)(c). It is probable that some have been abridged away, esp. by S (e.g. in S17–19, but not S14 and S20).

The order of names in P/S is the reverse of that in the tradition beginning with Aristotle (*Met.* A.3 984a7) and Theophrastus (*Phys.Op.* fr. 1 Diels = 225 FHS&G), cf. Diels *DG* 170. T CAG 2.10 (T5), 4.12 (Txii), and 5.18 (where he has

added Heraclitus after Hippasus to ch. 4.3.4), Sextus Empiricus *M.* 10.313, and Clement of Alexandria *Protr.* 64.2 too begin with Hippasus. The change may at some time have been introduced because Heraclitus was much more prominent than Hippasus (cited only once more at S for A 4.3).

We note that the four-elements cosmology (with air) is more familiar as a Stoic doctrine, though it has again been argued that it was already Heraclitean (Betegh 2007). The final conflagration is certainly Stoic and probably not Heraclitean, and condensation and rarefaction are probably un-Heraclitean as well. *Pace* Rösler (1973) 51 the attribution of πυκνῶσει καὶ μανῶσει at Theophr. *Phys.Op.* fr. 1 Diels (= 225 FHS&G) to Hippasus-cum-Heraclitus cannot be derived from Theophrastus, since he claimed *Phys.Op.* fr. 2 (= 226B FHS&G) that these concepts are only valid for Anaximenes. *Pace* DK 1.145.8–9 (followed by Kahn 1978, 134, 290) this entails that Diogenes Laertius *V.P.* 9.8, where we also find ἀραιῶσει καὶ πυκνῶσει, cannot be unadulterated Theophrastus, whose support for the ἐκπύρωσις described there too therefore becomes dubious as well. So his authority should not be invoked for what is in ch. 1.3.9. Heraclitean doxai are upgraded elsewhere in the *Placita* too, see e.g. at chs. 4.7.2 and 4.3.12.

§10 Diogenes' doxa in T CAG 4.12 is significantly different from its parallel in S 1.10.14. In the latter 'air' (the principle) is said to be 'infinite' (ἄερα ἄπειρον), an epitheton not found here in T but paralleled in *Phys.Op.* fr. 2 ap. Simplicius in *Phys.* 25.4 and attributed by Theophrastus to the 'air' of both Anaximenes and his purported follower Diogenes. T moreover writes that according to Diogenes air is the principle of 'the All' (τοῦ παντός), just as Theophrastus. This means that both lemmata, that of S as well as that of T, in some way ultimately derive from Theophrastus, according to whom Diogenes declared that 'the nature of the All [cf. T] is air which is unlimited [cf. S] and everlasting', but do so in disparate ways.

§11 Xenophanes is listed as a monist. Elsewhere lines are quoted that make him a dualist (21B29, B33 DK, see also *PPF* at fr. 33).

§12 A doctrine Aristotle ascribes to a group of 'Pythagoreans' is here ascribed to an individual Pythagorean, Philolaus. The doctrine itself, formulated in a more archaic way, is attested in verbatim texts cited as by Philolaus in Diogenes Laertius and Stobaeus. These have been generally accepted as genuine fragments since the pioneering work of Burkert (1962, Engl. version 1972), and are quoted below, section E(b)§12. It should in any case be noted that the *Placita* are the *earliest* work to make this identification also with regard to doctrines beyond the verbatim fragments explicitly attributed to Philolaus by later authors. The attribution of (most of) the first part of the detailed cosmology of ch. 2.7.6 with its central fire and counter-earth to Philolaus by A has been accepted, because Arist. *Cael.* 2.13 293a17–b11 attributes this to (again) 'the

Pythagoreans'. This also holds for the cosmological views concerned with the earth at chs. 3.11.3 and 3.13.2, once more ascribed to Philolaus. Yet the counter-earth is also attributed to the Pythagorean Hicetas at ch. 3.9.2, which if correct militates in favour of Aristotle's 'Pythagoreans', or of the phrase 'some of the Pythagoreans, of whom Philolaus is one' found at ch. 2.30.1. Other cosmological lemmata with name-label Philolaus have also been accepted as deriving from the original treatise, namely chs. 2.5.3, 2.20.12, and 2.30.1 (where the name-label is a little different, see above), although there is no corresponding passage in Aristotle. For further information see below at the chapters concerned. For other lemmata where the doxography 'knows' who is meant by Aristotle, see below at chs. 1.13 Commentary D(d)§2(4) and 1.21, Commentary B(2). On this issue of Pythagorean anonymity vs. naming see also M–R 2.1.176–177.

§14 The terms *ναστά* and *κενόν* used here and below, chs. 1.12.6 and 1.14.8, derive from Aristotle's account in the fragment of his *On Democritus* preserved by Simplicius, cited below section E(b)§14.

§§16–17 The diaphonia between Epicurus and Ecphantus regarding atomic motion only becomes clear when Hippolytus *Ref.* 1.15.2 is adduced.

§16 S has abridged this doxa considerably compared with P. It is likely that both references to Democritus in P were originally present in A (cf. also Tiv). E's text, however, introduces the Democritean name-label first. Given the evidence of the other witnesses (including J and T), this is best seen as a modification by E himself.

§16[116–118] The difference between Epicurus' and Democritus' views on weight may be explained by assuming that the intrinsic tendency of all atoms to move downwards according to Epicurus is lacking in Democritus, according to whom weight is not a permanent property like unsplitability, size, or shape, but one that is relative and depends on circumstances in compounds (cf. Theophrastus *Sens.* 61–62, cited section E(b)§16[115–116]). Later reports apparently reduced relative weight to absence of weight. For other suggestions see the discussion at Bakker (2016) 216–220.

The final clause of the Democritus fragment may perhaps be translated as 'not by a word' (but we have not done so). Cf. epic phrases such as *Il.* 1.504 ἢ ἔπει ἢ ἔργω, *Il.* 15.106, ἢ ἔπει ἢ ἐ βίῃ, and Plato's πᾶς ἡμῖν αἰδέσθω τὸν ἑαυτοῦ πρεσβύτερον ἔργω τε καὶ ἔπει at *Nom.* 879c.

§16[120–121] The shapes that are excluded by Epicurus as too fragile were allowed by Leucippus and Democritus according to Aristotle and Cicero, see e.g. texts at section E(b)§16[118–120].

§16[126] We have included Mras' emendation in our text. He elucidates this baffling passage as follows: 'Die Existenz von Atomen folgt aus der von ἄκενα (also unteilbaren) στοιχεῖα καὶ ζῶα sowie aus der der (ebenfalls unteil-

baren) μόνας, which is quite incomprehensible. A difficulty is that the word ἄκενος is scarcely used in Greek texts (it occurs once at Philo *QG* 4.30, Greek fragment) and elsewhere only, though often, in Hero *Mechanicus*. Perhaps we should rewrite ms. κενά as ἀμέτοχα κενού. ζῶα here presumably means ‘figures’, i.e. atoms of different shapes and sizes ([119–120]); cf. ῥυσμός in earlier Atomism, e.g. Aristotle *Met.* A.4 985b15–16, while μόνας may stand for the theoretical minimal part of the atom (cf. a definition at Iamblichus. *in Nicom.* 2.1 Vinel μωνάς δέ ἐστι ποσοῦ τὸ ἐλάχιστον). But one cannot be sure.

§17 Fortunately Ecphantus’ atomism, lacking in P, is here attested for A by the convergence of S and T, which again underlines the importance of the evidence of S/T. At A 2.3.3 this doxa is attested by S alone. P significantly epitomizes it away both times, perhaps because it conflicts with the view of flexible and infinitely divisible matter attributed to the successors of Thales and Pythagoras at chs. 9.1 and 1.16.2. According to Aristotle *Met.* M.6 1080b16–20 the ‘Pythagoreans’ posited that the ‘monads’ of which number is composed ‘have size’ (τὰς μονάδας ... ἔχειν μέγεθος). Which does not make them indivisible—but this is not the place for a discussion of the vexing issue of so-called number atomism.

For the πρῶτος εὔρετής motif see above, section D(d)§7[54–55]. The three principles attributed to Plato by Middle Platonist and other later sources are first found in Varro *Antiquitates rerum divinarum* fr. 206 Cardauns (quoted below section E(b)§20), where we also have three prepositional phrases, the first two identical with those at ch. 1.3.20, the third the same *ad sententiam*. See also at Dörrie–Baltes (1996) Baust. 113. They are of Peripatetic and then doxographical origin; see references at Mansfeld (2002a) 30–34, repr. M–R 3.385–389. For these principles as involved in the chapter sequence see above, section D(a) ad init. and below ch. 1.6 Commentary D(a), ch. 1.7 Commentary D(a), as well as ch. 1.11 Commentary D(d)§2.

§19 S at 1.10.11a begins by quoting four Empedoclean lines (31B6 + B36 DK). These are followed at *Ecl.* 1.10.11b by an explanation of the divine names in prose, which is followed in its turn by 31B16–17 on Philia and Neikos, plus a Homeric parallel of three lines for Philia and Neikos (Hera’s words at *Il.* 14.201–203, including the line 14.202 already quoted by him at 1.10.4!). The greater part of this explanation differs from P and is quite similar to what is in Heraclitus *All.Hom.* 24 and ps.Plutarch *Vit.Hom.* 99–100. The reference back to Homer is precisely paralleled at *Vit.Hom.* 99, and the singular and lengthy further explanation of Aidoneus as air is to some extent paralleled in Hippolytus *Ref.* 1.29.5. This explanation must be derived from a different kind of *testis proximus* (cf. Diels *DG* 88–89). Presumably the fourth Empedoclean line (B36) derives from a similar source. As a complete line this is only extant in S, while only the

last three words (plus a paraphrase of the first three) are paralleled elsewhere, namely in a different context at Aristotle *Met.* B.4 1000b2–3.

S's first series of excerpts from A 1.3 then follow at 1.10.12, but he does not return to Empedocles either here or in his second and third series of excerpts of A 1.3 further down, at chs. 1.10.14 and 1.10.16a. Even so, it may look as if S begins his excerpts from A 1.3 with (a version of) the Empedocles lemma. But because of the extra Empedoclean line and the Homeric lines it is clear that S 1.10.11a–b are the last of the series of poetic quotations with which in the usual way he begins his chapter. Kingsley (1994) wanted to derive S 1.10.11a–b from Theophrastus and so to attribute it to A, and is followed by Bottler (2014) 111–114. They have missed S's consistency in declining to repeat (parts of) paragraphs included by him and thus anticipated in the poetical section of the chapter among the prose abstracts from A.

P begins with a succinct explanatory introduction in prose, and then quotes the three lines of 31B6 but not B36. This is followed by a much shorter and different explanation in prose compared with what is in S. Diels rightly did not place S 1.10.11a–b in the right-hand column of *DG* 286–287 (but he does find a place for it in the parallel columns at *DG* 88). There also is a major discrepancy between P^{BE}, who equate Hera with air and Aidoneus with earth, and S who reverses the identification and adds some words of explanation. Hera as air is Platonic (*Crat.* 404c) and Stoic, e.g. Diogenes Laertius *V.P.* 7.147 = *SVF* 2.1021, and attributed to Theagenes of Rhegium, 8.2 DK; also Cicero *ND* 2.66 *aër autem, ut Stoici disputant, interiectus inter mare et caelum Iunonis nomine consecratur*, with Pease's long note ad loc. (Philippson's fragment of Philodemus *De pietate* purportedly pertaining to Empedocles (?) printed *ad finem* at 31A33 DK is too uncertain). At ch. 1.7.21 below Xenocrates is said to have held that air is Hades and to have passed on this idea to the Stoics which, to say the least, is curious in view of the Stoics' own doctrine. Remarkably Q (who as we know translates a version of P that is not everywhere identical with P^B and sometimes has better readings, but also introduces changes and mistakes of his own) supports the reading of S rather than P. It is therefore a real possibility, *pace* Diels *DG* 89 and Mansfeld at M–R 3.339, that Q did preserve A's reading, while S adopted the same reading via another intermediary. But it is also possible that Q made a swap, as he did with φιλοσοφίαν and σοφίαν at 1.prooem. 2. Finally it is not to be excluded that the explanation of the divine names in the text translated by Q had been corrected to make it fall in line with the other interpretation, which is that of the majority (Athenagoras *Leg.* 22.1, Heraclitus *All.Hom.* 24.7, Ach c. 3, p. 9.31–22, Diogenes Laertius *V.P.* 8.76, Hippolytus *Ref.* 7.29.4, ps.Probus in *Buc.* 6.31, p. 333.15 Thilo, and S).

This majority interpretation is probably the right one, since Zeus and Hera, mentioned first, may well represent heaven and earth, Aidoneus/air and Nestis/water being in between and listed top down as well. The epitheton *φερέςβιος* is almost always used of the earth, e.g. Hesiod *Th.* 693 γαῖα φερέςβιος. For a third view, which interprets Zeus as air and Aidoneus as fire (and so Hera as earth and Nestis, of course, as water) see Willi (2006) 226–228.

Hillgruber (1994) 38–49, who critically reviews the parallels in the sources that are concerned and the interpretations that have been propounded, argues (like Diels and others) that S derives from a tract dealing with Homer, though he has failed to take the evidence of Q into account. This complicated source-critical issue cannot be further dealt with in the present context.

§20 Plato's principles here are based on the *Timaeus* and represent his physics; see Runia (2003). At ch. 1.7.22 his metaphysical principles are the first to be mentioned: 'the One, the single-natured, the monadic, the true Being, the Good. All such names refer to the Intellect. The deity, then, is an Intellect, a separate Form'. We note the Early Academic colouring. The Platonic 'metaphysical' principles One and Indeterminate Dyad have been transferred to Pythagoras in §7 above (the One becoming 'Monad', as with Xenocrates), see this section §7.

§20[142–143] Diels deleted *Σωκράτης Σωφρονίσκου Ἀθηναῖος καί* and αἱ γὰρ αὐταὶ περὶ παντὸς ἐκατέρου δόξαι as early ps.Plutarchean interpolations (*DG* 14 'Socratis memoria impudentissima fraude adiectus est'). Additions these words certainly are, but assuredly of Aëtian provenance. The relative date of this change can be exactly determined: it is contemporaneous with the reshuffling and upgrading of the lemmata according to the Successions model, which (as the parallels in S prove) had already been applied in A. Socrates simply *had* to be present because he had been installed in the *Diadochai* as the link between Archelaus and Plato (and the other Socratics). Consequently both Socrates and Plato are also mentioned in 1.7.22 (the principles qua divinities) and 1.10.2 (the same description of the ideas as in 1.3.20), so there is emphatic consistency in this adaptation. Diels of course deleted 1.7.22 and 1.10.2 *Σωκράτης καί* as well. The attribution of Plato's three principles to Socrates is unique, false, and interesting. It may be due to the belief that he is one of Plato's spokespersons, for which see e.g. Diogenes Laertius *V.P.* 3.52.

§20[144] The three prepositional phrases placed after (and implicitly connected with) the three standard principles of the later accounts of Plato's thought are found only in S and could conceivably have been added by him. But the same prepositional phrases are found at ch. 1.11.2 (Plato again), in both P and S, so they must be retained here; for the precedent in Varro see above, this section §17.

§20[145–146] The addition of the god's 'internal representations' to his thoughts (ἐν τοῖς νοήμασι καὶ ταῖς φαντασίαις θεοῦ) is found only here and at ch. 1.10.2 below.

§21 Aristotle himself calls the element πρῶτον σῶμα, never πέμπτον, but in the doxographical tradition and elsewhere 'fifth' is preferred to 'first'. The validity of this fifth beyond the traditional four was questioned by many. See discussion at ch. 2.11 Commentary D(e)§4.

§22 (1) Heinze prints the texts from S and T separately but gives them the same fragment number (fr. 28), as he generally does with evidence that belongs together. Isnardi Parente (2nd ed.) numbers the text of S (calling it Aëtius) as F 21 and the text of T as F 22, calling it a 'dull repetition' of 'probably the same doxographer Aëtius' in her Commentary (2012, 262), and rejecting its derivation of things from matter for Xenocrates.

(2) A tenet rather similar to (one interpretation of) Xenocrates' description of matter is attributed to Pythagoras by Aristotle. This, at least, is what Damascius says, in *Parm.* 172.20–22 'Aristotle in his *Matters concerning Archytas* recounts that Pythagoras, too [sc. just as Plato], called matter the 'other', as it is flowing and continuously becoming 'other' ('Αριστοτέλης δὲ ἐν τοῖς Ἀρχυτείοις (Aristoteles fr. 207 R³; Archytas 47A13 DK) ἱστορεῖ καὶ Πυθαγόραν ἄλλο τὴν ὕλην καλεῖν ὡς ῥευστήν καὶ ἀεὶ ἄλλο γιγνόμενον). The attribution to Aristotle of this attribution to Pythagoras himself is dubious, but maybe Aristotle spoke of 'the Pythagoreans', even including Pythagoreanizing Platonists. For discussion of the notion of 'streaming matter' see Decleva Caizzi (1988) and the criticism of Isnardi Parente (1990) and (2012) 261, who for Xenocrates prefers the etymologizing ἄ-ἐν-αον (thus accepting Diels' emendation of ἀένναον, 'ever streaming'), but also admits a more literal secondary sense, namely 'inexhaustible'. The former in fact accords better with the 'multiplicity' of matter given as explanation in the tenet itself in the version in S, but we have not put the emendation in the text.

§23 Μνασέου: S reads Μνασαίου, and so do a number of mss. of T followed by Diels ('eodem errore Theodoretus'), for whom what he sees as a shared error in the Lachmannian sense of the concept is proof that T here derives from A. But Raeder follows the better mss. of T, which have Μνασέου like P. Wachsmuth follows the example of P and reads Μνασέου in the text of S. Rather than thinking of confusion with the physician Mnaseas cited by Galen we should accept a shared spelling mistake, occurring independently in both cases.

e Other Evidence

General Points

(1) *Lists of elements/principles.* The enumeration, description and discussion concerned with the principles and elements of ‘the things that are’ begin for us in the second half of the fifth century BCE, and continue until the end of Antiquity, cf. above, section D(d)(3). As this is not the place to provide a fuller history of this complicated subject we shall discuss a few examples with regard to differences and similarities without going into details.

The earliest extant lists (cf. below section E(b) General texts) in Gorgias, an Hippocratic author, Isocrates, Plato, and Xenophon diaeretically deal with the number (one or many, and/or how many, i.e. according to later terminology the category of quantity) and the nature (in later terminology the category of substance) of the principles or elements, and in some cases also with the issue of whether or not they are in motion, and of whether or not they come into being and pass away. In Plato we moreover already have a more or less historical account, in the sense that the doxai are to some extent described in chronological sequence (cf. *Sph.* 242c–243a, ἔτι πρόσθεν, ὕστερον—in later terminology the category of time). Aristotle, who appropriates and substantially refines this mode of exposition and analysis and for the most part collects his own evidence, applies it on a large scale in his dialectical overviews, which are also arranged according to his series of categories. And he combines a more or less chronological sequence with a systematic analysis according to the number and nature of the principles and elements and their being moved or immobile. As a further diaeretic criterium Aristotle added the distinction between corporeal or incorporeal to the division. Because of his subsumption of elements and principles under the concept of ‘cause’ he was capable of alternatively combining multiplicities of elements (*homoiomere*, atoms) under a single overarching material cause. In various ways this organization was taken over and modified by Theophrastus *Phys.Op.* frs. 1–9 Diels (= 224–230 + 234 FHS&G) and the late commentators on *Physics* 1 and *Metaphysics* A, see e.g. Mansfeld (1986a) 7–15 and (1989b) 134–138, with references to other literature. Cf. above, General Introduction sections 5.2.1 and 5.2.2.

Seneca *Ep.* 39.2 speaks of an *index philosophorum* (the phrase is unique), i.e. a ‘list of philosophers’; they are role models, which is a different arrangement.

(2) *Successions.* The arrangement of the philosophers in schools according to Succession was originally designed by Sotion in the early third cent. BCE. In Aristotle and Theophrastus partial antecedents are found of Successions in the form of master-pupil relationships, see Diels *DG* 104 with n. 3, and Wehrli (1978) 10. Presumably such isolated connections, encouraging the overhaul according to the template of Sotion, were already present in an earlier version of our chapter.

The Successions template is used by a wide variety of later authors. Among the texts parallel to our ch. 1.3 cited at *Testes primi* plus *Testes secundi* above, and section E(a) General texts plus section E(b) General texts below, those combining the arrangement according to the number of the principles on the one hand with that according to Succession on the other are a small minority: among the *Testes primi* ps. Justin *Coh. Gr.* 3.2–4.1, 5.4–6.1; among the other proximate texts Cicero *Luc.* 118 (who also imposed upon an earlier arrangement according to number, see Mansfeld 1989b), ps. Plutarch *Stromateis*, Epiphanius, Augustine *De civitate Dei* 8.2.1–3.4, T CAG 1.55, 2.9–11 and 4.5–11, and ps. Galen *HPh* c. 3 and c. 18. Augustine's is a straightforward account in an order that is the opposite of A's: *De duobus philosophorum generibus, id est Italico et Ionico, eorumque auctoribus*, i.e. first the Italians, then the Ionians. It was also applied to doctors, see e.g. Celsus *De medicina* proœm. 6–8 and above; to rhetors, see e.g. Quintilian *Institutiones* 3.1.8–2.1, and even to Roman *iuris consulti*, see Sextus Pomponius (a contemporary of the emperor Hadrian) at Justinian *Digesta* 1 tit. 2 rubr. 2.35 ff.

For discussions in the scholarly literature see Von Kienle (1959), Nörr (1976) 514–516, Mejer (1978) 62–73, Giannatasio Andria (1989), M–R 2.1.73–96, and the editions of Sotion by Wehrli (1978) as well as those of Philodemus on the Academics by Dorandi (1991) and on the Stoics by Dorandi (1994). On *Diadochai* as lists see Regenbogen (1950) 1448–1453, and for ancient definitions of ἀρεσις e.g. Havrda (2016) 210–217. See further M–R 2.1 ch. 7 'Successions and sects', dealing also with references to Successions elsewhere in the *Placita*, and Jeremiah (2018).

(3) *Order according to quantity*. Other authors have not modified the traditional order according to quantity, for to a decisive extent these later lists are rather faithful descendants of Aristotle *Met.* A and its first revision by Theophrastus as preserved in Simplicius, though they have been upgraded in various ways.

Heraclitus *All.Hom.* 22.2–9 has a list going from one via two to four, as already noted by Diels *DG* 94: 'ab elementorum numero procedens oratio'. On Sextus Empiricus see the next subsection.

(4) *Lists in Sextus Empiricus*. Sextus provides several lists, with interesting differences from each other, which serve as dialectical introductions to his treatment of specific themes and so are adjusted to criteria deriving therefrom. First, the main diaeresis at *M.* 9.4–11 distinguishes those who say the principles are 'efficient', or 'active' (δραστηρίους), from those who say they are 'material' (ὕλικός), cf. ps. Galen *HPh* c. 3 ad init. This recalls the part played by this distinction in A 1.3.2–3, where Anaximander and Anaximenes are criticized for omitting the efficient cause. Also interesting is a rare explicit reference to

and paraphrase of Aristotle *Met.* A.3 984b18–31 on Hermotimus, Parmenides, and Hesiod. Because this is a dialectical prelude to the discussion of the doctrines concerning the gods in Book 9, the emphasis is on the efficient principle. At *P.* 3.1–12 Sextus goes immediately from *archai* (divided into material and active) to gods, discussing the material principles separately at *P.* 3.30–37. The link between a discussion of principles and one of gods recalls the relation between A 1.3 and A 1.6–7. The influence of Peripatetic and Stoic modes of organization is also conspicuous in Sextus *M.* Books 9 and 10, and *P.* 3.1–150, both devoted to a critical discussion of physics. His choice of topics is parallel to the themes of a select group of chapters of A Book 1. The order is not the same but similar. He begins *M.* 9.13–198 ~ *P.* 3.2–12 with the active cause, i.e. with issues concerned with the gods (cf. A 1.6–7), adding cause *per se* at *M.* 9.195–330 (which also includes other themes) ~ *P.* 9.13–29 (cf. A 1.11), and then, *M.* 9.360–365 (cf. *M.* 10. 228.234, 312–318) ~ *P.* 3.30–37, treats the material cause, i.e. the principles and elements (cf. A 1.2–3). At *M.* 10.310–318 (the prelude to Sextus' chapters on coming to be and passing away), we have a straightforward division in a rising sequence according to number from one to infinitely many, that is, according to the category of quantity ('elementorum ordine niti videtur' Diels, *DG* 93). Here the distinction is between 'qualified' (ἐκ ποιοῦ) and 'unqualified' (ἐξ ἀποιοῦ), so according to the category of quality, is an additional criterium for division. In relation to the former only the Stoics are mentioned. The infinitists are divided into those whose first principles are similar and those whose first principles are dissimilar (category of quality again) to what is generated. This text is capably discussed by Warren (2015) 368–372, and compared with *M.* 9.360–364.

At *M.* 9.360–364 (the prelude to the chapters 'On body') Sextus begins with a division between those who say the elements are 'corporeal' (σώματα) and those who say they are 'incorporeal' (ἀσώματα). As representatives of the latter category he *ad finem* lists only Pythagoras, the mathematicians, and Plato. The first category is represented by no less than twenty-two individuals from Pherecydes to Asclepiades in a more or less historical order; they are listed in a division according to number in a rising sequence. Eight name-labels are accompanied by the ethnicon, and two display a reference to a master-pupil relationship, while Empedocles 31B6 is quoted just as in ch. 1.3.19. Finally a similar but shorter list, dealing with the 'material principles' only (περὶ ὑλικῶν ἀρχῶν), is found at *P.* 3.30–33. The lists in ps.Galen *HPh* c. 18 and Sextus *P.* 3.30–32 plus *M.* 9.360–364 are placed in parallel columns and compared by Betegh (2015) 179–183, who agrees with Volkmann's correction of Diels' original hypothesis in his dissertation—which was that ps.Galen derives from Sextus—in favour of the assumption of a shared tradition, already accepted by Diels *DG*

246–248. Betegh has noticed (ibid. 182) that the elements are ordered according to number, and argues that where applicable they are arranged in order of relative weight.

Further parallels will be mentioned below at the chapters that are concerned, see (listed in a Sextusian order) at A 1.12, ‘On bodies’, 1.17 ‘On mixture and blending’, 1.23 ‘On motion’, 1.24 ‘On coming to be and passing away’, 1.19 ‘On place’, and 1.21 ‘On time’.

(5) *Parallels in the Stromateis*. The important and substantial series of excerpts from ps.Plutarch *Stromateis* preserved by Eusebius is not explicit about Succession, but at 1–3 lists the three Milesians after each other and at 4–8 the Eleatics Xenophanes, Parmenides and Zeno, after whom the (Eleatic) Atomists Democritus and Epicurus. All this is clear enough. At a first glance the lemma 9 on Aristippus’ ethical principle (brought along as offering a contrast with Epicurus’ hedonistic *telos*, also cited) and his famous proscription of physics is a surprising *Fremdkörper* in this physical doxography. But this reference may well constitute a zero-option contrasting with the positive physics of the others that are listed. It recalls the position of Socrates among the physicists at Aristotle *Met.* A.6 987b1–2; note that the line *Od.* 4.392 is often attributed to or connected with Socrates, e.g. Musonius *Diss.* 3.24, Sextus *M.* 7.21, 11.2, Diogenes Laertius *V.P.* 2.21, 6.103, so Aristippus indeed looks like his stand-in. For Socrates’ similar role in the Ionic Succession at §20 see section D(d) §20[142–143].

At *Strom.* 10–12 the list concludes with Empedocles, Metrodorus and Diogenes of Apollonia in a sequence without credible order. There is no way of telling what Eusebius may have omitted (as he did in P 1.3, where we do know).

For the relation of the *Stromateis* to T CAG 2.9–11 and 4.5–12 see above, sections A(5)(b)–(c).

(6) *Further parallels, mainly later*. The list of Ach c. 3, p. 9.10–10.17 (discussed M–R 2.127–128) is peculiar in beginning with Zeno and Epicurus and ending with Thales and Pherecydes with water as principle and Heraclitus with fire and the (here anonymous) partisans of earth, so is following an inverted chronological order (cited above at *Testes secundi*). True to the tract’s isagogic purpose it includes a quotation from Aratus. Calcidius in *Tim.* cc. 280–282 is even closer to Aristotle’s account in *Met.* A than Sextus’ first list; see Van Winden (1959) 71–74. The enormous list of Epiph. *Haer.* 3.505–509 (quite a mixed bag, at least for the first section) appears to be divided over Ionians, Italians and Eleatics. The lists in the commentaries of Servius in *Buc.* 6.31 and of ps.Valerius Probus on the same passage, rich in quotations, belong with the evidence of the *testes proximi*. Ps.Galen *HPh* c. 3 (only the beginning quoted at section E(a) below), a long and substantial chapter but again a mixed bag, mentions the three standard Successions and provides extensive information on the Ionic (including Stoics,

Academics, and Minor Socratics) and rather less on the Italic and Eleatic Successions. We need a new critical edition of this chapter (as of the other chapters not edited by Jas 2018), which was in part reordered and also interlarded with asterisks by Diels, who moreover, following Usener, condemned the lines *DG* 601.3–4 with their explicit references to Ἰταλιῶται and Ἑλαίαν.

Another late list is found in ch. 2 137–138 (according to the division into chapters of the translator of the Arabic text, Walbridge 2014) of *On the Elements According to the Opinion of Hippocrates*, the third work in the sixth cent. *Alexandrian Epitomes of Galen*. These *Epitomes* combine abstracts from Galen with comments and other ingredients. This very interesting chapter, too long to quote, deals with the disagreement about the elements in elaborate detail. Some say there is one element, others more than one, some of the monists say it moves, others that it does not. And so on, quite close to Sextus Empiricus *M.* 9.4–11, 9.359–364 and 10.310–318, and to the divisions one encounters at the beginning of commentaries on Aristotle's *Physics*, for which see Mansfeld (1989b) and Wiesner (1989).

An even later and most interesting representative of an overview according to number and, apparently, the distinction between corporeal and incorporeal, is the long and composite list of the polymath Barhebraeus (13th cent.), *Lamp of the Holy Things*, 2nd base introd., translated by Gottheil (1887), and by Bakoš (1930) 542–547, who adds some parallels. Most of the time the name-labels are accompanied by doxai. This list begins with the materialist monists Thales, Homer, Anaximenes (fr. 235 Wöhrle), Diogenes, Hippasus, Heraclitus and Theophrastus. It goes on with Xenophanes (fr. 331 Strobel–Wöhrle) (1 moving principle), Parmenides (1 unmoving principle but only in thought, and limited), Melissus (1 principle, unlimited). It then deals with (explicitly) the pluralists, first in descending order, namely Anaxagoras, Leucippus, Democritus, and Epicurus with infinitely many elements, and Empedocles with 4 plus Love and Strife, then Aristotle with 3 and the Stoics with 2 principles. Pythagoras follows (numbers, presumably as incorporeal principles), who in his turn is followed by a couple of Platonists: Atticus, who says Plato has 4 principles, whereas Plato in the *Timaeus* says 3 and once elsewhere only 2, then Proclus, Plotinus, Syrianus, and Longinus the teacher of Porphyry, who are merely mentioned and not discussed further. At the end we find Bardesanes (5 principles) and Mani (2 principles). Compare the doxography about the soul in Nemesius *NH* c. 2 (see below, chs. 4.2–3), where the Manichaeans are mentioned as well, just before Ammonius, Plotinus, and Numenius (p. 17.13–17). A similar doxography on the soul is found at *Lamp of the Holy Things*, 8th base introd., translated Bakoš (1948) 1–2; there the last authority to be mentioned is Gregory of Nyssa; see below, ch. 4.2, Commentary D(e) *ad finem*.

Individual Points

Chapter heading. Numerous parallel titles and headings with umbrella function found elsewhere could be enumerated, but a few instances have to suffice. Think, for instance, of the titles of Aristotle's *pragmateiai*, often quoted by himself, e.g. Περὶ οὐρανοῦ (cf. A 2.11), Περὶ γενέσεως καὶ φθοράς (cf. A 1.24), Περὶ φιλοσοφίας, Περὶ ῥητορικῆς, etc. The so-called second titles, viz. those ἀπὸ τοῦ πράγματος, 'pertaining to the subject', of Platonic dialogues and of numerous titles of Democritus' books in the œuvre catalogues of Thrasyllus are early. For Plato it is sufficient to cite as examples Diogenes Laertius *V.P.* 3.58 Παρμενίδης ἢ περὶ ἰδεῶν (cf. A 1.10) or *V.P.* 3.60 Τίμαιος ἢ περὶ φύσεως (cf. A 1.30); for Democritus *V.P.* 9.46 Περὶ αἰσθησίων (cf. A 4.8) and Περὶ χρόνων (cf. A 1.15). Callimachus already refers to the *Phaedo* by its second title alone (Πλάτωνος ἐν τῷ περὶ ψυχῆς / γράμμ(α), *Epigr.* 23.3–4 Pfeiffer; cf. Plutarch *An.Procr.* 1013D), and the contents of this dialogue are far from being limited to the soul's existence. Aristotle quite often refers to the treatise we know as his Περὶ ψυχῆς with this title (*Int.* 1.16a8–9, *GA* 2.3 736a37, etc.)—a work that deals with much more than the existence of the soul; actually, this existence is tacitly presupposed. In the same way he uses ἐν τοῖς Περὶ φύσεως to refer to the *Physics* and other physical treatises (*Met.* A.3 983a33–b1, *Met.* M.9 1086a23–24, etc.) with their multiplicities of contents. Philoponus, briefly describing the contents of the *Physics*, says that in Books 1–4 Aristotle deals with ὅλη εἶδος τόπος χρόνος, and in all of Books 5–8 with motion, 'because the account of motion is complicated, and has many implications' (*in Phys.* 2.16–18 ἐν δὲ τοῖς τελευταίοις τέτρασι (sc. διδάσκει) περὶ κινήσεως· ποικίλος γάρ ἐστιν ὁ περὶ κινήσεως λόγος, καὶ πολλὰ τούτῳ ἐστὶ τὰ παρακολουθήματα). P^B's own book title, Περὶ τῶν ἀρεσκόντων τοῖς φιλοσόφοις φυσικῶν δογμάτων, allows of course for much more than the existence *simpliciter* of the physical tenets. At ch. 1.25.4 below (chapter heading Περὶ ἀνάγκης) the theme of necessity (or Necessity) is said to have been treated by Leucippus in a treatise entitled Περὶ νοῦ. See also above, section A.

Regenbogen (1950) 1474–1475 mentions the popularity of the umbrella heading in scientific and scholarly literature. On this vocabulary also in Plato and Aristotle see e.g. Zamagni (2004) 88–97. On Aristotle's references to his own titles see further Bonitz 102a19–104a2, Goulet *DPhA* 1.424–431. As an embedded phrase in Aristotle ('eorum fit mentio quae proxime vel antecedunt vel sequuntur', Bonitz 95b33; examples also at Friderici (1911) 30–31), a formula of this nature is the predecessor or equivalent of the chapter heading, or book title, see M–R 2.1.48, 159–161, 162–163, 170, 202–204. The heading or title Περὶ ἀρχῶν itself is widely paralleled, see below, section E(b) Chapter heading. Unnumbered chapter headings of the umbrella type, followed by definitions (e.g. p. 106.4–6 Περὶ τόπου. τόπος ἐστὶ λόγος αὐξητικὸς ὁμολογουμένου πράγματος ἥτοι ἀμαρτήμα-

τος ἢ ἀνδραγαθήματος) are found in the *Progymnasmata* of Theon, probably to be dated to the first half of the first century CE.

§9 The attribution of a (Heraclitean or ps.Heraclitean) cosmic cycle to Hip-pasus perhaps helps understand the difficult lemma on the destruction and generation of the world according to Philolaus at ch. 2.5.3.

§11 In an edition of Xenophanes the line 21B27 DK should of course read ἐκ γαίης γὰρ πάντα καὶ εἰς γῆν πάντα τελευτᾷ as at Sextus Empiricus *M* 10.313, but we have here followed the reading ἐκ γῆς of T, and of the mss. of S and of Hippolytus *Ref.* 10.4 (where as we know he plagiarizes Sextus). The beginning and end of the line are epic idiom: for ἐκ γαίης at the beginning cf. Hom. *Il.* 10.303 and Hes. *Th.* 725, for πάντα τελευτᾷ at the end cf. Hom. *Il.* 18.328 and 19.90. But note that in Xenophanes' line the verb is intransitive with πάντα as subject, in Homer transitive with πάντα as object.

E Further Related Texts

a Proximate Tradition

General texts: Cicero *Luc.* 117–118 (Diels *DG* 119–121) *non persequor quaestiones infinitas* ('theoretical', or 'abstract' issues are not Lucullus' turf, but he makes an exception here); *tantum de principiis rerum e quibus omnia constant videamus quem probet; est enim inter magnos homines summa dissensio.* (118) *princeps Thales* (fr. 71 Wöhrlé) *unus e septem, cui sex reliquos concessisse primas ferunt, ex aqua dixit constare omnia* (~ §1). *at hoc Anaximandro* (12A13 DK) *populari et sodali suo non persuasit; is enim infinitatem naturae dixit esse e qua omnia gignerentur* (~ §2). *post eius auditor Anaximenes* (13A9 DK) *infinitum aëra, sed ea quae ex eo orerentur definita; gigni autem terram aquam ignem, tum ex iis omnia* (~ §3). *Anaxagoras* (59A49 DK) *materiam infinitam, sed ex ea particulas similes inter se minutas, eas primum confusas postea in ordinem adductas mente divina* (~ §4). *Xenophanes* (21A4, A34 DK) *paulo etiam antiquior, unum esse omnia neque id esse mutabile, et id esse deum, neque natum umquam et sempiternum, conglobata figura* (~ §10). *Parmenides* (28A35 DK) *ignem qui moveat, terram quae ab eo formetur. Leucippus* (67A8 DK) *plenum et inane* (~ §13). *Democritus* (67A8 DK) *huic in hoc similis, uberior in ceteris* (~ §16). *Empedocles* (—) *haec pervulgata et nota quattuor* (~ §18). *Heraclitus* (T 304 Mouraviev) *ignem* (~ §9). *Melissus* (30A9 DK) *hoc quod esset infinitum et inmutabile et fuisse semper et fore* (~ Tiii). *Plato ex materia in se omnia recipiente mundum factum esse censet a deo sempiternum* (~ §20). *Pythagorei* (—) *e numeris et mathematicorum initiis proficisci volunt omnia* (~ §7). *Div.* 2.11 *quae sint initia rerum, ex quibus nascuntur omnia: physicorum est ista prudentia. Lucretius DRN* (1.635–691) *quapropter qui materiem rerum esse putarunt / ignem atque ex igni summam consistere solo, / magno opere a vera lapsi ratione videntur.* / *Heraclitus* (T 312 Mouraviev) *init quorum dux proelia primus. ... (645) nam cur tam variae res possent esse, requiro, / ex uno si sunt igni puroque creatae? / nil prodesset enim calidum denserier ignem / nec*

rare fieri. ... / (665) quod si forte alia credunt ratione potesse / ignis in coetu stinguere mutareque corpus ... / (690) dicere porro ignem res omnis esse neque ullam / rem veram in numero rerum constare nisi ignem. DRN 1.712–772 adde etiam qui conduplicant primordia rerum / aëra iungentes igni terramque liquori, / et qui quattuor ex rebus posse omnia rentur / ex igni terra atque anima procrecere et imbri. / quorum Acragantinus cum primis Empedocles (31A21 DK) est. ... / (763) denique quattuor ex rebus si cuncta creantur / atque in eas rursum res omnia dissolvuntur. ... / (770) sin ita forte putas ignis terraeque coire / corpus et aërias auras roremque liquoris, / nil in concilio naturam ut mutet eorum. DRN 1.830–842 nunc et Anaxagorae (59A44 DK) scrutemur homoeomerian / quam Grai memorant nec nostra dicere lingua / concedit nobis patrii sermonis egestas, / sed tamen ipsam rem facilest exponere verbis. / principio, rerum quam dicit homoeomerian, / ossa videlicet e pauxillis atque minutis / ossibus hic et de pauxillis atque minutis / visceribus viscus gigni sanguenque creari / sanguinis inter se multis coeuntibus guttis / ex aurique putat micis consistere posse / aurum et de terris terram con crescere parvis, / ignibus ex ignis, umorem umoribus esse, / cetera consimili fingit ratione putatque. Vitruvius 2.2.1 Thales (fr. 85 Wöhrle) primum aquam putavit omnium rerum esse principium (~ §1); Heraclitus Ephesius (T 322 Mouraviev), qui propter obscuritatem scriptorum a Graecis σκοτεινός est appellatus, ignem (~ §9); Democritus (—) quique est eum secutus Epicurus (—) atomos, quas nostri insecabilia corpora, nonnulli individua vocitaverunt (~ §14, §16); Pythagoreorum (—) vero disciplina adiecit ad aquam et ignem aëra et terrenum (~ §19). ergo Democritus, etsi non proprie res nominavit sed tantum individua corpora proposuit, ideo ea ipsa dixisse videtur, quod ea, cum sint disiuncta, nec laeduntur nec interitionem recipiunt nec sectionibus dividuntur, sed sempiterno aevo perpetuo infinitam retinent in se soliditatem.

(7) ὁ δὲ Ἀριστοτέλης (*Met.* A.3 984b18–31 where the fragments of Hesiod and Parmenides are also cited) καὶ Ἐρμότιμόν φησι τὸν Κλαζομένιον καὶ Παρμενίδην τὸν Ἐλεάτην καὶ πολὺ πρότερον τὸν Ἡσίοδον ταῦτα φρονεῖν κατασκευάζοντες γὰρ τὴν τῶν ὅλων γένεσιν ἔρωτα συμπαρέλαβον, τουτέστι τὴν κινητικὴν καὶ συναγωγὸν τῶν ὄντων αἰτίαν, (8) ὁ μὲν Ἡσίοδος λέγων (*Th.* 116–117 + 120) ‘ἦτοι μὲν πρῶτιστα χάος γένετ’, αὐτὰρ ἔπειτα / γαῖ’ εὐρύστερνος, πάντων ἔδος ἀσφαλὲς αἰεὶ, / ... / ἡδ’ ἔρος, ὃς κάλλιστος ἐν ἀθανάτοισι θεοῖσιν’, (9) ὁ δὲ Παρμενίδης (28B13 DK) ῥητῶς ἀποφηνάμενος ‘πρῶτιστον μὲν ἔρωτα θεὸν μητίσατο πάντων’. (10) δόξαι δ’ ἂν, ὡς προεῖπον, καὶ ὁ Ἐμπεδοκλῆς τοιοῦτος εἶναι· σὺν γὰρ τοῖς τέσσαρσι στοιχείοις τὸ Νεῖκος καὶ τὴν Φιλίαν καταριθμεῖται, τὴν μὲν Φιλίαν ὡς συναγωγὸν αἰτίαν, τὸ δὲ Νεῖκος ὡς διαλυτικὴν· ‘πῦρ’ γὰρ φησι (31B17.18–20 DK) ‘καὶ ὕδωρ καὶ γαῖα καὶ ἡέρος ἥπιον ὕψος, / Νεῖκός τ’ οὐλόμενον δίχα τῶν, ἀτάλαντον ἀπάντη, / καὶ Φιλότης μετὰ τοῖσιν, ἴση μῆκός τε πλάτος τε’. (11) οὐ μὴν ἀλλὰ καὶ οἱ ἀπὸ τῆς Στοᾶς (*SVF* 2.301) δύο λέγοντες ἀρχάς, θεὸν καὶ ἄποιον ὕλην, τὸν μὲν θεὸν ποιεῖν ὑπειλίφασιν, τὴν δὲ ὕλην πάσχειν τε καὶ τρέπεσθαι. *M.* 9.359–364 περὶ τῶν ἀνωτάτων καὶ ἀρχικωτάτων στοιχείων δύο μὲν αἱ πρῶται γεγόνασιν στάσεις, πλείους δὲ κατ’ εἶδος. οἱ μὲν γὰρ σώματα ἔλεξαν εἶναι τὰ τῶν ὄντων στοιχεῖα, οἱ δὲ ἀσώματα. (360) καὶ τῶν σώματα φαμένων Φερεκύδης μὲν ὁ Σύριος (*Schibli* p. 179) γῆν ἔλεξε πάντων εἶναι ἀρχὴν καὶ στοιχεῖον, Θαλῆς δὲ ὁ Μιλήσιος (*fr.* 143 *Wöhrlé*) ὕδωρ, Ἀναξίμανδρος (*fr.* 51 *Wöhrlé*) δὲ ὁ ἀκουστής τούτου τὸ ἄπειρον, Ἀναξίμένης (*fr.* 30 *Wöhrlé*) δὲ καὶ Ἰδαῖος ὁ Ἱμεραῖος (63 DK) καὶ Διογένης ὁ Ἀπολλωνιάτης (—) καὶ Ἀρχέλαος ὁ Ἀθηναῖος (60A7 DK), Σωκράτους δὲ καθηγητῆς, καὶ κατ’ ἐνίους Ἡράκλειτος (*T* 696 *Mouraviev*) ἀέρα, Ἰππασος δὲ ὁ Μεταποντίνος καὶ κατ’ ἐνίους Ἡράκλειτος (*T* 696 *Mouraviev*) πῦρ, (361) Ξενοφάνης δὲ ὕδωρ καὶ γῆν, ‘πάντες γὰρ γαῖης τε καὶ ὕδατος ἐκγενόμεσθα’ (21B33 DK), Ἰππῶν δὲ ὁ Πηγίνος (38A5DK) πῦρ καὶ ὕδωρ, Οἰνοπίδης δὲ ὁ Χίος (—) πῦρ καὶ ἀέρα, Ὀνομάκριτος (*Orph.* 108I *Bernabé*) δὲ ἐν τοῖς Ὀρφικοῖς πῦρ καὶ ὕδωρ καὶ γῆν, (362) οἱ δὲ περὶ τὸν Ἐμπεδοκλέα (31B6 DK) καὶ οἱ ἀπὸ τῆς Στοᾶς (—) γῆν καὶ ὕδωρ καὶ ἀέρα καὶ πῦρ, ‘τέσσαρα γὰρ πάντων ριζώματα πρῶτον ἄκουε· / Ζεὺς ἀργῆς Ἥρη τε φερέσβιος ἡδ’ Αἰδωνεύς / Νῆστis θ’, ἡ δακρύοις τέγγει κρούνωμα βρότειον’, (363) Δημόκριτος (68A55 DK) δὲ καὶ Ἐπίκουρος (—) ἀτόμους, εἰ μὴ τι ἀρχαιοτέραν ταύτην θετέον τὴν δόξαν καί, ὡς ἔλεγεν ὁ Στωικὸς Ποσειδώνιος (*F* 286 E.-K., 57b *Theiler*), ἀπὸ Μῶχου τινὸς ἀνδρὸς Φοίνικος καταγομένην, Ἀναξαγόρας δὲ ὁ Κλαζομένιος (—) ὁμοιομερείας, Διόδωρος δὲ ὁ ἐπικληθεὶς Κρόνος (*fr.* 117D *Döring*, II *F* 8 *Giannantonio*) ἐλάχιστα καὶ ἀμερῆ σώματα, Ἀσκληπιάδης δὲ ὁ Βιθυνὸς (cf. *Vallance ANRW* 2.37.1, p. 726) ἀνάρμους ὄγκους. (364) τῶν δὲ ἀσώματα δογματιζόντων οἱ μὲν περὶ Πυθαγόραν (—) τοὺς ἀριθμοὺς ἔλεξαν πάντων ἀρχεῖν, οἱ δὲ μαθηματικοὶ τὰ πέρατα τῶν σωματῶν, οἱ δὲ περὶ τὸν Πλάτωνα τὰς ιδέας. (365) τοιαύτης δὲ οὕσης τῆς κατὰ γένος καὶ κατ’ εἶδος

τῶν φυσικῶν διαστάσεως, ἐνέσται πρὸς πάντας κοινῶς ἀντερεῖν. *M.* 10.310–318 (quoted without naming Sextus in Hippol. *Ref.* 10.6.2–7.6) τῶν σκεψαμένων περὶ τῆς τοῦ παντὸς συστάσεως οἱ μὲν ἐξ ἐνὸς ἐγέννησαν τὰ πάντα, οἱ δ' ἐκ πλειόνων, καὶ (311) τῶν ἐξ ἐνὸς οἱ μὲν ἐξ ἀποίου, οἱ δὲ ἐκ ποιοῦ, καὶ τῶν ἐκ ποιοῦ οἱ μὲν ἐκ πυρὸς, οἱ δ' (ἐξ) ἀέρος, οἱ δ' ἐξ ὕδατος, ἄλλοι ἐκ γῆς, καὶ τῶν ἐκ πλειόνων οἱ μὲν (ἐξ) ἀριθμητῶν, οἱ δ' ἐξ ἀπείρων, καὶ τῶν ἐξ ἀριθμητῶν οἱ μὲν ἐκ δύο, οἱ δ' ἐκ τεσσάρων, οἱ δ' ἐκ πέντε, οἱ δ' ἐξ ἑξ, καὶ τῶν ἐξ ἀπείρων οἱ μὲν ἐξ ὁμοίων τοῖς γεννωμένοις, οἱ δὲ ἐξ ἀνομοίων, καὶ τούτων οἱ μὲν ἐξ ἀπαθῶν, οἱ δ' ἐκ παθητῶν. (312) ἐξ ἀποίου μὲν οὖν καὶ ἐνὸς σώματος τὴν τῶν ὅλων ὑπεστήσαντο γένεσιν οἱ Στωικοὶ (*SVF* 2.309)· ἀρχὴ γάρ τῶν ὄντων κατ' αὐτοὺς ἐστὶν ἡ ἀποῖος ὕλη καὶ δι' ὅλων τρεπτή, μεταβαλλούσης τε ταύτης γίνεται τὰ τέσσαρα στοιχεῖα, πῦρ καὶ ἀήρ, ὕδωρ καὶ γῆ. (313) ἐξ ἐνὸς δὲ καὶ ποιοῦ γεγενῆσθαι τὰ πάντα θέλουσιν οἱ τε περὶ τὸν Ἰππασσον (—) καὶ Ἀναξίμενη (fr. 33 Wöhrle) καὶ Θαλῆ (fr. 144 Wöhrle), ὧν Ἰππασσος μὲν καὶ κατὰ τινας Ἡράκλειτος ὁ Ἐφέσιος (*T* 697 Mouraviev) ἐκ πυρὸς ἀπέλιπον τὴν γένεσιν, Ἀναξίμενης δὲ ἐξ ἀέρος (fr. 33 Wöhrle), Θαλῆς δὲ ἐξ ὕδατος (fr. 144 Wöhrle), Ξενοφάνης (—) δὲ κατ' ἐνίους ἐκ γῆς· ἐκ γαίης γάρ πάντα, καὶ εἰς γῆν πάντα τελευτᾷ' (21B27 DK). (314) ἐκ πλειόνων δὲ καὶ ἀριθμητῶν, δυεῖν μὲν, γῆς τε καὶ ὕδατος, ὁ ποιητὴς Ὅμηρος, ὅτε μὲν λέγων (*Il.* 14.201) Ὠκεανόν τε, θεῶν γένεσιν, καὶ μητέρα Τηθύν, ὅτε δὲ (*Il.* 7.99) ἄλλ' ὑμεῖς μὲν πάντες ὕδωρ καὶ γαῖα γένοισθε'. συμφέρεσθαι δ' αὐτῷ δοκεῖ κατ' ἐνίους καὶ ὁ Κολοφώνιος Ξενοφάνης· φησὶ γάρ (21B33 DK)· πάντες γάρ γαίης τε καὶ ὕδατος ἐκγενόμεσθα'. (315) ἐκ γῆς δὲ καὶ αἰθέρος Εὐριπίδης, ὡς πάρεστιν ἐκδέξασθαι ἐκ τοῦ λέγειν αὐτόν (*Antigone* fr. 1023 N², 182a Kannicht) Ἀιθέρα καὶ Γαίαν πάντων γενέτειραν αἰεῖδω'. ἐκ τεσσάρων δὲ ὁ Ἐμπεδοκλῆς (31B6 DK)· τέσσαρα γάρ πάντων ριζώματα πρῶτον ἄκουε· / Ζεὺς ἀργῆς Ἥρῃ τε φερέσβιος ἡ δ' Αἰδωνεύς / Νηστῆς θ', ἡ δακρύοις τέγγει κρούνωμα βρότειον'. (316) ἐκ πέντε δὲ Ὀκελος ὁ Λευκανὸς (48.3a DK) καὶ Ἀριστοτέλης· συμπάρελαβον γάρ τοῖς τέσσαρσι στοιχείοις τὸ πέμπτον καὶ κυκλοφορητικὸν σῶμα, ἐξ οὗ λέγουσιν εἶναι τὰ οὐράνια. (317) ἐκ δὲ τῶν ἐξ τὴν πάντων ὑπέθεντο γένεσιν οἱ περὶ τὸν Ἐμπεδοκλέα. ἐν οἷς μὲν γάρ λέγει (31B6.1 DK) τέσσαρα τῶν πάντων ριζώματα' ἐκ τεσσάρων ποιεῖ τὴν γένεσιν· ὅταν δὲ προσθῇ (31B17.19–20 DK) Νεῖκος τ' οὐλόμενον δίχα τῶν, ἀτάλαντον ἀπάντη, / καὶ Φιλίη μετὰ τοῖσιν, ἴση μῆκος τε πλάτος τε', ἐξ παραδίδωσι τὰς τῶν ὄντων ἀρχάς, τέσσαρας μὲν τὰς ὕλικάς, γῆν ὕδωρ ἀέρα πῦρ, δύο δὲ τὰς δραστηρίους, Φιλίαν καὶ Νεῖκος. (318) ἐξ ἀπείρων δ' ἐδόξασαν τὴν τῶν πραγμάτων γένεσιν οἱ περὶ Ἀναξαγόραν τὸν Κλαζομένιον (—) καὶ Δημόκριτον (—) καὶ Ἐπίκουρον (—) καὶ ἄλλοι παμπληθεῖς, ἀλλ' ὁ μὲν Ἀναξαγόρας ἐξ ὁμοίων τοῖς γεννωμένοις, οἱ δὲ περὶ τὸν Δημόκριτον καὶ Ἐπίκουρον ἐξ ἀνομοίων τε καὶ ἀπαθῶν, τουτέστι τῶν ἀτόμων, οἱ δὲ περὶ τὸν Ποντικὸν Ἡρακλείδην (fr. 120 Wehrli, 61 Schütrumpf) καὶ Ἀσκληπιάδην (cf. Vallance *ANRW* 2.37.1, p. 726) ἐξ ἀνομοίων μὲν, παθητῶν δὲ, καθάπερ τῶν ἀνάρμων ὄγκων. *P.* 3.30–32 ζ' Περὶ ὕλικῶν ἀρχῶν. (30) ... συντόμως δὲ καὶ περὶ τῶν ὕλικῶν καλουμένων ἀρχῶν λεκτέον. ὅτι τοίνυν αὐταῖ εἰσὶν ἀκατάληπτοι, ῥᾶδιον συνιδεῖν ἐκ τῆς περὶ αὐτῶν γεγενημένης διαφωνίας παρὰ τοῖς δογματικοῖς. Φερεκύδης μὲν γάρ ὁ Σύριος (fr. 77 Schibli) γῆν εἶπε τὴν πάντων εἶναι ἀρχήν, Θαλῆς δὲ ὁ Μιλήσιος (fr. 140 Wöhrle) ὕδωρ, Ἀναξίμανδρος δὲ ὁ ἀκουστής τούτου (fr. 49 Wöhrle) τὸ ἄπειρον, Ἀναξίμενης (fr. 30 Wöhrle) δὲ καὶ Διογένης ὁ Ἀπολλωνιάτης

(—) ἀέρα, Ἰππασος δὲ ὁ Μεταποντίνος (—) πῦρ, Ξενοφάνης δὲ ὁ Κολοφώνιος (—) γῆν καὶ ὕδωρ, Οἰνοπίδης δὲ ὁ Χίος (41.5 DK) πῦρ καὶ ἀέρα, Ἰππων δὲ ὁ Ῥηγίνος (38.1 DK) πῦρ καὶ ὕδωρ, Ὀνομάκριτος δὲ ἐν τοῖς Ὀρφικοῖς (*Orph.* 108I Bernabé) πῦρ καὶ ὕδωρ καὶ γῆν, (31) οἱ δὲ περὶ τὸν Ἐμπεδοκλέα (—) καὶ τοὺς Στωικοὺς (—) πῦρ ἀέρα ὕδωρ γῆν—περὶ γὰρ τῆς τερατολογουμένης ἀποίου παρὰ τισιν ὕλης, ἣν οὐδὲ αὐτοὶ καταλαμβάνειν διαβιβάζονται, τί δεῖ καὶ λέγειν; οἱ δὲ περὶ Ἀριστοτέλην τὸν Περιπατητικὸν (—) πῦρ ἀέρα ὕδωρ γῆν τὸ κυκλοφορητικὸν σῶμα, (32) Δημόκριτος (cf. fr. 124 Luria) δὲ καὶ Ἐπίκουρος (—) ἀτόμους, Ἀναξαγόρας δὲ ὁ Κλαζομένιος (—) ὁμοιομερείας, Διόδωρος δὲ ὁ ἐπικληθεὶς Κρόνος (fr. 117C Döring, II F 8 Giannantoni) ἐλάχιστα καὶ ἀμερῆ σώματα, Ἡρακλείδης δὲ ὁ Ποντικός (fr. 119b Wehrli, 60B Schütrumpf) καὶ Ἀσκληπιάδης ὁ Βιθυνὸς (cf. Vallance *ANRW* 2.37.1, p. 726) ἀνάρμους ὄγκους, οἱ δὲ περὶ Πυθαγόραν (—) τοὺς ἀριθμούς, οἱ δὲ μαθηματικοὶ τὰ πέρατα τῶν σωμάτων, Στράτων δὲ ὁ φυσικός (fr. 43 Wehrli, 45B Sharples) τὰς ποιότητας. **ps.Galen** *Hph* c. 18, *DG* pp. 610.8–611.3 καὶ περὶ μὲν τῆς δραστηκῆς αἰτίας ἐπὶ τοσούτον. διεξελεῖν δ' ἂν εἴη καιρὸς καὶ περὶ τῆς ὕλικῆς. οἱ φυσικοὶ περὶ ταύτης εἰπόντες εἶναι μὲν ἀρχὴν ὕλικήν ἅπαντες ὁμοίως δεδώκασι, οὐ μὴν ἅπαντες εἶναι τὴν αὐτήν. ἀλλὰ Φερεκύδης μὲν ὁ Ἀσσύριος [read Σύρος] γῆν εἶναι ταύτην ἐνόμισε, Θαλῆς (fr. 392 Wöhrlé) δὲ ὕδωρ, Ἀναξίμανδρος (fr. 219 Wöhrlé) δὲ τὸ ἀπειρον, Ἀναξίμενης (fr. 178 Wöhrlé) δὲ καὶ Διογένης ὁ Ἀπολλωνιάτης (—) ἀέρα, πῦρ δὲ Ἰππασος ὁ Μεταποντίνος (—), Ξενοφάνης δ' ὁ Κολοφώνιος (fr. 92 Strobel-Wöhrlé) γῆν καὶ ὕδωρ. Ἰππων δὲ ὁ Ῥηγίνος (—) πῦρ καὶ ὕδωρ, Οἰνοπίδης δὲ ὁ Χίος (see fr. 5 Boddinar) πῦρ καὶ ἀέρα, Ὀνομάκριτος (see 1A1, *VS* p. 1.10 in app.) δὲ ἐν τοῖς Ὀρφικοῖς (108 F ii, 1114 F i Bernabé) γῆν καὶ πῦρ καὶ ὕδωρ, οἱ Στωικοὶ (—) δὲ τέσσαρα στοιχεῖα γῆν καὶ πῦρ καὶ ὕδωρ καὶ ἀέρα, Ἀριστοτέλης (—) δὲ τούτοις προσέθηκε καὶ τὸ κυκλοφορητικὸν σῶμα. Ἐμπεδοκλῆς (—) δὲ τέτταρσι στοιχείοις προσήγαγε Φιλίαν καὶ Νεῖκος, τῶν μὲν τεσσάρων στοιχείων ὕλικῶν ὄντων (καὶ) τῆς Φιλίας ταῦτα συγκρινούσης, τοῦ δὲ Νείκους διαλύοντος καὶ διακρίνοντος· Δημόκριτος (fr. 124 Luria) δὲ καὶ Ἐπίκουρος (—) τὰς ἀτόμους ἀρχὰς πάντων νομίζουσιν, Ἡρακλείδης δὲ ὁ Ποντικός (fr. 119a Wehrli, 60A Schütrumpf) καὶ Ἀσκληπιάδης ὁ Βιθυνὸς (cf. Vallance *ANRW* 2.37.1, p. 721) ἀνάρμους ὄγκους τὰς ἀρχὰς ὑποτίθενται τῶν ὄλων, Ἀναξαγόρας δὲ ὁ Κλαζομένιος (—) τὰς ὁμοιομερείας, Διόδωρος δὲ ὁ Κρόνος (fr. 117 Döring, II F 8 Giannantoni) ἐπικεκλημένος ἀμερῆ καὶ ἐλάχιστα σώματα, Πυθαγόρας (—) δὲ τοὺς ἀριθμούς, οἱ μαθηματικοὶ (—) δὲ τὰ πέρατα τῶν σωμάτων, Στράτων (fr. 42 Wehrli, 45A Sharples) δὲ ὁ φυσικός προσωνομασμένος τὰς ποιότητας.

Clement of Alexandria *Strom.* 1.11.52.4 στοιχεῖα δὲ σέβουσι Διογένης (—) μὲν τὸν ἀέρα, Θαλῆς (fr. 198 Wöhrlé) δὲ τὸ ὕδωρ, Ἰππασος (—) δὲ τὸ πῦρ, καὶ οἱ τὰς ἀτόμους ἀρχὰς ὑποτιθέμενοι (—), φιλοσοφίας ὄνομα ὑποδυόμενοι, ἄθεοι τινες ἀνθρωπίσκοι καὶ φιλήδονοι. *Strom.* 1.62.1–64.5 φιλοσοφίας τοῖνυν μετὰ τοὺς προειρημένους ἄνδρας (sc. the seven sages) τρεῖς γεγόνασι διαδοχαὶ ἐπάνωμι τῶν τόπων περὶ οὓς διέτριψαν, Ἰταλικὴ μὲν ἢ ἀπὸ Πυθαγόρου, Ἰωνικὴ δὲ ἢ ἀπὸ Θαλοῦ, Ἑλεατικὴ δὲ ἢ ἀπὸ Ξενοφάνους κτλ. **Eusebius** *PE* 1.7.16 (introducing ps.Plut. *Strom.*) τούτῳ (sc. συντυχητὴν δὲ τινα καὶ αὐτόματον εἶναι τὴν τοῦ παντὸς διακόσμησιν) δ' ἂν εὖροις συμφώνους καὶ τοὺς πλείστους τῶν παρ' Ἑλλήσι φιλοσόφων, ὧν ἐγὼ σοι τὰς περὶ ἀρχῶν δόξας καὶ τὰς πρὸς ἀλλήλους διαστάσεις καὶ διαφωνίας, ἐκ στοχασμῶν ἄλλ' οὐκ ἀπὸ καταλήψεως ὀρμηθείσας, ἀπὸ τῶν Πλουτάρχου Στρωματέων ἐπὶ τοῦ παρόν-

τος ἐκθήσομαι. *PE* 10.14.9–14 Θαλῆς ὁ Μιλήσιος (fr. 265 Wöhrle) φυσικὸς πρῶτος Ἑλλήνων γεγωνὸς περὶ τροπῶν ἡλίου καὶ ἐκλείψεως καὶ φωτισμῶν σελήνης καὶ ἰσημερίας διελέχθη· ἐγένετο δ' ὁ ἀνὴρ ἐπιστημώτατος ἐν τοῖς Ἑλλήσι. Θάλεω δὲ γίνεται ἀκουστικὸς Ἀναξίμανδρος (fr. 102 Wöhrle), Πραξιάδου μὲν παῖς, γένος δὲ καὶ αὐτὸς Μιλήσιος. οὗτος πρῶτος γνῶμονας κατεσκεύασε πρὸς διάγνωσιν τροπῶν τε ἡλίου καὶ χρόνων καὶ ὥρων καὶ ἰσημερίας. Ἀναξίμανδρου δὲ γνώριμος ἐγένετο Ἀναξίμενης Εὐρυστράτου Μιλήσιος (fr. 85 Wöhrle)· τούτου δὲ Ἀναξαγόρας Ἡγησιβούλου Κλαζομένιος (see below, §4). ... Ἀναξαγόρου δὲ ἐγένοντο γνώριμοι τρεῖς, Περικλῆς, Ἀρχέλαος, Εὐριπίδης· ὁ δὲ Ἀρχέλαος (—) ἐν Λαμψάκῳ διεδέξατο τὴν σχολὴν τοῦ Ἀναξαγόρου, μεταβάς δ' εἰς Ἀθήνας ἐκεῖ ἐσχόλασε καὶ πολλοὺς ἔσχεν Ἀθηναίων γνωρίμους, ἐν οἷς καὶ Σωκράτην. *PE* 14.3.7–9 (cited Diels *DG* 169) ὁ δὲ Δημόκριτος (—) ἀρχὰς τῶν ὄλων ἔφη εἶναι τὸ κενὸν καὶ τὸ πλήρες· τὸ πλήρες δὲ λέγων καὶ στερεόν, τὸ δὲ κενὸν μὴ ὄν. ... ὁ δὲ Ἡράκλειτος (T 844 Mouraviev) ἀρχὴν τῶν πάντων ἔφη εἶναι τὸ πῦρ, ἐξ οὗ τὰ πάντα γίνεται καὶ εἰς ὃ ἀναλύεται. ἀμοιβὴν γὰρ εἶναι τὰ πάντα χρόνον τε ὥρισθαι τῆς τῶν πάντων εἰς τὸ πῦρ ἀναλύσεως καὶ τῆς ἐκ τούτου γενέσεως. οἷδε μὲν οὖν πάντα κινεῖσθαι ἔφασαν. ὁ δὲ Παρμενίδης (—), τὸ γένος Ἑλεάτης ὢν, ἐν μὲν εἶναι τὸ πᾶν, ἀγέννητον δὲ καὶ ἀκίνητον καὶ κατὰ σχῆμα σφαιροειδὲς ὑπάρχειν ἐδογματίζε. Παρμενίδου δὲ Μέλισσος (—) ἐταίρος γέγονε, τὰ αὐτὰ τῷ Παρμενίδῃ δοξάζων. *Protr.* 66.1 (cited Diels *DG* 129) τῶν δὲ ἄλλων φιλοσόφων ὅσοι τὰ στοιχεῖα ὑπερβάντες ἐπολυπραγμόνησάν τι ὑψηλότερον καὶ περιττότερον, οἱ μὲν αὐτῶν τὸ ἄπειρον καθύμνησαν, ὡς Ἀναξίμανδρος (Μιλήσιος ἦν) (fr. 72 Wöhrle) καὶ Ἀναξαγόρας ὁ Κλαζομένιος (60A11 DK) καὶ ὁ Ἀθηναῖος Ἀρχέλαος (—). τούτῳ μὲν γε ἄμφω τὸν νοῦν ἐπεστησάτην τῇ ἀπειρίᾳ, ὁ δὲ Μιλήσιος Λεύκιππος (cf. 67A12 DK) καὶ ὁ Χῖος Μητροδῶρος (cf. 70A3 DK) διττάς, ὡς ἔοικεν, καὶ αὐτῷ ἀρχὰς ἀπειλίπτην τὸ πλήρες καὶ τὸ κενόν.

ps.Galen *Hph* c. 3, *DG* pp. 598.226–601.18 ἔστι τοίνυν ὁ πρῶτος ὑπὸ τῶν πλείστων ὑπειλημμένος τὸν φιλόσοφον τρόπον εἰς τοὺς Ἰωνας ὑπειλημμένους Θαλῆς ὁ Μιλήσιος (fr. 391 Wöhrle), δι' ὃν καὶ τὴν κατ' ἐκείνον φιλοσοφίαν Ἰωνικὴν ἄπαντες ὀνομάζουσιν (~ §1). τούτου δὲ γνώριμος Ἀναξίμανδρος (fr. 218 Wöhrle) γεγωνὸς ὁμοίως φιλοσοφῶν γέγονε (~ §2) καὶ τὸν Ἀναξίμενην (fr. 177 Wöhrle) μετὰ ταῦτα ζηλωτὴν εἶναι (~ §3) τῆς αὐτοῦ προαιρέσεως πεπονηκῶς Ἀναξαγόρου (—) καθηγητὴν γενέσθαι (~ §4) παρεσκεύασεν. οὗτος δὲ τὴν Μίλητον ἀπολελοιπὼς ἦκεν εἰς τὰς Ἀθήνας καὶ Ἀρχέλαον τὸν Ἀθηναῖον (—) (~ §5) πρῶτον εἰς φιλοσοφίαν παρῶρμησεν. ... Λεύκιππος ὁ Ἀβδηρίτης (—) ... τὴν τῶν ἀτόμων εὐρεσιν ἐπινενόηκε πρῶτος (~ §13)· Δημόκριτος (fr. 152 Luria) δὲ παρ' αὐτοῦ τὸ δόγμα παρειληφώς (~ §14). κτλ. *Hph* c. 18 see above p. 276.

Arnobius of Sicca *Adv.Nat.* 2.9–10, pp. 74.25–75.19 (cited Diels *DG* 172–173) *qui cunctarum rerum originem ignem esse dicit aut aquam, non Thaleti* (fr. 259 Wöhrle) *aut Heraclito* (T 684 Mouraviev) *credit? qui causam in numeris ponit, non Pythagorae Samio* (—), *non Archytae* (—)? *qui animam dividit et incorporales constituit formas, non Platoni Socratico? qui quintum elementum principalibus adplicat causis, non Aristoteli Peripateticorum patri? qui ignem minatur mundo, et venerit cum tempus arsurum, non Panaetio* (T 135 Alesse) *Chrysippo* (—) *Zenoni* (SVF 1.107)? *qui individuus corporibus mundos semper fabricatur et destruit, non Epicuro* (—) *Democrito* (—) *Metrodoro* (—)?

qui nihil ab homine comprehendi (autumat) atque omnia caecis obscuritatibus involuta, non Arcesilae (F 14a Mette), Carneadi (F 13c Mette), non alicui denique Academiae veteris recentiorisque cultori? ... ipsi demus principes et praedictarum patres sententiarum, nonne ea quae dicunt suis credita suspicionibus dicunt? vidit enim Heraclitus res ignium conversionibus fieri, concretionem aquarum Thales, Pythagoras (—) numeros coire, incorporeales formas Plato, individuorum Democritus concursiones? Adv.Nat. 2.56, pp. 130.24–131.7 eundem hunc (sc. mundum) alii elementis ex quatuor tradunt et pronuntiant stare, ex geminis alii, ex singulis tertii, sunt qui ex his nullo set individua corpora eius esse materiem et primam originem dicant. cumque ex his vera sit una sententia, at nulla ex his certa, similiter hic quoque argumenta omnibus praesto sunt, quibus et ea quae dicunt vera esse constituent et redarguant positas in aliorum sententiis falsitates.

Themistius Or. 26.317A–C Θαλής (fr. 300 Wöhrle) δὲ ὕστερον καὶ πρὸς γῆρα φύσεώς τε ἤψατο πρῶτος καὶ ἀνέβλειψεν εἰς τὸν οὐρανὸν καὶ τὰ ἄστρα ἐξήτασε, καὶ προεφήτευσεν ἐν κοινῷ ἅπασι Μιλησίοις ὅτι νῦξ ἔσοιτο ἐν ἡμέρᾳ καὶ δύσεται ἄνω ὁ ἥλιος καὶ ὑποθεύσεται αὐτὸν ἢ σελήνη, ὥστε ἀποτέμενεσθαι τὴν αὐγὴν καὶ τὰς ἀκτῖνας. Θαλῆς μὲν δὴ τοσαῦτα εἰσενεγκάμενος οὐ κατέθετο ὅμως εἰς συγγραφὴν τὰ εὐρήματα, οὔτε αὐτὸς ὁ Θαλῆς οὔτε ἄλλος τις τῶν εἰς ἐκεῖνον τὸν χρόνον. τοῦτου γεροντὸς ζηλωτῆς Ἀναξίμανδρος ὁ Πραξιάδου (fr. 120 Wöhrle) οὐ πάντῃ ὁμοίως ἐξήλωσεν, ἀλλὰ τοῦτ' εὐθὺς παρήλλαξε τε καὶ ἐξετράπετο, ὅτι ἐθάρρησε πρῶτος ὧν ἴσμεν Ἑλλήνων λόγον ἐξενεγκεῖν περὶ φύσεως συγγεγραμμένον. πρὶν δ' εἰς ὄνειδος καθεισθῆναι τὸ λόγου συγγράφειν, ἀλλ' οὐκ ἐνομίζετο τοῖς πρόσθεν Ἑλλήσι. καὶ ἐὼ τὸν Κλαζομένιον Ἀναξαγόραν (—) καὶ ἐφ' ὅσον οὗτος ἐνεωτέρησε, νοῦν καὶ θεὸν πρῶτος ἐπαγόμενος τῇ κοσμοποιίᾳ, καὶ οὐ πάντ' ἀνάψας τῆς φύσεως τῶν σωμάτων. ἀλλὰ Σωκράτης ὁ γενναῖος ἄρα τὴν ἀρχαίαν καὶ τετριμμένην ἐβάδιζε καὶ ἐγκατέμενε τοῖς ἴχνεσι τοῦ Ἀρχελαίου.

Basil of Caesarea in Hexaem. 1.2, p. 4.6–12 Amand de Mendieta–Rudberg διὰ τοῦτο οἱ μὲν ἐπὶ τὰς ὑλικὰς ὑποθέσεις κατέφυγον, τοῖς τοῦ κόσμου στοιχείοις τὴν αἰτίαν τοῦ παντὸς ἀναθέντες· οἱ δὲ ἄτομα καὶ ἀμερῆ σώματα, καὶ ὄγκους καὶ πόρους συνέχρινον τὴν φύσιν τῶν ὁρατῶν ἐφαντάσθησαν. νῦν μὲν γὰρ συνιόντων ἀλλήλοις τῶν ἀμερῶν σωμάτων, νῦν δὲ μετασυγκρινομένων, τὰς γενέσεις καὶ τὰς φθοράς ἐπιγίνεσθαι· καὶ ἐπὶ τῶν διαρκεστέρων σωμάτων τὴν ἰσχυροτέραν τῶν ἀτόμων ἀντεμπλοκὴν τῆς διαμονῆς τὴν αἰτίαν παρέχουσιν.

Calcidius in Tim. cc. 280–282 *alii formam dederunt, ut Thales (fr. 287 Wöhrle), quem ferunt ante omnes naturalia esse secreta rimatum, cum initium rerum aquam esse dicat, opinor ideo quod omnem victum quo utuntur quae vivunt humectum videret; inque eadem sententia Homerus esse invenitur, cum Oceanum et Tethyn dicat parentes esse geniturae (Il. 14.201 and 14.302), cumque iusiurandum deorum constituat aquam, quam quidem ipse appellat Stygem (Il. 5.185 and 15.37), antiquitati tribuens reverentiam et iureiurando nihil constituens reverentius. at vero Anaximenes (fr. 94 Wöhrle) aëra iudicans initium rerum, initium quoque corporum ceterorum et ipsius aquae non consentit Heraclito caput rerum ignem putanti. omnes ergo hi qui vel aquae vel aëri vel igni*

tribuunt principatum, in motu positam rerum originem censuerunt. (281) sunt tamen qui immobilem fore defendant et eandem ex omnibus in unam molem redactam, unum omnia esse censentes immobile sine ortu et sine interitu, ut Xenophanes Melissus Parmenides; sed Parmenides quidem unum omne perfectum et definitum pronuntiat, Melissus infinitum et indeterminatum. (282) Empedocles varium et multiforme quiddam esse silvam docet quattuor diversis sustentatum radicibus ignis aquae aëris terrae atque ex his fieri corporum modo concretionem, modo discretionem; idemque concretionem quidem vocat amicitiam, discretionem vero discordiam. in Tim. c. 286 haec ad praesens visa nobis necessaria fore ad explanationem Aristotelici dogmatis de initiis rerum. in Tim. c. 295 Numenius (fr. 52 des Places) ex Pythagorae magisterio Stoicorum hoc de initiis dogma refellens Pythagorae dogmate, cui concinere dicit dogma Platonicum. in Tim. c. 305 et quoniam singula haec initia sunt, rursus erit ex integro de initiis disserendum.

Ambrose of Milan Exam. 1.1 tantum ne opinionis adsumpsisse homines, ut aliqui eorum tria principia constituerent omnium, deum et exemplar et materiam, sicut Plato discipulique eius, et ea incorrupta et increata ac sine initio esse adseverarent deumque non tamquam creatorem materiae, sed tamquam artificem ad exemplar, hoc est ideam intendentem fecisse mundum de materia, quam vocant ὕλην, quae gignendi causas rebus omnibus dedisse adseratur, ipsum quoque mundum incorruptum nec creatum aut factum aestimarent, alii quoque, ut Aristoteles cum suis disputandum putavit, duo principia ponerent, materiam et speciem, et tertium cum his, quod operatorium dicitur, cui subpeteret competenter efficere quod adoriendum putasset. **Servius** in Buc. 6.31, p. 69.14–70.6 Thilo variae sunt philosophorum opiniones de rerum origine: nam alii dicunt omnia ex igne procreari, ut Anaxagoras [sic]; alii ex umore, ut Thales Milesius (fr. 319 Wöhrle), unde est Oceanumque patrem (Il. 14.201 = 14.302); alii ex quattuor elementis, ut Empedocles (—), secundum quem ait Lucretius ex imbri, terra atque anima nascuntur et igni (DRN 1.714–715). Epicurei (—) vero, quos nunc sequitur (sc. Vergil), nihil horum comprobant, sed dicunt duo esse rerum principia, corpus et inane: omne enim quod est, aut continet aut continetur. et corpus volunt esse atomos, id est quasdam minutissimas partes, quae τομήν, id est sectionem, non recipiunt, unde et atomi dictae sunt: quas Lucretius (DRN 1.268–270, 2.125–128) minutiores dixit esse illis corpusculis, quae in infusis per fenestram radiis solis videmus; dicit enim illas nec visum posse recipere. inane vero dicunt spatium, in quo sunt atomi. de his itaque duobus principiis volunt quattuor ista procreari, ignem, aërem, aquam, terram, et ex his cetera, ut illa duo elementa [et atomi et inane,] sint, haec vero quattuor syntheta, id est composita ex illis duobus, praestent originem aliis omnibus rebus. hac autem ratione comprobatur, ex atomis et inani omnia esse, quod nihil est in rerum natura, quod non et corpus habeat, et quia recipit sectionem, indicet etiam inanitatem. [ergo] ‘uti magnum per inane coacta / semina’ canebat (Verg. Buc. 6.31–32), inquit, mundi principium, id est quemadmodum coactae et collectae atomi per magnum inane fuissent origo ignis, aëris, terrarum et maris; nam

'semina' atomos dicit. dicimus autem 'haec atomus' et 'hae atomi'. cf. **Isidore of Seville** *Etym.* 13.2. **ps.Valerius Probus** in *Buc.* 6.31, pp. 332.25–335.27 Thilo omnem igitur hanc rerum naturae formam tenui primum et inani mole dispersam refert in quattuor elementa concretam ... (p. 334.29) Ciceronis diversa opinione (see below §19). Aristoteles quattuor elementa ait, aquam et terram ponderibus suis deorsum ferri, ignem et aëra tenuitate sua sublevare, et his quattuor elementis quintum quasi proprium aethera addit privata mole discretum. idem Aristoteles ait non esse idem ignem et aethera diversitatemque eorum elementorum probari ex eo, quod ignis omnia consumat, aether omnia conservet et nutriet. Anaxagoras (—) quattuor elementis constitutis rectorem adiungit sive spiritum sive Deum sive mentem, per quem haec quattuor regantur. (hic Anaxagoras Abderites fuit Democrito popularis et discipulus, quamquam alii Dionysium Smyrnaeum (—), quidam Aristotelem magistrum eius adfirmant, vir nobilis, amicus Alexandro, apud Persas comes (sic)). in *Buc.* 6.31, p. 343.21–344.18 Thilo sunt qui binis principiis mundum discriminant. nam Xenophanes Colophonius (fr. 182 Strobel–Wöhrle) terram et aquam prodidit: quamquam haec antea ab Homero tractata sit opinio (*Il.* 7.99) 'ἄλλ' ὑμεῖς μὲν πάντες ὕδωρ καὶ γαῖα γένοισθε'. consentit in numero Euripides (fr. 1023 N², 182a Kannicht), sed speciem discriminat. terram enim et aërem inducit principia rerum esse in *Antiopa*. ... (p. 344.8) sunt qui singulis elementis principia adsignaverunt: Parmenides Eleates terram [sic], Hippasus Metapontinus et Heraclitus Ephesius (T 779 Mouraviev), qui σκοτεινός appellatur, ignem, Anaximenes Lampsacenus [sic], qui primus existimatur physica induxisse, aërem (—), Thales Milesius (fr. 286 Wöhrle), magister eius, aquam. hanc quidem Thaletis opinionem ab Hesiodo putant manare, qui dixerit (*Th.* 116) 'ἦτοι μὲν πρότεστα χάος γένετ'· αὐτὰρ ἔπειτα'. nam Zenon Citieus (SVF 1.103, 1.496) sic interpretatur, aquam χάος appellatam ἀπὸ τοῦ χεῖσθαι, quamquam eandem opinionem ab Homero possimus intellegere, quod ait (*Il.* 14.201) 'Ὠκεανὸν τε θεῶν γένεσιν καὶ μητέρα Τηθύν', quod Vergilius quoque imitatus ait (*Georg.* 4.382) 'Oceanumque patrem rerum Nymphasque sorores'.

Augustine *C.D.* 8.2.1–3.4 Dombart–Kalb (cited Diels *DG* 173–174) (tit. *De duobus philosophorum generibus, id est Italico et Ionico, eorumque auctoribus.*) quantum enim adtinet ad litteras Graecas, quae lingua inter ceteras gentium clarior habetur, duo philosophorum genera traduntur: unum Italicum ex ea parte Italiae, quae quondam Magna Graecia nuncupata est; alterum Ionicum in eis terris, ubi et nunc Graecia nominatur. Italicum genus auctorem habuit Pythagoram Samium (—), a quo etiam ferunt ipsum philosophiae nomen exortum. nam cum antea sapientes appellarentur, qui modo quodam laudabilis vitae aliis praestare videbantur, iste interrogatus, quid profiteretur, philosophum se esse respondit, id est studiosum vel amatorem sapientiae; quoniam sapientem profiteri arrogantissimum videbatur. Ionici vero generis princeps fuit Thales Milesius (fr. 311 Wöhrle), unus illorum septem, qui sunt appellati sapientes. sed illi sex vitae genere distinguebantur et quibusdam praeceptis ad bene vivendum accommodatis; iste autem Thales, ut successores etiam propagaret, rerum naturam scrutatus suasque disputationes litteris mandans eminuit maximeque

admirabilis extitit, quod astrologiae numeris comprehensis defectus solis et lunae etiam praedicere potuit. aquam tamen putavit rerum esse principium et hinc omnia elementa mundi ipsumque mundum et quae in eo gignuntur existere. nihil autem huic operi, quod mundo considerato tam mirabile aspicimus, ex divina mente praeposuit. huic successit Anaximander (12A17 DK), eius auditor, mutavitque de rerum natura opinionem. non enim ex una re, sicut Thales ex umore, sed ex suis propriis principiis quasque res nasci putavit. quae rerum principia singularum esse credidit infinita, et innumerabiles mundos gignere et quaecumque in eis oriuntur; eosque mundos modo dissolvi, modo iterum gigni existimavit, quanta quisque aetate sua manere potuerit; nec ipse aliquid divinae menti in his rerum operibus tribuens. iste Anaximenes (13A10 DK), discipulum et successorem reliquit, qui omnes rerum causas aëri infinito dedit, nec deos negavit aut tacuit; non tamen ab ipsis aërem factum, sed ipsos ex aëre ortos credidit. Anaxagoras (—) vero eius auditor harum rerum omnium, quas videmus, effectorem divinum animum sensit et dixit ex infinita materia, quae constaret similibus inter se particulis rerum omnium; quibus suis et propriis singula fieri, sed animo faciente divino. Diogenes (64A8 DK, T 7c Laks) quoque Anaximenes alter auditor, aërem quidem dixit rerum esse materiam, de qua omnia fierent; sed eum esse compotem divinae rationis, sine qua nihil ex eo fieri posset. Anaxagorae successit auditor eius Archelaus (60A10 DK). etiam ipse de particulis inter se similibus, quibus singula quaeque fierent, ita putavit constare omnia, ut inesse etiam mentem diceret, quae corpora aeterna, id est illas particulas, coniungendo et dissipando ageret omnia. (3) Socrates huius discipulus fuisse perhibetur, magister Platonis, propter quem breviter cuncta ista recolui. Socrates ergo, primus universam philosophiam ad corrigendos componendosque mores flexisse memoratur, cum ante illum omnes magis physicis, id est naturalibus, rebus perscrutandis operam maximam impenderent.

Theodoret CAG 2.9–11: (2.9: T1) Θαλῆς (fr. 329 Wöhrle) μὲν γάρ, τῶν ἐπὶ καλουμένων σοφῶν ὁ πρεσβύτατος, ἀρχὴν πάντων τὸ ὕδωρ ὑπέλαβεν, (T1a) 'Ομήρῳ (Il. 14.201) γε οἶμαι εἰρηκότι πιστεύσας· 'Ωκεανόν τε θεῶν γένεσιν καὶ μητέρα Τηθύν'. (T2) Ἀναξίμανδρος (fr. 134 Wöhrle) δέ, τοῦτον διαδεξάμενος, ἀρχὴν ἔφη τὸ ἄπειρον· (T3) Ἀναξίμενης (fr. 111 Wöhrle) δέ, ὁ τοῦτου διάδοχος (T4) καὶ Διογένης ὁ Ἀπολλωνιάτης (—) τὸν ἀέρα ξυμφώνως ἀρχὴν προσηγορευσάτην· (2.10: T5) 'Ιππασος δέ ὁ Μεταποντῖνος (—) καὶ Ἡράκλειτος ὁ Ἐφέσιος (fr. 898 Mouraviev) τῷ πυρὶ τὴν ἀρχὴν τῶν πάντων ἀπενειμάτην· (T6) ὁ δὲ Ἀκραγαντῖνος Ἐμπεδοκλῆς (—) τὰ στοιχεῖα ἔφη τὰ τέτταρα· (T7) Ξενοφάνης δέ ὁ Κολοφώνιος (fr. 194 Strobel–Wöhrle) τὸ πᾶν αἰθέρ, ἐκ δὲ τῆς γῆς τὰ πάντα· (T8) καὶ Παρμενίδης (—) δὲ ὁ τοῦτου ἐταῖρος ὁ Ἐλεάτης ὡσαύτως τόνδε τὸν λόγον ἐκράτυνε, ψεῦδος δὲ ἀπέφηνε τῶν αἰσθήσεων τὸ κριτήριον, ἥμισυ λέγων ἐφικνεῖσθαι τοῦτο τῆς ἀληθείας· (2.11: T9) Δημόκριτος δὲ ὁ Ἀβδηρίτης (—) ἄπειρον τὸ πᾶν εἶρηκε καὶ ἀγένητον· (T10) Ἐπίκουρος δὲ ὁ Νεοκλέους ὁ Ἀθηναῖος (—) ἐκ τῶν ἀτόμων ἐξ ἀρχῆς ξυστῆναι τὸ πᾶν, εἶναι μέντοι ἀναρχον καὶ αἰθέρ· (T11) καὶ Μητρόδωρος δὲ ὁ Χίος (—), (T12) καὶ Ζήνων ὁ Ἐλεάτης (—) (T13) καὶ Διογένης ὁ Σμυρναῖος (—) διαφόρους ἀρχὰς τῶν ὄλων ὑπέθεντο.

CAG 4.5–12: (4.5: Ti) Ξενοφάνης μὲν οὖν ὁ Ὀρθομένους ὁ Κολοφώνιος (21A36 DK, fr. 197 Strobel–Wöhrle), ὁ τῆς Ἑλεατικῆς αἰρέσεως ἡγησάμενος, ἔν εἶναι τὸ πᾶν ἔφησε, σφαιροειδὲς καὶ πεπερασμένον, οὐ γενητόν, ἀλλ’ αἶδιον καὶ ἀάπειρον ἀκίνητον· πάλιν δ’ αὖ τῶνδε τῶν λόγων ἐπιλαθόμενος, ἐκ τῆς γῆς φύναι ἅπαντα εἴρηκεν. αὐτοῦ γὰρ δὴ τότε τὸ ἔπος ἐστίν· (21B27 DK) ‘ἐκ γῆς γὰρ τάδε πάντα, καὶ εἰς γῆν πάντα τελευτᾷ’. (4.6) ἀξυμῶνοι δὲ ἀντικρυς οἶδε οἱ λόγοι. εἰ γὰρ αἶδιος ὁ κόσμος, καὶ ἀναρχος· εἰ δὲ γε ἀναρχος, καὶ ἀναίτιος· εἰ δὲ ἀναίτιος, οὐκ ἔχει δῆπου μητέρα τὴν γῆν. εἰ δὲ αἰτίαν ἔχει τὴν γῆν, οὐκ ἄρα ἀναίτιος· εἰ δὲ οὐκ ἀναίτιος, οὐδὲ ἀναρχος· εἰ δὲ οὐκ ἀναρχος, οὐκ ἄρα αἶδιος. (4.7: Tii) καὶ Παρμενίδης δὲ ὁ Πύρρητος ὁ Ἑλεάτης (fr. 55 Coxon, Xenophanes fr. 198 Strobel–Wöhrle), Ξενοφάνους ἐταῖρος γενόμενος, κατὰ μὲν τὸν πρῶτον λόγον ξυμῶνα τῷ διδασκάλῳ συγγέγραφε· αὐτοῦ γὰρ δὴ τότε τὸ ἔπος εἶναι φασιν· (28B8.4 DK) ‘οὐλον μουνόγενές τε καὶ ἀτρεμές ἡδ’ (28B28.3 DK) ἀγένητον’. αἴτιον δὲ τῶν ὄλων οὐ τὴν γῆν μόνον, καθάπερ ἐκεῖνος, ἀλλὰ καὶ τὸ πῦρ εἴρηκεν οὗτος. (4.8: Tiii) Μέλισσος δὲ ὁ Ἰθαγένους ὁ Μιλήσιος (30A9 DK) τούτου μὲν ἐταῖρος ἐγένετο, τὴν δὲ παραδοθεῖσαν διδασκαλίαν ἀκήρατον οὐκ ἐτήρησεν· ἄπειρον γὰρ οὗτος ἔφη τὸν κόσμον, ἐκείνων φάντων πεπερασμένον. [CAG 4.9 (~ Tiv–vi) see above *testes primi*] (4.10) (fr. 201 Luria) καλοῦσι δὲ οὕτω τὰ σμικρότατα ἐκεῖνα καὶ λεπτότατα σώματα, ἃ διὰ τῶν φωταγωγῶν εἰσβάλλων ὁ ἥλιος δείκνυσιν ἐν ἑαυτῷ ἄνω καὶ κάτω παλλόμενα. [CAG 4.11–12 (~ Tviii–xi) see above *Testes primi*] (4.12: Txi) Ἰππασος δὲ ὁ Μεταποντῖνος (18.7 DK) καὶ Ἡράκλειτος ὁ Βλόσωνος ὁ Ἐφέσιος (—) ἔν εἶναι τὸ πᾶν, ἀκίνητον (ἀ(ε)κίνητον Zeller edd.) καὶ πεπερασμένον, ἀρχὴν δὲ τὸ πῦρ ἐσχηκέναι. (Txiii) ὁ δὲ Ἀπολλωνιάτης Διογένης (—) ἐκ τοῦ ἀέρος ἔφη ξυστῆναι τὸ πᾶν.

Epiphanius Haer. 3.505.1–508.15 Holl. **Olympiodorus the Alchemist** *Art.Sacr.* 18–25, pp. 80.19–83.14 Berthelot–Ruelle ἡ ἀρχὴ τοῖνυν παντὸς πράγματος κατὰ τινὰς ἢ μία ἐστίν, ἢ πολλαί, καὶ εἰ μὲν ἐστὶ μία, ἢ ἀκίνητός ἐστιν, ἢ ἄπειρος, ἢ πεπερασμένη· ὡσαύτως καὶ εἰ μὲν πολλαί ἀρχαί εἰσιν, πάλιν αὐταὶ ἢ ἀκίνητοί εἰσιν, ἢ πεπερασμέναι, ἢ ἄπειροι. ... (21) μίαν δὲ πεπερασμένην ἀρχὴν τῶν ὄντων ἐδόξαζεν Θάλης (—) τὸ ὕδωρ, ἐπειδὴ γόνιμόν ἐστιν καὶ εὐδιάπλαστον· γόνιμον γὰρ οὕτω, ἐπειδὴ γεννᾷ ἰχθύας· εὐδιάπλαστον δὲ, τὸ δυνάμενον διαπλάσθαι ὡσάν βούλης νῦν· καὶ τὸ ὕδωρ ὡσάν θέλης διαπλάττει· ἐν ᾧ γὰρ ἀγγεῖω βάλῃς τοῦτο ... (22) ὁ δὲ Διογένης (—) τὸν ἀέρα, ἐπειδὴ οὗτος πλούσιός ἐστιν καὶ γόνιμος· τίκτει γὰρ ὄρνεα· καὶ εὐδιάπλαστος καὶ αὐτός· ὡς γὰρ θέλεις διαπλάττει καὶ τοῦτον· ἀλλὰ καὶ εἰς ἐστὶν οὗτος καὶ κινούμενος, καὶ οὐκ αἶδιος. (23) Ἡράκλειτος (—) δὲ καὶ Ἰππασος (—) τὸ πῦρ ἐδόξασαν εἶναι ἀρχὴν πάντων τῶν ὄντων, ἐπειδὴ δραστικόν ἐστιν τοῦτο· δραστικὴ δὲ βούλεται εἶναι ἡ ἀρχὴ τῶν γινομένων ὑπ’ αὐτὴν πλέον, ὡς δὲ τινες λέγουσι, καὶ γόνιμόν ἐστιν τὸ πῦρ· γίνεται γὰρ ἐν τῷ ὑπεκκαύματι. (24) τὴν γὰρ γῆν οὐδεὶς ἐδόξασεν εἶναι ἀρχὴν, εἰ μὴ Ξενοφάνης ὁ Κολοφώνιος (21A36 DK)· διὰ δὲ τὸ μὴ εἶναι αὐτὴν γόνιμον, οὐδεὶς αὐτὴν στοιχεῖον ἐδόξασεν. ... (25) μίαν δὲ κινουμένην ἄπειρον ἀρχὴν πάντων τῶν ὄντων δοξάζει Ἀναξίμανδρος (fr. 174 Wöhrle) τὸν ἀέρα. λέγει γὰρ οὕτως (13B3 DK, *spurium*)· ‘ἐγγὺς ἐστὶν ὁ ἀήρ τοῦ ἀσώματου· καὶ ὅτι κατ’ ἔκροιαν τοῦτου γινόμεθα, ἀνάγκη αὐτόν καὶ ἄπειρον εἶναι καὶ πλούσιον διὰ τὸ μηδέποτε ἐκλείπειν’. Ἀναξίμανδρος

(fr. 216 Wöhrle) δὲ τὸ μεταξύ ἔλεγεν ἀρχὴν εἶναι· μεταξύ δὲ λέγω τὸν ἀτμὸν ἢ τὸν καπνόν· ὁ μὲν γὰρ ἀτμός μεταξύ ἐστὶν πυρὸς καὶ γῆς, καὶ καθόλου δὲ εἰπεῖν, πᾶν τὸ μεταξύ θερμῶν καὶ ὑγρῶν ἀτμός ἐστι· τὰ δὲ μεταξύ θερμῶν καὶ ξηρῶν, καπνός.

Hippolytus *Ref.* 1.6.1 Θαλοῦ τοίνυν Ἀναξίμανδρος γίνεται ἀκροατής· Ἀναξίμανδρος Πραξιάδου Μιλήσιος (12A11 DK). οὗτος ἀρχὴν ἔφη τῶν ὄντων φύσιν τινὰ τοῦ ἀπείρου, ἐξ ἧς γίνεσθαι τοὺς οὐρανούς καὶ τοὺς ἐν αὐτοῖς κόσμους. ταύτην δὲ αἰδίον εἶναι καὶ ἀγήρω, ἣν καὶ πάντας περιέχειν τοὺς κόσμους. Augustine *C.D.* 8.2.23–30 Dombart–Kalb *Anaximander* (12A17 DK) ... *innumerabiles mundos gignere et*

quaecumque in eis oriuntur; eosque mundos modo dissolvi, modo iterum gigni existimavit, quanta quisque aetate sua manere potuerit.

§3 Anaximenes: Diogenes Laertius *V.P.* 2.3 Ἀναξίμενης (13A1 DK) Εὐρυστράτου, Μιλήσιος, ἤκουσεν Ἀναξίμανδρου. **Hippolytus** *Ref.* 1.7.1 Ἀναξίμενης δέ, καὶ αὐτὸς ὢν Μιλήσιος (13A7 DK), υἱὸς δὲ Εὐρυστράτου, ἀέρα ἀπειρον ἔφη τὴν ἀρχὴν εἶναι, ἐξ οὗ τὰ γινόμενα (καὶ) τὰ γεγονότα καὶ τὰ ἐσόμενα καὶ θεοὺς καὶ θεία γίνεσθαι. **Philoponus** *in de An.* 87.2–5 Διογένης ὁ Ἀπολλωνιάτης (—) καὶ Ἀναξίμενης (fr. 168 Wöhrle) ἀρχὴν τῶν ὄντων τὸν ἀέρα λέγοντες, ἐκ τούτου καὶ τὴν ψυχὴν ἔλεγον, καὶ γινώσκουν μὲν πάντα τὴν ψυχὴν ὡς ἔχουσιν τὴν τῶν πάντων ἀρχήν, κινητικωτάτην δὲ εἶναι διὰ λεπτομέρειαν.

§4 Anaxagoras: Strabo 14.1.36, 645C.34–36 Κλαζομένιος δ' ἦν ἀνὴρ ἐπιφανὴς Ἀναξαγόρας (59A7 DK) ὁ φυσικός, Ἀναξιμένους ὁμιλητὴς τοῦ Μιλήσιου· διήκουσαν δὲ τούτου Ἀρχέλαος (—) ὁ φυσικός καὶ Εὐριπίδης ὁ ποιητής. **ps.Aristotle** *Spir.* 3 483b12–16 τὴν ἀρτηρίαν μόνον εἶναι δεκτικὴν πνεύματος, τὸ δὲ νεῦρον οὐ. διαφέρειν δὲ καὶ ὅτι τὸ μὲν νεῦρον ἔχει τάσιν, ἡ δ' ἀρτηρία ταχὺ διαρρήγνυται, καθάπερ καὶ ἡ φλέψ. τὸ δὲ δέρμα ἐκ φλεβῶς καὶ νεύρου καὶ ἀρτηρίας. **Anon. Londiniensis** *Iatr.* col. xxi.23–28 + 32–38 Manetti ὁ μὲν γὰρ Ἑρασίστρατος (fr. 87 Garofalo) καὶ π[ό]ρρω τοῦ ἱατρικοῦ κανόνος προήλθε· ὑπέλαβεν γὰρ τὰ πρῶτα | σώματα λόγῳ θεωρητὰ εἶναι ὥστε τὴν | [αἰσθητ]ήν φλέβα συνεστάναι ἐγ' λόγῳ | θε[ω]ρητῶν σωμάτων, φλεβὸς, ἀρτηρίας, νεῦρο(υ). ... (32) ἀπλὰ μὲν οὖν ἐστὶ τὰ ὅμοιο[μερῆ], κατὰ τὰς τομὰς διαιρούμενα | εἰς ὅμ[οι]α μέρη ὡς ἐγκέφαλός τε καὶ νεῦρον καὶ ἀρτηρία, φλέψ· καὶ τὰ ὑγρά. ἔκασ[το]ν γὰρ τούτων καὶ ὁμοιομερές ἐστίν | καὶ τ[ε]μ[ν]όμενον εἰς ὅμοια χωρίζεται | μέρη. **Hippolytus** *Ref.* 1.8.1 μετὰ τοῦτον γίνεται Ἀναξαγόρας Ἑγησιβούλου ὁ Κλαζομένιος (59A42 DK). οὗτος ἔφη τὴν τοῦ παντὸς ἀρχὴν Νοῦν καὶ ὕλην· τὸν μὲν Νοῦν ποιοῦντα, τὴν δὲ ὕλην γινομένην· ὄντων γὰρ πάντων ὁμοῦ, Νοὺς ἐπελθὼν διεκόσμησεν'. τὰς δὲ ὑλικὰς ἀρχὰς ἀπείρους ὑπάρχειν καὶ τὰς μικροτέρας αὐτῶν ἀπειρα λέγει. **Diogenes Laertius** *V.P.* 2.6 Ἀναξαγόρας Ἑγησιβούλου (59A1 DK) ἡ Εὐβούλου, Κλαζομένιος. οὗτος ἤκουσεν Ἀναξιμένους, καὶ πρῶτος τῇ ὕλῃ Νοῦν ἐπέστησεν, ἀρξάμενος οὕτω τοῦ συγγράμματος, ὃ ἐστίν ἡδέως καὶ μεγαλοφρόνως ἡρμηνευμένον (59B1 DK)· 'πάντα χρήματα ἦν ὁμοῦ· εἶτα Νοὺς ἐλθὼν αὐτὰ διεκόσμησεν'. **Eusebius** *PE* 10.14.12 Ἀναξαγόρας Ἑγησιβούλου Κλαζομένιος (—). οὗτος δὴ πρῶτος διήρθρωσε τὸν Περί ἀρχῶν λόγον. οὐ γὰρ μόνον περὶ τῆς πάντων οὐσίας ἀπεφάνητο, ὡς οἱ πρὸ αὐτοῦ, ἀλλὰ καὶ περὶ τοῦ κινούντος αὐτὴν αἰτίου. 'ἦν γὰρ ἀρχήν', φησί (59B1 DK), 'τὰ πράγματα ὁμοῦ πεφυρμένα· Νοὺς δὲ εἰσελθὼν αὐτὰ ἐκ τῆς ἀταξίας εἰς τάξιν ἤγαγεν'. *PE* 14.14.8–9 μόνος δ' οὖν πρῶτος Ἑλλήνων Ἀναξαγόρας μνημονεύεται ἐν τοῖς Περί ἀρχῶν λόγοις Νοῦν τὸν πάντων αἴτιον ἀποφῆναισθαι. ... τὸν τε Περί ἀρχῶν λόγον πρῶτος Ἑλλήνων διήρθρωσεν. οὐ γὰρ μόνον περὶ τῆς πάντων οὐσίας ἀπεφάνητο, ὡς οἱ πρὸ αὐτοῦ, ἀλλὰ καὶ περὶ τοῦ κινούντος αὐτὴν αἰτίου. (9) 'ἦν γὰρ ἐν ἀρχῇ', φησὶν (59B1 DK), 'ὁμοῦ τὰ πράγματα πεφυρμένα, Νοὺς δὲ εἰσελθὼν αὐτὰ ἐκ τῆς ἀταξίας εἰς τάξιν ἤγαγε'. **Servius** *in Aen.* 4.625, p. 573.7–12 Thilo *ex ossibus: secundum Anaxagoran* (—), *qui homoeomerian dicit, id est omnium membrorum similitudinem, esse in rebus creandis {id est} ex ossibus, ex sanguine, ex medullis: nam omnia pro parte sui transeunt in procreationem.* **Lucretius** *DRN* 1.830 *nunc ad Anaxagorae veniamus homoeomerian etc.*, see

General texts above. *Capitula Lucretiana* at DRN 1.830 *contra Anaxagoran*. *Simplicius in Phys.* 162.26–33 τοῦτο οὖν ὡς ἀξίωμα προλαβὼν ὁ Ἀναξαγόρας (—) τὸ μηδὲν ἐκ τοῦ μὴ ὄντος γίνεσθαι, δοκεῖ τοιοῦτόν τινα τῇ δυνάμει λόγον ἐρωτᾶν. τὸ γινόμενον ἢ ἐξ ὄντος γίνεται ἢ ἐκ μὴ ὄντος· ἀλλ’ ἐκ μὴ ὄντος ἀδύνατον· ἐξ ὄντος ἄρα. εἰ δὲ τοῦτο, καὶ ἐνυπάρχοντος τῷ ἐξ οὗ ἐστίν. οὐ γὰρ ἔξωθεν ποθεν ἐπεισὶν φαίνεται, ὅταν ἐξ ἵππων γεννῶνται σφήκες ἢ ἐξ ὕδατος ἀήρ. ἔνεστιν ἄρα ἐν τῇ ὁμοιομερείᾳ καὶ σὰρξ καὶ ὅστουν καὶ αἷμα καὶ χρυσὸς καὶ μόλυβδος καὶ γλυκὺ καὶ λευκόν, ἀλλὰ διὰ μικρότητα ἀναίσθητα ἡμῖν ἐστίν, ὄντα πάντα ἐν πᾶσι. *Psellus Op.Theol.* 1.61.11–12 + 52–78 Gautier ‘καὶ εἰ τὸ πάντα’ γὰρ φησιν (sc. Gregory of Nazianzus) ‘ἐν πᾶσι κείσθαι μὴ πειστέον τοῖς λέγουσιν, ἀλλ’ ἡμῖν γε πειστέον ὡς ἐν ἀλλήλοις καὶ παρ’ ἀλλήλοις ἐκείμεθα’. ... (p. 241.55) ἀλλὰ τοῖς Ἀριστοτέλους λόγοις ὠμίληκώς φύσεως τὴν Ἀναξαγόρου (38E Gemelli Marciano) δόξαν ἐκέισε διαθρυλλουμένην ἐνταῦθα διαμασάται. οὗτος γὰρ ὁ ἀνὴρ φανερώς ὤπται διαμαρτάνων γένεσιν ἀναιρῶν καὶ εἰσάγων διάκρισιν· ἐπειδὴ γὰρ εὔρε φυσικὸν δόγμα λέγον μηδὲν ἐκ τοῦ μηδενὸς γίνεσθαι, ἀλλὰ πάντα ἐκ τινος, ἀγνοήσας ὅσαχῶς τὸ μὴ ὄν λέγεται καὶ ὅτι τὸ μὲν δυνάμει, τὸ δὲ ἐνεργείᾳ, ὑπερβάς τὴν ὕλην ἀφ’ ἧς οἱ φυσικοὶ πάντα γεννῶσι καὶ εἰς ἣν ἀναλύουσιν, ἐδογματίζε ‘πάντα ἐν πᾶσι μεμίχθαι’, καὶνόν τινα λόγον εἰσάγων. ἐν γὰρ τῇ αὐτῇ γονῇ καὶ τρίχας ἔλεγεν εἶναι καὶ ὄνυχας καὶ φλέβας καὶ ἀρτηρίας καὶ συνδέσμους καὶ τᾶλλα πάντα τοῦ σώματος, ἀφανῆ δὲ διὰ μικρομέρειαν, αὐξάνειν δὲ κατὰ μικρὸν καὶ ἀπ’ ἀλλήλων διακρίνεσθαι. ‘πῶς γὰρ ἂν’, φησίν, ‘ἐκ μὴ τριχὸς θριξί γένοιτο ἢ σὰρξ ἐκ μὴ σαρκός’; ἀλλ’ εἶναι καὶ σαρκία βραχύτατα καὶ νεῦρα καὶ ὅστ’ αὖ καὶ τᾶλλα πάντα ἐν ἀλλήλοις συγκείμενα, βραχύτατά γε μὴν ὥστε μὴ ὁράσθαι, αὐξάνεσθαι δ’ ὕστερον καὶ διακρίνεσθαι ἀπ’ ἀλλήλων καὶ διαφανῆ γίνεσθαι. οὐ τῶν σωμάτων δὲ μόνον κατηγόρει τὴν τοιαύτην σύγκρασιν, ἀλλὰ καὶ τῶν χρωμάτων· εἶναι γὰρ ἔφασκε λευκὸν ἐν τῷ μέλανι καὶ μέλαν ἐν τῷ λευκῷ. τοῦτο δὲ καὶ κατὰ τῶν ῥοπῶν ἐτίθει· ἐν γὰρ τῷ βαρεῖ τὸ κοῦφον ἐμίγνυε καὶ ἐν τῷ κοῦφῳ τὸ βαρὺ, αἱ δὲ ἅπαντα ὁ Σταγειρίτης φιλόσοφος φιλοσόφοις λόγοις ἐξήλεγξε. ταῦτη γοῦν τῇ δόξῃ καὶ ὁ μέγας διαμαχόμενος Γρηγόριος, εἰ καὶ μὴ δεῖν φησιν ἔπεσθαι ταῖς Ἀναξαγορείοις δόξαις μηδὲ πιστεύειν τοῖς λέγουσι πάντα ἐν πᾶσι κείσθαι (πῶς γὰρ ἂν τὰ ἐναντία ἐν τοῖς ἐναντίοις εὔρεθῇ;), ‘ἀλλ’ ἡμῖν γε’ φησίν ‘πειστέον ὡς ἐν ἀλλήλοις καὶ παρ’ ἀλλήλοις ἐκείμεθα’. τὸ γὰρ ἀδύνατον, φησί, τῆς ἐκείσε δόξης δυνατόν ἐν τοῖς ἡμετέροις εὐρίσκεισθαι ἤθεσιν· ἐν ἀλλήλοις γὰρ καὶ παρ’ ἀλλήλοις ἐκείμεθα.

Scholium in Gregorium Nazianzenum MPG 36.91a23–38 (Nicetas *Comm. in xvi Or. Gregorii Nazianzeni* fr. 109 Constantinescu, excerpting Psellus) ὁ δὲ Ἀναξαγόρας (59B10 DK) παλαιὸν εὐρὼν δόγμα ὅτι οὐδὲν ἐκ τοῦ μηδαμῇ γίνεται, γένεσιν μὲν ἀνῆρει, διάκρισιν δὲ εἰσήγεν ἀντὶ γενέσεως. ἐλήρει γὰρ ἀλλήλοις μὲν μεμίχθαι πάντα, διακρίνεσθαι δὲ αὐξάνόμενα. καὶ γὰρ ἐν τῇ αὐτῇ γονῇ καὶ τρίχας εἶναι καὶ ὄνυχας καὶ φλέβας καὶ ἀρτηρίας καὶ νεῦρα καὶ ὅστ’ αὖ καὶ τυγχάνειν μὲν ἀφανῆ διὰ μικρομέρειαν, αὐξάνόμενα δὲ κατὰ μικρὸν διακρίνεσθαι. ‘πῶς γὰρ ἂν’, φησίν, ‘ἐκ μὴ τριχὸς γένοιτο θριξί καὶ σὰρξ ἐκ μὴ σαρκός’; οὐ μόνον δὲ τῶν σωμάτων ἀλλὰ καὶ τῶν χρωμάτων ταῦτα κατηγόρει. καὶ γὰρ ἐνεῖναι τῷ λευκῷ τὸ μέλαν καὶ τὸ λευκὸν τῷ μέλανι. τὸ αὐτὸ δὲ ἐπὶ τῶν ῥοπῶν ἐτίθει, τῷ βαρεῖ τὸ κοῦφον σύμμικτον εἶναι δοξάζων καὶ τοῦτο αὐθις ἐκείνῳ. ἅτινα πάντα ψευδῆ ἐστί, πῶς γὰρ ἂν τὰ ἐναντία τοῖς ἐναντίοις συνέσονται;

§§5–6 *Archelaus Ionic Succession: Diogenes Laertius V.P.* 2.16–17 Ἀρχέλαος (60A1 DK) Ἀθηναῖος ἢ Μιλήσιος, πατὴρ Ἀπολλοδώρου, ὡς δέ τινες, Μίδωνος, μαθητῆς Ἀναξαγόρου, διδάσκαλος Σωκράτους· οὗτος (sc. Anaxagoras?) πρῶτος ἐκ τῆς Ἰωνίας τὴν φυσικὴν φιλοσοφίαν μετήγαγεν Ἀθήναζε, καὶ ἐκλήθη φυσικός, παρὸ καὶ ἔληξεν ἐν αὐτῷ (sc. Archelaus) ἡ φυσικὴ φιλοσοφία, Σωκράτους τὴν ἠθικὴν εἰσαγαγόντος. ... ὁ δὲ λόγος αὐτῷ οὕτως ἔχει. τηκόμενον φησι τὸ ὕδωρ ὑπὸ τοῦ θερμοῦ, καθὸ μὲν εἰς τὸ (μέσον διὰ τὸ) πυρῶδες συνίσταται, ποιεῖν γῆν· καθὸ δὲ περιρρεῖ, ἀέρα γεννᾶν. cf. *V.P.* 1.18 καὶ μέχρι μὲν Ἀρχελάου (—) τὸ φυσικὸν εἶδος ἦν (sc. τῆς φιλοσοφίας).

§5 *Archelaus: Sextus Empiricus M.* 9.360 Ἀναξιμένης (fr. 30 Wöhrle) δὲ καὶ Ἰδαῖος ὁ Ἱμεραῖος (63 DK) καὶ Διογένης ὁ Ἀπολλωνιάτης (—) καὶ Ἀρχέλαος ὁ Ἀθηναῖος (60A7 DK), Σωκράτους δὲ καθηγητής, καὶ κατ' ἐπίου Ἡράκλειτος (T 696 Mouraviev) ἀέρα (sc. ἔλεξε πάντων εἶναι ἀρχὴν καὶ στοιχεῖον). *Hippolytus Ref.* 1.9.1–2 Ἀρχέλαος (60A4 DK) τὸ μὲν γένος Ἀθηναῖος, υἱὸς δὲ Ἀπολλοδώρου. οὗτος ἔφη τὴν μίξιν τῆς ὕλης ὁμοίως Ἀναξαγόρα, τὰς τε ἀρχὰς ὡσαύτως, αὐτὸς δὲ τοῦ Νοῦ ἐνυπάρχειν τι εὐθέως (τῷ) μίγμα(τι). (2) εἶναι (δὲ) ἀρχὴν τῆς κινήσεως (τὸ) ἀποκρίνεσθαι ἀπ' ἀλλήλων τὸ θερμὸν καὶ τὸ ψυχρόν. *Diogenes Laertius V.P.* 2.16 Ἀρχέλαος (60A1 DK) ... ἔλεγε δὲ δύο αἰτίας εἶναι γενέσεως, θερμὸν καὶ ψυχρόν. *Augustine C.D.* 8.2.42–44 Dombart–Kalb *Anaxagorae successit auditor eius Archelaus* (60A10 DK) *etiam ipse de particulis inter se similibus* (i.e. ὁμοιομερεῖαι) *quibus singula quaeque fierent ita putavit constare omnia.*

§6 *Ionic Succession: Clement of Alexandria Strom.* 1.14.62.1 φιλοσοφίας τοῖνυν ... τρεῖς γεγονάσι διαδοχαὶ ἐπώνυμοι τῶν τόπων περὶ οὓς διέτριψαν, Ἰταλικὴ μὲν ἢ ἀπὸ Πυθαγόρου, Ἰωνικὴ δὲ ἢ ἀπὸ Θαλοῦ, Ἑλεατικὴ δὲ ἢ ἀπὸ Ξενοφάνους. *Diogenes Laertius V.P.* proem. 13–15 (Socratici fr. I H 6 Giannantoni, *FDS* 121) φιλοσοφίας δὲ δύο γεγονάσιν ἀρχαί, ἡ τε ἀπὸ Ἀναξιμάνδρου καὶ ἡ ἀπὸ Πυθαγόρου ... καὶ ἐκαλεῖτο ἡ μὲν Ἰωνικὴ, ὅτι Θαλῆς (fr. 236 Wöhrle) Ἴων ὢν, Μιλήσιος γάρ, καθηγήσατο Ἀναξιμάνδρου. ... (14) καταλήγει δὲ ἡ μὲν εἰς Κλειτόμαχον καὶ Χρύσιππον καὶ Θεόφραστον ἢ Ἰωνικὴ. ... Θαλοῦ μὲν γάρ Ἀναξίμανδρος, οὗ Ἀναξιμένης, οὗ Ἀναξαγόρας, οὗ Ἀρχέλαος, οὗ Σωκράτης ὁ τὴν ἠθικὴν εἰσαγωγών· οὗ οἱ τε ἄλλοι Σωκρατικοὶ καὶ Πλάτων ὁ τὴν ἀρχαίαν Ἀκαδήμειαν συστήσας· οὗ Σπεύσιππος (test. 13 Tarán) καὶ Ξενοκράτης (—), οὗ Πολέμων (fr. 1 Gigante), οὗ Κράντωρ (test. 4c Mette) καὶ Κράτης, οὗ Ἀρκεσίλαος (test. 4c Mette) ὁ τὴν μέσσην Ἀκαδήμειαν εἰσηγησάμενος· οὗ Λακύνδης (test. 4 Mette) ὁ τὴν νέαν Ἀκαδήμειαν φιλοσοφῆσας· οὗ Καρνεάδης (test. 4c Mette), οὗ Κλειτόμαχος (test. 6b Mette). καὶ ὧδε μὲν εἰς Κλειτόμαχον. (15) εἰς δὲ Χρύσιππον οὕτω καταλήγει· Σωκράτους Ἀντισθένης, οὗ Διογένης ὁ κύων, οὗ Κράτης ὁ Θηβαῖος, οὗ Ζήνων ὁ Κιτιεύς, οὗ Κλεάνθης, οὗ Χρύσιππος. εἰς δὲ Θεόφραστον οὕτως· Πλάτωνος Ἀριστοτέλης, οὗ Θεόφραστος. καὶ ἡ μὲν Ἰωνικὴ τοῦτον καταλήγει τὸν τρόπον. *V.P.* 8.1 ἐπεὶ δὲ τὴν Ἰωνικὴν φιλοσοφίαν τὴν ἀπὸ Θαλοῦ καὶ τοὺς ἐν ταύτῃ διαγενομένους ἄνδρας ἀξιολόγους διεληλύθαμεν κτλ. *Eusebius PE* 10.14.9–18. *PE* 14.17.10.

§§7–8 *Pythagoras Italic Succession: Hippolytus Ref.* 1.2.1 ἔστι δὲ καὶ ἑτέρα φιλοσοφία οὐ μακρὰν τῶν αὐτῶν χρόνων, ἧς ἤρξε Πυθαγόρας, ὃν Σάμιόν τινες λέγου-

σιν. ἦν Ἰταλικὴν προσηγόρευσαν διὰ τὸν Πυθαγόραν φεύγοντα Πολυκράτην τὸν Σαμίων τύραννον οἰκῆσαι πόλιν τῆς Ἰταλίας κάκει τὸν βίον πληρῶσαι. οὐ τὴν αἴρεσιν διαδεξάμενοι κτλ. (see below §7).

§7 *Pythagoras: Cicero Luc. 118 Pythagorei e numeris et mathematicorum initiis proficisci volunt omnia.* Hippolytus Ref. 1.2.1–2 ... Πυθαγόρας ... δὲ περὶ φυσικῶν ζητήσας ἔμιξεν ἀστρονομίαν καὶ γεωμετρίαν καὶ μουσικὴν (καὶ ἀριθμητικὴν add. edd.)· (2) καὶ οὕτως μονάδα μὲν εἶναι ἀπεφάνετο τὸν θεόν. Ref. 1.2.6–9 τῶν δὲ ἀριθμῶν ἀρχὴ γέγονε καθ' ὑπόστασιν ἢ πρώτη μονάς, ἣτις ἐστὶ μονάς ἄρσην, γεννώσα πατρικῶς πάντας τοὺς ἄλλους ἀριθμούς. δευτέρον ἢ дуάς, θήλυς ἀριθμός, ὃ δὲ αὐτὸς καὶ ἄρτιος ὑπὸ τῶν ἀριθμητικῶν καλεῖται. τρίτον ἢ τριάς, ἀριθμός ἄρσην· οὗτος καὶ περισσὸς ὑπὸ τῶν ἀριθμ(ητικ)ῶν νενομοθέτηται καλεῖσθαι. ἐπὶ πᾶσι δὲ τούτοις ἢ τετράς, θήλυς ἀριθμός, ὃ δὲ αὐτὸς καὶ ἄρτιος καλεῖται, ὅτι θήλυν ἐστίν. γεγόνασιν οὖν οἱ πάντες ἀριθμοὶ ληφθέντες ἀπὸ γένους τέσσαρες—ἀριθμός δ' ἦν τὸ γένος ἀόριστος—, ἀφ' ὧν ὁ τέλειος αὐτοῖς συνέστηκεν ἀριθμός, ἢ δεκάς· τὸ γὰρ ἕν, δύο, τρία, τέσσαρα γίνεται δέκα, ἐὰν ἐκάστῳ τῶν ἀριθμῶν φυλάσσεται κατ' οὐσίαν τὸ οἰκείον ὄνομα. ταύτην ὁ Πυθαγόρας ἔφη ἱεράν τετρακτύν, 'πηγὴν ἀνάου φύσεως' ὡς 'ρίζωματ' ἔχουσιν ἐν ἑαυτῇ.

§8 *Italic Succession: Diogenes Laertius V.P. proem. 13–15* (Socratici fr. I H 6 Giannantoni, FDS 121) φιλοσοφίας δὲ δύο γεγόνασιν ἀρχαί, ἡ τε ἀπὸ Ἀναξίμανδρου καὶ ἡ ἀπὸ Πυθαγόρου ... (15) ἡ δὲ Ἰταλικὴ οὕτω (sc. καταλήγει): Φερεκύδους Πυθαγόρας, οὐ Τηλαύγης ὁ υἱός, οὐ Ξενοφάνης, οὐ Παρμενίδης, οὐ Ζήνων ὁ Ἐλεάτης, οὐ Λεύκιππος, οὐ Δημόκριτος, οὐ πολλοὶ μὲν, ἐπ' ὀνόματος δὲ Ναυσιφάνης (75.1 DK) {καὶ Ναυκύδης}, ὧν Ἐπίκουρος. 1.122 ἀρκτέον ἀπὸ τῆς Ἰωνικῆς φιλοσοφίας, ἥς καθηγήσατο Θαλῆς, οὐ διήκουσεν Ἀναξίμανδρος. V.P. 8.1–3 ... φέρε καὶ περὶ τῆς Ἰταλικῆς διαλάβωμεν, ἥς ἤρξε Πυθαγόρας Μνησάρχου ... , Σάμιος· ... (3) εὐρὼν τὴν πατρίδα τυραννουμένην ὑπὸ Πολυκράτους, ἀπῆρεν εἰς Κρότωνα τῆς Ἰταλίας· κάκει νόμους θείας τοῖς Ἰταλιώταις ἐδοξάσθη σὺν τοῖς μαθηταῖς. Hippolytus Ref. 1.2.1–2 ἔστι δὲ καὶ ἐτέρα φιλοσοφία ... , ἦν Ἰταλικὴν προσηγόρευσαν διὰ τὸν Πυθαγόραν φεύγοντα Πολυκράτην τὸν Σαμίων τύραννον οἰκῆσαι πόλιν τῆς Ἰταλίας κάκει τὸν βίον πληρῶσαι. οὐ τὴν αἴρεσιν οἱ διαδεξάμενοι οὐ πολὺ διήνεγκαν τοῦ αὐτοῦ φρονήματος. Eusebius PE 10.4.17 ὁ μὲν οὖν Πυθαγόρας τοιοῦτος. πρώτη δ' ἐκ τῆς τούτου διαδοχῆς ἡ κληθεῖσα Ἰταλικὴ φιλοσοφία συνέστη, τῆς ἐπυνυμίας ἐκ τῆς κατὰ τὴν Ἰταλίαν διατριβῆς ἀξιωθεῖσα· μεθ' ἣν ἡ ἀπὸ Θαλοῦ τοῦ τῶν ἐπτά σοφῶν ἐνὸς Ἰωνικῆ προσαγορευθεῖσα· κάπειτα ἡ Ἐλεατικὴ, Ξενοφάνην τὸν Κολοφώνιον πατέρα ἐπιγραψαμένη.

§9 *Heraclitus Hippasus: Lucretius DRN 1.635–638 quapropter qui materiem rerum esse putarunt / ignem atque ex igni summam consistere solo, / magno opere a vera lapsi ratione videntur. / Heraclitus init quorum dux proelia primus. Capitula Lucretiana* at 1.635 *Contra Heraclitum.* Diogenes Laertius V.P. 8.84 Ἰππασος Μεταποντίνος (18A1 DK) καὶ αὐτὸς Πυθαγορικός. ἔφη δὲ χρόνον ὠρίσμενον εἶναι τῆς τοῦ κόσμου μεταβολῆς καὶ πεπερασμένον εἶναι τὸ πᾶν καὶ αἰετίνητον. 9.7–8 (on Heraclitus, 22A1 DK) ἐδόκει δ' αὐτῷ καθολικῶς μὲν τὰδε· ἐκ πυρὸς τὰ πάντα συνεστάναι καὶ εἰς τοῦτο ἀναλύεσθαι· ... (8) ... πῦρ εἶναι στοιχεῖον καὶ πυρὸς ἀμοιβῆν τὰ πάντα, ἀραιώσει καὶ πυκνώσει {τὰ} γινόμενα. σαφῶς δ' οὐδὲν ἐκτίθε-

ται. ... γεννάσθαι τε αὐτὸν (sc. τὸν κόσμον) ἐκ πυρὸς καὶ πάλιν ἐκπυροῦσθαι κατὰ τινας περιόδους ἐναλλάξ τὸν σύμπαντα αἰῶνα· τοῦτο δὲ γίνεσθαι καθ' εἰμαρμένην. τῶν δὲ ἐναντίων τὸ μὲν ἐπὶ τὴν γένεσιν ἄγον καλεῖσθαι πόλεμον καὶ ἔριν, τὸ δ' ἐπὶ τὴν ἐκπύρωσιν ὁμολογίαν καὶ εἰρήνην, καὶ τὴν μεταβολὴν ὁδὸν ἄνω κάτω, τὸν τε κόσμον γίνεσθαι κατ' αὐτήν. **Hippolytus Ref. 1.4.1** Ἡράκλειτος (T 658 Mouraviev) δὲ φυσικὸς φιλόσοφος ὁ Ἐφέσιος κτλ.

§10 Diogenes: Diogenes Laertius V.P. 9.57 Διογένης (59A1 DK) Ἀπολλοθέμιδος Ἀπολλωνιάτης· ... ἤκουσε δέ, φησὶν Ἀντισθένης (fr. 15 Giannatasio Andria), Ἀναξιμένους. ἦν δὲ τοῖς χρόνοις κατ' Ἀναξαγόραν. ... ἐδόκει δὲ αὐτῷ τάδε· στοιχεῖον εἶναι τὸν ἀέρα. ... τὸν τε ἀέρα πυκνούμενον καὶ ἀραιούμενον γεννητικὸν εἶναι τῶν κόσμων.

§11 Xenophanes: Hippolytus Ref. 1.14.1–4 Ξενοφάνης δὲ ὁ Κολοφώνιος (21A33 DK) Ὁρθομένους υἱός. ... (4) τὰ δὲ πάντα εἶναι ἐκ γῆς.

§12 Philolaus: Varro L.L. 5.1.10 *Pythagoras Samius ait omnium rerum initia esse bina ut finitum et infinitum, bonum et malum, vitam et mortem, diem et noctem.* **Diogenes Laertius V.P. 8.84** Φιλόλαος (44A1 DK) Κροτωνιάτης Πυθαγορικός.

§13 Leucippus: Diogenes Laertius V.P. 9.30–31 Λεύκιππος (67A1 DK) Ἐλεάτης, ὡς δὲ τινες, Ἀβδηρίτης, κατ' ἐνίους δὲ Μιλήσιος. οὗτος ἤκουσε Ζήνωνος. ... πρῶτός τ' ἀτόμους ἀρχὰς ὑπεστήσατο. ... (31) τὸ μὲν πᾶν ἄπειρόν φησιν, ὡς προείρηται· τούτου δὲ τὸ μὲν πλήρες εἶναι, τὸ δὲ κενόν, (ἄ) καὶ στοιχεῖα φησι. **Hippolytus Ref. 1.12.1** Λεύκιππος (67A10 DK) δὲ Ζήνωνος ἐταῖρος ... στοιχεῖα δὲ λέγει τὸ πλήρες καὶ (τὸ) κενόν.

§14 Democritus: Diogenes Laertius V.P. 9.44 (Democritus 68A1 DK) ἀρχὰς εἶναι τῶν ὄλων ἀτόμους καὶ κενόν. **V.P. 9.45** φύσει δε ἄτομα καὶ κενόν. **Hippolytus Ref. 1.13.1** Δημόκριτος δὲ Λευκίππου γίνεται γνώριμος· Δημόκριτος Δαμασπίπου Ἀβδηρίτης (68A40 DK) λέγει δὲ ὁμοίως Λευκίππῳ περὶ στοιχείων, πλήρους καὶ κενού.

§16 Epicurus Democritus: Diogenes Laertius V.P. 10.1 Ἐπίκουρος Νεοκλέους ... Ἀθηναῖος. **Hippolytus Ref. 1.22.1–2** Ἐπίκουρος (fr. 271 adn., fr. 267 Usener) δὲ σχεδὸν ἐναντίαν πᾶσι δόξαν ἔθετο. ἀρχὰς μὲν τῶν ὄλων ὑπέθετο ἀτόμους καὶ κενόν—κενὸν μὲν οἶον τόπον τῶν ἐσομένων, ἀτόμους δὲ τὴν ὕλην, ἐξ ἧς τὰ πάντα—, ἐκ δὲ τῶν ἀτόμων συνελθουσῶν γενέσθαι καὶ τὸν θεόν, καὶ τὰ στοιχεῖα {πάντα}, καὶ (τοὺς κόσμους, καὶ) τὰ ἐν αὐτοῖς πάντα, καὶ ζῶα καὶ (τ)ἄλλα, ὡς μὴδὲν (μήτε) γίνεσθαι μήτε συνεστάναι, εἰ μὴ ἐκ τῶν ἀτόμων εἴη. τὰς δὲ ἀτόμους τὸ λεπτομερέστατον καὶ καθ' οὗ οὐκ ἂν γένοιτο κέντρον οὐδὲ σημεῖον οὐδέν, οὐδὲ διαίρεσις οὐδέμια, ἔφη εἶναι· διὸ καὶ ἀτόμους αὐτάς ὠνόμασεν.

§§1–3 + §9 **Thales Homer Anaximander Anaximenes Heraclitus Hip-pasus:** **Aristotle Met.** A.3 983b6–13 (Thales 11A12 DK) τῶν δὴ πρώτων φιλοσοφησάντων οἱ πλείστοι τὰς ἐν ὕλης εἶδει μόνας ᾤκηθησαν ἀρχὰς εἶναι πάντων· ἐξ οὗ γὰρ ἔστιν ἅπαντα τὰ ὄντα καὶ ἐξ οὗ γίγνεται πρῶτον καὶ εἰς ὃ φθείρεται τελευταῖον, τῆς μὲν οὐσίας ὑπομενούσης τοῖς δὲ πάθεσι μεταβαλλούσης, τοῦτο στοιχεῖον καὶ ταύτην ἀρχὴν φασιν εἶναι τῶν ὄντων, καὶ διὰ τοῦτο οὕτε γίγνεσθαι οὐθὲν οἴονται οὕτε ἀπόλλυσθαι, ὥς τῆς τοιαύτης φύσεως ἀεὶ σωζομένης.

§1 **Thales Homer:** **Aristotle Met.** A.3 983b18–33 τὸ μέντοι πλῆθος καὶ τὸ εἶδος τῆς τοιαύτης ἀρχῆς οὐ τὸ αὐτὸ πάντες λέγουσιν, ἀλλὰ Θαλῆς (11A12 DK) μὲν ὁ τῆς τοιαύτης ἀρχηγὸς φιλοσοφίας ὕδωρ φησὶν εἶναι ... , λαβῶν ἴσως τὴν ὑπόληψιν ταύτην ἐκ τοῦ πάντων ὄραν τὴν τροφὴν ὑγρὰν οὖσαν καὶ αὐτὸ τὸ θερμὸν ἐκ τούτου γιγνόμενον καὶ τούτῳ ζῶν (τὸ δ’ ἐξ οὗ γίγνεται, τοῦτ’ ἐστὶν ἀρχὴ πάντων)—διὰ τε δὴ τοῦτο τὴν ὑπόληψιν λαβῶν ταύτην καὶ διὰ τὸ πάντων τὰ σπέρματα τὴν φύσιν ὑγρὰν ἔχειν, τὸ δ’ ὕδωρ ἀρχὴν τῆς φύσεως εἶναι τοῖς ὑγροῖς. εἰσὶ δὲ τινες (sc. Hippasius) οἱ καὶ τοὺς παμπαλαίους καὶ πολὺ πρὸ τῆς νῦν γενέσεως καὶ πρῶτους θεολογήσαντας οὕτως οἴονται περὶ τῆς φύσεως ὑπολαβεῖν· Ὡκεανὸν τε γὰρ καὶ Τηθύν (Hom. *Il.* 14.201 + 14.302) ἐποίησαν τῆς γενέσεως πατέρας, καὶ τὸν ὄρκον τῶν θεῶν ὕδωρ, τὴν καλουμένην ὑπ’ αὐτῶν Στύγα (Hom. *Il.* 15.37–38, *Od.* 5.185–186, etc.) {τῶν ποιητῶν}· τιμωτάτον μὲν γὰρ τὸ πρεσβύτατον, ὄρκος δὲ τὸ τιμωτάτον ἐστίν. **Mete.** 2.2 354b33–34 γελοῖοι πάντες ὅσοι τῶν πρότερον ὑπέλαβον τὸν ἥλιον τρέφεσθαι τῷ ὑγρῷ. **Mete.** 2.2 355a11–15 (Heraclitus 22B6 DK). **Artemon** at the Elder Seneca *Suas.* 1.11 (on Oceanus) εἴτε πρεσβύτατον στοιχεῖον, εἴτε γένεσις θεῶν. **ps.Plutarch Hom.** 2.93, 959–962 Kindstrand ἀρξάμεθα τοίνυν ἀπὸ τῆς τοῦ παντὸς ἀρχῆς καὶ γενέσεως, ἣν Θαλῆς ὁ Μιλήσιος (fr. 187 Wöhrlé) εἰς τὴν τοῦ ὕδατος οὐσίαν ἀναφέρει, καὶ θεασάμεθα εἰ πρῶτος Ὁμηρος τοῦθ’ ὑπέλαβεν, εἰπὼν (*Il.* 14.246) ‘Ὡκεανὸς θ’ ὅς περ γένεσις πάντεσσι τέτυκται’. **Simplicius in Phys.** 23.21–30 (**Theophrastus Phys.Op.** fr. 1 Diels, 225 FHS&G) τῶν δὲ μίαν καὶ κινουμένην λεγόντων τὴν ἀρχὴν, οὗς καὶ φυσικοὺς ἰδίως

καλεῖ, οἱ μὲν πεπερασμένην αὐτὴν φασιν, ὥσπερ Θαλῆς μὲν Ἐξαμίου Μιλήσιος (11A13 DK) καὶ Ἴππων (—), ... , ὕδωρ ἔλεγον τὴν ἀρχὴν ἐκ τῶν φαινομένων κατὰ τὴν αἴσθησιν εἰς τοῦτο προαχθέντες. καὶ γὰρ τὸ θερμὸν τῷ ὑγρῷ ζῇ καὶ τὰ νεκρούμενα ξηραίνεται καὶ τὰ σπέρματα πάντων ὑγρά καὶ ἡ τροφὴ πᾶσα χυλώδης· ἐξ οὗ δὲ ἐστὶν ἕκαστα, τούτῳ καὶ τρέφεσθαι πέφυκεν· τὸ δὲ ὕδωρ ἀρχὴ τῆς ὑγρᾶς φύσεώς ἐστι καὶ συνεκτικὸν πάντων. διὸ πάντων ἀρχὴν ὑπέλαβον εἶναι τὸ ὕδωρ καὶ τὴν γῆν ἐφ' ὕδατος ἀπεφώνησαν κείσθαι. Θαλῆς δὲ πρῶτος παραδέδοται τὴν περὶ φύσεως ἱστορίαν τοῖς Ἑλλήσιν ἐκφῆναι κτλ. *Scholia vetera in Iliadem* 14.246 Erbse ἐκ γὰρ ὕδατος πάντα τὰ στοιχεῖα· καὶ τὸ σπέρμα δὲ πνεῦμά ἐστιν ὑγρῷ κραθέν.

§2–3 *Anaximander Anaximenes*: Aristotle *Phys.* 3.4 203b15–26 (Anaximander 11A15 DK) τοῦ δ' εἶναι τι ἄπειρον ἢ πίστις ἐκ πέντε μάλιστα· ἂν συμβαίνοι σκοποῦσιν ...· (3) ἔτι τῷ οὕτως ἂν μόνως μὴ ὑπολείπειν γένεσιν καὶ φθοράν, εἰ ἄπειρον εἴη ὅθεν ἀφαιρεῖται τὸ γινόμενον· ...· (5) μάλιστα δὲ καὶ κυριώτατον, ὃ τὴν κοινὴν ποιεῖ ἀπορίαν πᾶσι· διὰ γὰρ τὸ ἐν τῇ νοήσει μὴ ὑπολείπειν καὶ ὁ ἀριθμὸς δοκεῖ ἄπειρος εἶναι καὶ τὰ μαθηματικά μεγέθη καὶ τὸ ἕξω τοῦ οὐρανοῦ· ἄπειρον δ' ὄντος τοῦ ἔξω, καὶ σῶμα ἄπειρον εἶναι δοκεῖ καὶ κόσμοι. *GC* 2.1 329a8–13 (Anaximander fr. 11 Wöhrlé) ἀλλ' οἱ μὲν ποιοῦντες μίαν ὕλην παρὰ τὰ εἰρημένα, ταύτην δὲ σωματικὴν καὶ χωριστήν, ἀμαρτάνουσιν· ἀδύνατον γὰρ ἄνευ ἐναντιώσεως εἶναι τὸ σῶμα τοῦτο αἰσθητῆς· ἢ γὰρ κοῦφον ἢ βαρὺ, ἢ ψυχρὸν ἢ θερμὸν ἀνάγκη εἶναι τὸ ἄπειρον τοῦτο, ὃ λέγουσιν τινες εἶναι τὴν ἀρχὴν. *Athenagoras Leg.* 18.3–4 Ὁρφέως (1B13 DK) δέ, ὃς καὶ τὰ ὀνόματα αὐτῶν πρῶτος ἐξηῦρεν καὶ τὰς γενέσεις διεξῆλθεν καὶ ὅσα ἑκάστοις πέπρακται εἶπεν καὶ πεπίστευται παρ' αὐτοῖς ἀληθέστερον θεολογεῖν, ᾧ καὶ Ὀμηρὸς τὰ πολλὰ καὶ περὶ θεῶν μάλιστα ἔπεται, καὶ αὐτοῦ τὴν πρώτην γένεσιν αὐτῶν ἐξ ὕδατος συνιστάντος· Ὡκεανός, ὅσπερ γένεσις πάντεσσι τέτυκται' (*Il.* 18.201 = 18.302). *Philoponus in Phys.* 432.14–23 ὁ Ἀναξίμανδρος (fr. 213 Wöhrlé) δεῖν μὲν οἰόμενος ἄπειρον εἶναι τὴν ἀρχὴν διὰ τὴν αἰεγενεσίαν, ἵνα μὴ ἐπιλείπη, μήπως ἐπιστήσας τῇ ἀνακάμψει τῶν πραγμάτων, ὅτι ἐξ οὗ τι γίνεται εἰς τοῦτο καὶ διαλύεται, συνεωρακώς δὲ ὅτι ἐν τοῖς τέτρασι στοιχείοις οὐσης τινὸς ἐναντιώσεως πρὸς τὰ λοιπὰ, εἰ ὑπόβοιτο ἐν αὐτῶν εἶναι τὴν ἀρχὴν, ἐπειδὴ ἀνάγκη ταύτην ἄπειρον εἶναι, ἄπειρος δὲ οὕσα φθείρει τὰ λοιπὰ ἀπείρου οὐσης τῆς ἐν αὐτῇ δυνάμεως, οὐδὲν μέντοῦτων ὑπέθετο εἶναι τὴν ἀρχὴν, ἕτερον δὲ εἶναι παρὰ ταῦτα τὴν ἀρχὴν ἐξ οὗ καὶ τὰ στοιχεῖα καὶ τὰ λοιπὰ τὴν γένεσιν ἔχει. τοῦτο δὲ τὸ μεταξὺ πως εἶναι αὐτῶν ὑπέθετο, ἵνα τῇ πρὸς τὰ ἐναντία κοινωνίᾳ σῶζῃται μάλλον τὰ λοιπὰ ἢ φθείρηται ὑπὸ τῆς ἐν αὐτῷ ἀπείρου δυνάμεως. *Simplicius in Phys.* 24.13–18 (*Theophrastus Phys.Op.* fr. 2 Diels, 226A FHS&G) τῶν δὲ ἐν καὶ κινούμενον καὶ ἄπειρον λεγόντων Ἀναξίμανδρος μὲν Πραξιάδου Μιλήσιος (12A9 DK), Θαλῶ γενόμενος διάδοχος καὶ μαθητῆς, ἀρχὴν τε καὶ στοιχεῖον εἶρηκε τῶν ὄντων τὸ ἄπειρον, πρῶτος τοῦτο τοῦνομα κομίσας τῆς ἀρχῆς. λέγει δ' αὐτὴν μήτε ὕδωρ μήτε ἄλλο τι τῶν καλουμένων εἶναι στοιχείων, ἀλλ' ἐτέραν τινὰ φύσιν ἄπειρον, ἐξ ἧς ἅπαντας γίνεσθαι τοὺς οὐρανούς καὶ τοὺς ἐν αὐτοῖς κόσμους.

§§2–3 *Anaximander Anaximenes (criticism)*: Aristotle *Met.* A.8 988 b22–28 ὅσοι μὲν οὖν ἐν τε τὸ πᾶν καὶ μίαν τινὰ φύσιν ὥς ὕλην τιθέασι, καὶ ταύ-

την σωματικὴν καὶ μέγεθος ἔχουσιν, δῆλον ὅτι πολλαχῶς ἀμαρτάνουσιν. ... καὶ περὶ γενέσεως καὶ φθορᾶς ἐπιχειροῦντες τὰς αἰτίας λέγειν, καὶ περὶ πάντων φυσιολογούν-τες, τὸ τῆς κινήσεως αἴτιον ἀναιροῦσιν.

§3 Anaximenes: Plato *Phdr.* 246b (cited Plot. *Enn.* 4.3.7) ψυχὴ πᾶσα παντὸς ἐπιμελεῖται τοῦ ἀψύχου, πάντα δὲ οὐρανὸν περιπολεῖ. **Aristotle *Met.* A.3 984a5–7** Ἀναξίμενης (13A4 DK) δὲ ἀέρα καὶ Διογένης (—) πρότερον ὕδατος καὶ μάλιστα ἀρχὴν τιθέασι τῶν ἀπλῶν σωμάτων (cf. below §10). *Met.* A.3 984a17–27 ἐκ μὲν οὖν τούτων μόνην τις αἰτίαν νομίσκειν ἂν τὴν ἐν ὕλῃς εἶδει λεγομένην· ... εἰ γὰρ ὅτι μάλιστα πᾶσα γένεσις καὶ φθορὰ ἐκ τινος ἐνός ἢ καὶ πλειόνων ἐστίν, διὰ τί τοῦτο συμβαίνει καὶ τί τὸ αἴτιον; οὐ γὰρ δὴ τό γε ὑποκείμενον αὐτὸ ποιεῖ μεταβάλλειν ἑαυτὸ· λέγω δ' οἷον οὔτε τὸ ξύλον οὔτε ὁ χαλκὸς αἴτιος τοῦ μεταβάλλειν ἑκάτερον αὐτῶν, οὐδὲ ποιεῖ τὸ μὲν ξύλον κλίνην ὁ δὲ χαλκὸς ἀνδριάντα, ἀλλ' ἕτερόν τι τῆς μεταβολῆς αἴτιον. τὸ δὲ τοῦτο ζητεῖν ἐστὶ τὸ τὴν ἐτέραν ἀρχὴν ζητεῖν, ὥς ἂν ἡμεῖς φαίμεν, ὅθεν ἢ ἀρχὴ τῆς κινήσεως. *de An.* 1.5 411b7–9 δοκεῖ γὰρ τοῦναντίον μᾶλλον ἢ ψυχὴ τὸ σῶμα συνέχειν· ἐξελθούσης γοῦν διαπνέεται (sc. ἡ ψυχὴ) καὶ σῆπεται (sc. τὸ σῶμα). **Philodemus *Piet.* (PHerc. 1428) col. 8.14–21** Henrichs Διογένης ὁ Βαβυλωνίος (*SVF* 3 Diog. 33) ἐν τῷ Περὶ | τῆς Ἀθηνᾶς τὸν | κόσμον γράφει τῷ Δ[ι]τ[ὸν] αὐτὸν ὑπάρ[χει]ν ἢ περιέχειν | τ[ὸ]ν Δία καθά[πε]ρ | ἀνθρω[πον] ψ[υχ]ήν. **Achilles c. 13, p. 21.4–6** Ποσειδῶνιος (F 149 E.-K., 400a Theiler) δὲ ἀγνοεῖν τοὺς Ἐπικουρεῖους ἔφη, ὥς οὐ τὰ σώματα τὰς ψυχὰς συνέχει, ἀλλ' αἱ ψυχαὶ τὰ σώματα, ὥσπερ καὶ ἡ κόλλα καὶ ἑαυτὴν καὶ τὰ ἐκτὸς κρατεῖ. **Cornutus *Comp.* c. 2, p. 2.6–10** Torres ὥσπερ δὲ ἡμεῖς ὑπὸ ψυχῆς διοικούμεθα, οὕτω καὶ ὁ κόσμος ψυχὴν ἔχει τὴν συνέχουσαν αὐτὸν, καὶ αὕτη καλεῖται Ζεὺς, πρῶτως καὶ διὰ παντὸς ζῶσα καὶ αἰτία οἷσα τοῖς ζῶσι τοῦ ζῆν· διὰ τοῦτο δὲ καὶ βασιλεύειν ὁ Ζεὺς λέγεται τῶν ὄλων, ὥς ἂν καὶ ἐν ἡμῖν ἡ ψυχὴ καὶ ἡ φύσις ἡμῶν βασιλεύειν ῥηθεῖη. **ps.Galen *Intr.* 14.698.4–13 K.** κατὰ δὲ τὸν Ἀθήναιον (sc. of Attalia) στοιχεῖα ἀνθρώπου οὐ τὰ τέσσαρα πρῶτα σώματα, πῦρ καὶ ἀήρ καὶ ὕδωρ καὶ γῆ, ἀλλ' αἱ ποιότητες αὐτῶν, τὸ θερμὸν καὶ τὸ ψυχρὸν καὶ τὸ ξηρὸν καὶ τὸ ὑγρὸν, ὧν δύο μὲν τὰ ποιητικὰ αἰτία ὑποτίθεται, τὸ θερμὸν καὶ τὸ ψυχρὸν, δύο δὲ τὰ ὑλικά, τὸ ξηρὸν καὶ τὸ ὑγρὸν, καὶ πέμπτον παρεισάγει κατὰ τοὺς Στωϊκοὺς (*SVF* 2.416) τὸ διήκον διὰ πάντων πνεῦμα, ὃ φ' οὐ τὰ πάντα συνέχεσθαι καὶ διοικεῖσθαι. **Galen *Plen.* 7, p. 10–14 K.** οἱ Στωϊκοὶ (*SVF* 2.439) τὸ μὲν συνέχον ἕτερον ποιοῦσι, τὸ συνεχόμενον δὲ ἄλλο· τὴν μὲν γὰρ πνευματικὴν οὐσίαν τὸ συνέχον, τὴν δὲ ὑλικὴν τὸ συνεχόμενον· ὅθεν ἀέρα μὲν καὶ πῦρ συνέχειν φασί, γῆν δὲ καὶ ὕδωρ συνέχεσθαι. *Plen.* 7, p. 13–16 K. οὐδὲ γὰρ οὐδ' οἱ πολλοὶ τῶν Ἡροφίλειων (fr. 280 Von Staden), οὐδ' οἱ νεώτεροι Στωϊκοὶ (*SVF* 2.440) λέγουσιν τινα ἀπόδειξιν τοῦ τὸ μὲν πνεῦμα καὶ τὸ πῦρ συνέχειν ἑαυτὸ τε καὶ τὰ ἄλλα, τὸ δὲ ὕδωρ καὶ τὴν γῆν ἐτέρου δεῖσθαι τοῦ συνέχοντος. **Diogenes Laertius *V.P.* 3.68** (the Platonic World Soul) περιέχειν δὲ ἐκ τοῦ μέσου διὰ παντὸς κύκλῳ τὸ σῶμα. *V.P.* 7.138 τὸν δὲ κόσμον διοικεῖσθαι κατὰ νοῦν καὶ πρόνοιαν, καθά φησι Χρύσιππος (*SVF* 2.634) τ' ἐν τῷ πέμπτῳ Περὶ προνοίας καὶ Ποσειδῶνιος (F 21 E.-K., 345 Theiler) ἐν τῷ τρισκαιδεκάτῳ Περὶ θεῶν, εἰς ἅπαν αὐτοῦ μέρος διήκοντος τοῦ νοῦ, καθάπερ ἐφ' ἡμῶν τῆς ψυχῆς· ἀλλ' ἥδη δι' ὧν μὲν μᾶλλον, δι' ὧν δὲ ἥττον. **Tertullian *Adv.Nat.* 2.2.19** Borleffs *unde et Varro (Rer.Div. fr. 23 Cardauns) ignem mundi animum facit, ut perinde (i)n mundo ignis omnia gubernet sicut animus in nobis* (cited Isid. *Etym.* 8.6.21

unde et Varro ignem mundi animum dicit, proinde quod in mundo ignis omnia gubernet, sicut animus in nobis). **Simplicius in Phys.** 24.26–28 (**Theophrastus Phys.Op.** fr. 2 Diels, 226A FHS&G) Ἀναξιμένης δὲ Εὐρυστράτου Μιλήσιος (13A5 DK), ἑταῖρος γεγωνὺς Ἀναξιμάνδρου, μίαν μὲν καὶ αὐτὸς τὴν ὑποκειμένην φύσιν καὶ ἄπειρόν φησιν ὥσπερ ἐκεῖνος, οὐκ ἀόριστον δὲ ὥσπερ ἐκεῖνος, ἀλλὰ ὠρισμένην, ἀέρα λέγων αὐτήν.

§4 Anaxagoras: Plato Phd. 97b–d. **Aristotle Met.** A.3 984a11–16 Ἀναξαγόρας δὲ ὁ Κλαζομένιος (59A43 DK) τῇ μὲν ἡλικίᾳ πρότερος ὢν τούτου (sc. τοῦ Ἐμπεδοκλέους, 31A6 DK), τοῖς δ' ἔργοις ὕστερος (cf. **Met.** A.8 989b4–6 + b19–21), ἀπείρους εἶναι φησι τὰς ἀρχάς· σχεδὸν γὰρ ἅπαντα τὰ ὁμοιομερῆ καθάπερ ὕδωρ ἢ πῦρ οὕτω γίνεσθαι καὶ ἀπόλλυσθαι φησι, συγκρίσει καὶ διακρίσει μόνον, ἄλλως δ' οὔτε γίνεσθαι οὔτ' ἀπόλλυσθαι ἀλλὰ διαμένειν αἰδία. **Met.** A.3 985a19–20 Ἀναξαγόρας (—) τε γὰρ μηχανῇ χρῆται τῷ νῷ πρὸς τὴν κοσμοποιίαν. **Met.** A.3 984b15–20 νοῦν δὴ τις εἰπὼν ἐνείναι, καθάπερ ἐν τοῖς ζῴοις, καὶ ἐν τῇ φύσει τὸν αἷτιον τοῦ κόσμου καὶ τῆς τάξεως πάσης οἶον νήφων ἐφάνη παρ' εἰκῇ λέγοντας τοὺς πρότερον. φανερώς μὲν οὖν Ἀναξαγόραν (59A58 DK) ἴσμεν ἀψάμενον τούτων τῶν λόγων, αἰτίαν δ' ἔχει πρότερον Ἐρμότιμος ὁ Κλαζομένιος εἰπεῖν. **Phys.** 3.4 203a24–26 (Anaxagoras 59A45) ἐντεῦθεν γὰρ ἔοικε καὶ ὁμοῦ ποτὲ πάντα χρήματα· φάναι εἶναι, οἶον ἢδε ἢ σὰρξ καὶ τόδε τὸ ὁστοῦν, καὶ οὕτως ὅτιοῦν. **Phys.** 1.4 187a19–b8 οἱ δ' ἐκ τοῦ ἐνός ἐνούσας τὰς ἐναντιότητας ἐκκρίνεσθαι ... καὶ ὅσοι δ' ἐν καὶ πολλὰ φασιν εἶναι, ὥσπερ Ἐμπεδοκλῆς (31A36 DK) καὶ Ἀναξαγόρας (59A52 DK)· ἐκ τοῦ μίγματος γὰρ καὶ οὗτοι ἐκκρίνουσι τᾶλλα. διαφέρουσι δὲ ἀλλήλων τῷ τὸν μὲν περιόδον ποιεῖν τούτων, τὸν δ' ἅπαξ, καὶ τὸν μὲν ἅπειρα, τὰ τε ὁμοιομερῆ καὶ τάναντία, τὸν δὲ τὰ καλούμενα στοιχεῖα μόνον. ἔοικε δὲ Ἀναξαγόρας ἅπειρα οὕτως οἰηθῆναι διὰ τὸ ὑπολαμβάνειν τὴν κοινὴν δόξαν τῶν φυσικῶν εἶναι ἀληθῆ, ὥς οὐ γιγνομένου οὐδενὸς ἐκ τοῦ μὴ ὄντος (διὰ τοῦτο γὰρ οὕτω λέγουσιν, ἦν ὁμοῦ πάντα, καὶ τὸ γίνεσθαι τοιόνδε καθέστηκεν ἀλλοιοῦσθαι, οἱ δὲ σύγκρισιν καὶ διάκρισιν)· ἔτι δ' ἐκ τοῦ γίνεσθαι ἐξ ἀλλήλων τάναντία· ἐνυπῆρχεν ἄρα· εἰ γὰρ πᾶν μὲν τὸ γιγνόμενον ἀνάγκη γίνεσθαι ἢ ἐξ ὄντων ἢ ἐκ μὴ ὄντων, τούτων δὲ τὸ μὲν ἐκ μὴ ὄντων γίνεσθαι ἀδύνατον ..., τὸ λοιπὸν ἤδη συμβαίνειν ἐξ ἀνάγκης ἐνόμισαν, ἐξ ὄντων μὲν καὶ ἐνυπαρχόντων γίνεσθαι, διὰ μικρότητα δὲ τῶν ὄγκων ἐξ (187b) ἀναισθήτων ἡμῖν. διό φασι πᾶν ἐν παντὶ μεμῖχθαι, διότι πᾶν ἐκ παντὸς ἐώρων γιγνόμενον· φαίνεσθαι δὲ διαφέροντα καὶ προσαγορεύεσθαι ἕτερα ἀλλήλων ἐκ τοῦ μάλισθ' ὑπερέχοντος διὰ πλῆθος ἐν τῇ μίξει τῶν ἀπειρῶν· εἰλικρινῶς μὲν γὰρ ὅλον λευκὸν ἢ μέλαν ἢ γλυκὺ ἢ σάρκα ἢ ὁστοῦν οὐκ εἶναι, ὅτου δὲ πλεῖστον ἕκαστον ἔχει, τοῦτο δοκεῖν εἶναι τὴν φύσιν τοῦ πράγματος. **GA** 1.18 723a6–11 οὐ αὐτὸς γὰρ λόγος ἔοικεν εἶναι οὗτος τῷ Ἀναξαγόρου (—), τῷ μὲν γίνεσθαι τῶν ὁμοιομερῶν· πλὴν ἐκεῖνος μὲν ἐπὶ πάντων, οὗτοι δ' ἐπὶ τῆς γενέσεως τῶν ζῴων τοῦτο ποιοῦσιν. ἔπειτα τίνα τρόπον αὐξηθήσεται ταῦτα τὰ ἀπελθόντα ἀπὸ παντός; Ἀναξαγόρας μὲν γὰρ εὐλόγως φησὶ σάρκας ἐκ τῆς τροφῆς προσίεναι ταῖς σαρκίν. For a list of ὁμοιομερῆ see **HA** 1.1 487a1–10 ἔστι δὲ τῶν ὁμοιομερῶν τὰ μὲν μαλακὰ καὶ ὑγρά, τὰ δὲ ξηρὰ καὶ στερεὰ, ὑγρά μὲν, ἢ ὄλως ἢ ἕως ἂν ἢ ἐν τῇ φύσει, οἶον αἷμα, ἰχώρ, πιμελή, στέαρ, μυελός, γονή, χολή, γάλα ἐν τοῖς ἔχουσι, σὰρξ τε καὶ τὰ τούτοις ἀνάλογον, ἔτι ἄλλον τρόπον τὰ περιττώματα, οἶον φλέγμα, καὶ τὰ ὑποστήματα τῆς κοιλίας καὶ κύστεως· ξηρὰ δὲ καὶ στερεὰ οἶον νεῦρον,

δέρμα, φλέψ, θρίξ, ὅστων, χόνδρος, ὄνυξ, κέρας (ὁμώνυμον γὰρ τὸ μέρος, ὅταν τῷ σχήματι καὶ τὸ ὅλον λέγῃται κέρας), ἔτι ὅσα ἀνάλογον τούτοις. **Simplicius in Phys.** 27.2–17 (**Theophrastus Phys.Op.** fr. 4 Diels, 228A FHS&G) Ἀναξαγόρας μὲν γὰρ Ἥγησιβούλου Κλαζομένιος (59A41 DK), κοινωνήσας τῆς Ἀναξιμένης φιλοσοφίας, πρῶτος μετέστησε τὰς περὶ τῶν ἀρχῶν δόξας καὶ τὴν ἐλλείπουσαν αἰτίαν ἀνεπλήρωσε, τὰς μὲν σωματικὰς ἀπείρους ποιήσας· πάντα γὰρ τὰ ὁμοιομερῆ, ὅσον ὕδωρ ἢ πῦρ ἢ χρυσόν, ἀγέννητα μὲν εἶναι καὶ ἄφθαρτα, φαίνεσθαι δὲ γινόμενα καὶ ἀπολλύμενα συγκρίσει καὶ διακρίσει μόνον, πάντων μὲν ἐν πᾶσιν ὄντων, ἐκάστου δὲ κατὰ τὸ ἐπικρατοῦν ἐν αὐτῷ χαρακτηριζομένου. χρυσὸς γὰρ φαίνεται ἐκεῖνο, ἐν ᾧ πολὺ χρυσίον ἐστὶ καίτοι πάντων ἐνόντων τῆς δὲ κινήσεως καὶ τῆς γενέσεως αἴτιον ἐπέστησε τὸν Νοῦν ὁ Ἀναξαγόρας, ὅφ' οὐ διακρινόμενα τοὺς τε κόσμους καὶ τὴν τῶν ἄλλων φύσιν ἐγέννησαν.

§5 Archelaus: Aristotle GC 2.3 330b9–12 ὅσοι μὲν οὖν ἐν μόνον λέγουσιν, εἴτα πυκνώσει καὶ μανώσει τὰλλα γεννώσι, τούτοις συμβαίνει δύο ποιεῖν τὰς ἀρχάς, τό τε μανὸν καὶ τὸ πυκνόν ἢ τὸ θερμόν καὶ τὸ ψυχρόν. **GA** 5.3 783a37–b2 τὸ μὲν ψυχρόν οὐ μόνον σκληρύνει ἀλλὰ καὶ πυκνοί, τὸ δὲ θερμόν μανότερον ποιεῖ. **Met.** A.4 985b10–12 καὶ καθάπερ οἱ ἐν ποιοῦντες τὴν ὑποκειμένην οὐσίαν τὰλλα τοῖς πάθεσιν αὐτῆς γεννώσι, τὸ μανὸν καὶ τὸ πυκνόν ἀρχὰς τιθέμενοι τῶν παθημάτων. but cf. **Simp. in Phys.** 149.32–150.2 ἐπὶ γὰρ τούτου (sc. Anaximenes, 13A5 DK) μόνου Θεόφραστος ἐν τῇ Ἱστορίᾳ (**Phys.Op.** fr. 2, 226B FHS&G) τὴν μάνωσιν εἴρηκε καὶ πύκνωσιν (δῆλον δὲ ὡς καὶ οἱ ἄλλοι τῇ μανότητι καὶ πυκνότητι ἐχρῶντο). **Simplicius in Phys.** 27.23–28 (**Theophrastus Phys.Op.** fr. 4 Diels, 228A FHS&G) Ἀρχέλαος ὁ Ἀθηναῖος (60A5), ᾧ καὶ Σωκράτῃ συγγεγονέναι φασιν Ἀναξαγόρου γενομένῳ μαθητῇ, ἐν μὲν τῇ γενέσει τοῦ κόσμου καὶ τοῖς ἄλλοις πειράται τι φέρειν ἴδιον, τὰς ἀρχὰς δὲ τὰς αὐτὰς ἀποδίδωσιν ὥσπερ Ἀναξαγόρας. οὗτοι μὲν οὖν ἀπείρους τῷ πλήθει καὶ ἀνομογενεῖς τὰς ἀρχὰς λέγουσι, τὰς ὁμοιομερείας τιθέντες ἀρχάς.

§6 + §8 Ionic Italic: Aristotle Met. A.5 987a9–14 μέχρι μὲν οὖν τῶν Ἰταλικῶν καὶ χωρὶς ἐκείνων μορυχώτερον εἰρήκασιν οἱ ἄλλοι περὶ αὐτῶν, πλὴν ὥσπερ εἰπομεν δυοῖν τε αἰτίαιν τυγχάνουσι κεχρημένοι, καὶ τούτων τὴν ἑτέραν οἱ μὲν μίαν οἱ δὲ δύο ποιοῦσι, τὴν ὅθεν ἡ κίνησις· οἱ δὲ Πυθαγόρειοι δύο (58B8 DK) μὲν τὰς ἀρχὰς κατὰ τὸν αὐτὸν εἰρήκασιν τρόπον.

§6 Ionic Sicilian: Plato Sph. 242d Ἰάδεις δὲ καὶ Σικελαὶ τινες ὕστερον Μοῦσαι κτλ.

§7[54–55] Pythagoras: Plato Grg. 507e–508a φασι δ' οἱ σοφοί, ᾧ Καλλίκλεις, καὶ οὐρανὸν καὶ (508a) γῆν καὶ θεοὺς καὶ ἀνθρώπους τὴν κοινωνίαν συνέχειν καὶ φιλίαν καὶ κοσμιότητα καὶ σωφροσύνην καὶ δικαιοσύνην, καὶ τὸ ὅλον τοῦτο διὰ ταῦτα 'κόσμον' καλοῦσιν, ᾧ ἐταῖρε, οὐκ ἀκοσμίαν οὐδὲ ἀκολασίαν. **Cicero Tusc.** 5.8 omnes, qui in rerum contemplatione studia ponebant, sapientes et habebantur et nominabantur, idque eorum nomen usque ad Pythagorae manavit aetatem. quem, ut scribit auditor Platonis Ponticus Heraclides (fr. 88 Wehrli, 85 Schütrumpf), vir doctus in primis, Phliuntem ferunt venisse, eumque cum Leonte, principe Phliasiarum, docte et copiose disseruisse quaedam. cuius ingenium et eloquentiam cum admiratus esset Leon, quaesivisse ex eo, qua maxime arte confideret; at illum: artem quidem se scire nullam, sed esse philosophum.

admiratum Leontem novitatem nominis quaesivisse etc. **Diogenes Laertius** V.P. 1. prooem. 12 φιλοσοφίαν δὲ πρῶτος ὠνόμασε Πυθαγόρας καὶ ἑαυτὸν φιλόσοφον, ἐν Σικυῶνι διαλεγόμενος Λέοντι τῷ Σικυωνίων τυράννῳ (ἢ Φλειασίων, καθά φησιν Ἡρακλείδης ὁ Ποντικός (fr. 87 Wehrli, 84 Schütrumpf) ἐν τῇ Περὶ τῆς ἄπνου). 8.1. 8.8. **Diodorus Siculus** 10.10.1 ὅτι Πυθαγόρας φιλοσοφίαν, ἀλλ' οὐ σοφίαν ἐκάλει τὴν ἰδίαν αἴρεσιν.

§7[55–70] **Pythagoras: Anon. Photii** cod. 249, pp. 237.23–238.1 Thesleff καὶ ἐπειδὴ πάντα εἰς τοὺς ἀριθμοὺς ἀνήγον ἕκ τε τῆς μονάδος καὶ τῆς δυάδος, καὶ τὰ ὄντα πάντα ἀριθμοὺς προσηγόρευον, ὁ δὲ ἀριθμὸς συμπληροῦται τοῖς δέκα, ὁ δὲ δέκα σύνθεσις τῶν τεσσάρων κατὰ τὸ ἐξῆς ἀριθμούντων ἡμῶν, καὶ διὰ τοῦτο τὸν ἀριθμὸν πάντα τετρακτὺν ἔλεγον.

§7[55–57] **Pythagoras: Aristotle Met.** A.6 985b23–986a2 ἐν δὲ τούτοις καὶ πρὸ τούτων οἱ καλούμενοι Πυθαγόρειοι (58B4 DK) τῶν μαθημάτων ἀψάμενοι πρῶτοι ταῦτά προήγαγον, καὶ ἐντραφέντες ἐν αὐτοῖς τὰς τούτων ἀρχὰς τῶν ὄντων ἀρχὰς ᾤκησαν εἶναι πάντων. ἐπεὶ δὲ τούτων οἱ ἀριθμοὶ φύσει πρῶτοι, ἐν δὲ τοῖς ἀριθμοῖς ἐδόκουν θεωρεῖν ὁμοιώματα πολλὰ τοῖς οὖσι καὶ γιγνομένοις, μάλλον ἢ ἐν πυρὶ καὶ γῇ καὶ ὕδατι, ... ἔτι δὲ τῶν ἀρμονιῶν ἐν ἀριθμοῖς ὁρῶντες τὰ πάθη καὶ τοὺς λόγους, — ἐπεὶ δὴ τὰ μὲν ἄλλα τοῖς ἀριθμοῖς ἐφαίνετο τὴν φύσιν ἀφωμοιωσθαι πάσαν, οἱ δ' ἀριθμοὶ πάσης τῆς φύσεως πρῶτοι, τὰ τῶν ἀριθμῶν στοιχεῖα τῶν ὄντων στοιχεῖα πάντων εἶναι ὑπέλαβον.

§7[58–80] **Sextus Empiricus M.** 10.261–263 (*Test. Plat.* 32 Gaiser, 12 Krämer, C1–C2 Isnardi Parente) ὁ Πυθαγόρας ἀρχὴν ἔφησεν εἶναι τῶν ὄντων τὴν μονάδα, ἥς κατὰ μετοχὴν ἕκαστον τῶν ὄντων ἐν λέγεται: ... (262) δύο οὖν τῶν ὄντων ἀρχαί, ἡ τε πρώτη μονάς, ἥς κατὰ μετοχὴν πάσαι αἱ ἀριθμῶνται μονάδες νοοῦνται μονάδες, καὶ ἡ ἀόριστος δυάς, ἥς κατὰ μετοχὴν αἱ ὠρισμέναι δυάδες εἰσὶ δυάδες. ... καὶ ὅτι ταῖς ἀληθεαῖς αὐταὶ εἰσι τῶν ὄλων ἀρχαί, (263) ποικίλως οἱ Πυθαγόρειοι διδάσκουσιν. τῶν γὰρ ὄντων, φασί, τὰ μὲν κατὰ διαφορὰν νοεῖται, τὰ δὲ κατ' ἐναντίωσιν, τὰ δὲ πρὸς τι. κατὰ διαφορὰν μὲν οὖν εἶναι τὰ καθ' ἑαυτὰ καὶ κατ' ἰδίαν περιγραφὴν ὑποκείμενα, οἷον ἄνθρωπος ἵππος φυτὸν γῆ ὕδωρ ἀήρ πῦρ.

§7[55–57] + [62–70] **Pythagoras: Simplicius in Phys.** 26.26–29 τινὲς μὲν τοι καὶ μέχρι δεκάδος προήγαγον τὰς ἀρχὰς, εἰ καὶ μὴ τὰς στοιχειώδεις, ὥσπερ οἱ Πυθαγόρειοι (possibly a neglected fragment of Theophr. *Physikai Doxai*) τοὺς ἀπὸ μονάδος ἄχρι δεκάδος ἀριθμοὺς ἀρχὰς ἔλεγον τῶν ἀπάντων (ἢ τὰς δέκα συστοιχίας, ὡς ἄλλοι ἄλλως ἀνέγραψαν).

§7[58–61] **Aristotle Met.** A.6 987b20–27 (on Plato, *Test. Plat.* 22A Gaiser, 9 Krämer, A1 Isnardi Parente) ὡς μὲν οὖν ὕλην τὸ μέγα καὶ τὸ μικρὸν εἶναι ἀρχὰς, ὡς δ' οὐσίαν τὸ ἔν: ἐξ ἐκείνων γὰρ κατὰ μέθεξιν τοῦ ἐνὸς τὰ εἶδη εἶναι τοὺς ἀριθμοὺς. τὸ μέντοι γε ἐν οὐσίαν εἶναι, καὶ μὴ ἕτερόν τι ὃν λέγεσθαι ἐν, παραπλησίως τοῖς Πυθαγόρειοις ἔλεγε, καὶ τὸ τοὺς ἀριθμοὺς αἰτίους εἶναι τοῖς ἄλλοις τῆς οὐσίας ὡσαύτως ἐκείνοις: τὸ δὲ ἀντὶ τοῦ ἀπείρου ὡς ἐνὸς δυάδα ποιῆσαι, τὸ δ' ἄπειρον ἐκ μεγάλου καὶ μικροῦ, τοῦτ' ἴδιον. **Speusippus** at Procl. in *Parm.* 3.501.4–9 Steel et ut *Speusippus* (fr. 62 Isnardi Parente, 48 Tarán) narrans tamquam placencia antiquis audi quid dicit. 'le unum melius ente putantes (sc. the ancients—i.e. the Pythagoreans?) et a quo le ens et ab ea quae secundum principium habitud-

ine ipsum liberaverunt; existimantes autem quod, si quis le unum ipsum seorsum et solum meditatam sine aliis secundum se ipsum suadere, nullum alterum elementum ipsi apponens, nichil utique fiet aliorum, interminabilem dualitatem entium principium inducens. (Steel's retroversion: 'τὸ γὰρ ἐν κρείττον τοῦ ὄντος ἡγούμενοι καὶ ἀφ' οὗ τὸ ὄν, καὶ τῆς κατ' ἀρχὴν σχέσεως αὐτὸ ἀπήλλαξαν· ὑπολαμβάνοντες δὲ ὅτι, εἴ τις τὸ ἐν αὐτὸ χωρὶς καὶ μόνον διανοοῦμενος ἄνευ τῶν ἄλλων καθ' αὐτὸ τιθεῖν, μηδὲν ἕτερον στοιχεῖον αὐτῷ προσθεῖς, οὐδὲν ἂν γένοιτο τῶν ἄλλων, τὴν ἀόριστον дуάδα τῶν ὄντων ἀρχὴν εἰσέγαγον.')

Theophrastus Met. 31 11a27–b7 Πλάτων (p. 494 Gaiser, *Test.Plat.* B3 Isnardi Parente) δὲ καὶ οἱ Πυθαγόρειοι (58B14 DK) μακρὰν τὴν ἀπόστασιν, ἐπιμειψίσθαι τ' ἐθέλειν ἅπαντα· καίτοι καθάπερ ἀντίθεσιν τινα ποιοῦσιν τῆς ἀορίστου дуάδος καὶ τοῦ ἐνός, ἐν ἧ καὶ τὸ ἄπειρον καὶ τὸ ἄτακτον καὶ πᾶσα ὡς εἰπεῖν ἀμορφία καθ' αὐτήν, ὥς δ' οὐχ οἶόν τ' ἄνευ ταύτης τὴν τοῦ ὅλου φύσιν, ἀλλ' οἷον ἰσομοιρεῖν ἢ καὶ ὑπερέχειν τῆς ἐτέρας, ἢ καὶ τὰς ἀρχὰς ἐναντίας. **ps.Plutarch Hom.** 2.145, 1743–1747 Kindstrand ὁ γὰρ Πυθαγόρας τοὺς ἀριθμοὺς μεγίστην δύναμιν ἔχειν ἡγούμενος καὶ πάντα εἰς ἀριθμοὺς ἀναφέρων, ..., δύο τὰς ἀνωτάτω ἀρχὰς ἐλάμβανε, τὴν μὲν ὠρισμένην μονάδα, τὴν δὲ ἀόριστον дуάδα καλῶν, τὴν μὲν ἀγαθῶν, τὴν δὲ κακῶν οὖσαν ἀρχήν. **Galen Di.Dec.** 9.343.12–14 K. καθ' ἕτερον τρόπον ἰδεᾶν μὲν τὴν μονάδα, τὴν дуάδα δὲ ὕλην ἄπειρον. **Alexander of Aphrodisias in Met.** 39.14–15 διὰ τὸ μόνιμον δὲ καὶ τὸ ὅμοιον πάντη καὶ ἀρχικὸν τὸν νοῦν μονάδα τε καὶ ἐν ἔλεγον (sc. the Pythagoreans). **ps.Iamblichus Theol.Ar.** p. 6.4–5 de Falco ὅτι τὴν μονάδα ἐκάλουν οἱ Πυθαγόρειοι νοῦν, εἰκάζοντες τῷ ἐνὶ taken from **Anatolius de Dec.** p. 5.19–21 Heiberg ἐκάλουν δὲ αὐτήν (sc. τὴν μονάδα) οἱ Πυθαγόρειοι νοῦν, εἰκάζοντες τῷ ἐνὶ αὐτήν, τῷ νοητῷ θεῷ, τῷ ἀγεννήτῳ, αὐτοκαλῷ, αὐτοαγαθῷ κτλ.

Differently on the first principles: *Pythagorica Hypomnemata* at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK) at D.L. *V.P.* 8.24–25 φησὶ δ' ὁ Ἀλέξανδρος ἐν Ταῖς τῶν φιλοσόφων διαδοχαῖς καὶ ταῦτα εὐρηκέναι ἐν Πυθαγορικοῖς ὑπομνήμασιν· (25) ἀρχὴν μὲν τῶν ἀπάντων μονάδα· ἐκ δὲ τῆς μονάδος ἀόριστον дуάδα ὡς ἂν ὕλην τῇ μονάδι αἰτίῳ ὄντι ὑποστήναι· ἐκ δὲ τῆς μονάδος καὶ τῆς ἀορίστου дуάδος τοὺς ἀριθμοὺς κτλ. **Eudorus frs.** 3–5 Mazzearelli (in part verbatim) at **Simp. in Phys.** 181.7–30 καὶ οἱ Πυθαγόρειοι δὲ οὐ τῶν φυσικῶν μόνων ἀλλὰ καὶ πάντων ἀπλῶς μετὰ τὸ ἐν, ὃ πάντων ἀρχὴν ἔλεγον, ἀρχὰς δευτέρας καὶ στοιχειώδεις τὰ ἐναντία ἐτίθεσαν, αἷς καὶ τὰς δύο συστοιχίας ὑπέταττον οὐκέτι κυρίως ἀρχαῖς οὖσαις. γράφει δὲ περὶ τούτων ὁ Εὐδωρος τάδε· 'κατὰ τὸν ἀνωτάτω λόγον φατέον τοὺς Πυθαγορικοὺς τὸ ἐν ἀρχὴν τῶν πάντων λέγειν, κατὰ δὲ τὸν δεύτερον λόγον δύο ἀρχὰς τῶν ἀποτελουμένων εἶναι, τὸ τε ἐν καὶ τὴν ἐναντίαν τούτῳ φύσιν. ὑποτάσσεσθαι δὲ πάντων τῶν κατὰ ἐναντίωσιν ἐπινοουμένων τὸ μὲν ἀστέιον τῷ ἐνὶ, τὸ δὲ φαῦλον τῇ πρὸς τοῦτο ἐναντιουμένη φύσει. διὸ μηδὲ εἶναι τὸ σύνολον ταύτας ἀρχὰς κατὰ τοὺς ἄνδρας. εἰ γὰρ ἢ μὲν τῶνδε ἢ δὲ τῶνδε ἐστὶν ἀρχή, οὐκ εἰσὶ κοιναὶ πάντων ἀρχαὶ ὥσπερ τὸ ἐν'. (fr. 4) καὶ πάλιν 'διό', φησί, 'καὶ κατ' ἄλλον τρόπον ἀρχὴν ἔφασαν εἶναι τῶν πάντων τὸ ἐν, ὡς ἂν καὶ τῆς ὕλης καὶ τῶν ὄντων πάντων ἐξ αὐτοῦ γεγεννημένων. τοῦτο δὲ εἶναι καὶ τὸν ὑπεράνω θεόν'. (fr. 5) καὶ λοιπὸν ἀκριβολογούμενος ὁ Εὐδωρος ἀρχὴν μὲν τὸ ἐν αὐτοὺς τίθεσθαι λέγει, στοιχεῖα δὲ ἀπὸ τοῦ ἐνός γενέσθαι φησίν, ἃ πολλοὶς αὐτοὺς ὀνόμασιν προσαγορεύειν. λέγει γάρ· 'φημί τοίνυν

τοὺς περὶ τὸν Πυθαγόραν τὸ μὲν ἐν πάντων ἀρχὴν ἀπολιπεῖν, κατ' ἄλλον δὲ τρόπον δύο τὰ ἀνωτάτω στοιχεῖα παρεισάγειν. καλεῖν δὲ τὰ δύο ταῦτα στοιχεῖα πολλαῖς προσηγορίαις· τὸ μὲν γὰρ αὐτῶν ὀνομάζεσθαι τεταγμένον ὠρισμένον γνωστὸν ἄρρεν περιττὸν δεξιὸν φῶς, τὸ δὲ ἐναντίον τούτῳ ἄτακτον ἀόριστον ἄγνωστον θῆλυ ἀριστερὸν ἄρτιον σκότος, ὥστε ὡς μὲν ἀρχὴ τὸ ἐν, ὡς δὲ στοιχεῖα τὸ ἐν καὶ ἡ ἀόριστος дуас, ἀρχαὶ ἄμφω ἐν ὄντα πάλιν. καὶ δῆλον ὅτι ἄλλο μὲν ἐστὶν ἐν ἡ ἀρχὴ τῶν πάντων, ἄλλο δὲ ἐν τῇ δυάδι ἀντικείμενον, ὃ καὶ μονάδα καλοῦσιν'. **Anon. Photii** cod. 249, p. 237.16–23 Thesleff ὅτι διαφέρειν ἔλεγον οἱ ἀπὸ Πυθαγόρου μονάδα καὶ ἐν. μονὰς μὲν γὰρ παρ' αὐτοῖς ἐνομιζέτο ἡ ἐν τοῖς νοητοῖς οὐσα, ἐν δὲ τὸ ἐν τοῖς ἀριθμοῖς· ὁμοίως δὲ καὶ δύο τὸ ἐν τοῖς ἀριθμητοῖς· ἔλεγον δὲ τὴν δυάδα ἀόριστον, ὅτι ἡ μὲν μονὰς κατὰ τὴν ἰσότητά καὶ τὸ μέτρον λαμβάνεται, ἡ δὲ дуас καθ' ὑπερβολὴν καὶ ἔλλειψιν· μεσότης μὲν οὖν καὶ μέτρον οὐ δύναται μάλλον καὶ ἦττον (439a) γενέσθαι· ἡ δὲ ὑπερβολὴ καὶ ἔλλειψις ἐπειδὴ ἐπ' ἀπειρον προχωρεῖ, διὰ τοῦτο ἀόριστον αὐτὴν ἔλεγον δυάδα. **Sextus Empiricus** *M.* 10.261 + 277 (*Test. Plat.* 32 Gaiser, 12 Krämer, C1 + C2 Isnardi Parente) ὁ Πυθαγόρας ἀρχὴν ἔφησεν εἶναι τῶν ὄντων τὴν μονάδα, ἥς κατὰ μετοχὴν ἕκαστον τῶν ὄντων ἐν λέγεται· καὶ ταύτην κατ' αὐτότητα μὲν ἑαυτῆς νοουμένην μονάδα νοεῖσθαι, ἐπισυντεθεῖσαν δ' ἑαυτῇ καθ' ἑτερότητα ἀποτελεῖν τὴν καλουμένην ἀόριστον δυάδα. ... (277) φασὶν ἐν ταῖς ἀρχαῖς ταύταις τὸν μὲν τοῦ δρώντος αἰτίου λόγον ἐπέχειν τὴν μονάδα, τὸν δὲ τῆς πασχούσης ὕλης τὴν δυάδα.

§7[62–70] **Pythagoras** *Aristotle Met.* A.6 986a22–23 (Pythagorei 58B5 DK) ἔτεροι δὲ τῶν αὐτῶν τούτων τὰς ἀρχὰς δέκα λέγουσιν εἶναι τὰς κατὰ συστοιχίαν λεγομένας. **ps.Iamblichus Theol.Ar.** p. 83.5–9 de Falco λέγει δὲ (sc. Σπεύσιππος fr. 4 Lang, 122 Isnardi Parente, 28 Tarán; Philolaus 44A13 DK) τὸν τρόπον τοῦτον περὶ αὐτῆς· 'ἔστι δὲ τὰ δέκα τέλειος (ἀριθμός), καὶ ὀρθῶς τε καὶ κατὰ φύσιν εἰς τοῦτον κατανατῶμεν παντοίως ἀριθμοῦντες "Ἕλληνες τε καὶ πάντες ἄνθρωποι οὐδὲν αὐτοὶ ἐπιτηδεύοντες'. **Theon of Smyrna Exp.** p. 99.17–23 Hiller πάντα μὲν γὰρ τὸν ἀριθμὸν εἰς δεκάδα ἡγαγον, ἐπειδὴ ὑπὲρ δεκάδα οὐδεὶς ἐστὶν ἀριθμός, ἐν τῇ αὐξήσει πάλιν ἡμῶν ὑποστρεφόντων ἐπὶ μονάδα καὶ δυάδα καὶ τοὺς ἐξῆς· τὴν δὲ δεκάδα ἐπὶ τετράδα συνίστασθαι· ἐν γὰρ καὶ β' καὶ γ' καὶ δ' ἐστὶ ι', ὥστε τοὺς δυνατωτάτους ἀριθμοὺς ἐντὸς τῆς τετράδος θεωρεῖσθαι.

§2 A 4.prooem. Περιωδευμένων δὲ τῶν τοῦ κόσμου μερῶν διαβήσομαι πρὸς τὰ κατὰ μέρος.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The chapter is only preserved in the tradition of P. It is written out fully in P^B and Q, i.e. inclusive of §2, and in E without §2, with E providing numerous interesting textual variants that may go back to the early history of the text. E, writing his own work, has no use for P's (i.e. A's) authorial remarks. G reduces the long account to just three lines and Ps only takes over the main themes of the description, combining them with other material and carefully expunging all references to atomism.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition, apart from brief passages in Hippolytus (who *Ref.* 1.12.2 attributes a version of the cosmogony to Leucippus), is represented by the account of Leucippus' cosmogony in Diogenes Laertius *V.P.* Book 9, and esp. by the cosmogony in Lucretius *DRN* Book 5. The resemblance between our chapter and Diogenes' Leucippean cosmogony has led to

the attribution of ch. 1.4 to Leucippus as 67A24 DK ('Auszug aus dem Μέγας διάκοσμος' DK ad loc.), but to us this ascription seems less likely, though of course the report is in what one may call the Leucippean tradition. The overall structure and numerous details of Lucretius' version are in entire agreement with what is found in our chapter. In fact §1 reads like a series of excerpts from Lucretius or conversely, see Robin on Lucretius and the doctrine of A 1.4 at Ernout–Robin (1928) 3.55: 'On verra avec quelle fidélité L(ucrèce) l'interprète'. Another proximate parallel is provided by Dionysius of Alexandria in Eusebius, who seems to be dependent on the *Placita* tradition (cf. below at ch. 1.14, Commentary D(d)§6). It is to be noted that Epicurus, *Ep. Pyth.* 89–90, sharply criticizes certain aspects of what is in fact the account given by Lucretius and A. But in the context of the present inquiry we cannot attempt to solve the problem of the relation between Lucretius' and Epicurus' diverging versions of the cosmogony, or find a solution for the question of the Epicurean vs. the Leucippean origin of the contents of the chapter. Worthwhile discussion and rich material are to be found at Spoerri (1959) 6–30; see also Bakker (2016) 224–235.

(2) *Sources.* The ultimate sources of §1 will be works of Leucippus and Democritus as well as of Epicurus and his followers. In favour of an Epicurean source is the reference to the weight of the larger atoms (§1[7] βαρύτατα), and the continuity of the principal ideas from Leucippus to his own time is attested by Cicero *ND* 1.66 (cited at section E(a)§1) and others.

C Chapter Heading

(1) A quite precise formula and a fairly common expression, dealing with the sub-question *unde* and the question type of cause, with some variations attested by the sources. In phrases about the generation of the cosmos the form συνέστηκε(ν) is rather more common than συνέστη, which explains Diels' and our preference for the longer form. συνέστη is perhaps more poetical, cf. Euripides fr. 910.6–7 Kannicht (Anaxagoras 59A30 DK) κόσμον ἀγήρων, πῇ τε συνέστη / καὶ ὅπῃ καὶ ὅπως—but see also e.g. Aristotle *Cael.* 1.10 279b25, Philo *Plant.* 7. On the other hand the fact that the text of the lemma itself has κόσμος συνέστη may weigh in favour of the reading of P^{E2} and P^{Ps}. The parallels in the *Placita*, found in the headings of chs. 2.13 and 3.16, have συνέστη not συνέστηκε(ν): 2.13 Τίς οὐσία τῶν πλανητῶν καὶ ἀπλανῶν, καὶ πῶς συνέστη, 3.16 Περί θαλάσσης, πῶς συνέστη καὶ πῶς ἔστι πικρά. *Ad sententiam* there is of course no difference.

(2) Among the *Placita* headings beginning with Πῶς or containing πῶς a little later there are several with the formula πῶς γίνεται (or γίνονται), all revealing a particular interest in the causal elucidations of a problem. See e.g. chs. 2.19 ... πῶς γίνεται χειμῶν καὶ θέρος, 3.17 Πῶς ἀμπώτιδες γίνονται καὶ πλήμμυραι. Πῶς +

γίνονται or γίνονται is found particularly in headings in the last book. On headings see further above at ch. 1.1, Commentary C.

D Analysis

a Context

(1) *Introduction.* The chapter belongs with the introduction of the treatise to the extent that, after ch. 1.3 on the material (and occasionally other) principles, it provides in §1 a compacted history of the generation of the cosmos and its main parts, albeit from an Atomist point of view. For all this one-sidedness it still preludes upon Books 2 and 3 as a whole. Now ch. 1.4, exclusively Atomist, only speaks of a single cosmos, so the reader may wonder why there is no mention of the usual multiplicity of kosmoi according to the Atomists. Presumably this is because this single cosmos very much resembles our world, so in fact serves as the world of the *Placita*. In the next chapter, 1.5, moreover, the single cosmos or All is opposed to the infinitely many kosmoi of the Atomists (an issue that is also part of the problem in ch. 2.1), so the topic is postponed for a little while rather than avoided.

We may add that, though our present chapter (i.e. §1) could very well have found a place at the beginning of Book 2, it fulfils an important role in its present position. Together with ch. 1.3 as its immediate predecessor and ch. 1.5 as its sequel, it demonstrates that the treatise is to an important extent about physics in the sense of cosmogony and cosmology, and not concerned with theoretical and abstract conceptions alone. In fact, as pointed out M–R 2.1.22–24 and 2.1.54, the block consisting of chs. 6–29, dealing with more abstract matters, have so to speak been interpolated in a detailed account of cosmology comprising chs. 1.4–5 plus Book 2. What is more, Ach ch. 3, ‘On the principle of the whole’, is parallel to A 1.3, while Ach ch. 4, ‘On the construction of the whole’, is parallel to A 1.4. This parallel of sequence and contents in A and its proximate source shows that A’s order, or the inclusion in the introductory section of the cosmogonical ch. 1.4, is not *contra morem*, but *pace* Diels *DG* 58 agrees with the broader tradition; see M–R 2.1.127–129. Of some importance is also the fact that in ch. 1.3.2 (Anaximander), 1.3.4 (Anaxagoras), and 1.3.9 (Hippasus Heraclitus), cosmogony, even inclusive of some details, is briefly mentioned after the principles or elements from which things come forth. And this is already the case in Theophrastus in Simplicius on Anaximander (*Phys.Op.* fr. 2 Diels ~ 226A FHS&G) and Anaxagoras (*Phys.Op.* fr. 4 Diels ~ 228A FHS&G); see M–R 2.1.132–133 for the details. For the influence of Platonist and Stoic orderings see above ch. 1.3, Commentary D(a).

(2) *Authorial comment.* The final sentence (§2), summarizing the cosmogony of §1, is an authorial comment understandably omitted by E (inadvertently

incorporated by Diels 67A24 DK *ad finem*). It is comparable to those made at other nodal points of the treatise. The corresponding proem of Book 4 (Greek text cited *loci Aetiani* §2), looking back on Books 2 and 3 and forward to the contents of Books 4 and 5 and thus placed in the *omphalos* position as regards these preceding and following Books, states that ‘The parts of the cosmos having now been treated systematically, I shall continue in the direction of the particular phenomena’. See further M–R 2.1.42–59 and General Introduction 2.7.

b Number–Order of Lemmata

(1) We need not assume that lemmata providing alternative cosmogonies have been abridged away (see above), but cannot of course be certain. What nevertheless causes some surprise is that the view of Aristotle and others that the cosmos is ungenerated and everlasting is lacking. Accordingly the opportunity is missed of presenting a standard diaphonia, for which see e.g. already Plato *Tim.* 28b, then e.g. Diodorus Siculus 1.6.3, with reference to philosophers of nature (φυσιολόγοι) and historians, or the three choices of Philo *Aet.* 9 (see below section E(b)§1). Possibly the omission (if omission it is) is deliberate and economical in view of the presence of this issue in the next chapter, 1.5.4, and esp. of the whole series of alternatives in ch. 2.4 below (with emphasis on the destructibility of the cosmos, as is also clear from its heading); see ch. 2.4, Commentary B.

(2) The authorial remark in §2 follows upon §1 in the same way as the authorial remark in ch. 3.8.2 follows a first lemma of the standard type.

c Rationale–Structure of Chapter

The *skopos* (aim) of the chapter is to provide a short and introductory account of the generation of *the* cosmos and its main parts. At a first glance the choice of an Atomist account of cosmogony causes some surprise in a treatise that in the prologue intimates and in its first chapter declares its preference for Peripatetic thought. The reason why an available Atomist account was chosen seems to be purely pragmatic: it is very systematic, discusses matters in sequence, and still manages to be comparatively brief and quite detailed, so is quite useful from a didactic point of view. The cosmos at issue resembles or rather *is* our cosmos, not one of the oddly shaped kosmoi in found in infinite space according to Epicurus (cf. A 2.2.5). Actually neither infinite space nor the infinitely many other kosmoi found in infinite space according to Epicurus’ master Metrodorus in the next chapter are mentioned here. This emphasis on the origin of a single cosmos just like ours may help explain why the lemma lacks a name-label.

Comparable accounts of Platonist or Stoic origin may have been less informative within a small compass. Cf. M–R 2.1.22–23, 50–51. An option that is cer-

tainly lacking is the widely popular creationist view associated with the cosmogony of Plato's *Timaeus*. A's secularist penchant may be responsible, for which see above, ch. 1.1, Commentary D(c) *ad finem*. Atomist and creationist cosmogonies are often opposed to each other, e.g. Pl. *Phlb.* d–e and Basil *in Hexaem.* 1.2, p. 3.14–4.17 Amand de Mendieta–Rudberg.

d Further Comments

Individual Points

§1[16] A does not appear to distinguish clearly in his terminology between ἄσπερες and ἄστρα. Certainly it is not possible to consistently translate the former as 'planets' and the latter as 'stars'. See further our comments on ch. 2.13 Commentary D(a). In l. 16 there is a discrepancy between P^B and P^E precisely on this point, with P^B reading ἀστέρων and P^E ἄστρον. It is safest in all three cases (l. 16, 18 and 22) to translate 'heavenly bodies'.

§1[23] Is the drying out of the earth caused only by the winds resulting from the revolution of the heavens and the air below it, or also by the heat of the heavenly bodies? By reading αὔρας P^B supports the former view, with αὔγας P^E the latter. Though the former is perhaps the *lectio difficilior*, we have chosen the latter because of the role of solar heat in similar cosmogonies, see ch. 3.16 below.

§2 On the authorial remark see M–R 2.1.50–51.

e Other Evidence

(1) *Atomist cosmogonies*. On Lucretius see at section B above. The song of Silenus in Vergil's *Sixth Eclogue*, which 6.31–40 begins with a briefly sketched Atomist cosmogony presumably inspired by Lucretius, provides an interesting parallel: such secular theories of Atomist provenance may have been acceptable as being representative of cosmogony *per se*. The formation of the four elements from concatenations of atoms mentioned ch. 1.4. §1[20–26]: γῆ, πῦρ, ἀήρ, τὴν ὑγρὰν φύσιν / τὸ ὕδωρ] is paralleled in Silenus' song. Spoerri (1970a) and (1970b) on the song of Silenus and its ancient commentators argues persuasively in favour of an Epicurean (or even Lucretian) narrative that is free of Empedoclean echoes.

(2) *Similar cosmogonies*. Comparable cosmogonies, for instance in Diodorus Siculus, no longer believed to be Democritean, and Ovid (see below section E(b)§1), are more eclectic (assuming the use of this term is still permitted), while that of Apollonius Rhodius *Arg.* 1.496–502 is quite Empedoclean; see Spoerri (1959) 1–30, 38–44, Barchiesi (2005) 145–166.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The chapter is quite broadly attested.

(1) In addition to the text of P^B and Q, it is also fully written out by E, who in the third doxa preserves a fine reading that is superior to what is found in the later transmission. G cites three doxai, the first two fairly faithfully, the third a longer Platonic lemma in a reduced form. The doxa of Empedocles has been interpolated in the text of Philo *Prov.* 1.22 as part of the interpolation of material from A 1.3. Ps uses only the heading.

(2) S includes the chapter together with ch. 2.7 in his ch. 1.22 ‘On the ordering of the cosmos’. The Platonic doxa is pared down to a five-word summary at 1.22.3d, followed by the quote from *Tim.* 31a–b on which A’s doxa is ultimately based.

(3) Diels *DG* 292 with some hesitation added a final lemma from T, *CAG* 4.12 (see app. crit.), which he placed not in the text but in the apparatus and gave the number §5: ‘Hippasus of Metapontum [18A7 DK] and Heraclitus, son of Blosson, of Ephesus (T 200 Mouraviev) held that the All is one, unmoved [*sic*; ἀκίνητον, after Zeller generally amended to ἀ(ε)κίνητον ‘always in motion’] and limited, and that the principle is fire’ (on this emendation see above ch. 1.3 Commentary A(5)(c)). This may seem justified because of the mention of the singularity of the All, but entails neglecting the part about fire as the principle, which as to theme belongs with the chapter on the principles, A 1.3. The assumption that the Theodorean lemma must be a combination of two lemmata from different Aëtian chapters does not convince, because the two themes are already combined in Theophrastus *Phys.Op.* fr. 1 (= fr. 225 FHSG, ap. Simp. in *Phys.* 23.33–24.2) and Diogenes Laertius *V.P.* 8.84, see Diels *DG* 168 and 221, Journée (2018) at M–R 4, passim, and Mansfeld (2018b) at M–R 4.247–248. Subsequently, at Hippasus 18A1 DK (~ *V.P.* 8.84) we are told by Diels that the phrase is ‘aus Theophrast’, with reference to 18A7 (Theophr. *Phys.Op.* fr. 1). The present lemma is not printed in DK. So we have decided not to follow Diels here. See further ch. 1.3 Commentary A(5)(c).

B Proximate Tradition and Sources

(1) *Proximate tradition.* For the proximate tradition see below on ch. 2.1. This chapter deals with the same theme.

(2) *Sources.* The account of Plato’s view ultimately derives from the *Timaeus*. For the counter-arguments, mostly of Atomist provenance, see below at section D(d)§4.

C Chapter Heading

(1) This heading, formulating a very precise question, is only found in the traditions of S and P up to Psellus and nowhere else. *Pace* Leszl (2002) 175 the question ‘whether one ...’ obviously entails a contrast between one and more than one (: question type of quantity). The relation between ‘one’ (or unique) and ‘all’ adverts us to the various senses in which these terms have been used.

(2) In S it is surprising to find that the material in this chapter is not used in ch. 1.21 on the cosmos etc. which contains some doxai from A 2.1, but rather in ch. 1.22 the heading of which is based on A 2.7 (*Ecl.* p. 195.3). The heading of our ch. 1.5 is then cited as a sub-heading halfway this chapter (p. 198.18). Photius’ index combines chapter heading and sub-heading, both obviously taken from S 1.22. The Laurentianus manuscript has Περὶ κόσμου τάξεως ἐν αὐτῷ καὶ τάδε· εἰ ἐν τὸ πᾶν, which means that the Stobaeon chapter ‘On the ordering of

the cosmos' also contains 'Whether the All (sc. the universe) is unique'. Wachsmuth should not have added the sub-heading between angle brackets to the main one at p. 195.3. Bottler (2014) 124–127 appears to argue in favour of a single chapter *Περὶ τάξεως τοῦ κόσμου· εἰ ἓν τὸ πᾶν* in the source shared by P and S, because Photius is only able to count this heading as no. 22 in his second decad of headings if it is that of a single chapter. But Photius counts headings in S not P. It is, however, quite unlikely that P, the epitomator, would have distributed the lemmata over two different chapters in two different books, whereas S's combination and even coalescence of different chapters from A in one of his own is his standard practice. In S 1.22 there is no coalescence or close combination of lemmata of chs. 1.5 and 2.7. This is not to be wondered at, because the two chapters have very little in common. Chs. 1.5 and 2.1, on the other hand, to a considerable extent deal with the same topic, so lemmata excerpted from them are cited in two successive blocks, 2.1 at *Ecl.* 1.22.3b following 1.5 at 1.22.3a. See also M–R 1.11, 1.22–24 (on chs. 1.5–2.1 and their overlap), 2.2.306–322 (on ch. 2.1).

D Analysis

a Context

Introduction. The chapter is part of the introduction of the treatise. The question of the uniqueness or plurality of kosmoi follows in a natural way upon the (Atomist) account of the generation of a single cosmos in ch. 1.4. It is no less general than ch. 1.4, and equally preliminary to the account of the cosmos as a whole that is to follow in Book 2. Even so, the present chapter together with ch. 1.4 could very well have found a place at the beginning of Book 2. This is also clear from the fact that the issues of plurality vs. uniqueness, and of the infinite according to size or number, are also part of the subject of ch. 2.1, 'On the cosmos'. Coalescing the two chs. 1.5 and 2.1 would have saved space. S of course noticed the overlap; under the sub-heading *Εἰ ἓν τὸ πᾶν* in his ch. 1.22 he has copied out, without interruption, first 3a: A 1.5.2 + 1.5.1 + 1.5.4, then 3b: 2.1.2 + 2.1.3 and 3c: 2.1.4 + 2.1.5, a quite sensible arrangement.

b Number–Order of Lemmata

(1) P has four lemmata, S three. S has omitted P₃, name-label Plato, replacing it in his usual way with an abstract from Plato, viz. *Tim.* 31a–b, preceded by the words (*Ecl.* p. 199.23–24) *Πλάτων ἕνα τὸν κόσμον ἀπεφήνατο· λέγει γὰρ ἐν τῷ Τιμαίῳ οὕτως*, of which the first colon, 'Plato said there is only one cosmos', can be read as terse summary of P₃. But at 1.22.3d this replacement only follows further down, after the excerpts from ch. 2.1 at 1.22.3b–c and so not after those from ch. 1.5 at 1.22.3a.

(2) Two of the three lemmata S shares with P are presented in a different order, viz. $S_1 = P_2$ and $S_2 = P_1$, while $S_3 = P_3$. Which of these two arrangements is to be attributed to A it is hard to say, because from a systematic point of view the difference is irrelevant.

(3) As to the place of the Plato lemma (P_3), no argument against P's order is available because of the fact that S placed the text he substituted for this lemma after his excerpts from A. We therefore have decided to follow Diels in the *DG* who, as usual, followed P.

c Rationale–Structure of Chapter

Diaphoniae. See above, section C ad init. Three lemmata in favour of the uniqueness of the cosmos, §§1–3, are contrasted with a single lemma, §4, in favour of plurality—in fact in favour of an infinite multiplicity of atomist kosmoi, which amounts to a neat and strong diaphonia. §1 and §2 are opposed to each other because according to the Stoics the cosmos constitutes the totality of what is corporeal, while according to Empedocles it is only a small part of the All (: the universe), the remainder being inert matter. There is also a distinction between §§1–2 on the one hand, dogmatically presenting doxai without argumentation, and §§3–4, where the doxai are accompanied by arguments—which, moreover, in §3 are argued against (an explicitly dialectical feature not often found in the *Placita*), but not in §4. The opposition between uniqueness and plurality as first and last is maintained by both P and S, and is not affected by the displacement of §3 in S.

d Further Comments

Individual Points

§1 The lemma as transmitted can be rendered: 'The (philosophers) from the Stoa declared the cosmos to be unique, and also said that it was all that is corporeal'. This awkward phrase compares uneasily with but does not contradict the standard Stoic doctrine concerned with the distinction between 'the All' (the cosmos + the empty space beyond the cosmos) and 'the whole' (the cosmos alone) reported elsewhere, viz. ch. 2.1.7 below; cf. Ach c. 5 p. 15.11–13, Sextus Empiricus *M.* 9.332 (= *SVF* 2.524), and see Long–Sedley (1987) 1.270. In line [2] the καί after εἶναι (in P, not in S) should be omitted, while the first τό in the same line may be a corruption (easily explained as a perseveration of the τό in the τό πᾶν of the heading) that was already present in the text of A. An improved *constitutio* would look like ὃν δὴ καὶ πᾶν ἔφασαν εἶναι τὸ σωματικόν. For the phrase πᾶν τὸ σωματικόν cf. Plu. *Def.Or.* 428D ἡ δὲ τοῦ δωδεκαέδρου φύσις περιληπτικὴ τῶν ἄλλων σχημάτων οὕσα τοῦ ὄντος εἰκὼν πρὸς πᾶν (ἄν) τὸ σωματικὸν γεγονέναι δόξειε, '... a model with reference to all corporeal being' (trans. Babbitt LCL).

§2 The information that the cosmos is ‘but a small part of the All (: the universe), the remainder being unworked matter’ is not confirmed in other accounts of Empedocles, let alone in the fragments quoted verbatim. It is not clear to which phase, or phases, of the cosmic cycle this should refer.

§3 The counter-arguments against Plato are: (1) That man is ‘full-grown’ or ‘perfect’ or ‘complete’ (τέλειος), has reached his τέλος, although he does not (like the Platonic cosmos) contain everything, entails that there will be a multiplicity of men, just as there will be a multiplicity of ‘finished’ statues etc. So being ‘complete’ is not a sufficient condition for being unique. So far we have found no parallels. (It is clear that ‘complete’ here has a different sense than in ch. 1. procem. 3 above). (2) The refutation of the assumption that there is nothing (i.e. no void) beyond the cosmos because otherwise it could not ‘whirl around’ is based on a *reductio ad absurdum* in favour of the sphericity of the cosmos at Arist. *Cael.* 2.4 287a11–22 cited section E(b)§4. Aristotle here argues that if a cosmos were rectilinear or lentil- or egg-shaped it would when turning in a circle not return to the same place, so presuppose the existence of a void or place beyond—*quod non* (note that Alexander at Simp. in *Cael.* 409.32–410.8 argues against). This dialectical argument against Plato presupposes that a cosmos may have a variety of shapes, as is clear from ch. 2.2 below, and as was in fact the outcome of a difference of view among some Presocratics, and the considered view of Epicurus, see *Ep.Hdt.* at Diogenes Laertius *V.P.* 10.74 plus scholion, *Ep.Hdt.* at *V.P.* 10.88, and A ch. 2.2.5, but fails to account for Aristotle’s original point that a spherical cosmos is able to move in a circle although there is nothing beyond. As already noted above, S drastically abridged the lemma; in fact we only have P and his tradition for an argument that may have been set out more fully in A. (3) Arist. *Cael.* 1.10 280a28–32 already directed the ancient argument that what comes into being would necessarily perish against Plato (he refused to accept the way-out devised by Speusippus and Xenocrates, for which see *Cael.* 1.9 279b32–280a2, cited section E(b)§4). A point of view similar to Aristotle’s is at Lucretius *DRN* 5.156–165, also cited section E(b)§4, who argues against unidentified philosophers who combined Plato’s view with the Stoic idea that the world has been created for the benefit of humanity. Note that P at ch. 2.4 in his first lemma ascribes Plato’s view as formulated at ch. 1.5.4 to ‘Pythagoras and Plato and the Stoics’ (Cyril *Juln.* 2.15, using this passage, says ‘Pythagoras and the Stoics’); while S in this later chapter carefully distinguishes the Stoic view from the Platonic, see A 2.4.8–9. So Lucretius’ opponents, if not a mere dialectical ploy, may derive from an epitomizer’s reckless combination of name-labels as in P’s lemma. (4) καὶ πολλὰ παραδείγματα ἔστιν κτλ. Edward Jeremiah has pointed out to us that this line gives a counter-argument against the second of Plato’s justifications for the uniqueness of the world (it would not

be similar to the model, if it were not alone in its sort), i.e. 'And there are many models (for a multiplicity of worlds), just as there are in the case of statues, buildings, and paintings'. This interpretation is supported by four points: (a) It makes the set of counter-arguments complete and gives them the same order as the original arguments. There would then be a corresponding sequential counter-argument for each of Plato's three justifications instead of just the first and third ones. (b) The word *παράδειγμα* has just been used above in precisely this sense. (c) The test cases given (statues, buildings, and paintings) are all things built from models. (d) This interpretation of the Greek actually makes sense as an argument. Plato's second justification relies on the premise that there is only one model, so that what represents it most faithfully should also be one. But if there are plural models, then there are conceivably plural worlds, just as in the case of statues there are many models of statues and many actual statues corresponding to each of these models.

In line 13 there is a significant divergence between P^E and P^B (supported by Q). The former reading is obviously superior because it argues against the premise of Plato's third argument, whereas the latter reading provides an argument that hardly makes sense. Diels was right to base the text on E, who here preserves an earlier reading later corrupted in transmission (unfortunately G and S do not help us). The argument adopts an Atomist point of view (cf. ch. 1.4), as also in the final doxa. It is not accepted by the standard Platonic-Aristotelian cosmological model.

See also ch. 2.4, Commentary D(d)§1

e Other Evidence

The formula $\varepsilon\tilde{\nu}$ τὸ πᾶν is widely paralleled, but as a rule has a different connotation, namely not a numerical sense, as here, but a qualitative sense, pertaining to the rigid one-ness of the One-and-All that is for instance attributed to the Eleatics. For the numerical sense see e.g. Plato *Sph.* 244b τῶν $\varepsilon\tilde{\nu}$ τὸ πᾶν λεγόντων (opposed to τῶν ἄλλων ὅσοι πλεῖον ἐνὸς λέγουσι τὸ πᾶν εἶναι), for both senses Aristotle *Phys.* 1.5 188a19–20 οἳ τε λέγοντες ὅτι $\varepsilon\tilde{\nu}$ τὸ πᾶν, *Met.* A.3 984b1–2 τῶν μὲν οὖν $\varepsilon\tilde{\nu}$ φασκόντων εἶναι τὸ πᾶν, Theophrastus *Phys.Op.* fr. 5 Diels = 224GHS&G ap. Simp. *in Phys.* 22.26 μίαν δὲ τὴν ἀρχὴν ἦτοι $\varepsilon\tilde{\nu}$ τὸ ὄν καὶ πᾶν, *Phys.Op.* fr. 6 Diels = 227C FHS&G at Alexander *in Met.* 31.11–12 κατ' ἀλήθειαν μὲν $\varepsilon\tilde{\nu}$ τὸ πᾶν (Parmenides 28A7 DK), and Hippolytus *Ref.* 1.14.2 λέγει δὲ ... ὅτι $\varepsilon\tilde{\nu}$ τὸ πᾶν ἐστὶν (Xenophanes 21A33 DK). Cf. also below, ch. 1.7.27 Μέλισσος καὶ Ζήνων τὸ $\varepsilon\tilde{\nu}$ καὶ πᾶν (sc. θεὸν εἶναι), καὶ μόνον αἰδῖον καὶ ἄπειρον τὸ $\varepsilon\tilde{\nu}$. There is quite a body of literature on the history of the word κόσμος, but nothing that we know of on the phrase τὸ πᾶν, 'the All', in a cosmological sense. τὸ πᾶν meaning 'the universe' is first found in Empedocles 31B14, B17.32 and B30.3 DK, then frequently

in Plato's *Timaeus*, e.g. 27a4, 28c4, 29c5, 30b5, etc., in Arist. *Met.* A.4 985a25, 5 986b17, 8 988b21. See also Mansfeld (2002b) 277–281 = M–R 3.422–427 and Mansfeld (2018a) 249–251. See further our comments on the parallel chapter ch. 2.1 below.

In relation to §4 Metrodorus' argument at ps.Plut. *Strom.* 11 (before the lacuna in the text of the paragraph; cited below section E(a)§5) that the All (: the universe) is infinite looks like a pastiche of the well-known argument of Melissus 30B1–B4 DK, inclusive of the difficulty inherent in the move from temporal to spatial infinity (for the 'full' and the 'void' see 30B7.7 DK). Zeller–Nestle (1920) 1.2.1186 n. 1 argued that Metrodorus was in a position to follow Melissus (inclusive of the Melissean 'Fehlschluß'), and that *Strom.* 11 and our §4 are in agreement. Bicknell (1982) 197 argued that Μητροδῶρος ὁ Χῖος was substituted for Μέλισσος ὁ Σάμιος. Palmer (2001) 7–9, who cites our §4 as well, again argues in favour of Metrodorus. We may add that at T CAG 2.7 this Melissean tenet is attributed to Democritus as well ('Democritus of Abdera said the All is infinite and ungenerated'), largely paralleled at ps.Plut. *Strom.* 7: 'Democritus of Abdera posited that the All is infinite because it was absolutely not manufactured by anyone [or: 'anything']. ... 'And what sort of All it is he sets out verbatim, (saying) that the causes of things that are taking place now have no beginning'. This attribution has to be accepted as a selective emphasis on an important aspect of his doctrine, facilitated by the fact that Melissus posited Being (in later reports modified to the All, or the cosmos), and the Atomists the void and matter, to be infinite and everlasting. Aristotle reports that 'Democritus shows how impossible it that everything can have been generated, because time was not generated' (Arist. *Phys.* 8.1 251b15–17, Democritus 68A71 DK, fr. 64a Taylor).

a Proximate Tradition (see also below at ch. 2.1)

General texts: Cicero *Ep.* 9.26.3 *ille baro te putabat quaesitum unum caelum esset an innumerabilia.* Div. 2.11 *unusne mundus sit an plures.* Philo of Alexandria *Abr.* 162 πότερον εἷς ἢ πλείονές εἰσι κόσμοι. *Ebr.* 188–189 (skeptical trope) πολλάκις δὲ καὶ ἐναντία οὐ περὶ ἐνὸς τίθεται τοῦ τυχόντος, ἀλλὰ σχεδὸν περὶ πάντων μικρῶν τε καὶ μεγάλων, ἐν οἷς αἱ ζητήσεις συνίστανται· οἱ γὰρ ἄπειρον τὸ πᾶν εἰσηγούμενοι τοῖς πεπερασμένον εἶναι λέγουσιν κτλ. Quintilian *Inst.* 7.2.6 *quaeritur per coniecturam et qualitatem circa modum speciem numerum: ... unus mundus an plures.* Galen *Loc.Aff.* 8.159.5–7 (καὶ τοῦ) ἄπειρόν τε τὸ πᾶν ἢ πεπερασμένον, ἢ πολλοὺς εἶναι κόσμους ἢ ἀπεριλήπτους κατὰ τὸν ἀριθμόν, ἢ ἓνα μόνον, τοῦτον. Alexander of Aphrodisias in *Top.* 171.15–16 ὁ δὲ περὶ τοῦ ἢ ἓνα ἢ πολλοὺς εἶναι τοὺς κόσμους διαλέγοιτο. Sextus Empiricus *M.* 9.331–334 καὶ δὴ οἱ μὲν ἀπὸ τῆς Στοᾶς φιλόσοφοι (*SVF* 2.524) διαφέρειν ὑπολαμβάνουσι τὸ ὅλον καὶ τὸ πᾶν· ὅλον μὲν γὰρ εἶναι λέγουσι τὸν κόσμον, πᾶν δὲ τὸ σὺν τῷ κόσμῳ

ἔξωθεν κενόν, καὶ διὰ τοῦτο τὸ μὲν ὅλον πεπερασμένον εἶναι (πεπέρασται γὰρ ὁ κόσμος), τὸ δὲ πᾶν ἄπειρον (τοιούτον γὰρ τὸ ἐκτὸς τοῦ κόσμου κενόν). ὁ δὲ Ἐπίκουρος (fr. 75 Usener) ἀδιαφόρως τήν τε τῶν σωμάτων καὶ τήν τοῦ κενοῦ φύσιν ὅλον τε καὶ πᾶν προσαγορεύειν εἶωθεν. ... οἱ δὲ φάμενοι μὴδ' ὅλως εἶναι κενόν, ὥς οἱ ἐκ τοῦ Περιπάτου, τὸ ὅλον καὶ τὸ πᾶν τῶν σωμάτων μόνον, οὐχὶ δὲ καὶ τοῦ κενοῦ ἐπικατηγοροῦσιν. **Diogenes Laertius** *V.P.* 8.84 "Ἰππασος Μεταποντίνος (18A1 DK) ... ἔφη δὲ ... πεπερασμένον εἶναι τὸ πᾶν καὶ ἀεικίνητον. **Ambrose of Milan** *Exam.* 1.1.3, p. 4.2–5 Schenkel *Pythagoras* (—) *unum mundum adserit, alii innumerabiles dicunt esse mundos, ut scribit Democritus* (fr. 358 Luria), *cui plurimum de physicis auctoritatis vetustas detulit*. **Galen** *Loc.Aff.* 8.158.11–159.4 K. ὥσπερ δ' ἐνταῦθα φιλονεικίαν αἰσχροῖν ἐπιδείκνυνται προφανῶς, οὕτως ἄνοιαν, ὅταν οἴωνται πάνθ' ἑαυτῶν σαλεύεσθαι τὰ δόγματα, καὶ ἐν ὅτιον ἐλεγχθῇ· τινὰ μὲν γὰρ ἀλλήλοις ἀκολουθεῖ ... καθάπερ ... ἄπειρόν τε τὸ πᾶν ἢ πεπερασμένον, ἢ πολλοὺς εἶναι κόσμους ἢ ἀπεριλήπτους κατὰ τὸν ἀριθμόν, ἢ ἓνα μόνον τοῦτον (cf. also ch. 2.1). **Arnobius of Sicca** *Adv.Nat.* 2.58, p. 133.4–5 *locus ipse ac spatium, in quo situs est ac volutatur, quid sit? infinitus, finitus inanis an solidus?* cf. **Eusebius** *PE* 15.32.8 (listing chapters) εἰ χρή τὸ πᾶν ἐν ἢ πολλὰ ἡγεῖσθαι καὶ εἰ ἓνα τὸν κόσμον ἢ πλείους.

Chapter heading: Εἰ ἐν τὸ πᾶν] εἰ χρή τὸ πᾶν ἐν ἢ πολλὰ ἡγεῖσθαι καὶ εἰ ἓνα τὸν κόσμον ἢ πλείους *PE* p. 406.7–8

§1 Stoics: Arius Didymus fr. 29 Diels at Eus. *PE* 15.15.1 (on Stoics, *SVF* 2.528) ὅλον δὲ τὸν κόσμον σὺν τοῖς ἑαυτοῦ μέρεσι προσαγορεύουσι θεόν· τοῦτον δὲ ἓνα μόνον εἶναι φασι καὶ πεπερασμένον καὶ ζῶον καὶ αἰδῖον καὶ θεόν. **Diogenes Laertius** *V.P.* 7.140 (on Stoics, *SVF* 3 Antip. 43, Posidonius F 8 E.-K., 260 Theiler) ἓνα τὸν κόσμον εἶναι καὶ τοῦτον πεπερασμένον. cf. **Theodoret** *CAG* 4.5 Ξενοφάνης μὲν οὖν ὁ Ὁρθομένους ὁ Κολοφώνιος (21A36DK) ὁ τῆς Ἑλεατικῆς αἰρέσεως ἡγήσάμενος ἐν εἶναι τὸ πᾶν ἔφησε σφαιροειδὲς καὶ πεπερασμένον, οὐ γενητὸν ἀλλ' αἰδῖον καὶ πάμπαν ἀκίνητον.

§3 Plato: Diogenes Laertius *V.P.* 3.71–72 (on Plato) κόσμον τε εἶναι ἓνα γεννητὸν ... ἓνα τε αὐτὸν καὶ οὐκ ἄπειρον κατεσκευάσθαι, ὅτι καὶ τὸ ὑπόδειγμα ἐν ἡν ἄφ' οὗ αὐτὸν ἐδημιούργησε ... ἀλλὰ μὴν καὶ ἄφθαρτον διαμένειν τὸν κόσμον διὰ τὸ μὴ διαλύεσθαι εἰς τὸν θεόν. **Ambrose of Milan** *Exam.* 2.2.5, p. 44.10–15 Schenkel *nam sunt qui unum caelum esse dicant nec alterius caeli faciendi, dum esset una ὕλη, ut ipsi aiunt, potuisse subpetere substantiam, quoniam cum omnis superiori caelo esset expensa, nihil reliqui fuit quod ad aedificationem secundi caeli tertii proficeret alii vero innumeros caelos et mundos esse adserunt*. cf. **Proclus** at Philop. *Aet.Mu.* p. 24.2–16.

§4 Metrodorus: *Capitula Lucretiana* at *DRN* 1.951 (cited from Epic. *Ep.Hdt.* at D.L. 10.41, but without diacritics) το παν απειρον· το γαρ πεπερασμενον ακρον εχει. ad *DRN* 2.1058 *apiros mundos*. **ps.Plutarch** *Strom.* 11 (fr. 179 Sandbach) at Eus. *PE* 1.8.11 Μητρόδωρος ὁ Χίος (70A4 DK) αἰδῖον εἶναι φησι τὸ πᾶν, ὅτι εἰ ἡν γενητὸν, ἐκ τοῦ μὴ ὄντος ἂν ἦν· ἄπειρον δέ, ὅτι αἰδῖον, οὐ γὰρ ἔχειν ἀρχὴν ὅθεν ἡρξατο οὐδὲ πέρας οὐδὲ τελευτήν.

b Sources and Other Parallel Texts (see also below at Ch. 2.1)

General texts: Aristotle *Phys.* 8.1 250b18–22 ἀλλ' ὅσοι μὲν ἀπείρους τε κόσμους εἶναι φασι ... ὅσοι δ' ἓνα. Theophrastus *Phys.Op.* fr. 1 Diels, 225 FHS&G at Simp. in *Phys.* 23.33–24.2 Ἰππασος δὲ ὁ Μεταποντίνος (18A7 DK) καὶ Ἡράκλειτος ὁ Ἐφέσιος (22A5 DK) ἔν καὶ οὗτοι καὶ κινούμενον καὶ πεπερασμένον· ἀλλὰ πῦρ ἐποίησαν τὴν ἀρχὴν. *Divisiones Aristoteleae* 42, p. 56.1–2 φυσικὸν δέ (sc. πρόβλημα), οἷον πότερον εἰς κόσμος ἐστὶν ἢ πλείους. Diogenes Laertius *V.P.* 2.17 (on Archelaus, 60A1 DK) τὸ πᾶν ἄπειρον. Eusebius *PE* 15.62.13 (on Ariston, *SVF* 1.353) τὴν τ' αὐτὴ διαφωνίαν παμπόλλην οὖσαν· τοὺς μὲν γὰρ ἄπειρον ἀποφαίνειν τὸ πᾶν, τοὺς δὲ πεπερασμένον.

Chapter heading: Pliny *Nat.* 1 p. 11.2–3 *an finitus sit mundus et an unus.*

§1 Stoics: Proclus in *Tim.* 3.143.18–20 ὡς γὰρ τὸ πᾶν τὸ σωματικὸν ἐντὸς ἐτεκτῆναι τοῦ ψυχῆς, οὕτω καὶ τὴν γῆν ἐντὸς τοῦ οὐρανοῦ δεδημιουργηκεν.

§2 Empedocles: Empedocles 31B13–14 DK at ps.Arist. *MXG* 2 967b23–27 Ἐμπεδοκλῆς ... λέγων ὡς τοῦ παντός οὐδὲ κενεόν. πόθεν οὖν τί κ' ἐπέλθοι; ὅταν δὲ εἰς μίαν μορφήν συγκριθῇ, ὡς ἐν εἶναι, οὐδὲν φησι τὸ γε 'κενεὸν πέλει οὐδὲ περισσόν'.

§3 Plato: Plato *Tim.* 28b ὁ δὲ πᾶς οὐρανὸς—ἡ κόσμος ἢ καὶ ἄλλο ὅτι ποτὲ ὀνομαζόμενος μάλιστ' ἂν δέχοιτο, τοῦθ' ἡμῖν ὀνομάσθω—σκεπτέον δ' οὖν περὶ αὐτοῦ πρῶτον, ὅπερ ὑπόκειται περὶ παντός ἐν ἀρχῇ δεῖν σκοπεῖν, πότερον ἦν αἰεὶ, γενέσεως ἀρχὴν ἔχων οὐδεμίαν, ἢ γέγονεν, ἀπ' ἀρχῆς τινος ἀρξάμενος. γέγονεν. *Tim.* 30c–31b τῶν μὲν οὖν ἐν μέρους εἶδει πεφυκότων μηδενὶ καταξιώσωμεν—ἀτελεῖ γὰρ εἰσὶ οὐδὲν ποτ' ἂν γένοιτο καλόν—οὐ δ' ἐστὶν ἄλλα ζῶα καθ' ἐν καὶ κατὰ γένη μόρια, τούτῳ πάντων ὁμοιότατον αὐτὸν εἶναι τιθώμεν. τὰ γὰρ δὴ νοητὰ ζῶα πάντα ἐκεῖνον ἐν ἑαυτῷ περιλαβὸν ἔχει, καθάπερ ὁδε ὁ (d) κόσμος ἡμᾶς ὅσα τε ἄλλα θρέμματα συνέστηκεν ὁράτα. τῷ γὰρ τῶν νοουμένων καλλίστῳ καὶ κατὰ πάντα τελέῳ μάλιστα αὐτὸν ὁ θεὸς ὁμοιωσάι βουληθεὶς ζῶον ἐν ὁράτῳ, πάνθ' ὅσα (31a) αὐτοῦ κατὰ φύσιν συγγενῆ ζῶα ἐντὸς ἔχον ἑαυτοῦ, συνέστησε. πότερον οὖν ὁρθῶς ἓνα οὐρανὸν προσεῖρήκαμεν, ἢ πολλοὺς καὶ ἀπείρους λέγειν ἦν ὁρθότερον; ἓνα, εἴπερ κατὰ τὸ παρὰδειγμα δεδημιουργημένος ἔσται. ... ἵνα οὖν (b) τόδε κατὰ τὴν μόνωσιν ὁμοιον ἦ τῷ παντελεῖ ζῶῳ, διὰ ταῦτα οὕτε δύο οὐτ' ἀπείρους ἐποίησεν ὁ ποιῶν κόσμους, ἀλλ' εἰς ὅδε μονογενὴς οὐρανὸς γεγονώς ἐστὶν καὶ ἔτ' ἔσται. *Tim.* 33a πρὸς δὲ τούτοις ἓν, ἅτε οὐχ ὑπολειμμένων ἐξ ὧν ἄλλο τοιοῦτον γένοιτ' ἂν, ἔτι δὲ ἵν' ἀγῆρων καὶ ἄνοσον ἦ (quoted Philo *Aet.* 26). *Tim.* 33c–d ἀπῆλπε γὰρ οὐδὲν οὐδὲ προσήειν αὐτῷ ποθεν—οὐδὲ γὰρ ἦν—αὐτὸ γὰρ ἑαυτῷ τροφήν τὴν ἑαυτοῦ φθίσιν παρέχον καὶ πάντα ἐν ἑαυτῷ καὶ ὑφ' (d) ἑαυτοῦ πάσχον καὶ δρῶν ἐκ τέχνης γέγονεν· ἡγήσατο γὰρ αὐτὸ ὁ συνθεὶς αὐταρκες ὃν ἄμεινον ἔσσεσθαι μάλλον ἢ προσδεῆς ἄλλων. Aristotle fr. 206 R³ at Simp. in *Cael.* 296.16–17 Ἀριστοτέλης ... τοῦ Πλάτωνος Τίμαιον ἐπιτεμνόμενος γράφει· 'φησὶ δὲ γενητὸν εἶναι'. *Cael.* 1.10 279b32–280a2 ἦν δὲ τινες βοήθειαν ἐπιχειροῦσι φέρειν ἑαυτοῖς τῶν λεγόντων ἀφαρτον μὲν εἶναι γενόμενον δέ, οὐκ ἐστὶν ἀληθές· ὁμοίως γὰρ φασι τοῖς τὰ διαγράμματα γράφουσι καὶ σφᾶς εἰρηκέναι περὶ τῆς γενέσεως, οὐχ ὡς γενομένου ποτέ, ἀλλὰ διδασκαλίας χάριν ὡς μάλλον γνωρίζοντων, ὥσπερ τὸ διάγραμμα γιγνόμενον θεασαμένους. *Cael.* 1.10 280a28–32 εἰσὶ γὰρ τινες οἷς ἐνδέχασθαι δοκεῖ καὶ ἀγέννητόν {τι} ὃν φθαρήναι

καὶ γενόμενον ἄφθαρτον διατελεῖν, ὥσπερ ἐν τῷ Τιμαίῳ· ἐκεῖ γάρ φησι τὸν οὐρανὸν γενέσθαι μὲν, οὐ μὴν ἀλλ' ἔσεσθαι γε τὸν λοιπὸν αἰεὶ χρόνον. *Cael.* 1.12 283a4–7 τὸ δὲ φάναι μὴδὲν κωλύειν γινόμενόν τι ἄφθαρτον εἶναι καὶ ἀγέννητον ὃν φθαρῆναι, ἅπαξ ὑπαρχούσης τῷ μὲν τῆς γενέσεως τῷ δὲ τῆς φθοράς, ἀναιρεῖν ἐστὶ τῶν δεδομένων τι. *Cael.* 1.12 283a29–31 ἔστι δὲ καὶ ὧδε θεωρῆσαι ὅτι ἀδύνατον ἢ γενόμενον ποτε ἄφθαρτον διατελεῖν, ἢ ἀγέννητον ὃν καὶ αἰεὶ πρότερον ὃν φθαρῆναι. κτλ. *Cael.* 2.4 287a11–22 ἔτι δὲ ἐπεὶ φαίνεται καὶ ὑπόκειται κύκλῳ περιφέρεσθαι τὸ πᾶν, δέδεικται δ' ὅτι τῆς ἐσχάτης περιφορᾶς οὔτε κενὸν ἐστὶν ἔξωθεν οὔτε τόπος, ἀνάγκη καὶ διὰ ταῦτα σφαιροειδῆ εἶναι αὐτόν. εἰ γὰρ ἔσται εὐθύγραμμος, συμβήσεται καὶ τόπον εἶναι ἔξω καὶ σῶμα καὶ κενόν. κύκλῳ γὰρ στρεφόμενον τὸ εὐθύγραμμον οὐδέποτε τὴν αὐτὴν ἐφέξει χώραν, ἀλλ' ὅπου πρότερον ἦν σῶμα, νῦν οὐκ ἔσται, καὶ οὐ νῦν οὐκ ἔστι, πάλιν ἔσται, διὰ τὴν παράλλαξιν τῶν γωνιῶν. ὁμοίως δὲ καὶ εἴ τι ἄλλο σχῆμα γένοιτο μὴ ἴσας ἔχον τὰς ἐκ τοῦ μέσου γραμμάς, οἷον φακοειδὲς ἢ ὦρειδὲς· ἐν ἅπασι γὰρ συμβήσεται καὶ τόπον ἔξω καὶ κενὸν εἶναι τῆς φορᾶς, διὰ τὸ μὴ τὴν αὐτὴν χώραν κατέχειν τὸ ὅλον. *Ocellus* ch. 13 εἰ δὲ καὶ δοξάζοι τις αὐτὸ (sc. τὸ πᾶν) φθίρεισθαι, ἥτοι ὑπὸ τινος τῶν ἔξω τοῦ παντὸς φθαρῆσεται δυναστευόμενον ἢ ὑπὸ τινος τῶν ἐντός. οὔτε δ' ὑπὸ τινος τῶν ἔξωθεν· ἐκτός γὰρ τοῦ παντὸς οὐδέν, τὰ γὰρ ἄλλα πάντα ἐν τῷ παντί, καὶ τὸ ὅλον καὶ τὸ πᾶν ὁ κόσμος· ... εἰ δὲ οὔτε ὑπὸ τινος τῶν ἔξωθεν οὔτε ὑπὸ τινος τῶν ἐνδοθεν φθαρῆσεται τὸ πᾶν, ἄφθαρτος ἄρα καὶ ἀνώλεθρος ὁ κόσμος· τοῦτον γὰρ ἔφαμεν εἶναι τὸ πᾶν. **Philo of Alexandria** *Aet.* 78 (*SVF* 3 Boeth. 7). **Plutarch** *de E* 389F 'πολλὰ δ' ἄλλα τοιαῦτα, ἔφην ἐγώ, 'παρελθὼν τὸν Πλάτωνα προσάξομαι λέγοντα (*Tim.* 31a) κόσμον ἕνα'. **Lucretius** *DRN* 1.958–959 *omne quod est igitur nulla regione viarum / finitumst; namque extremum debebat habere.* *DRN* 5.156–165 *dicere porro hominum causa voluisse parare / praeclaram mundi naturam proptereaque / adlaudabile opus divom laudare decere / aeternumque putare atque inmortale futurum, / nec fas esse, deum quod sit ratione vetusta / gentibus humanis fundatum perpetuo aevo, / sollicitare suis ulla vi ex sedibus umquam / nec verbis vexare et ab imo evertere summa, / cetera de genere hoc adfingere et addere, Memmi, / desiperest.* **Cicero** *ND* 1.20–23 *sed illa palmaris* (sc. sententia), *quod, qui* (sc. Plato) *non modo natum mundum introduxerit sed etiam manu paene factum, is eum dixerit fore sempiternum. hunc censes primis ut dicitur labris gustasse physiologiam id est naturae rationem, qui quicquam quod ortum sit putet aeternum esse posse?* ... (23) *an haec, ut fere dicitis, hominum causa a deo constituta sunt? sapientiumne? propter paucos igitur tanta est rerum facta molitio. an stultorum?* **Scholium in Aristotelem** *Cael.* 1.9, p. 4.489a9–12 Brandis ὁ Ξενοκράτης (fr. 54 Heinze, 73 Isnardi Parente²) καὶ ὁ Σπεύσιππος (fr. 54a Lang, 94 Isnardi Parente, 61a Tarán) ἐπιχειροῦντες βοηθῆσαι τῷ Πλάτῳ ἐλεγον ὅτι οὐ γενητὸν τὸν κόσμον ὁ Πλάτων ἐδόξαζεν ἀλλὰ ἀγέννητον, χάριν δὲ διδασκαλίας καὶ τοῦ γνωρίσαι καὶ παραστήσαι αὐτὸ ἀκριβέστερον ἔλεγε τοῦτον γενητὸν.

§4 Metrodorus *Epicurus Ep.Hdt.* at D.L. 10.45 ἀλλὰ μὴν καὶ κόσμοι ἄπειροί εἰσιν. *Ep.Pyth.* at D.L. 10.89 ὅτι δὲ καὶ τοιοῦτοι κόσμοι εἰσὶν ἄπειροι τὸ πλῆθος ἔστι καταλαβεῖν. **Cicero** *Luc.* 55 *ais Democritum* (68A81 DK) *dicere innumerabiles esse mundos.* **Valerius Maximus** 8.14.2 *Alexandri pectus insatiabile laudis, qui*

Anaxarcho (72A11 DK) *comiti suo ex auctoritate Democriti* (fr. lxxxiii Luria) *praeceptoris innumerabiles mundos esse referenti 'heu me' inquit 'miserum, quod ne uno quidem adhuc sum potitus!'* **Plutarch** *Tranq.An.* 466D Ἀλέξανδρος Ἀναξάρχου (72A11 DK) περὶ κόσμων ἀπειρίας ἀκούων ἐδάκρυε. **Diogenes Laertius** *V.P.* 9.31 τὸ μὲν πᾶν ἄπειρόν φησιν (on Leucippus, 67A1 DK), ὡς προείρηται (*V.P.* 9.30)· τούτου δὲ τὸ μὲν πλήρες εἶναι, τὸ δὲ κενόν, (ἃ) καὶ στοιχεῖά φησι. κόσμους τε ἐκ τούτων ἀπείρους εἶναι καὶ διαλύεσθαι εἰς ταῦτα.

κάλλος τοῦ κόσμου καὶ ταῦτα τὰ φαινόμενα· ὁ μὲν γὰρ λοξὸς κύκλος ἐν οὐρανῷ διαφόροις εἰδῶλοις πεποίκιλται·

τῷ δ' ἐνὶ Καρκίνος ἐστὶ, Λέων δ' ἐπὶ τῷ, μετὰ δ' αὐτὸν
 Παρθένος, ἥ δ' ἐπὶ οἱ Χηλαὶ καὶ (ἐπ' αὐτῷ) Σκορπίος αὐτὸς
 Τοξευτὴς τε καὶ Αἰγόκερως, ἐπὶ δ' Αἰγοκέρωτι
 Ὑδροχόος· δύο δ' αὐτὸν ἐπ' Ἰχθύες ἀστερόεντες,
 τοὺς δὲ μέτα Κριός, Ταῦρος δ' ἐπὶ τῷ Δίδυμοί τε.
 μυρία δ' ἄλλα καθ' ὁμοίας τοῦ κόσμου περικλάσεις πεποίηκεν· ὅθεν καὶ
 Εὐριπίδης φησί·

τό τ' ἀστερωπὸν οὐρανοῦ σέλας,
 χρόνου καλὸν ποίκιλμα, τέκτονος σοφοῦ.
 ἐλάβομεν δ' ἐκ τούτου ἔννοιαν θεοῦ· αἰεὶ τε γὰρ ἥλιος καὶ σελήνη
 καὶ τὰ λοιπὰ τῶν ἄστρον τὴν ὑπόγειον φορὰν ἐνεχθέντα ὅμοια μὲν
 ἀνατέλλει τοῖς χρώμασιν, ἴσα δὲ τοῖς μεγέθεσι καὶ κατὰ τόπους καὶ
 κατὰ χρόνους τοὺς αὐτοὺς.

διόπερ οἱ τὸν περὶ τῶν θεῶν παραδόντες σεβασμὸν διὰ τριῶν
 ἐξέθηκαν ἡμῖν εἰδῶν, πρῶτον μὲν τοῦ φυσικοῦ, δεύτερον δὲ τοῦ μυθικοῦ,
 τρίτον δὲ τοῦ τὴν μαρτυρίαν ἐκ τῶν νόμων εἰληφότος. διδάσκεται δὲ τὸ
 μὲν φυσικὸν ὑπὸ τῶν φιλοσόφων, τὸ δὲ μυθικὸν ὑπὸ τῶν ποιητῶν, τὸ δὲ
 νομικὸν ὑφ' ἐκάστης αἰεὶ πόλεως συνίσταται.

διαίρεται δ' ἡ πᾶσα διδαχὴ εἰς εἶδη ἑπτὰ· καὶ πρῶτον μὲν τὸ ἐκ
 τῶν φαινομένων καὶ μετεώρων· θεοῦ γὰρ ἔννοιαν ἔσχον ἀπὸ τῶν φαινο-
 μένων ἀστέρων, ὀρώντες τούτους μεγάλῃς συμφωνίας ὄντας αἰτίους καὶ
 τεταγμένους ἡμέραν τε καὶ νύκτα καὶ χειμῶνα καὶ θέρος, ἀνατολάς τε
 καὶ δυσμάς, καὶ τὰ ὑπὸ τῆς γῆς ζωογονούμενα καὶ καρπογονούμενα. διὸ
 πατὴρ μὲν ἔδοξεν αὐτοῖς οὐρανὸς ὑπάρχειν, μήτηρ δὲ γῆ· τούτων δ' ὁ

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) The chapter is only recorded in P and his tradition (with only the heading in Ps), so lacking in S just like ch. 1.7.1, and there is no evidence of its use in S or T, but the parallels in the earlier and later proximate tradition for the proximity of the discussion of the *origin* of the concept of god (or gods) and the dispute about their *existence* and nature is certainly in favour of attributing the chapter to A, just as is the case with A ch. 1.7.1 (see the present chapter below, sections D(a) and (e), and ch. 1.7 Commentary A and D(c)). Parallels for this association are to be found at Cicero *ND* 2.4–19 and Sextus Empiricus *M.* 9.13–48 about the origin of the concept, Cicero *ND* 2.20–44 about their existence, *ND* 2.45–72 about their nature, and Sextus Empiricus *M.* 9.49–194 about their existence and nature. Cf. below, section D(a). In the case of Athenagoras we cannot be certain whether he has based his text on A or P; see above General Introduction, section 4.3.

(2) The single doxa that it contains is the longest in the work. It is found in full in P^B and P^Q. P^G drastically reduces the chapter to about a seventh of its original length. The anonymous definition of the essence of the divine with which it begins is that of Posidonius quoted in S (and not in P) at ch. 1.7.10 (wording identical). Brief verbatim quotations (in a different order) are found in Cyril, while Ps utilizes it quite superficially in the theological section of his work.

(3) The brief paraphrase of §1[5–19] at Ath *Leg.* 16.1, καλὸς μὲν γὰρ ὁ κόσμος καὶ τῷ μεγέθει περιέχων καὶ τῇ διαθέσει τῶν τε ἐν τῷ λοξῷ κύκλῳ καὶ τῶν περὶ τὴν ἄρκτον καὶ τῷ σχήματι σφαιρικῶ ὄντι, anticipated *ibid.* 4.2 τοσαῦτα ἔχοντες πρὸς θεοσέβειαν ἐνέχυρα, τὸ εὐτακτον, τὸ διὰ παντὸς σύμφωνον, τὸ μέγεθος, τὴν χροιάν, τὸ σχῆμα, τὴν διάθεσιν τοῦ κόσμου, may derive from either P or A, or may even

go back to the original source of A. It cannot be concluded that the Christian apologist, whose work is to be dated to c. 177 CE, made direct use of P, although he may well have done so. The question has implications for the dating of P; see further M–R 1.75, 124–125, 312–314.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition consists for the most important part in the substantial accounts of Philodemus, Cicero, Sextus Empiricus and Clement of Alexandria; see at section D(e) below.

(2) *Sources.* Although the use of Stoic handbooks (as in Philodemus, Cicero, Sextus and Clement) can hardly be denied, e.g. because of the parallel between the sevenfold *didache* and Cicero *ND* 2.60–71 plus Clement of Alexandria *Protr.* 26, the introductory passage about the beauty of the firmament or sky as apparent from its shape, colour, size and decoration of stars does not bear the stamp of the handbook, but rather impresses one as an abstract from a major work. This in spite of the parallels in Lucretius *DRN* 2.1026–1032 cited below, section E(a)§1[7–9], or in well-known arguments of Aristotle surviving in Cicero and Sextus (cited below section E(b)§1[29–32]). The parallel in A has not been noticed in the Lucretius commentaries we have seen; for that of the Lucretius passage with Aristotle's *On Philosophy* see Clay (1983) 243–244. Only the 'Stoic' definition at the beginning is, as we have seen, ascribed to Posidonius at A 1.7.10 (F 101 E.-K., 364 Theiler). Yet one understands that scholars have thought of Posidonius (though less so today than formerly) and that some among them, e.g. Theiler, have even attributed (almost) the whole chapter to the Apamaean. Cf. further below, section D(d)§1[5–32] and [47–50].

C *Chapter Heading*

A precise and detailed heading. The sources differ as to god/gods in the singular or plural. Obviously the plural is to be preferred, since Q and Ps would automatically opt for a monotheistic formula. This is the first of the six headings beginning with Πόθεν (*unde*), the issue of source or origin, a sub-species of the question type of cause and a sub-sub-species of the theoretical *quaestio*. The others are at chs. 2.5, 2.17, 4.21, 5.11, and 5.28; for this question *unde* cf. Cicero *Top.* 82, *coniecturae ratio in quattuor partes distributa est, quarum ... altera* (sc. est) *unde ortum sit*.

D *Analysis*

a Context

(1) The chapter on the origin of the concept of God is the first of the three chapters dealing with theological matters. It is closely connected with the next

chapter, 1.7, which deals at length with the question types of the existence (or not) and nature, or substance, of the gods. In its turn this chapter is followed by the short ch. 1.8, 'On demons and heroes'. Compare Cicero (in whose announcement at *ND* 2.3 the origin of the conception is encapsulated within the question of existence: *primum docent esse deos, deinde quales sint*): first *ND* 2.4–15 the origin of the conception, then 16–167: questions of existence and nature etc. Also see Sextus Empiricus *M.* 9.13–48 (with section-heading *Περὶ θεῶν* of the umbrella type): origin of the conception; 9.49–194: questions of existence and nature (heading *εἰ εἰσὶ θεοί* announced at the end of 9.48). At *M.* 9.12 Sextus says explicitly (but without doubt too sweepingly) that 'in each investigation the *concept* of the theme of the investigation is placed first' (*κατὰ πᾶσαν ζήτησιν προτάττεται ἡ τοῦ ζητουμένου πράγματος νόησις*), which entails that in the present case we have first to find out how 'the concept of God' (*ἔννοιαν ... θεοῦ*) is acquired. Cf. above, section A. This order, first a discussion of the concept (ch. 1.6), and then of the question of existence and that of substance according to a multiplicity of authorities (ch. 1.7), corresponds with the rule that before setting out differences of (philosophical) opinion concerned with a particular theme it is useful to formulate a (nominal, or conceptual) definition that is generally acceptable, see below, ch. 1.9, Commentary D(c) and D(e)(2). This rule is not followed entirely strictly here, since the chapter that represents this conceptual ingredient starts with a definition of the essence according to a particular school, the Stoics.

The parallels in both the anterior and subsequent proximate tradition therefore strongly support the ascription of our chapter to A, in spite of its omission by S. They do not exist for Bottler (2014), who hops from ch. 1.5 to ch. 1.7.2 (so also excluding 1.7.1). It is to be noted that the natural origin of the conception (see below, section D(c)) may certainly be used as belonging with the proofs of existence, so anticipates the theme of ch. 1.7.1.

(2) According to a complementary perspective ch. 1.6 (plus chs. 1.7–8) links up with ch. 1.9, 'On matter', and ch. 1.10, 'On idea'. This combination God–matter–idea is reminiscent of a Middle Platonist background, viz. the well-known triad of Platonist principles (cf. Gersh 1986, 1.244–246, Lachenaud 1993, 89 n. 9) going back to the *Timaeus*. See also above ch. 1.3, Commentary D(a) and D(d)§20, and below at ch. 1.8, Commentary D(a); also M–R 2.1.51, 2.1.69. The prominence given to theology in Middle Platonism is mostly a Stoic and Epicurean legacy—one only has to think of Cicero's *De natura deorum*. For theology as the culmination of physics and as being an 'initiation' see Cleanthes and Chrysippus *SVF* 1.538, 2.42 and 2.1008.

(3) There is an equally important backwards connection with ch. 1.3 (*Περὶ τῶν ἀρχῶν τί εἰσιν*) plus ch. 1.4 (*Πῶς συνέστηκεν ὁ κόσμος*); compare e.g. Alcibi-

ous *Did.* c. 8, p. 162.24–27 H.: ‘Following on these topics (sc. introductory matters, logic, mathematics), let us turn to a discussion of the principles and of the doctrines of theology [cf. ch. 1.6–8], taking our start from above from first principles [cf. ch. 1.3], and then descending from these to examine, first, the origin of the world [cf. ch. 1.4]’ etc. This sequence of principles and gods coincides with that of the subpart ‘on principles and elements’ and ‘on gods’ of the first section of the Stoic φυσικὸς λόγος, for which see above, Book 1.proœm., Commentary D(a), and M–R 2.1.197–109, esp. 2.1.100, and below at ch. 1.12, Commentary D(a). Also see above, ch. 1.3, Commentary D(a), and below, ch. 1.7, Commentary D(a).

b Number–Order of Lemmata

At a first glance there is only a single very long lemma with the name-label ‘the Stoics’. For the sake of convenience one may carve it up along its natural joints: [2–4] definition with name-label; [5–28] first explanation from design (*ex operibus*, ἀπὸ/ἐκ τῶν ἔργων) beginning with the quasi-name-label ἔσχον (‘they’—i.e., either the Stoics of the definition, or the humans in general of the heading—‘obtained’); [29–32] additional explanation from design beginning with the quasi-name-label ἐλάβομεν (‘we’—i.e. we humans—‘obtained’); [33–37] *theologia tripartita* with an implied quasi-name-label οἱ ... παραδόντες; [38–63] sevenfold teaching with the quasi-name-labels διαιρεῖται and ἔφασαν. See however immediately below, *main diaeresis*.

c Rationale–Structure of Chapter

(1) *Main diaeresis*. The main diaeresis of the chapter is between nature and culture, that is, between [5–32], the origin of the conception in a natural and immediate way and the conclusions to be drawn therefrom, and [33–63], its origin as mediated by teaching and tradition, though teaching and tradition also appealed to perception and drew conclusions from it.

(2) *Definition*. The (Posidonian) definition of the *theion* comes first, just as in several other *Placita* chapters the first lemma contains a conceptual definition (cf. the anonymous definitions at A 1.9, 1.10, 1.11, 1.12, 1.14, and 1.15, and οἱ Στωικοὶ ὀρίζονται at 4.8.1, and see below ch. 1.9, Commentary D(c) and (e)2). As in some of these other cases, so also here the definition hardly contributes to our understanding of what follows. It just is an important definition on offer. Nevertheless it imparts a Stoic colouring to the text as a whole.

(3) *Parts of chapter*. The chapter, as we saw in section D(c)(1) above, divides into two main parts. Its first subpart is again divided into subparts, viz. first [5–28] a Stoic argument, as the presence of the name-label at the definition and the formula ‘they obtained a conception’ in fact seem to claim, although the

chapter heading speaks of ‘human beings’ in general. The second subpart [29–32], which starts afresh with the formula ‘we obtained a conception’, precisely because of this ‘we’ i.e. ‘we humans’ (as in the chapter heading), need not be interpreted as presenting a point of view that is uncontaminatedly Stoic. This is a well-worn argument, see e.g. Plato *Philebus* 28e and Xenophon *Memorabilia* 4.3.13, cited below, E(b)§1[29–32].

The second main part is again divided into two subparts. The origin of the so-called *theologia tripartita* [33–37] in its first subpart is not known, though it may have been formulated by a Stoic who for us has remained hidden (the Stoics, we may note, had a certain fondness of tripartite divisions, though they were not the only ones). To posit a Stoic origin for the *theologia tripartita* on the basis of its presence in the present chapter amounts to begging the question. See further below, section D(d) §1[33–37].

The ‘sevenfold teaching’ [38–63] in the second subpart is a complicated affair. The matter-of-fact reference at [57–63] to the assumption that the gods have a human shape does not agree with the Stoics’ contempt for this widespread belief (for which see e.g. *SVF* 2.1057–1060). The argument for anthropomorphism (on the term see Santoro 2000, 144–145) is soundly Epicurean, see Demetrius Laco *De forma dei* (*PHerc.* 1055) cols. xiv–xvi Santoro on the form of the human body as the only one compatible with the presence of intellect (partially cited section E(b)§1[57–63]), so that also the god must have this form; further Cicero *De natura deorum* 1.46–48 and 1.76, also cited section E(b)§1[57–63]. At ch. 1.7.1[29–30] below the praise of human beauty nullifies that of the sphericity of the heavens, or cosmos: ‘And how (can Plato say) the deity is spherical in shape, humbler in status than man?’ On the other hand it should be noted that the ‘sevenfold teaching’ is point for point paralleled by the exposition of Cicero’s Stoic spokesperson Balbus in *ND* Book 2 (though the order of these points is not always the same), as supplemented by a remark of Cotta the Academic in Book 3.63 quoted at section E(a)§1.38–63. The striking parallels with the second-generation Stoics Cleanthes and Persaeus are discussed at section D(d)§1[5–32] and [47–50].

The only further (weak) contrast—one cannot speak of a diaphonia, as these two accounts supplement rather than contradict each other—is that between *tripartite* theology and *sevenfold* teaching. There is no reference to the various other theories famously listed by Cicero *ND* 1.25–41 and Philodemus *Piet.* 1 cols. i–xv or Sextus Empiricus *M.* 9.13–28 (apart from those ingredients which have been gratefully incorporated by Stoics), and so certainly not to those of Epicurus and his followers. A diaphonia or diaeresis of philosophical views is absent. Note, however, that our almost entirely positive chapter forms a sort of diptych with the negative first section of the next chapter, 1.7, in which the

views of the atheists are listed and argued. Accordingly the diaphonia, desirable as well as *de rigueur*, manifests itself through the combination of these two successive chapters (cf. Lachenaud 1993, 217 n. 3).

Let us look at some of the details. We begin with a variety of so-called natural theology, the familiar (but for most of us today invalid) argument from design or *sensus Dei ex operibus suis* [5–37] (also at [38–47]). This first section of the chapter argues from the beauty of the firmament or sky as well as what appears in it according to *four* aspects: its shape, its colour, its size, and the variety of the heavenly bodies that adorn it. This beauty demonstrates that a craftsman-like technical force is at work (familiar of course from Stoic philosophy, and not from Stoic philosophy alone). The four aspects are demonstrated in strict succession: [9–12] shape, [12–16] colour, [16–17] size, and [17–28] the adorning heavenly bodies all contribute to the beauty of the firmament. For κάλλος and μέγεθος as well as their combination as belonging with the defining characteristics of the gods see Verdenius (1949) 297–298 and Mussies (1988) 4–7.

This way of thinking is not restricted to Greek thought, see e.g. *Septuaginta* Ps. 18.1 οἱ οὐρανοὶ διηγούνται δόξαν θεοῦ, ποιήσιν δὲ χειρῶν αὐτοῦ ἀναγγέλλει τὸ στερέωμα (*King James Version* 19:1 ‘The heavens declare the glory of God; and the firmament sheweth his handywork’). For Philo’s repeated and detailed use of this topos see Runia (1981) 132.

(4) *Colour*. A reference to colour occurs both at [12–16] on the sky, and at [29–31] on the sun, the moon and the other stars. Though elsewhere, too (e.g. Cleanthes at Cicero *ND* 2.15 *solis lunae siderumque omnium distinctionem utilitatem pulchritudinem ordinem*, in general Cicero *ND* 2.98–115), the beauty, *pulchritudo* or *ornatus*, of the sky and the heavenly bodies plays an important part in theological argumentation, we have not been able to find a parallel reference to *colour* in this specific context apart from the brief parallel passage, or rather doublet, at *Ath Leg.* 4.2, cited at *testes secundi*. In a different context, namely a passage in Lucretius (*DRN* 2.77–87) about the surprise that things we are accustomed to would cause us when seen for the first time, there is a reference to the sky, its ‘clear and pure *colour*’, and the planets, sun and moon it contains. He uses a standard description for a different purpose. At *DRN* 5.1183–1210 he returns to this theme in order to explain that it is fear that makes us believe in the gods. The wonderful spectacle of the heavens and its colour, and of the constellations and their movements, is also described *DRN* 2.1023–1104, who however he argues that no divinity can be involved, thus negating the argument *ex operibus dei*. Cf. further below section, D(d)§1[14–16]. Pliny *NH* 19.23 tells us the *vela* (‘awnings’) in the amphitheatre of Nero were *colore caeli, stellata*.

(5) *Natural origin*. According to [29–32] the risings of the sun and its fellow stars that are invariably repeated at the same time and in the same place

demonstrate that they continue to preserve their shape and colour unchanged. Note the emphasis on *repetition* here at [29–32], not present at [5–28], which from an epistemic point of view constitutes a crucial further point. The exceptional focus on *colour* and *visibility* at [12–16] shows that the *conception*, *ἔννοια*, of the divine from beauty as revealed by the shape, colour, size of the firmament and the variety of the (fixed) stars that adorn it comes about ‘*naturally* ... and without technical elaboration’, as formulated further down in ch. 4.11.1. The primary example of such a conception cited in this epistemological chapter is that of a colour term too, ‘white’, originally a datum perceived by the sense of sight and remembered because of repeated occurrences (for which in our present chapter cf. [30–32]). This type of conception is contrasted with conceptions ‘produced by our instruction and diligence’ (cf. the tripartite theology and the sevenfold teaching). ‘The latter’ (the later chapter goes on) ‘are just called conceptions, the former [e.g. this conception of ‘white’] also preconceptions’.

(6) *Argument for existence*. The obtainment of the conception of the divine from the beauty of the sky induces an argument for the existence of the divine. This section is not without its learned asides either (the reference to Plato and the quotation of the poet Aratus are instances of instruction and diligence). Yet it stands in clear contrast to the accounts that follow, viz. that of conceptions organized by the tripartite theology (‘those people who have transmitted reverence for the gods have done so by means of three kinds of exposition’—the first *taught* (*διδάσκεται*) by philosophers, the second by poets), and ‘the teaching’ that ‘is divided into seven kinds’. The latter also include ingredients that pertain to perception: the visible signs that people see ([40] *ὁρώντες* and [45] *βλέποντες*), as well as the inner perception, or self-awareness, which is also *natural* (see below at ch. 4.11, Commentary D(d)): the *πάθη* (‘passions’) instantiated by their subsequent interpretation as the divinities Eros, Aphrodite, and Pothos.

Boys-Stones (2003) 194 n. 4 distinguishes between the origin of the conception as a ‘common concept’ and ‘the very different issue of *who* was responsible for the particular gods described in traditional theology’; the sevenfold teaching ‘deals with the origins, not of our concept of god as such, but of the particular representations of god in traditional theology’. This is all very well, but surely the traditional theology is the source of quite a few (perhaps not always correct) conceptions of the gods. The contrast between direct perception and its consequences on the one hand and tradition and teaching on the other has been noticed by Wildberger (2006) 1.28, who does not however refer to its epistemic background.

d Further Comments

Individual Points

§1[2] The convergence of P^B and P^Q make it quite certain that we should read θεῖου in preference to θεοῦ. Authors such as Eusebius and Cyril often modify texts in favour of Christian monotheism. οὐσία here is a good example of substance in the sense of material or corporeal substance.

§1[2–4] According to ch. 1.7.10 (in S only) this is Posidonius' definition. Wildberger (2006) 512 n. 175 argues that S may have taken it from 1.7 (a chapter S preferred to omit) and inserted it in the next chapter, while P 'simplified' the name-label. This is possible, but perhaps too ingenious.

§1[5–32] & [47–50] Of Cleanthes' four explanations of the origin of our notions of the divine at Cicero *ND* 2.13–15 (*SVF* 1.528) the fourth and second (in that order) are paralleled at [5–32] and [47–49]. The second explanation is shared by Zeno's other pupil Persaeus. The 'division of the teaching into seven parts', as noted, is paralleled in Cicero *ND* 2.60–70, expounded by Balbus, plus 3.63, in Cotta's account, and in Clement of Alexandria (who describes the seven subdivisions in exactly the same order as A). Wildberger, in an excellent note (2006, 512–513 n. 175) argues for Posidonius as source of the greater part of the fragment (minus the *theologia tripartita*), but whether the anonymous definition with which this account begins is his cannot be proved. Wendland (1888) and others a long time ago already argued in favour of Posidonius (cf. above, section B(2)). Something is to be said for attributing most of the text to the influence of 'the' Stoics in general, though doubt lingers as to the tripartite theology, while the eulogy of anthropomorphism is absolutely un-Stoic.

§1[7–25] Torraca renders 'cosmo' and Lachenaud 'monde', but the meaning of κόσμος here is 'sky', 'heaven', or 'firmament' (see examples at LSJ s.v. iv), and the next section, §1.14–16.

§1[14–16] The visibility of the heaven is caused by its 'blue colour, darker than purple but still bright', which is said to traverse the air and to be visible (to us) at a vast distance. Wildberger (2006) 1.28 on this passage speaks of the 'Schönheit des Äthers'.

Compare Lucretius *DRN* 2.1039 *caeli clarum purumque colorem*, and *mundus* at *DRN* 5.772 *agni per caerula mundi*, 'through the blue spaces of the great firmament', which is equivalent to 1.1090, *per caeli caerula*, 'through the blue sky' (transl. Smith, LCL), and Manilius 1.703 on the Milky Way, which 'shines like a glowing path in the dark-blue of the heavens' (*in caeruleo ... mundo*, transl. Goold, LCL; more lines cited below, ch. 3.1 section E(a)§1). With Lucretius compare Epicurus' definition at *Ep.Pyth.* at Diogenes Laertius *V.P.* 10.88, "cosmos is a sort of container of the heavens, containing heavenly bodies and earth and all the phenomena" (κόσμος ἐστὶ περιοχὴ τις οὐρανοῦ, ἄστρα τε καὶ γῆν καὶ πάντα

τὰ φαινόμενα περιέχουσα). See also Verg. *Ecl.* 6.34 on the origin of the ‘celestial vault’, *ipse tener mundi concreverit orbis* (more of this text cited at ch. 1.4 section E(b)§1), Seneca *Thyestes* 834 *picti sidera mundi*, Lucan 2.289 *sidera quis mundumque velit spectare cadentem*.

Note that the theory of visual perception implied at §1[12–16] is that of intro-mission, not the usual Stoic one of visual rays issuing from the eyes (extra-mission; for these two rival theories see below, ch. 4.13, and for Chrysippus’ doctrine ch. 4.15.2). That the heavenly sphere is meant is also clear from the argument that it is the largest representative of its species, i.e. the largest of the nested series of concentric spherical layers (the others being air and water) constituting the world together with the globe of the earth (see below, ch. 1.14.2, Commentary D(d)). In a non-Atomist context it does not make sense to assume other worlds that are smaller than ‘the’ world. The author of the *Epinomis*, discussing the god Ouranos, says ‘whether one pleases to give him the name Cosmos or Olympos or Ouranos—let him call him thus’ (977b εἴτε κόσμον εἴτε ὄλυμπον εἴτε οὐρανὸν ἐν ἡδονῇ τῷ λέγειν, λεγέτω μὲν), and at 978b says that ‘the sphere of the fixed stars might be pre-eminently called κόσμος’ (Cornford 1934, 1); see esp. Tarán (1975) 81–82. This meaning is also attested for Xenocrates in Clement of Alexandria *Protr.* 66.2 (= fr. 15 Heinze, 135 Isnardi Parente²). Philo *Aet.* 3–4, who confirms that the word κόσμος has ‘many meanings’ (τῶν πολλὰχῶς λεγομένων ἐστίν), says the second meaning is ‘the heaven only: it was on heaven that Anaxagoras had been gazing, when in answer to the person who asked why he suffered discomfort by spending the whole night under the open sky, he replied that he did this in order to contemplate the cosmos, meaning by cosmos the choric movements and revolutions of the stars’ (Greek text cited *infra* at section E(b)§1[7–9], trans. Colson LCL). ‘Sphere of the fixed stars’ (κόσμος ἐστὶν ἡ τῶν ἀπλανῶν σφαῖρα) is the fifth of the six senses of the word κόσμος listed by the astronomer Diodorus of Alexandria at Ach c. 5, p. 15.6–7, who appeals to Plato’s *Timaeus*, presumably 28b (not a very good parallel) or 40a (better ps.Plato, i.e. Philip of Opus, *Epin.* 977b or 987b, cited above). Also found at Alcinous *Did.* c. 15, p. 170.19–20 H., see Whittaker’s note ad loc. (parallels in Proclus). It is the second of the three senses of κόσμος cited by Diogenes Laertius *V.P.* 7.137 (*SVF* 2.526) ‘and they also call the orderly arrangement of the heavenly bodies cosmos’ (καὶ αὐτὴν δὲ τὴν διακόσμησιν τῶν ἀστέρων [τῶν ἀστέρων wrongly deleted by Von Arnim, Long–Sedley, and Dorandi] κόσμον εἶναι λέγουσι). Cf. also Diogenes Laertius *V.P.* 8.48, on Pythagoras: τὸν οὐρανὸν πρῶτον ὀνομάσαι κόσμον. This meaning of κόσμος in our chapter is further confirmed in the parallel account of the sevenfold exposition in Clement of Alexandria *Protr.* 26.1, where in the first subdivision we find the ‘contemplation of the ouranos’ (τὴν οὐρανοῦ θέαν). Also cf. the first section of the parallel sevenfold exposition

at Eusebius *PE* 5.3.2, πρῶτον μὲν τὸ ἐκ τῶν φαινομένων κατ' οὐρανὸν φωστήρων. This interpretation is also to be preferred at Ath *Leg.* 16.1 cited above, *Testes secundi*, where περιέχων means 'encompasses', and where we find the same emphasis on the adornment of the outer heaven with stars. Also see Cicero *ND* 2.4 'when we have looked up at the heaven and have contemplated the heavenly things' (cf. section E(a)§1[29–32]). Finally cf. ch. 1.7.31 (a part of lemma only in S) 'the visible descendants of the first God: sun, moon, stars, earth and the all-embracing cosmos (ὁ περιέχων πάντα κόσμος)'. Note that in Book 2 there is a ch. 2.2 on the shape (σχῆμα) of the κόσμος in the sense of 'world', but that among the chapters dealing with the οὐρανός (2.11–2.12) there is no chapter on the shape of the οὐρανός. The only time κόσμος possibly means 'world' in the present chapter is in the phrase 'it alone corresponds to its own parts, since it is round and so are its parts', for these parts may be the nested concentric spheres of which the sky is the largest—but 'sky' or 'heaven' is equally possible, for the stars that are its parts presumably are also spherical.

Conversely, one of the meanings of οὐρανός and *caelum* is 'world' or 'All', see e.g. Arist. *Cael.* 1.9 278b20–21 τὸ γὰρ ὅλον καὶ τὸ πᾶν εἰώθαμεν λέγειν οὐρανόν, Pomponius Mela 1.3 *omne igitur hoc, quidquid est cui mundi caelique nomen indidimus*, Plin. *Nat.* 2.1.1 *mundum et hoc quodcumque nomine alio caelum appellare libuit*, Calc. in *Tim.* c. 98 *caelum quoque usurpantes mundum omnem vocamus*, Macr. in *Somn.* 2.11.12 *mundus proprie caelum vocatur*.

This is not to deny that often enough the spherical κόσμος is the 'world', as is the view of the majority of philosophers (Plato, Aristotle, Stoics) and scientists (Euclid, Ptolemy), see at ch. 2.2.1 and the passages cited above at *loci Aetiani* §1[9–11] and below at section E(b)§[9–11], and of course all of chs. 2.1–10 below. Further, we should not forget either that the word κόσμος also means 'ornament,' i.e., something worth looking at, something beautiful, and that this association is not entirely absent when other senses predominate. Cf. Isidore of Seville *Etym.* 13.1.2 *Graeci vero nomen mundo de ornamento adcommo-daverunt, propter diversitatem elementorum et pulchritudinem siderum. appellatur enim apud eos κόσμος, quod significat ornamentum*. On both meanings see also Psellus *Theol.* 6.52–54 Gautier αὐτίκα δ' ὁ φιλόσοφος Ἀριστοτέλης νῦν μὲν ἰδίᾳ τὸν οὐρανὸν κόσμον ὠνόμασε, νῦν δὲ τὸ ἐκ τῶν στοιχείων σύστημα τε καὶ σύγκριμα.

§1[15] The minority reading σύστασιν makes better sense than the majority reading ἀπόστασιν, so we have followed recent editors in preferring it. The same applies to the reading ὑπερέχον in l. [17]. It should be noted that in this chapter P^{B(II)}, i.e. the ms. Marcianus 521, though the youngest of the main manuscripts, has quite a number of deviant and often superior readings.

§1[18] ταῦτα τὰ φαινόμενα, 'the familiar visible signs': immediately before the quotation from Aratus' *Phaenomena* the word surely alludes to the meaning of

this title. Missed by Torraca, who translates ‘quelle cose che ci appaiono’, and Lachenaud, who has ‘les phénomènes suivants’. See also below, on §1[38–39].

§1[20–24] One should exercise care in regularising a quotation in conformity with the original. Therefore the metrically sound αἰγοκέρωτι in l. 22 should be retained in favour of αἰγοκερῆι, the reading in the Aratus tradition. The non-metrical words ἐπ’ αὐτῷ in [21] have been added by A, or perhaps P. These lines are the earliest extant list of the constellations of the Zodiac (Aratus *Phaen.* 544 Ζωϊδίων δέ ἐ κύκλον ἐπὶ κλησιν καλέουσιν, Cicero *Arat.* 317–319). That Cicero’s spokesperson Balbus at *ND* 2.104–114 quotes numerous lines from the author’s *Aratea* is not a coincidence: the Stoic literature consulted by Cicero and A certainly made use of the famous poem. At ch. 2.19.3 Aratus is cited too (*Phaen.* 10–12), though not in a theological context.

§1[27–28] The lines of Critias are quoted out of context, see below at §1[38–45].

§1[33–37] The argument of Rüpke (2005) that Varro has no Greek predecessors fails to convince because of his Greek terminology (*mythicon*, *physicon*) and for instance the partial parallels already found in Strabo cited below, section E(b)§1[33–37]. A will hardly have been dependent upon an author writing in Latin (the present passage is not mentioned by Rüpke).

The *politikon* is noted as evidence of atheism by Ciceo *ND* 1.118, cited ch. 1.7 section E(a)§1[47–50].

§1[33] διόπερ. According to Dihle (1996) 184–185 this conjunction is ‘völlig unpassend’; ‘der Hinweis auf die Theologia tripertita (bildet) einen durchaus störenden Einschub’. But the fact that the argument that comes before the διόπερ appeals to the *sensus Dei ex operibus*, that is, is an argument from the realm of physics, justifies the associative connection with the first genus of the tripartite theology to be mentioned, the *physikon*.

§1[34–36] For the physical theology taught by the philosophers see below, ch. 1.7.2–25, with Commentary B.

§1[38–63] The third and seventh part of the sevenfold *didache* are noted as evidence of atheism by Cicero *ND* 1.118–119, cited ch. 1.7 section E(a)§1[47–50].

§1[38–59] For the parallels between A and Cicero *ND* 2.60–71 see Wildberger (2006) 1.28–30, with tabular arrangement at 1.29 and further references at 2.512–513 n. 175.

§1[38–45] ‘It is typical for the Stoic position that the adverse aspects of the heavenly phenomena have been suppressed completely’ is what Henrichs (1975) 98 n. 24 notes on this passage. That these aspects, familiar from numerous other accounts, have been left out is of course true, but this stance is by no means typically Stoic. Quite the contrary: it is Platonic rather than Stoic (see e.g. ps.Pl. *Epin.* 976e–977b, cited below at section E(b) General texts), and

it is a characteristic trait of A. One of Seneca's aims in providing lofty scientific explanations for earthquakes and thunder and lightning and so on in the *Naturales quaestiones* is to liberate his readers from fear, which of course allows him to describe these untoward events in striking detail. Cleanthes' third reason for the formation of our conceptions of the divine at Cicero *ND* 2.14 (*SVF* 1.528) pertains to the fears inspired by 'lightning, storms, rain, snow, hail, floods, pestilences, earthquakes and occasionally subterranean rumblings, showers of stones and raindrops the colour of blood, also landslips and chasms suddenly opening in the ground, also unnatural monstrosities human and animal, and what are called by the Greeks 'comets' and by us 'long-haired stars' ... and the doubling of the sun ...' (trans. Rackham, LCL). This long list comprises the subjects of quite a few chapters of A's meteorological Book 3 and of one chapter in Book 5 (5.8, Πῶς τέρατα γίνεταί); nowhere in these chapters do we find any allusion to the divine. In an entirely similar way only the positive lines of the Critias fragment are quoted at [27–28], though they are part of a text that highlights the negative side of the gods on high and of thunder and lightning (88B25.29–39 DK; some of these other lines are then quoted in the next chapter, 1.7.1). This elimination of the fear of the heavenly bodies and other natural phenomena associated with religion is typical for the secular attitude of A, who detheologizes elsewhere and virtually confines treatment and discussion of the divine to the chapters on principles and divinities. See Runia at M–R 3.268 with n. 56, Mansfeld (2013a), and above, ch. 1.1, Commentary D(c) *ad finem*. At ch. 2.19.3 Aratus is cited too (*Phaen.* 10–12), though not in a theological context.

§1[38] διαίρεται δ' ἡ πᾶσα διδασχὴ εἰς εἴδη ἑπτὰ plus [47] εἰς δεῦτερον δὲ καὶ τρίτον τόπον τοὺς θεοὺς διεῖλον: the use of both *topos* and *eidos* in the sense of 'part' ('subdivision') reminds one of the Stoic terminology at Diogenes Laertius *V.P.* 7. 39–40 and 7.132, but may have become common usage.

§1[38–39] ἐκ τῶν φαινομένων καὶ μετεώρων is practically a hendiadys. We translate φαινομένων as 'visible signs' (think of the title of the works of Aratus and others, and cf. above at [18]) and not as 'appearances' in general, because the term (or rather both terms together) is/are resumed with τῶν φαινομένων ἀστέρων in the next line, and the paragraph as a whole is about the contemplation of the heavenly bodies and the realization of what they bring about. See also above at §1[7–25]. Torraca translates 'fenomeni celesti', Lachenaud 'les phénomènes visibles dans le ciel'.

§1[45–46] For this etymology of θεός see the numerous passages beginning with Plato *Crat.* 397c–d cited below, section E(b) §1[39–47].

§1[48–49] *More Stoico* the earlier idea of Prodicus can be interpreted as being consistent with the notion of Providence.

§1[52] ἔλαπις should have been listed among the πάθη (Wendland 1888, 203) as indeed occurs in Clement of Alexandria *Protr.* 26.4. Is this a lapsus of A?

§1[59–63] The coda concerned with anthropomorphism in a way adds an eighth point to the sevenfold teaching, or perhaps rather a fourth species to the *theologia tripertita*. We suggest that it is a veiled reference to the representation in human shape of the gods in painting and sculpture. Compare Dio Chrysostom *Or.* 12.44: ‘now that we have set before us three sources of man’s conception of the divine being, to wit, the implanted, that derived from the poets, and that derived from the lawgiver, let us name as the fourth that derived from the plastic arts and the work of skilled craftsmen who make statues and likenesses of the gods—I mean painters and sculptors’, etc. (trans. Cohoon LCL, slightly modified; see Dihle 1996, 185). The justification for this practice given by A, as noted above, has an Epicurean ring.

e Other Evidence

(1) A in ch. 1.6 and ch. 1.7 deals in succession with the origin of the conception of God and with that of its existence and nature. This sequence is paralleled in Cicero and Sextus Empiricus cf. above, section D(a). For the relation between these issues in the sources see e.g. Schmekel (1892) 85–86, Mansfeld (1999b) 453, 454–462, and 469–474. The order ‘that they exist’ (~ ch. 1.6) on the one hand, and ‘whether they exist’ (~ ch. 1.7.1)—‘what they are’ (~ ch. 1.7.2–25) on the other, is that of the original order of the question types in Aristotle *APo.* 2.1 89b24–25, ζητοῦμεν δὲ τέτταρα, τὸ ὅτι, τὸ διότι, εἰ ἔστι, τί ἔστιν (on this passage see Charles 2000, 69–71). For further parallels see below, section E(b) *ad finem*, and for the later tradition of ‘the four types of inquiry’ in al-Kindī and others Altmann–Stern (1958) 8–23, Hein (1985) 57–62, Rudolph (1989) 120–121, Menn–Wisnowsky (2012), and Adamson–Pormann (2012) 10–11. See also above, Book 1.prooem., Commentary D(e)(3a) and (3b).

(2) Epicurus in Book 12 of his *On Nature* discussed the formation of the conception of divinity by early man (quoted Philodemus *Piet.* 225–231 Obbink = fr. 84 Usener), and in the same Book criticized the atheists Prodicus, Diagoras and Critias (*Piet.* 523–533 Obbink = fr. 87 Usener, cited below, ch. 1.7, section E(b)§1). See Sedley (1998b) 121, with references. Both the present chapter *ad finem* (§1[59–63], see below, section D(c)) and the critical §1 of ch. 1.7, which, as we may note, follows immediately after the final section of ch. 1.6, have a strong Epicurean colouring; cf. below, ch. 1.7 Commentary B. The parallel with the sequence in a Book of Epicurus’ *On Nature* may be a coincidence, and again it may not. It may be used as a further argument in favour of the Aëtian authenticity of chs. 1.6 and 1.7.1, and hardly as one against this assumption.

(3) Apart from the other views on the origin of the conception listed by Philodemus, Cicero, and Sextus one also misses the widespread appeal to what happens in dreams and the occasional references to divination and epiphanies. But this is not due to an accident of transmission or a case of authorial whimsy. Divination is accepted by some and rejected by others according to ch. 5.1, and the natural origin of dreams conflicts with their being divinely inspired in ch. 5.2. The *Placita* are about physics. Accordingly pride of place is given to the 'natural' origin of the conception of the Divinity in a *cosmological* setting. The two theoretical theological tables are not only added for the sake of completeness, but also because both of them deal with physics: the first species of the tripartite theology is the *physikon*, just as the first subdivision of the seven-fold teaching is about the origin of the conception from the contemplation of the stars.

(4) For the distinction between nature and argument (or culture) in the formation of the conception of the divine cf. Cicero, who *Tusc.* 1.36 says 'that the gods exist we believe naturally, what their nature is we get to know by reasoning' (*deos esse natura opinamur, qualesque sint, ratione cognoscimus*). Also compare the distinction between on the one hand the origin of the belief in the deity in the 'ingrown notion *ex operibus*' (τὴν ἔμφυτον ἅπασιν ἀνθρώποις ἐπίνοιαν, ἐξ αὐτῶν γιγνομένην τῶν ἔργων [: *ex operibus*] καὶ ἀληθοῦς), and on the other the notion 'that has been acquired through arguments and myths and customs' (τὴν ἐπίκτητον καὶ δι' ἑτέρων ἐγγιγνομένην ταῖς ψυχαῖς λόγοις τε καὶ μύθοις καὶ ἔθεσι) of Dio Chrysostom *Or.* 12.39. Epicurus and his followers, too, distinguished between the immediate and the derivative acquisition of such conceptions, see *Ep.Men.* at Diogenes Laertius *V.P.* 10.123 and Cicero *ND* 1.47, *sed ne omnia revocentur ad primas notiones, ratio hoc idem ipsa declarat*. For the Stoic distinction between primary concepts, or *ennoiai* also called *prolepseis*, that are formed naturally on the one hand and secondary concepts, just called *ennoiai*, acquired through 'our instruction and diligence' and so are a matter of culture on the other, see below, ch. 4.11[10–12], with Commentary D(e).

(5) In Plato *Tim.* 30a–b the cosmos is beautiful because it is endowed with intellect and soul. In fact Plato has various reasons for regarding the cosmos as καλός.

Testes primi:

Athenagoras *Leg.* 6.2.9–3.19 Πλάτων δὲ καὶ Ἀριστοτέλης (καὶ οὐχ ὥς ἐπιδεικνύων τὰ δόγματα τῶν φιλοσόφων ἐπ' ἀκριβές, οὕτως ἃ εἰρήκασιν (~ tit.) περὶ θεοῦ διέξειμι· οἶδα γὰρ ὅτι ὅσον συνέσει καὶ ἰσχύι τῆς βασιλείας πάντων ὑπερέχετε, τοσοῦτον καὶ τῷ πάσαν παιδείαν ἀκριβοῦν πάντων κρατεῖτε, οὕτω καθ' ἕκαστον παιδείας μέρος κατορθοῦντες ὥς οὐδὲ οἱ ἐν αὐτῇς μόριον ἀποτερόμενοι· ἄλλ' ἐπειδὴ ἀδύνατον δεικνύειν ἄνευ παραθέσεως ὀνομάτων ὅτι μὴ μόνοι εἰς μονάδα τὸν θεὸν κατακλείομεν, ἐπὶ τὰς δόξας ἐτραπόμην)· φησὶν οὖν ὁ Πλάτων· (sequitur *Tim.* 28b), (~ §22) ἕνα τὸν ἀγέννητον καὶ αἰδίων νοῶν θεόν. εἰ δ' οἶδεν καὶ ἄλλους οἶον ἥλιον καὶ σελήνην καὶ ἀστέρας, ἄλλ' ὥς γεννητοὺς οἶδεν αὐτούς· (sequitur *Tim.* 41a) ...

Leg. 6.4.25–38 (~ §23) ὁ δὲ Ἀριστοτέλης καὶ οἱ ἄπ' αὐτοῦ ἕνα ἄγοντες, οἶονεὶ ζῶον σύνθετον, ἐκ ψυχῆς καὶ σώματος συνεστηκότα λέγουσι τὸν θεόν, σῶμα μὲν αὐτοῦ τὸ αἰθέριον νομίζοντες τοὺς τε πλανωμένους ἀστέρας καὶ τὴν σφαῖραν τῶν ἀπλανῶν, κινούμενα κυκλοφορητικῶς, ψυχὴν δὲ τὸν ἐπὶ τῇ κινήσει τοῦ σώματος λόγον, αὐτὸν μὲν οὐ κινούμενον, αἴτιον δὲ τῆς τούτου κινήσεως γινόμενον. (~ §24) οἱ δὲ ἀπὸ τῆς Στοᾶς (*SVF* 2.1027), κἂν ταῖς προσηγορίαις κατὰ τὰς παραλλάξεις τῆς ὕλης, δι' ἧς φασὶ τὸ πνεῦμα χωρεῖν τοῦ θεοῦ, πληθύνωσι τὸ θεῖον τοῖς ὀνόμασι, τῷ γοῦν ἔργῳ ἕνα νομίζουσι τὸν θεόν. εἰ γὰρ ὁ μὲν θεὸς πῦρ τεχνικὸν ὀδῶ βαδίζον ἐπὶ γενέσει κόσμου ἐμπεριειληφὸς ἅπαντας τοὺς σπερματικὸς λόγους καθ'

οὓς ἕκαστα καθ' εἰμαρμένην γίγνεται, τὸ δὲ πνεῦμα αὐτοῦ διήκει δι' ὅλου τοῦ κόσμου, ὁ θεὸς εἰς κατ' αὐτούς, Ζεὺς μὲν κατὰ τὸ ζέον τῆς ὕλης ὀνομαζόμενος, Ἥρα δὲ κατὰ τὸν ἀέρα, καὶ τὰ λοιπὰ καθ' ἕκαστον τῆς ὕλης μέρος δι' ἧς κεχώρηκε καλούμενος.

Leg. 7.2.13–14 ἄλλος ἄλλως ἐδογμάτισεν αὐτῶν καὶ περὶ θεοῦ ... (~ *quaestio*).

Leg. 23.2.11–15 (~ ch. 1.8.1). πρῶτος Θαλῆς (fr. 186 Wöhrlé) διαιρεῖ, ὡς οἱ τὰ ἐκείνου {διαιροῦντες} ἀκριβοῦντες μνημονεύουσιν, εἰς θεόν, εἰς δαίμονας, εἰς ἥρωας. (~ §2) ἀλλὰ θεὸν μὲν τὸν νοῦν τοῦ κόσμου ἄγει, δαίμονας δὲ οὐσίας νοεῖ ψυχικάς, καὶ ἥρωας τὰς κεχωρισμένας ψυχὰς τῶν ἀνθρώπων, ἀγαθοὺς μὲν τὰς ἀγαθὰς, κακοὺς δὲ τὰς φαύλους.

Leg. 23.3.30–37 (~ §22) ἄρ' οὖν ὁ (sc. Πλάτων) τὸν αἰθιόν, νῶ καὶ λόγῳ καταλαμβανόμενον, περινοήσας θεὸν καὶ τὰ ἐπισυμβεβηκότα αὐτῷ ἐξειπὼν (τὸ ὄντως ὄν, τὸ μονοφυές, τὸ ἀγαθὸν ἀπ' αὐτοῦ ἀποχεόμενον, ὅπερ ἐστὶν ἀλήθεια), καὶ περὶ πρώτης δυνάμεως ... περὶ τῶν ἐκ τῶν αἰσθητῶν (γῆς τε καὶ οὐρανοῦ) λεγομένων γεγονέναι μεῖζον ἢ καθ' ἑαυτὸν ἀλήθες μαθεῖν ἐνόμισεν;

Traditio ps.Plutarchi:

Eusebius *PE* 7.11.13 (~ *quaestio*, non citatus ap. *DG*) ταῦτα μὲν οὖν ἀπὸ μυρίων ὅσων τῆς Ἑβραίων θεολογίας ἐκκείσθω. ἄρ' οὖν ἄξιον ἐν συγκρίσει παραβάλλειν αὐτοῖς τὰς τῶν σοφῶν Ἑλλήνων θεολογίας, τῶν μὲν μὴδ' ὅλως εἶναι θεὸν ἀποφνημαμένων, τῶν δὲ τοὺς ἀστέρας εἶναι φασκόντων, οὓς καὶ μύδρους τυγχάνειν διαπύρους (deest in *DK* sed cf. *P* ap. *A* 2.20.8 in *PE* 15.23.5) ἤλων καὶ πετάλων δίκην ἐμπεπηγότας τῷ οὐρανῷ (deest in *DK* et Wöhrlé sed cf. *P* ap. *A* 2.14.3–4 in *PE* 15.31.2), τῶν δὲ πῦρ εἶναι τεχνικὸν ὁδῶ βαδίζον (deest in *SVF*, sed cf. *P* ap. *A* §24 in *PE* 14.16.9) ...

ps.Iustinus *Coh.* 5.2.13–20 (~ §22) Πλάτων μὲν γάρ, ὡς ἄνωθεν κατελγλυθὼς καὶ τὰ ἐν οὐρανοῖς ἅπαντα ἀκριβῶς ἑωρακώς, τὸν ἀνωτάτω θεὸν ἐν τῇ πυρώδει οὐσίᾳ εἶναι λέγει. (~ §23) Ἀριστοτέλης δέ, ἐν τῷ πρὸς Ἀλέξανδρον τὸν Μακεδόνά λόγῳ σύντομόν τινα τῆς ἑαυτοῦ φιλοσοφίας ἐκτιθέμενος ὅρον, σαφῶς καὶ φανερώς τὴν Πλάτωνος ἀναρεῖ δόξαν, οὐκ ἐν τῇ πυρώδει οὐσίᾳ τὸν θεὸν εἶναι λέγων· ἀλλὰ, πέμπτον αἰθερίον τι καὶ ἀμετάβλητον ἀναπλάττων σῶμα, ἐν τούτῳ αὐτὸν εἶναι φησιν. γέγραφε γοῦν οὕτως (*Mu.* 2.392a5–9)· 'οὐχ ὡς ἔνιοι τῶν περὶ τὸ θεῖον πλημμελούντων ἐν τῇ πυρώδει οὐσίᾳ τὸν θεὸν εἶναι φασιν'.

Coh. 6.1.8–12 (~ §22) καὶ αὖθις τοῦ Πλάτωνος ἐν τῇ πρώτῃ τοῦ ἀνωτάτω οὐρανοῦ ἀπλανεῖ σφαίρᾳ τὸν τε πρῶτον θεὸν καὶ τὰς εἰδέας εἶναι λέγοντος· (~ §23) Ἀριστοτέλης μετὰ τὸν πρῶτον θεὸν οὐ τὰς εἰδέας ἀλλὰ τινας νοητοὺς θεοὺς εἶναι λέγει οὕτω μὲν οὖν περὶ τῶν ἐν οὐρανοῖς πρὸς ἀλλήλους διαφέρονται πραγμάτων.

Coh. 31.1.7 (~ §1[27]) ὁ μεγάλῳφωνος Πλάτων.

Coh. 36.3.23–25 ὁ γοῦν Ἀριστοτέλης, ὡς ἀκριβέστερον Πλάτωνος τὰ ἐν οὐρανοῖς ἑωρακώς, οὐχ ὥσπερ ὁ Πλάτων ἐν τῇ πυρώδει οὐσίᾳ τὸν θεὸν εἶναι λέγει (οὕτω καὶ αὐτὸς ἔφη), ἀλλ' ἐν τῷ αἰθεριῳδῇ πέμπτῳ στοιχείῳ εἶναι αὐτὸν ἀπεφῆναιτο. (~ §23).

Theodoretus CAG 2.112–113 (~ P1 sive A1) ἀναγνωστέον δὲ οὐ μόνον τὰ τῶν ἱερῶν ἀποστόλων μαθήματα, ἀλλὰ καὶ τὰ τῶν θείων προφητῶν θεσπίσματα· οὕτω γάρ τις καὶ τῆς παλαιᾶς καὶ τῆς καινῆς θεολογίας τὴν ξυμφωνίαν ὁρῶν, θαυμάσεται τὴν ἀλήθειαν καὶ φεύξεται μὲν Διαγόρου τοῦ Μιλήσιου (sic) καὶ τοῦ Κυρηναίου Θεοδώρου καὶ Εὐημέρου τοῦ Τεγεάτου τὸ ἄθεον· τούτους γὰρ ὁ Πλούταρχος ἔφησε μηδὲνα νενομικέναι θεόν.

CAG 3.4 (~ P1 sive A1) οὐκ οὖν μόνοι γε ἄθεοι Διαγόρας ὁ Μιλήσιος (sic) καὶ ὁ Κυρηναῖος Θεόδωρος καὶ Εὐήμερος ὁ Τεγεάτης καὶ οἱ τοῦτοις ἡκολουθηκότες, παντάπασι φάντες μὴ εἶναι θεούς, ὥς ὁ Πλούταρχος ἔφη (~ P1 sive A1), ἀλλὰ καὶ Ὁμηρος καὶ Ἡσίοδος καὶ αἱ τῶν φιλοσόφων ξυμμορίαι ...

CAG 6.6 (~ P1 sive A1) τοὺς μὲν οὖν ἀμφὶ τὸν Διαγόραν φασὶν ἄθεους ἐπὶ κλην ὀνομασθῆναι διὰ τὸ πάμπαν ἀρνηθῆναι τὸ θεῖον ...

Cyrillus Juln. 1.38–39 ὅποιαί τοίνυν αὐτῶν αἱ δόξαι γεγόνασιν, ἐπὶ καιροῦ λελέξε-ται πρὸς ἡμῶν (~ P2) Θάλῃς μὲν οὖν ὁ Μιλήσιος νοῦν τοῦ κόσμου φησὶν εἶναι τὸν θεόν, (~ P7) Δημόκριτος δὲ ὁ Ἀβδηρίτης συμφέρεται κατὰ τι, προσεπάγει δὲ τι καὶ ἕτερον· νοῦν μὲν γὰρ εἶναι τὸν θεόν ἰσχυρίζεται καὶ αὐτός, πλὴν ἐν πυρὶ σφαιροειδεῖ, (~ P8) καὶ αὐτὸν εἶναι τὴν τοῦ κόσμου ψυχὴν. (~ P3) Ἀναξίμανδρος δὲ οἶμον ὥσπερ ὀλοτρόπως ἐτέραν ἰῶν θεὸν διορίζεται εἶναι τοὺς ἀπείρους κόσμους, οὐκ οἶδ' ὅ τι λέγων. (39) (~ P23) ὁ δὲ πλείστην ἔχων καὶ οὐκ ἔξω θαύματος εἰς βασάνους ἐννοιῶν τὴν δείνωσιν, τὸν Ἀριστοτέλη λέγων τὸν Σταγειρίτην, τὸν Πλάτωνος φοιτητὴν, 'εἶδος μὲν χωριστὸν' ὀνομάζει τὸν θεόν, ἐπιβῆναι δὲ διατείνεται τῇ τοῦ παντός σφαίρᾳ. (~ P24) καὶ μὴν καὶ οἱ καλούμενοι Στωϊκοὶ θεὸν εἶναι φασὶ πῦρ τεχνικὸν ὁδῶ βαδίζον ἐπὶ γενέσει κόσμου. γεγράφασι δὲ περὶ τούτων Πλούταρχος τε καὶ ἕτεροι τῶν παρ' αὐτοῖς λογάδων, καὶ ὁ θρασὺς καθ' ἡμῶν Πορφύριος (cf. fr. 425F Smith).

ps.Galenus HPh c. 35 Περί θεοῦ (text Diels)

35.1 (~ P1) ὅσα κατ' ἀρχὰς περὶ θεοῦ λέγοντες (c. 16, DG pp. 608.15–609.10, vid. *Testes secundi ad fin.*) παραλελοίπαμεν, ταῦτα νῦν ἐροῦμεν. τοὺς μὲν τῶν πρότερον πεφίλοσοφκῶτων εὔροιμεν (ἀν) θεοὺς ἡγνοηκότας, ὥσπερ Διαγόραν τὸν Μήλιον καὶ Θεόδωρον τὸν Κυρηναῖον καὶ Εὐήμερον τὸν Τεγεάτην· οὐ γὰρ εἶναι θεοὺς εἰπεῖν τετολμήκασιν. ἔοικε δὲ ταύτην τὴν ὑπόληψιν Εὐριπίδης † ἐπὶ θεοὺς διὰ δέος τῶν Ἀρεοπαγιτῶν ἐκκαλυμένον τοῦτο δι' ἔξιν ὑφίστασθαι. Ἀναξαγόρας δὲ τὸν θεὸν ἐπὶ τὸ διατεταχέναι τὸν κόσμον παρειληφώς ἐστηκότα τὰ σώματα κατ' ἀρχὰς διακεκοσμηκέναι φησί, νοῦν δ' εἶναι τὸν πεποιηκότα ταῦτα ὑπέλαβεν. Πλάτων δὲ οὐχ ἐστηκότα ταῦτα ὑπέθετο, ἀτάκτως δὲ κινούμενα ὑπὸ τοῦ θεοῦ εἰς τάξιν ἦχθαι καὶ τοῦ προσήκοντος μετετληφέναι.

35.2 (~ P2) Θαλῆς δὲ νοῦν τοῦ κόσμου τὸν θεὸν ἡγήσατο.

35.3 (~ P3) Ἀναξίμανδρος δὲ τοὺς ἀπείρους οὐρανούς θεοὺς εἶναι νομίζει.

35.4 (~ P4) Δημόκριτος δὲ νοῦν ἐν πυρὶ σφαιροειδεῖ τὴν τοῦ κόσμου ψυχὴν ὑπολαμβάνει.

35.5 (~ P5) Πυθαγόρας δὲ τῶν ἀρχῶν τὴν μονάδα θεὸν καὶ τὸ ἀγαθὸν ᾤκησεν, ἥτις ἐστὶν ἡ τοῦ ἐνὸς φύσις, αὐτὸς ὁ νοῦς. τὴν δ' ἀόριστον δυάδα μόνην τὸ κακόν, περὶ ἣν ἐστὶν ὁ ὀρατὸς κόσμος.

- 35.6 (~ P6) καὶ Πλάτωνι μὲν τοῦτο δοκεῖ τὸν θεὸν ἀμιγῆ πάσης ὕλης καὶ μηδενὶ παθητῷ συμπεπλεγμένον.
- 35.7 (~ P7) Ἀριστοτέλης δὲ τὸν ἀνωτάτω θεὸν εἶδος χωριστὸν ἐπιβεβηκότα τῇ σφαίρᾳ τοῦ παντός· ὅθεν ἐστὶν αἰθέριον σῶμα τὸ μέγιστον ὑπ' αὐτοῦ νομιζόμενον, διηρημένον κατὰ τὰς σφαίρας {διαίρεσεις} τῇ μὲν φύσει ἡμῶν συναφεῖς, τῷ δὲ λόγῳ κεχωρισμένης· ὥστ' εἶναι ζῶον σύνθετον ἐκ σώματος καὶ θεότητος καὶ τὸ μὲν αἰθέριον, κινούμενον, κυκλοφορητικόν, τὴν δὲ ψυχὴν λόγον ἀκίνητον, αἴτιον τῆς κινήσεως κατ' ἐνέργειαν.
- 35.8 (~ P8) οἱ Στωικοὶ δὲ τὸν θεὸν πῦρ ἔντεχνον ἢ πνεῦμα νομίζουσιν, ὁδῷ βαδίζον ἐπὶ κόσμους γένεσιν, ἐμπειριληφὸς πάντας τοὺς σπερματικούς λόγους, καθ' οὓς ἕκαστα καθ' εἰμαρμένην γίνεσθαι, καὶ διήκειν δι' ὅλου τοῦ κόσμου τὰς προσηγορίας μεταλαμβάνον{τε} κατὰ τὰς τῆς ὕλης δι' ἧς κεχώρηκε παραλλάξεις. θεοὺς δὲ καὶ τὸν κόσμον καὶ τοὺς ἀστέρας καὶ τὴν γῆν εἶναι νομίζουσιν, τὸ δὲ ἀνώτατον πάντων τὸν νοῦν εἶναι, τὸν θεόν.
- 35.9 (~ P9) Ἐπίκουρος δὲ ἀνθρωποειδεῖς εἶναι τοὺς θεοὺς, λόγῳ δὲ πάντας θεωρητοὺς διὰ τὴν λεπτομέρειαν τῆς τῶν εἰδώλων φύσεως· ὁ δὲ αὐτὸς τέτταρας φύσεις κατὰ γένος ἀφθάρτους * * * ὁμοιότηας. αὗται λέγονται καὶ ὁμοιομέρειαι καὶ στοιχεῖα τῷ αὐτῷ.

PPs: Psellus *Omn.Doctr.* c. 15 (~ tit.) Τίς ὁ θεός.

Testes secundi:

Nemesius *NH* 2, p. 28.12–14 Morani ἔπειτὰ φησιν (sc. Ἀριστοτέλης) ἐντελέχειαν οὖσαν τὴν ψυχὴν ἀκίνητον εἶναι καθ' ἑαυτήν, κινεῖσθαι δὲ κατὰ συμβεβηκός (~ §23).

Hermias *Irr.* 11.3 ὁ μεγάλῳ φωνος Πλάτων.

ps.Galenus *HPh* c. 16, *DG* pp. 608.12–609.5 τῶν οὖν πρότερον ἀπὸ τῶν ἀρχῶν τῶν τε δραστικῶν καὶ τῶν ὑλικῶν ἡργμένων τῆς φυσικῆς πραγματείας, ταῦτά ἡμῖν εἰκότως διανοηθέντες ἀρμόττειν, νομίζομεν ἀπὸ τούτων (τὴν) ἀρχὴν ποιεῖσθαι τῶν λόγων. εἰρηκότων τοίνυν ἐκείνων, ὡς τὸ πάντων δραστικώτατον αἴτιον τῶν ὄντων καὶ γινομένων ἐστὶ θεός, καὶ νῦν ὁμοίως ἡμῖν ποιητέον (~ *quaestio*). Πλάτων μὲν οὖν καὶ Ζήνων ὁ Στωικός (*SVF* 1.153) περὶ τῆς οὐσίας τοῦ θεοῦ διεληλυθότες οὐχ ὁμοίως περὶ ταύτης διανοήθησαν, ἀλλ' ὁ μὲν Πλάτων θεὸν ἀσώματον (~ §22[108–109]) Ζήνων δὲ σῶμα, περὶ τῆς μορφῆς μηδὲν εἰρήκοτες (~ §14). (~ §25) Ἐπίκουρος δὲ ἀνθρωπόμορφον τοῦτον ὑπέλαβεν. (~ §10) οἱ Στωικοὶ δὲ ἰδίαν μὲν ἰδέαν οὐκ ἔχειν διηνεκῶς, πνεῦμα δὲ πυρῶδες ὁμοιούμενον πᾶσι ῥαδίως, οἷς ἂν προσρυῇ. τόπον δὲ κρατεῖν ὠρισμένον καὶ κινεῖσθαι μεταβατικῶς μόνον Ἐπίκουρος (—) αὐτὸν εἶπεν ἐπεχείρησεν (~ §24). οἱ δὲ Στωικοὶ (—) ἔμφυτον μὲν ἐπὶ πάντων διήκειν, ὁμοιούμενον δὲ ἐκάστῳ κινούμενον καὶ μεταλλάττον (~ §10).

- §18 A 2.1.3 ... Μέλισσος τὸ μὲν πᾶν ἄπειρον ...
- §19 A 1.3.19 Ἐμπεδοκλῆς ... τέσσαρα μὲν λέγει στοιχεῖα, πῦρ ἀέρα ὕδωρ γῆν, δύο δ' ἀρχικάς δυνάμεις, Φιλίαν τε καὶ Νεῖκος· ὧν ἡ μὲν ἐστὶν ἐνωτική τὸ δὲ διαιρετική. A 1.8.2 Θαλῆς Πυθαγόρας Πλάτων οἱ Στωικοὶ δαίμονας ὑπάρχειν οὐσίας ψυχικάς (εἶναι δὲ καὶ ἥρωας τὰς κεχωρισμένας ψυχὰς τῶν σωματῶν)· καὶ ἀγαθοὺς μὲν τὰς ἀγαθὰς κακοὺς δὲ τὰς φαύλας. A 1.26.1 Ἐμπεδοκλῆς οὐσίαν ἀνάγκης αἰτίαν χρηστικὴν τῶν ἀρχῶν καὶ τῶν στοιχείων.

- §§21–22 aliter A 5.20.1 Πλάτων καὶ Ἀριστοτέλης ... τὸν θεὸν ζῶν λογικὸν ἀθάνατον.
- §21 {{A 1.3.22 Ξενοκράτης συνεστάναι τὸ πᾶν ἐκ τοῦ ἐνὸς καὶ τοῦ ἀένναου, ἀέννανον τὴν ὕλην αἰνιττόμενος διὰ τοῦ πλήθους.}}
- §22 A 1.3.20 Σωκράτης Σωφρονίσκου Ἀθηναῖος καὶ Πλάτων Ἀρίστωνος Ἀθηναῖος (αἱ γὰρ αὐταὶ περὶ παντὸς ἑκατέρου δόξαι) τρεῖς ἀρχάς, τὸν θεὸν τὴν ὕλην τὴν ἰδέαν ... ὁ δὲ θεὸς νοῦς ἐστὶ τοῦ κόσμου. A 1.10.1 ἰδέα ἐστὶν οὐσία ἀσώματος, αἰτία τῶν ὧς ἐστὶν αὐτὴ καὶ παράδειγμα τῆς τῶν κατὰ φύσιν ἐχόντων αἰσθητῶν ὑποστάσεως, αὐτὴ μὲν ὑφειστώσα καθ' ἑαυτήν, εἰκονίζουσα δὲ τὰς ἀμόρφους ὕλας καὶ αἰτία γιγνομένη τῆς τούτων διατάξεως, πατὴρ ἐπέχουσα τοῖς αἰσθητοῖς τάξιν. A 1.10.2 Σωκράτης καὶ Πλάτων χωριστάς τῆς ὕλης οὐσίας τὰς ἰδέας ὑπολαμβάνει, ἐν τοῖς νοήμασι καὶ ταῖς φαντασίαις τοῦ θεοῦ, τουτέστι τοῦ νοῦ, ὑφειστώσας. A 1.11.2 Πλάτων τριχῶς τὸ αἷτιον· φησὶ γὰρ ὅφ' οὐ ἐξ οὐ πρὸς δ'· κυριώτερον δ' ἡγεῖται τὸ ὅφ' οὐ· τοῦτο δ' ἦν τὸ ποιοῦν, ὅ ἐστι νοῦς. A 2.6.4 Πλάτων τὸν ὁρατὸν κόσμον γεγενῆσθαι πρὸς παράδειγμα τοῦ νοητοῦ κόσμου.
- §23 A 1.3.21 Ἀριστοτέλης ... στοιχεῖα δὲ τέσσαρα, πέμπτον δὲ τὴν σῶμα αἰθέριον ἀμετάβλητον. A 1.12.3 Ἀριστοτέλης βαρύτατον μὲν εἶναι τὴν γῆν ἀπλῶς, κουφότατον δὲ τὸ πῦρ· ἀέρα δὲ καὶ ὕδωρ ἄλλοτ' ἄλλως. μὴδὲν δὲ πῦρ κυκλοτερώς φύσει κινεῖσθαι, μόνον δὲ τὸ πέμπτον σῶμα. A 1.28.1 αὕτη δ' ἐστὶ τὸ αἰθέριον σῶμα. A 2.3.4 τὰ μὲν γὰρ οὐράνια τούτων πάντων (sc. ἔμψυχον, αἰσθητικόν, λογικόν, νοερόν, προνοῖα διοικούμενον) κοινωνεῖν, σφαίρας γὰρ περιέχειν ἐμψύχους καὶ ζωτικὰς. A 2.6.5 Πυθαγόρας ... φησὶ γεγενῆσθαι ... ἐκ δὲ τοῦ δωδεκαέδρου τὴν τοῦ παντὸς σφαῖραν. A 2.7.5 Ἀριστοτέλης πρῶτον μὲν αἰθέρα ἀπαθῆ, πέμπτον δὴ τὴν σῶμα ... τοῖς μὲν οὐρανίοις ἀποδεδόσθαι τὴν κυκλικὴν κίνησιν. A 2.11.5 Ἀριστοτέλης ἐκ πέμπτου σώματος (sc. τὸν οὐρανόν). A 2.13.12 Ἀριστοτέλης ἐκ τοῦ πέμπτου σώματος (sc. εἶναι τὰ ἄστρα). A 2.12.1 Θαλῆς Πυθαγόρας οἱ ἅπ' αὐτοῦ μεμερίσθαι τὴν τοῦ παντὸς οὐρανοῦ σφαῖραν εἰς κύκλους πέντε. A 2.20.11 Ἀριστοτέλης σφαῖραν ἐκ τοῦ πέμπτου σώματος (sc. εἶναι τὸν ἥλιον). A 2.16.4 Ἀριστοτέλης ὑπὸ τῶν σφαιρῶν, ἐφ' ὧν ἕκαστος ἐμβέβηκε, φέρεσθαι (sc. τὰ ἄστρα). A 2.30.7 ... τοῦ αἰθέρος, ὃν προσαγορεύει σῶμα πέμπτον. A 3.6.2 Ἀριστοτέλης ἀκίνητον τὴν ψυχὴν πάσης κινήσεως προηγούμενην, τῆς δὲ κατὰ συμβεβηκὸς μετέχειν. A 3.14.1 Πυθαγόρας τὴν γῆν ἀναλόγως τῇ τοῦ παντὸς οὐρανοῦ σφαίρᾳ διηρηθῆσθαι εἰς πέντε ζῶνας. A 4.4.6 οἱ δὲ γε Πυθαγόρου διάδοχοι ἐκ πέντε στοιχείων τὸ σῶμα κραθῆναι φάντες—τοῖς γὰρ τέτταρσι ξυνέταξαν τὸ αἰθέριον.
- §24 A 1.1.2 φύσιν τινὲς εἶναι λέγουσι πνεῦμα ἔντεχον ὁδοποιητικόν. A 2.4.2 οἱ Στωικοὶ (ὑπὸ θεοῦ γεγενῆσθαι τὸν κόσμον). A 1.27.5 Ζήνων ὁ Στωικὸς ἐν τῷ Περὶ φύσεως δύναμιν κινήτικὴν τῆς ὕλης κατὰ ταῦτα καὶ ὡσαύτως (sc. τὴν εἰμαρμένην), ἥντινα μὴ διαφέρειν πρόνοιαν καὶ φύσιν καλεῖν. A 1.27.6 Ἀντίπατρος ὁ Στωικὸς θεὸν ἀπεφαίνετο τὴν εἰμαρμένην.
- §25 A 1.3.16 Ἐπίκουρος ... ἔφη τὰς ἀρχὰς τῶν ὄντων σώματα, λόγῳ θεωρητά, ἀμετοχα κενοῦ, ἀγέννητα, ἀδιάφθαρτα, οὔτε θραυσθῆναι δυνάμενα οὔτε διαπλασθῆναι ἐκ τῶν μερῶν λαβεῖν οὐτ' ἀλλοιωθῆναι· εἶναι δ' αὐτὰ λόγῳ θεωρητά· ταῦτα μὲντοι κινεῖσθαι ἐν τῷ κενῷ καὶ διὰ τοῦ κενοῦ· εἶναι δὲ καὶ αὐτὸ τὸ κενὸν ἄπειρον καὶ τὰ σώματα ἄπειρα.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

Given the interest of its subject it is not surprising that the long chapter on theology is well attested. Indeed with its nine witnesses it is as well attested as, or to some extent even better than ch. 1.3 on first principles.

(1) The Byzantine mss. of P and Q's translation preserve nine doxai, of which the first is of much greater length than the remaining eight. In §8 the three name-labels Diogenes Cleanthes Oenopides preserved by S have fallen out in P, though the doxa is saved and combined with §16 in P₄ (and G). All of P's extant name-labels, namely P₂ Thales, P₃ Anaximander, P₄ Democritus, P₅ Pythagoras, P₆ Plato, P₇ Aristotle, P₈ Stoics, and P₉ Epicurus are paralleled in S, and occur in the same order. The doxai of Thales, Plato, and Aristotle in P have been abridged. P's chapter is written out almost in full by E, with significant changes in §1 (omission of lines 5–8 and 13–29) and §2 and §7 (excision of *νοῦν* for theological reasons, see M–R 1.135–136). It is briefly anticipated at *PE* 7.11.13, which had escaped Diels. All nine doxai are also found in G, although with the long first doxa severely reduced. Cyril paraphrases five of the doxai in a polemical exposé of Greek philosophical theology. Only the heading is found in Ps.

(2) Unlike A and under the influence of later developments in ancient philosophy (and perhaps also Christianity), S treats theology much earlier than the principles (which follow on later at 1.10). In his chapter on positive theology at the beginning of Book 1 of the *Eclogae* (preceded only by a small section of his proœmium, the rest of which is lost) he cites no less than twenty-four doxai in succession without interweaving other material. Only eight of these lemmata are paralleled in P. We saw above that their order is the same in both chief witnesses. This suggests that S wrote out ch. 1.7.2–24 in full, just as he sometimes does elsewhere with entire chapters.

Our text of S does not have the first very long doxa extant in P. Diels *DG* 59–60 first argued that S ch. 1.2, 'On those who believe that providence and the ensuing divine powers relating to the management of the whole do not exist' (Περὶ τῶν νομιζόντων μὴ εἶναι πρόνοιαν καὶ ἐπομένας ταύτῃ θείας ἐπὶ τῇ τοῦ παντός διοικήσει δυνάμεις), a lost chapter, may well have been where S placed the first doxa. But as Elter (1880) 22 pointed out, Diagoras, Theodorus, and Euhemerus are absent from the index of Photius. He concluded against Diels that §1 was absent from Stobaeus. But Diels (1881) 348–349 replied that there are omissions and irregularities in the index, and, more to the point in the present context, that Callimachus, cited by name and patronymic ch. 1.7.1[4] and by name again [21], occurs twice in the index, the second time among the poets but the first

time (cod. 167, p. 114b6–7) among the philosophers, between Cleanthes and Critias. The source for this (fortunate) mistake in his view can only be the section of ch. 1.7 lost in our text of S: ‘Dieser wunderliche Irrtum zeigt deutlich, daß das atheistische Stück von Stobaios ganz oder theilweise berücksichtigt war’, sc. in the lost chapter. See also Winiarczyk (1976) 43 with n. 67. Bottler (2014) 135–136 typically declines to take notice of the force of Diels’ refutation. We may add that the parallels for the discussion of the atheist position over against its opposite in the wider tradition, namely in the earlier (esp. Cicero and Philodemus) as well as in the subsequent proximate tradition (Sextus Empiricus, Clement of Alexandria), also support the presence of this theme in A. See also below at sections A(5) and D(d) for the strikingly parallel arguments concerned with creationism of A 1.7.1[27–58] and Cicero *ND* 1.18–24, the evidence for which in Philodemus (assuming it was there) has been lost. For the connection with the argument on the natural origin of the concept of God, which also testifies in favour of the derivation from A, see ch. 1.6 above, Commentary A, D(a), and D(c). In S’s rich collection of evidence for positive theological ideas there was understandably no place for atheism.

(3) T in contrast only makes use of the first doxa, P 1.7.1, on the atheistic position. His brief and repetitive abstracts occur in three passages: *CAG* 2.112 (Diagoras Theodorus Euhemerus, and ‘Plutarch’ as source), 3.4 (Diagoras Theodorus Euhemerus and ‘Plutarch’ as source, again), and 6.6 (only Diagoras, ‘Plutarch’ absent). All three are cited above at *Testes primi*. Note that *GAG* 3.4 is a paraphrase of *CAG* 2.112: the wording and word-order are somewhat different, and that *GAG* 6.6 is a very short abstract. T in each of these three passages adroitly combines this material with information on atheism and the creation of false gods culled from several Books of the *PE*. At *CAG* 2.113 this information is abstracted from elsewhere in the same Book 14. At *CAG* 3.4–5, where the available editions give no information on the source(s), he anticipates his much enlarged abstracts from *PE* prooemium and Books 4–5 in *CAG* 3.23–59, mentioning the tripartite theology and dealing with parts of the sevenfold *didache* concerned with Greek θεοποιία (cf. ch. 1.6[35–60] with Commentary and at Further related texts (a)). The abstracts that follow on at *CAG* 3.6–7 derive from the same context in E. And what follows on at *CAG* 6.6 also derives from E. For the details see the excellent *apparatus fontium* in Raeder’s edition of T. This suggests that, in accordance with the law of the least effort, one after another these three passages, derived by E from P, were abstracted from E at the same time as, and together with, the other abstracts that follow.

But this is far from certain. Diels *DG* 10 and 297 in the apparatus underneath ch. 1.7 stated that E was T’s source here. His point was that the mistaken ethnonym Μιλήσιος instead of Μήλιος for Diagoras is found in both E and T (twice,

sc. also at *GAG* 3.4), while he believed that the mss. of P read Μήλιος. But as is clear from the editions of Mau and Lachenaud all these mss. read Μιλήσιος, which is confirmed by Q. Schulte (1904) 55 also argued that T excerpted E, and so now does Scholten (2015) 251 n. 104 (cf. also 118–119). At M–R 1.168, however, we argued that it is more likely that he also possessed a copy of P, but elsewhere in his treatise preferred to use A. T *never* refers to ‘Plutarch’ (or, for that matter Aëtius) in the context of the anonymous *Placita* excerpts that, because of extra material shared with S but is lacking in P, *must* derive from A (see Mansfeld at M–R 4.151–168 and above, General Introduction, section 2.5). T elsewhere cites the real Plutarch twenty times by name (though as a rule indirectly from his favourite sources Eusebius and Clement), in one passage even adding ὁ ἐκ Χαίρωνείας τῆς Βοιωτίας; see overview at Scholten (2015) 804–806.

(4) There remain a number of snippets from the doxai of Aristotle (§23), the Stoa (§24), Thales (§2) and Plato (§22) in Athenagoras. Diels argued that these were taken from P and thus provide the earliest witness to that work. However, this cannot be certain, since the texts include possible allusions to material found only in S, i.e. the apologist may have used A rather than P, or even a cousin writing. See further M–R 1.312–314 and General Introduction section 2.5. In the case of ps.Justin, however, given that elsewhere in his work he cited 10 doxai from ch. 1.3 which are all present in P (see section A(2)), it is most likely that he used that source here as well, so we list these above in the tradition of P.

(5) With no less than thirty different name-labels in twenty-four paragraphs (§§2–25) ch. 1.7 is the richest chapter of the *Placita* as to doxai. As we have seen above only eight of S’s name-labels are paralleled in P, so no less than twenty-two are contributed by S alone. This in the context of the *Placita* unequalled richness and variety is surely meant as a counterweight to the atheist positions and arguments in §1, which provides a further argument for attributing §1 to A. Further note that among these thirty there are no less than thirteen name-labels that are not paralleled in the related and also quite rich ch. 1.3 ‘On principles’, namely (in order of appearance) Cleanthes, Oenopides (of Chius), Posidonius, Speusippus, Critolaus, Diodorus of Tyre, Mnesarchus, Boethus, Parmenides, Melissus, Zeno (of Elea), Polemo, and the Stoics. Three of these, i.e. the *recherché* name-labels Diodorus of Tyre, Mnesarchus, and Polemo, are found only here in the *Placita*, so we are in the presence of a real effort.

(6) The Stobaeian text of §§2–25 (only!) has been commented upon by (Dörrie–Baltes)–Pietsch–Lakmann (2006) 237–259, who blandly situate ‘Platon’s Theologie und die seiner Schüler—mit den Augen der antiken Doxographen—im Kontext der Vorgänger und Nachfolger’. They are puzzled by the order of the lemmata and offer no solution.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The Epicurean colouring of §1 has been widely recognized. (For that of the final section of ch. 1.6 see above, 1.6 Commentary D(a)). The Epicurean overviews dealing with the doxai on the gods in Philodemus *De pietate* and Cicero *De natura deorum* Book 1 are of primary importance, not only for the doxographies of §§2–25 (unlike the lemmata in A often with arguments against, esp. in Cicero), but also for the inclusion of the so-called atheists of §1. (For Cicero as a witness for the wider doxographical tradition see also above ch. 1.3, and below chs. 4.2–7, 4.9, and 5.1.) Cicero refers to some of these atheists by name at *ND* 1.2, as constituting the second part of the overarching diaeresis between believers and deniers. In Cotta's speech at *ND* 1.61 this diaeresis is cited again, and followed at *ND* 1.63 by a paragraph on the atheists and a longer section on the same subject at *ND* 1.117–121. For further parallels in the widespread proximate tradition see the texts collected at section E(a)§1 below. Qua structure and contents Sextus Empiricus *P.* 3.217–218 is analogous to *the whole* of ch. 1.7, because he first lists the atheists and next a selection of definitions of the divinity. The longer passage on the atheists at *M.* 9.49–57, under the heading 'Do gods exist?' (one that would be appropriate as part of a heading for A 1.7) is parallel as to its cast of atheists and poetic quotations to 1.7.1, see Diels *DG* 58–59, and Winiarczyk (1976) 43–45, who argues for a collection of arguments of various provenance by Clitomachus as an important intermediary source. Runia (1996) 553–554 = M–R 3.353 points out that the third line of Callimachus fr. 191 Pfeiffer on Euhemerus is found only in 1.7.1 and Sextus Empiricus *M.* 9.51; this 'cannot be a coincidence' (his emphasis). If we were only in possession of these parallels in Sextus and did not have those in Philodemus and Cicero we would speak of a Skeptical tradition, but it is in our view quite clear that the Skeptical and the Epicurean accounts are both part of a more general current. The parallels dealing with the atheists in Cicero and Philodemus show that this information had already entered the wider doxographical tradition by the first cent. BCE. The parallels to views of the atheists in Cicero *ND* 1.118–119 and Sextus *M.* 9.17–19 plus 9.50–58 have been cited below, section E(a) General texts and §1[2–8] and §1[12–14]. Interestingly, the parallels in ps. Galen *HPh* c. 16, unlike those in c. 35 not excerpted from P but from a cousin source, are found under the heading 'On the physical (part)', Περὶ τοῦ φυσικοῦ, which thus not only seems to introduce the physical section of the tract (for the term cf. e.g. Sextus *P.* 3.1), but also to allude to the first species of tripartite theology, the *physikon*, which is taught by the philosophers; see e.g. above, ch. 1.6.1[34–36].

There are important points of agreement between Cicero *ND* 1.18–24 and A 1.7[27–58], see Philippson (1939) 17–21, cited by Pease (1955) 1.187 and followed *ibid.* 188, though there are of course also differences of emphasis. These

arguments against creationism and providence are also largely paralleled (though not in the same order) in Lucretius *DRN* 5.156–234, see the Lucretian commentaries ad loc. and e.g. the double columns of Hirzel (1877) 10–11 n. 1. Lucretius argues against opponents which remain anonymous. It has been doubted that Lucretius has not only Plato but also the Stoics in mind, but in view of the parallel in Cicero *ND* 1.18–21 it seems sensible to believe that they are included. There is moreover no evidence that Plato believed in creation for the sake of humanity, or that others believed he did.

It is also of some interest to note that Clement *Protr.* 64.1 says ‘Let us look briefly at the views (*doxai*) on the gods boastfully pronounced by the philosophers’ (ἐπιδράμωμεν ... τῶν φιλοσόφων τὰς δόξας ὅσας ἀνθρώποι περὶ τῶν θεῶν). One may compare this utterance with Athenagoras’ more neutral phrase at *Leg.* 6.2 ‘I turned to the *doxai*’ (ἐπὶ τὰς δόξας ἐτραπόμεν).

The first Aëtian argument is concerned with providence and creationism *per se*. A 1.7[27–41] argues against Plato’s Demiurge, clearly referring to the *Timaeus*, and against Anaxagoras’ cosmic intellect (*Nous*), paraphrasing the famous opening of the treatise. But how can the god be able to construct a cosmos by looking at (sc. and imitating) himself, or how can a god be spherical, a shape inferior to that of man? Plato and Anaxagoras ‘are both mistaken’ (A 1.7.[35] κοινῶς οὖν ἀμαρτάνουσιν ἀμφοτέροι), since this kind of activity conflicts with the nature of a god qua happy and indestructible anthropomorphic living being without worries. Menial work and bothering about humans to the extent of constructing the cosmos for the sake of man would be detrimental to the divinity’s felicity. Cicero *ND* 1.18–21 argues at some length against Plato’s demiurgic god in the *Timaeus* and the demiurgic Providence of the Stoics. A version of the Aëtian point about God looking at (and imitating) himself is taken up by Cicero’s ‘by what eyes of the intellect was Plato able to contemplate the construction of so mighty a work?’ The phrase ‘to both of you (sc. Plato and the representative of the Stoics) the following question may be put ...’ (*ND* 1.21, *ab utroque autem sciscitor*) corresponds with the κοινῶς ἀμφοτέροι directed at Plato and Anaxagoras. The analogy is structural and based on content, and only in part based on identical name-labels. Similarly Lucretius *DRN* 5.168–170, who wonders what could have motivated the gods to change their way of life, and 5.181–186, where he asks where ‘the gods’ could have found ‘the model for making things’.

The second argument, at A 1.7.1[42–51], is about the more particular question of what the divinity was doing prior to the construction of the cosmos. Was he absent, or asleep? Eternal sleep is equivalent to death, and mortality is irreconcilable with the nature of the divinity. The decision to construct a world moreover must have been motivated by a deficiency in God’s felicity, which also

conflicts with his nature (for this specific point cf. Lucretius *DRN* 5.170–173). In Cicero ‘the question addressed to both’ pertains to precisely this issue: if the builders of the cosmos suddenly became active, they must forever have been asleep before (*ND* 1.21–22). Similarly Lucretius *DRN* 5.168–173 and Diogenes of Oenoanda NF 126/127 IX = NF 127 IV + fr. 20 Smith at Hammerstedt–Smith (2014) 145–146, of which a sentence is quoted below at section A(b)§1[34–50].

These first two points are indebted to Aristotle’s arguments against the demiurge of the *Timaeus* extant at Philo, *Aet.* 39–43 (without name-label) = Aristotle *De phil.* fr. 19 c Ross (also cf. *De phil.* fr. 16 Ross at Simplicius in *Cael.* 288.28 ff.; and *De phil.* fr. 20 Ross at Cicero *Luc.* 119, cited below, section E(b)§1[41–50]). See e.g. Mansfeld (1981) 299–303, with references.

The third argument, at A 1.7.1[52–58], is one of the rare examples of an ethical issue in the *Placita*. We encounter the problem of moral evil in the theodicy, and have to listen to the well-worn complaint that good people suffer and evil people prosper, which shows beneficent providence to be an empty notion. This argument has only a limited and rather sarcastic analogue in *ND* 1.23. If God constructed the world for the sake of humans, the Epicurean Velleius asks, did he do so for the wise, a scarce commodity? Or for the fools? But God had no cause to favour the wicked (sc. as he clearly does when one assumes that he determines what happens in the world).

These striking parallels further support the claim that ch. 1.7.1 is indeed Aëtian, and at the same time help to place the account of Cicero’s Epicurean spokesperson in the context of the wider tradition, where treatment of these further matters will have been obligatory as well.

(2) *Sources*. Of the standard so-called atheists the triad Prodicus (T 70 Mayhew), Diagoras and Critias are already mentioned together in a famous testimonium to Book 12 of Epicurus *On Nature* (see Obbink 1996, 350–358), for which see now also Philod. *PHerc.* 1428, col. 333 Vassallo (*olim* fr. 19). Also to be included among the ultimate inspirations for the diaeresis concerned with the existence or not of the gods is surely Aristotle’s example of the question types of existence and essence at *APo.* 2.1 89b31–35, ‘we investigate some matters in a different manner, e.g. whether a centaur or a god is (the ‘whether it is or not’ is said *simpliciter*, and not in the sense of ‘whether white or not’). When we know that it exists we inquire what it is, e.g. what is god or what is man’. This general reference to the denial of the god’s existence shows that some sort of *Atheistenkatalog* must have been at the back of Aristotle’s mind. Among the ultimate inspirations for several lemmata of our chapter is Aristotle *Met.* N.4 1091a29–b15, a treatment of the relation between First Principle(s) *per se* and the Good according to various authorities. According to (1) the ancient poets and theologians (i.e. the Orphics, Hesiod, and Homer) and some mod-

ern thinkers—Aristotle means Speusippus, and the Pythagoreans according to some of whom the Principle is the One—τὸ ἀγαθὸν καὶ τὸ καλὸν appears only subsequently in the course of the natural development of things, so is not a Principle. But according to (2) the *sophoi*, e.g. ‘Empedocles and Anaxagoras’, to (3) a ‘mixed’ category ‘using myth only part of the time’, viz. Pherecydes and the Magi, and to (4) ‘some of those who posit unchangeable substances’ and argue that the Good and the One are the same, viz. some of the Platonists, it is a Principle and element (and according to Aristotle belongs with first philosophy).

These *theologoi* and semi-*theologoi*, viz. Orphics, Hesiod, Homer, Pherecydes, and Magi are absent from A’s overview, which is restricted to the views of the *sophoi* and of Pythagoras and the Platonists (for this characteristic secularizing trend cf. above at ch. 1.1, Commentary D(c) and ch. 1.6, Commentary D(d)[38–45]). This also holds for the poets and representatives of Oriental religions analysed by Eudemus (fr. 150 Wehrli) as cited by Damascius *Princ.* 3.162.19–166.7 Westerink–Combès, see Mansfeld (2013a). On the other hand such authorities are still present (and are criticized) in Philodemus *De pietate* (e.g. Mimnermus, Musaeus, Homer, Epimenides, see Henrichs 1975, Texts I and II), and in Cicero (the brief paragraph *ND* 1.42 on the poets in general).

Of *sophoi*, on the other hand, we have a more than generous attendance in A. We notice a series of Presocratics as well as one of Hellenistic philosophers, namely Cleanthes, Posidonius, Critolaus, Diodorus of Tyre, Zeno Stoicus, Mnesarchus, the Stoics, and Epicurus. In the third place, we have a group consisting of Pythagoras, Speusippus, Xenocrates, and Plato, and perhaps including Aristotle. The Presocratics will have arrived via the Peripatetic tradition. The ultimate sources of the Hellenistic doxai will be the treatises of the authors that are concerned. Runia (1996) 573–574 = M–R 3.370–371, at the end of his detailed commentary on §1, concludes that ‘there are three main strands of tradition ..., the Sceptical, the Epicurean, and the doxographical’. In ch. 1.6 we found a blend of mainly Stoic and (at the end of 1.6.1) Epicurean points of view.

C Chapter Heading

(1) Formulated according to the question type or category of substance and aiming at a definition, just as in a few other cases: ch. 1.1 Τί ἐστι φύσις, ch. 1.3 Περί ἀρχῶν τί εἰσιν, similarly chs. 2.8, 2.10, 2.11, 2.13, 2.32, 3.8, 4.12, 5.3, and 5.17. See above ch. 1.1 at Commentary C. The present formula is paralleled only in Philo (*Fug.* 164) and some Christian authors. Strictly speaking this heading does not apply to §1, where the question types of existence *simpliciter* and *specialiter* are at issue, but only to §§2–25: as Runia (1996) 550 = M–R 3.351 rightly points out, ‘[t]he use of the article is surely deliberate, i.e. the god identified as principle’.

The final phrase of S's heading of *Ecl.* 1.1, 'of what kind of substance is he' (sc. the god, ποίας οὐσίας ὑπάρχει), further clarifies the issue of §§2–25. See also below section D(a)(2).

(2) The often found title, or heading, under which issues like the ones found here are discussed elsewhere is the umbrella form Περὶ θεῶν (*De natura deorum*). This, in fact, is the heading with which the present chapter is referred to in the next chapter, 1.8.1: παρακειμένως δὲ τῷ περὶ θεῶν λόγῳ τὸν περὶ δαιμόνων καὶ ἡρώων ἱστορητέον.

D Analysis

a Context

(1) Ch. 1.7 is the second of the block of three theological chapters, which in its turn is connected with chs. 1.9, 'On matter' and 1.10, 'On idea'. This relation between (the concepts of) God, matter and idea points at a Middle Platonist background. See below at chs. 1.9–1.10, both times at Commentary D(a), and above at ch. 1.3, Commentary D(a) and D(d)§20; also ch. 1.6, Commentary D(a) for the relation with the Stoic φυσικὸς λόγος and Sextus Empiricus on physics. See further M–R 2.1.51, 2.1.69, 2.197–109, and on the relation with the previous chapter dealing with the origin of the concept of God (and on some of the parallels for this combination) ch. 1.6, Commentary A, D(a), and D(c). For the Epicurean link between the two chapters see ch. 1.6, Commentary D(a).

(2) The chapter consists of two large sections that could easily have figured as separate chapters (elsewhere the questions of (a) the existence and (b) the substance or essence of the divine are indeed sometimes treated at some distance from each other, as at Clement of Alexandria *Protr.* 2.24.2 (atheists) and 5.64.1–2 and 5.66 (philosophers)). Cf. below, section D(c).

(3) The second section (§§2–25), which deals with the nature of the divinity, is a counterpart and sort of mirror reflection of ch. 1.3 on the principles, for the principle can be divine and the divinity be presented as a principle, cf. for instance Sextus Empiricus *P.* 3.1–2, who puts active principles and the divine on a par, or the account of the principles in Augustine *C.D.* 8.2.1–3.4. See also on the chapter heading at section C above, and above ch. 1.3 Commentary D(a).

There are even particular instances of this relationship between ch. 1.3 and 1.7. In ch. 1.3 on the principles there are four mentions of gods: 1.3.7[60] Pythagoras 'Intellect the god' (νοῦς ὁ θεός); 1.3.19[136–138] Empedocles, quotation of fr. 31B6: Zeus, Hera, Aidoneus, and Nestis, followed by a physicist explanation of the divine names; 1.3.20[144] Socrates and Plato, 'the god is the Intellect of the cosmos' (ὁ δὲ θεὸς νοῦς ἐστὶ τοῦ κόσμου); and 1.3.23[154], Zeno Stoicus 'the god' (τὸν θεόν). At 1.3.20 (Plato, cf. §31) and 1.3.23 (Zeno) this divine principle is mentioned next to the principle of matter (Zeno), and next to the principles

of matter and Form (Plato). One of the monistic material principles found in ch. 1.3 appears again as a divinity in ch. 1.7, namely at 1.3.3 ~ 1.7.4 (Anaximenes: air), 1.3.5 ~ 1.7.5 (Archelaus: air, in 1.7.5 now accompanied by νοῦς). In 1.3.3 Anaximenes' cosmic air is moreover made to function as an analogue of the soul (itself air as well) that holds us humans together. Such a dual appearance, as principle and as divinity, also holds for the first of Pythagoras' two principles, the Monad, see ch. 1.3.7[58]. For the relation and affinity between principles and divinities see further Sextus *P.* 3.2–12 (γ' περὶ θεοῦ, on god), 3.30–37 (ζ' περὶ ὑλικῶν ἀρχῶν, material principles), and (in the same order as in A) *M.* 9.4–12 (α' περὶ ἀρχῶν φυσικῶν), 9.13–193 (β' περὶ θεῶν). Ps.Galen *HPH* c. 16 (cited above ad fin. at *Testes secundi*) says that like the men of old he will begin with the 'active and material principles' (ἀρχῶν τῶν τε δραστηκῶν καὶ τῶν ὑλικῶν), and he follows them in holding that 'the most active cause of what is and comes to being is the god'. The account of the material principle follows at ps.Galen *HPH* c. 18, a list from Pherecydes to Strato. This order, again, recalls that of S, and of Sextus at *P.* 3.2–37, who likewise says 'the god is the most active principle' (*P.* 3.2).

b Number–Order of Lemmata

(1) P has nine lemmata, S no less than twenty-five. The long lemma §1 is lost in the text of S as transmitted (see above at section A(2)), and he abridges the Aristotle lemma because he intends to cite *De mundo*. The eight lemmata P and S have in common are found in exactly the same order, so the extra lemmata of S may easily be inserted among those of P. Accordingly there is no reason to deviate from Diels' order in the *DG*.

(2) Given the richness of S' collection of doxai and the fact that he appears to have written out the whole of ch. 1.7.224 it is unlikely that one or two lemmata originally in A are missing (cf. M–R 2.1.86), though it remains odd that there is no Xenophanes lemma; see below, section D(d) General points. But at a first glance the order remains opaque from a systematic point of view (see the next section).

c Rationale–Structure of Chapter

The chapter falls into two large main parts, cf. section D(a)(2) above.

(1) The *first* part (the long §1) is concerned with the question type of existence (for which see ch. 1.6, Commentary D(a)); it collects views and arguments against. As we have already noticed it has been thoroughly commented upon by Runia (1996) = M–R 3.343–373. The first part of this first section (§1[2–26 ἐναντίον]) is concerned with the question type of existence *simpliciter*, and collects views and arguments against by presenting the views of Diagoras and other

atheists. Its second part (§1[27 καὶ γὰρ Πλάτων–58]) is concerned with a subsidiary question of existence, namely that of the existence of the Demiurge, that is, of a particular type of divinity, and as a corollary with the reality of providence, and collects arguments against both. The Epicurean nature of the arguments in §1[26 καὶ γὰρ Πλάτων–68], which emphasize the carefree life of the anthropomorphic gods to destroy the creationist option, has been recognized. For the question of existence in §1 see above, ch. 1.6 Commentary D(a), and Mansfeld (1999c) 454–462.

(2) The *second* part (§§2–25), which is concerned with the question type and category of substance in the sense of physical body or incorporeal entity, is in many ways a listing of a large number of views that affirm the gods' existence by stating 'what it is', with various further structural features. For this question type see again see above, ch. 1.6 Commentary D(a). It deals with the second subdivision of what according to Augustine's Varro are the *tria genera theologiae* (which comes first at ch. 1.6 [35–36]: διδάσκεται δὲ τὸ μὲν φυσικὸν ὑπὸ τῶν φιλοσόφων). The redactor of the chapter clearly found it important to gather the negative and positive aspects in one and the same overview, thus achieving a satisfactory doxographical diaphonia. This is not an original idea, but goes back to an anterior tradition, for the combination, including names of so-called atheists and an anticipatory note about the differences of opinion among those who accept the existence of the gods, is paralleled at Cicero *ND* 1.2 and worked out at considerable length in Cicero's treatise. See also Sextus Empiricus *M.* 9.49–57 arguments contra and *M.* 9.60–136 in favour, and the standard atheists at Clement of Alexandria *Protr.* 24.2 plus the (according to Clement atheist) philosophers from Thales to Empedocles at *Protr.* 64.1–3. See also above, sections C and D(a)(2), and ch. 1.6, Commentary D(a).

(3) *Diaeresis*. It is of undeniable importance (and in fact a most satisfactory piece of evidence in favour of our analysis of doxographical structure) that Philodemus, looking back upon his dialectical-doxographical discussion and at its introduction at the (for us lost) beginning of his account, explicitly calls it a *diaeresis*: *Piet.* col. xv.13–23 Henrichs (Greek text above as first Philodemus text at *Testes secundi*): 'Now this part of the diaeresis that has been formulated at the beginning has been completed as well, it would be opportune to continue with the doctrine of piety according to Epicurus'.

(3) *Successions and order according to contents*. At a first glance no dominating diaeresis or diaphonia is clearly visible in the lemmata order of the second part of our present chapter, §§2–25. This is because systematic criteria have been combined with one belonging with the Successions order, just as in ch. 1.3, where see at Commentary D(c) and D(e), also for later parallels and earlier tradition, and as in ch. 4.3, cf. below at section D(c). The list ends with the four

Hellenistic schools and, significantly, Epicurus. Thus, we meet again with the diaeresis to be discerned in the earlier ch. 1.3, namely a division according to number (monists as distinguished from pluralists)—here *of divinities*, not of the principles of physical theory, although, as we have seen above at D.(b), in several cases the divinities of the later chapter are the same as the principles of the earlier chapter.

In our present chapter we also find arrangements according to a diaeresis (or listing) according to affinity (e.g. of substance), a structural feature found in numerous other *Placita* chapters. See for example §§1.7.5–7 on god as Intellect, §§1.7.11–12 on Intellect, or §§1.7.4–5 on air.

(5) *Monists and pluralists*. Furthermore, just as in ch. 1.3, we have monists and pluralists. The monists are: §2 Thales, §3 Anaximander, §4 Anaximenes, §5 Archelaus, §6 Anaxagoras, §7 Democritus, §8 Diogenes, Cleanthes and Oenopides, §10 Posidonius, §11 Speusippus, §12 Critolaus plus Diodorus of Tyre, §13 Heraclitus (if we may assume that his ‘everlasting fire’ and ‘reason’ are the same), §14 Zeno Stoicus, §15 Mnesarchus, §16 Boethus, §17 Parmenides, §18 Melissus and Zeno Eleaticus, and §20 Polemon. The pluralists are: §9 Pythagoras, §19 Empedocles, §21 Xenocrates, §22 Socrates and Plato, §23 Aristotle, §24 the Stoics in general, and §25 Epicurus. Just as in ch. 1.3 this numerical diaeresis has been modified to a certain extent by a secondary application of the Successions principle. For the continuous series of monists at §§2–20 is interrupted twice, namely by the pluralist doxai of §9 Pythagoras and §19 Empedocles. The continuous series of pluralists at §§19–25 is interrupted once, namely by the monist doxa of §20 Polemon.

(6) *Successions*. Like ch. 1.3, but this time without stating this *disertis verbis*, the second part of our chapter begins with the five lemmata belonging to the early Ionian Succession: §2 Thales, §3 Anaximander, §4 Anaximenes, §5 Archelaus, and §6 Anaxagoras. The same five as in the earlier chapter, but we note that the standard sequence Anaxagoras–Archelaus has been inverted. In a subdiaeresis according to affinity of substance Archelaus’ air in §4 joins up with Anaximenes’ air in §3. Since the chapter deals with theology Anaxagoras, elsewhere a pluralist according to the number of his material principles or because he is presented as having two principles, Intellect and matter, can be made to figure here as a monist with his single divine Intellect.

A few fragments of Successions are also distributed over the chapter. We may first mention a Stoic faction (part of the Ionian Succession) consisting of §14 Zeno, §15 Mnesarchus, and §16 Boethus. This little list also deviates from the standard order, as Boethus is a pupil of Zeno (but perhaps there is a confusion of sorts with another and later Boethus). Other Stoics are found scattered elsewhere: Cleanthes at §8 appears in the company of Diogenes (of Apollonia

rather than the Stoic Diogenes of Babylon, see below section D(d)§8) and the earlier scientist Oenopides, collected in a single doxa because they are made to claim the World Soul is God. Posidonius at §10 appears to be on his own after §9 Pythagoras, but in fact is part of a sequence of doxai also listed according to affinity: §§2–12 are concerned, in various ways, with Intellect (Νοῦς), while §8 on the World Soul is an foreign element that seems less awkward because the next lemma, §9 Pythagoras, interrupts the monistic sequence too, albeit for another reason, namely its pluralism.

Pythagoras, although a pluralist, had to be moved up because he is the archegete of the Italian Succession, just as happened in ch. 1.3, and exactly as in ch. 1.3 so also here the pluralist doxa of the Pythagoras lemma infiltrates a series of monist doxai.

The three Stoics of §§14–16 are followed by a group belonging to the Italian or Eleatic Succession never explicitly mentioned in the *Placita*: §17 Parmenides and §18 Melissus plus Zeno, where (just as at Diogenes Laertius *V.P.* 9.24–25) the later Melissus is placed before Zeno, traditionally Parmenides' immediate pupil—but Zeno is claimed to have the same view as Melissus. The diaphonic contrast between Parmenides and Melissus goes back to the well-known distinction first formulated by Aristotle (*Met.* A.5 986b18–21). The monist Democritus at §7 (monist, like Anaxagoras, in view of his theology not his physics), who according to the standard Italian/Eleatic order of Succession should have followed in the company of other Atomists after §18 Melissus, is placed before the pluralist archegete of the Italian Succession, namely Pythagoras at §7. In §12 the Peripatetic Critolaus is accompanied by his obscure pupil Diodorus of Tyre (Ionian Succession), and these later Peripatetics, qua monists, come before Plato and his followers. Plato at §22 is appropriately followed by §23 Aristotle (archegete of the Peripatetic branch of the Ionian Succession), but the Early Academics Xenocrates at §21 and Speusippus at §11 are placed before §22 Plato, while Speusippus, who in the standard Academic section of the Ionian Succession is found between Plato and Xenocrates, is placed here so far before Xenocrates that the traditional link between master and follower has been severed. This could happen because as a monist he stayed where he was. Polemon at §20, who according to the standard Succession order should have followed somewhere after §21 Xenocrates, is placed before this paragraph, and this happens because he, too, is a monist. That three Stoics are placed before three Eleatics shows that the sequence is not chronological throughout, as was of course already clear from the position of §9 Pythagoras after §7 Democritus and §8 Diogenes Cleanthes Oenopides, a combination of name-labels that is also interesting qua mix of individual elements of Successions. Nevertheless §24 the Stoics plus §25 Epicurus may have been placed after §23 Aristotle for

chronological reasons; the latter perhaps also because his singular and even in part opaque views are (as happens also elsewhere in the *Placita*) at home in the final position. We note moreover that both in Philod. *Piet.* col. xv.23 Henrichs (according to the announcement) and Cicero *ND* 1.43–56 the doxography is followed by an exposition of Epicurus' theology—standard procedure: discussion of one's own view, as in Aristotle, being preceded by a dialectical-doxographical discussion.

(7) *Immanence and transcendence.* The majority of the gods of the philosophers listed here are immanent entities. The doxographer takes some care to show that the monistic principles are not (as in ch. 1.3) mere physical elements, for there is something special about them this time. In the case of Thales (§2) and Anaximenes (§4) the gods inhabit the elements they are connected with in a subtle manner, as special 'powers' or 'qualities' (δυνάμεις). See above, ch. 1.3, Commentary D(c)(5). The presence of the divine in water in the Thales paragraph actually recalls the account of Stoic cosmogony at Diogenes Laertius *V.P.* 7.135–136 (*SVF* 2.580). This device resembles the doctrine attributed to Xenocrates in the second part of §21, where we moreover read that he bequeathed his credo to the Stoics. That the (variously named) divinity inhabits the elements is indeed a well-known and common Stoic view, as is moreover attested at §24[125–127]. The gods may also be *recherché* elements, as with Critolaus and Diodorus of Tyre (§12, 'an Intellect (derived) from impassive ether') and Boethus (§16, 'the ether'), or sophisticated material compounds, as with Zeno (§14, 'the fiery Intellect of the cosmos'), Posidonius (§10, 'an intelligent and fiery Spirit'), and the Atomists (§7 Democritus, 'fire with spherical form', and §25 Epicurus 'the fine particles of which the nature of their images consists'). Or they are linked in subtle ways with the world as a whole qua soul of the cosmos (§8 Diogenes, Cleanthes and Oenopides), or as its Intellect (§2 Thales, §14 Zeno again).

One also encounters entities that are in some sense transcendental, or metaphysical, as one would expect in a general theological context, for in several lemmata, namely §9 Pythagoras (probably), §21 Xenocrates, §22 Socrates and Plato, and §23 Aristotle, we have theological tenets that (at least in some cases) are at home in what Aristotle and Theophrastus called 'first philosophy'.

(8) *Diaphoniae.* There is a striking diaphonia between §5 Archelaus, according to whom 'the Intellect does not make the cosmos', and §6 Anaxagoras, according to whom this 'Intellect makes the cosmos' (thus also §22 Socrates/Plato). The somewhat paradoxical result is also that here denial comes before affirmation, but perhaps the a-chronological suggestion (in agreement with the criticism of creationism in §1) is that the doxa of Anaxagoras corrects the doxa

of Archelaus. There is also a diaphonia between §11 Speusippus and §22 Plato, for according to this *Plato interpretatus*, as we saw, the Good is predicated of the first Principle.

d Further Comments

General Points

A famous theologian who is conspicuously absent and often present elsewhere (and not in the *Placita* alone) is Xenophanes. It is hard to find an explanation, especially given his prominent presence in the Ciceronian account (*ND* 1.28). The name-label occurs 19 times elsewhere in the treatise, 10 of which are found in Book 2.

Individual Points

§1 Throughout this long passage on the atheistic position there are considerable divergences in the text between P^B and P^E. Diels generally follows P^E. In the absence of confirming evidence (P^{GQ}), we have retained P^B. On this paragraph as a whole see the commentary of Runia (1996), Baltes (2000) 93–99 and Sedley (2007) 141–144.

§1[2] P^G, against all the other representatives of P's tradition as sources for the text, including E (for the latter see above section A), has the correct version of the ethnonim for Diagoras: Μῆλιος. *Pace* Frede (1999b) 141–142 and others we maintain that this indicates a superior manuscript tradition represented by G's *exemplar*, as already posited by Diels *DG* 14, just as in other cases where G has preserved a correct reading or even saved an entire lemma lost elsewhere in the Byzantine tradition (sometimes confirmed by the Antinoopolis papyrus, still unknown to Diels because first published by Barns and Zilliacus 1960–1967, cf. M–R 1.150, 126–130). In the majority of cases other parallel texts have Μῆλιος not Μιλήσιος. Fourteen erroneous names in Diogenes Laertius deriving from the 'misinterpretation of the abbreviated word' (e.g. Heraclides for Heraclitus, also found elsewhere) have been collected at Mejer (1978) 25–27. For such misspellings or misreadings compare for instance below ch. 4.2.7, where for P^B's correct Δικαίαρχος T reads Κλέαρχος and Nem pp. 17.5, 17.10, and 22.19 has Δείναρχος. Not too much should be made of this sort of error, although the tradition of the better witnesses should in principle be preferred, even if wrong. But in view of G's reading we have of course not done so here.

§1[7] *P.Oxy.* 1011 confirms that Callimachus' original reading was Παρχαῖον, as earlier conjectured by Bentley. The question here, however, must be what stood in A's text. Unfortunately there is no other evidence than P^B. His reading, which makes reasonable sense in the context, is also found at *Scholia ad*

Iohannis Tzetzae Allegorias Iliadis ad Il. 4.37, p. 609 Matranga (see Pfeiffer *ad loc.*). Against all the editors, we retain the reading in P^B. In the following line, however, there is little doubt that the reading must be ψήχει, as found in P^Q and Sextus Empiricus, against P^B's reading.

§1[21] For φησιν cf. above ch. 1.3, Commentary D(d)§3.

§1[24–26] That the gods, esp. Zeus, are able to make the straight crooked and conversely, and so on, is a wide-spread belief, for which see e.g. Hes. *Op.* 3–7 with West (1978) *ad loc.*, and below at §1[42–51]. What we have here are counter-examples derived from Aristotle's *Categories*.

§1[25] τόν is the *lectio difficilior* here, but in the logical context τό is to be preferred.

§1[27] Πλάτων ὁ μεγαλόφωνος is ironical (cf. Hermias *Irrisio* 11, ps.Justin *Cohortatio* 31 p. 68.7 Marcovich), but a reference to his 'loud and clear voice' can also be complimentary, see the Themistius passage quoted section E(b)§1[27–34], and Eusebius *PE* 13.20.7. The parallels in Hermias and ps.Justin are striking and surely derive from the same tradition, though not necessarily in this case from P or even A; see our comment on ch. 4.2 Commentary A(5).

§1[27–51] See the commentary of Baltes (2000) 94–99, who however over-emphasizes the Epicurean background of this section.

§1[30–33] A similar comparison between Plato and Anaxagoras is also found in Eusebius *PE* 10.14.12 and 14.14.9, where the former's ἐκ τῆς ἀταξίας εἰς τάξιν is attributed to the latter in a garbled quotation of the opening sentence of his book. Conversely, the doxographical Anaxagorean phrase [31] αὐτὰ διεκόσμησε becomes the [34] διεκόσμησε ταῦτα of Plato's Demiurge.

§1[35] κοινῶς οὖν ἀμαρτάνουσιν ἀμφότεροι: for ἀμαρτάνειν and explicit dialectical argument in the *Placita* see above at ch. 1.2, Commentary D(d)(3). The originally Aristotelian term survives in an Epicurean context.

§1[42–51] Zeus may be credited with turning an opposite into its opposite, as for instance in the proem of Hesiod's *Erga*, cf. above at §1[24–26]. The point of the present argument is that this does not hold for all pairs of opposites.

§2 As Pietsch–Lakmann (2006) 240–241 point out, the theology ascribed to Thales contains *in nuce* numerous views attributed to later philosophers.

§3 Here, and also in §17 and §21 it may be suspected that the *verbum dicendi* ἀπεφήνατο has been added by S (cf. M–R 1.232–234). But note §24, where ἀποφαίνονται is read by both P and S. It is safer to leave the text as it stands. There can also be no doubt that S and P^G, supported by P^Q, have the superior reading ἀπείρους.

§4 ἐπὶ τῶν οὕτως λεγομένων can be understood as either neuter or masculine, i.e. statements about the gods or the gods themselves. We have followed Torraca in opting for the former.

§7 The confused *doxa* is to be explained as based on the view that the Democritean soul consists of fiery and spherical particles (Aristotle *de An.* 1.2 403b31–404a3) and that according to *de An.* 1.2 404a27–30 (68A101 DK) and A ch. 4.5a.2 below Democritus held that there is no distinction between ψυχή and νοῦς.

§§7–8 P, or perhaps rather a copyist of an archetypal version, has combined §7 with the second part of §8, in a similar way as at ch. 4.7.1–2. Cf. Diels *DG* 63–64.

§8 Though it may be questioned (Laks 2008, 237) whether Diogenes of Apollonia is meant or the Stoic Diogenes of Babylon, the former is virtually certain in view of the parallel at Cicero *ND* 1.29 (Diogenes of Babylon is mentioned *ND* 1.41) and, presumably, Philodemus *Piet.* 6b Gomperz, fr. 18 Schober. If this is right, his view of air as the conscious first principle has been upgraded. Zeller in Zeller-Wellmann (1909) 50 n. creates a Stoic Oenopides *ex nihilo*, but there is no reason to doubt the presence of Oenopides of Chius here (he is also mentioned at chs. 2.12.2 and 2.32.6), victim of a similar upgrading. The lemma unites individuals with various backgrounds, which is far from unusual in the *Placita*. For Cleanthes see below at §§14–16.

§§9–11 There is a clear diaphonia between §9 Pythagoras and §11 Speusippus: according to the former ‘of the principles the Monad is the deity and the Good, which is the nature of the One and *identical* to the Intellect’, while according to the latter ‘(the deity is) the Intellect which is *not identical* to the One or the Good, but has a nature of its own’ (our emphasis). Clearly, this Neopythagorean Pythagoras is so to speak retroactively included among those authorities who (as formulated at Aristotle *Met.* N.4) declare the Principle and the Good to be the same. But Speusippus, as in Aristotle, fails to make his deity the primary Principle, clearly locating it somewhere else. Dillon (2003) 63 writes that Speusippus ‘highest principle’, namely ‘the One’ from which the Intellect is distinguished, is in §22 ‘inaccurately given also the Platonic title of ‘the Good,’ but this is missing the contrast with the Pythagoras of §9. Tarán (1981) 376–379, in his discussion of 1.3.11 (fr. 58 of his Speusippus), adduced ch. 1.7.22 (Plato) and 1.7.21 (Xenocrates), but likewise forgot to cite 1.7.9 (Pythagoras), and also failed to look at *Met.* N.4. Our suggestion is that Speusippus’ Intellect, or god, is here claimed to be below the One on the one hand but beyond the Good on the other, the Good only being operative on the level of cosmic Soul (in which this Intellect presumably dwells); for similar suggestions see Reydam-Schils (2013) 33–35. This explains why we find Speusippus among the for the most part Presocratic theological immanentist monists in the early part of the chapter, quite far from his Academic colleagues. This position at the beginning copies (or is at least analogous to) that in Aristotle’s diaeresis in *Met.* N.4. See also below at §21[94–97].

§9 This paragraph looks like a rather faithful paraphrase (with appropriate emphasis on the theological and even moral aspect) of ch. 1.3.7[58–61] on the principles, or from its source, cf. Lachenaud (1993) 223. See above ch. 1.3 Commentary D(d)§7. But that the Dyad is evil is not paralleled in the earlier chapter. The two principles as god and daemon, or good and evil, can only be exactly paralleled in accounts of Persian dualism, see section E(b)§9. For partial antecedents of this kind of interpretation in Aristotle, who has good and bad at position nine under respectively limit and unlimited in the Pythagorean *systoichia* at *Met.* A.5 986a26 (cf. *EN* 1.4 1096b5–6 and *EN* 2.5 1106b29–30), see below section E(b)§7, Mansfeld (1992b) 269–270 and Donini (2011) 263–265. Eudorus fr. 3 Mazzarelli on the principles and elements says the second One (the One qua element) is ‘good’ (ἀστειον) and the entity opposed to it ‘bad’ (φᾶνλον), at Simplicius in *Phys.* 181.13–14. Cf. below section E(b)§9.

§9[71] ἐστὶν δὲ καὶ ὁ ὁρατὸς κόσμος: a version of this final phrase is found in both P (that is, in P^B, and P^G, who conflates and alters the meaning—P^E omits it) and S. So it is wrongly bracketed by some editors here because this time extant only in P; Lachenaud rightly keeps it.

§10 Posidonius’ *pneuma* is paralleled in the doxa attributed to the Stoics in general at §24[125–127] below, πνεῦμα μὲν ἐνδιήκον δι’ ὅλου τοῦ κόσμου, τὰς δὲ προσηγορίας μεταλαμβάνον διὰ τὰς τῆς ὕλης, δι’ ἧς κεχώρηκε, παραλλάξεις.

§11 The innovative way Plato is depicted in §22 should make us disinclined of taking §11 Speusippus, §21 Xenocrates and §20 Polemon *au pied de la lettre* and as absolutely reliable information. Too much has been made esp. of the cryptic Polemon doxa, see Reydam-Schils (2013) 40–44.

§13 ἐκ τῆς ἐναντιοδρομίας can be understood from Diogenes Laertius *V.P.* 9.7 διὰ τῆς ἐναντιοτροπῆς and is ultimately derived from fr. 22B51 DK παλίντροπος ἁρμονίη.

§§14–16 + §24 (and §8) The dissimilar doxai of the three Stoics Zeno, Mnesarchus and Boethus at §§14–16 are the result of a forced selection that enables the doxographer to present them as monists. This also holds for Cleanthes at §8. According to Cicero *ND* 1.36 (cited above at section E(b) General texts) Zeno also identified God as the ‘law of nature’, the ‘aether’ (here attributed to Boethus at §14), the ‘reason that pervades all nature’, and he further declared that the stars, the years, the months, the seasons and the elements are divine. For Boethus another view is attested at Diogenes Laertius *V.P.* 7.148 (*SVF* 3 Boeth. 3), namely that the sphere of the fixed stars is God. For Mnesarchus we have no other information, but his view that the cosmos is God is widely paralleled in Stoic sources, and so also here at §24[127] below. Zeno’s νοῦν κόσμου πύρινον is about equivalent with the νοερὸν θεὸν ... πῦρ τεχνικόν of §24[123].

§§17–18 The metaphysical firsts of Parmenides and Melissus (and Zeno) cannot serve as physical principles. Therefore they are absent in ch. 1.3, but they can be made to function as gods. The lemmata T CAG 4.5–9 cited in ch. 1.3 at Commentary E(a) (Ti Xenophanes, Tii Parmenides, Tiii Melissus) were excluded from the reconstruction of that chapter, see above ch. 1.3, Commentary D(b). Ti and Tii list physical principles next to these sterile firsts, telling us explicitly that Xenophanes was inconsistent and ‘forgot about’ his ‘immobile one and all’, and that Parmenides followed in his master’s footsteps.

§19 We have introduced some conjectures *ad probabilem sententiam* in a text that otherwise would be virtually incomprehensible. It is of course certain that the name-label ‘Empedocles’ has fallen out. Wachsmuth’s conjecture <Ἐμπεδοκλῆς τὸν σφαῖρον καὶ> τὸ ἓν perhaps assumes that a single line is missing. It is remarkable that Diels in the *DG* does not include a conjecture in S’s text. His attempt in the first edition of *VS* assumes *saut du même au même*. But the placement of τὸ ἓν at the end of §18 is quite awkward, and Wachsmuth’s conjecture has the advantage of allowing the phrase θεὸν εἶναι to be understood, as in most other doxai. But so does the reading we have adopted. Conjecturally interpolating the Σφαῖρος further down and eliminating the difficult κόσμον makes better sense as well. But perhaps we should have left the text as it is and reserved the emendations for the apparatus, so also have kept πρὸς {τ} ἀναλυθήσεται. Zeno is here included by S, while he omits him at ch. 1.24.1.

The interpretative presentation of Empedocles combines ingredients from *Peri physeos* and *Katharmoi*, just as at ch. 1.26.1 below, q.v. Here at 1.7.19 the One qua Necessity (ἀνάγκη) rules the four Empedoclean elements as its matter, of which Love and Strife are the forms, while at 1.26.1 Necessity (ἀνάγκη) is a cause that is able to use the principles (namely Love and Strife) and the elements. Originally this Necessity is that of the *Katharmoi* fragments 31B115 and B116 DK, which determines the fate of guilty *daimones* (according to the later tradition these are souls, as in our lemma), and is not in the same way involved with the cosmic cycle of the elements directed by Love and Strife of the *Peri physeōs*. The formula [92] καθαροὶ καθαρῶς can only be precisely paralleled in Christian authors (14 times), e.g. Cyril *in Jo.* 1.158.3 Pusey ἵνα λοιπὸν καθαροὶ καθαρῶς τὸ θεῖον ἐπαθρεῖν ἰσχύσωμεν κάλλος, and obviously has a religious ring. The slightly different formula καθαρὸς καθαρῶς, said of humans who lead an ethically responsible life (no doubt in the sense preached by the *Katharmoi*), can be part of a hexameter. The background may be ‘Orphic’ and so even genuinely Empedoclean, as Bignone (1916) 330 n. 7 argued. Cf. *Lamellae aureae* Orph. frs. 489.1 F–490.1 F–491.1 F Bernabé ἔρχομαι ἐκ καθαρῶν καθαρὰ, χθονίων βασιλεια. In our text we have added quotation marks to indicate that the phrase, reminiscent of the title, sounds like a verbatim fragment of the *Katharmoi*.

This interpretation of Empedocles is also found in the main source of fr. B115, Hippolytus *Ref.* 7.29, and in later authors such as Philoponus and Simplicius. See O'Brien (1981a) 14–20, 73–92, and 111–115 (list of sources for 31B115), and Mansfeld (1992b) 208–221, 262–266.

§§20–21 See at section D(d) on §11 above.

§21[94–97] Dillon's hypothesis (2011) 31–34 that the contents of this divine Intellect are the Ideas is hard to substantiate, also in view of the fact that the, or a, divine Intellect (νοῦς) is attributed in no less than 11 paragraphs of the present chapter, namely in §2 even to Thales (as already in Cicero *ND* 1.25), in §5 to Archelaus in the company of §6 Anaxagoras where it does not surprise, in §7 surprisingly to Democritus. Then in §9 to Pythagoras, in §11 to Speusippus, and in §21 to Xenocrates (see above at §§9–11). Next in §12 to our surprise to Critolaus and Diodorus of Tyre and somewhat to our surprise in §14 to Zeno the Stoic (as in §24 to the Stoics in general), and finally in §22 to Plato.

§21[98–99] The identification of the Dyad with the World Soul is difficult to explain. For the generous supplement of Dillon (1986) 49 see the apparatus criticus. Translated by Dillon (2003b) 103: 'the other, as female, (holding the rank of) Mother of the gods, (which he terms 'Rhea' and 'even' (*artios*) and 'matter' (*hyle*); and as offspring of these he postulates) Dike, ruling over the realm below the heavens'.

§21[102] The reading ἀειδοῦς can be retained if it is additional to the reference to Hades rather than having supplanted it.

§21[104–105] For a probable *interpretatio stoica* of a representative of the Old Academy (in the manner of Antiochus) see Reydam's-Schils (2013) 36–37, who somewhat cavalierly attributes this to 'the doxographer'.

§22 The first divinity described here is quite different from the first member of the triad of Timaeus physical principles 'God, matter, and ideas' at ch. 1.3.20 above, for this time the deity is

the One, the single-natured, the monadic, the true Being, the Good. All such names refer to the Intellect. The deity, then, is an Intellect, (that is,) a separate Form; by 'separate' let that be understood which is free of all matter, not entwined with any of the bodily entities, and also not sharing affection with anything in nature that is passible.

We note that matter is still mentioned alongside the One. According to Baltes at Dörrie–Baltes (1996) 441 this metaphysical doxa of §22 recalls Theophrastus' attribution of two principles to Plato. Moreover it 'könnte ja durchaus letztlich auf eine zusammenfassende Darstellung der Lehre Platons durch seinen Hauptinterpreten in der alten Akademie, Xenokrates, zurückgehen'. Theo-

phrastus indeed already combined the Demiurge qua Intellect and good with the Good (of the *Republic*). However, what we have in §22, we believe, is a doctrine based on a combination of ingredients that has gone through a metaphysical filter inspired by Aristotelian theology, ultimately deriving from (1) the *Republic* (the Good of 509b, though no longer ἐπέκεινα τῆς οὐσίας), (2) the *Timaeus* (the Demiurge and the cosmology), and (3) an early metaphysical interpretation of the *Parmenides* (the ‘One that is’ of the first hypothesis), namely a principle of unity transcending all plurality. See Van Riel (2013) 103–117.

That this divinity is in some sense of the word ‘transcendental’ is beyond doubt. Yet it is at the same time said to be ‘Father and Maker’, a formula predicated of the Demiurge at *Tim.* 28c (where he also turns out to be ‘difficult to find and impossible to reveal to all’, so bets are hedged and interpretations invited). This demiurgic god accompanied by matter and what is passible also reminds one of the pair of Stoic first principles, God and matter, just as of the two principles, ‘Soul’ and ‘body’, of *Epin.* 983d, a dialogue today generally attributed to Philip of Opus, but in antiquity in the first place to Plato himself and so included in the *corpus Platonikum*.

According to the not unreasonable view of some later Platonists transcendence and demiurgic activity are incompatible, which entails splitting up the divine, as in Alcinous *Did.* c. 10 and Numenius e.g. frs. 11 and 20 des Places: the transcendental god is distinguished from the Demiurge. Atticus and the sources of Diogenes Laertius *V.P.* 3.69 and 3.76 and Hippolytus *Ref.* 1.19.6–7, however, do not make this distinction. The remainder of the lemma here, where our attention is directed towards the demiurgic activity, is also quite Timaeian, though providing interesting details of later origin. The formula νοητὸς κόσμος, ‘intelligible world’, is first attested in Philo (see Baltes 1972, 105–106, Runia 1999, 154–156), and then in the present passage. In our paragraph it comments on and explains the opaque formula ‘intelligible divine offspring’, θεῖα ἔγγονα νοητά, with which it is equivalent. Hence the explanatory particle τε, misunderstood by editors: we do not need Usener’s supplement (καὶ αἱ ἰδέαι), because νοητὸς κόσμος followed by ‘models of the visible cosmos’, παραδείγματα ... τοῦ ὁρατοῦ κόσμου, is sufficiently clear. It would even seem that the term ἰδέαι is avoided; at least we are not prevented from thinking of numbers as constituting the furniture of the intelligible world. These Ideas or numbers are the intelligible offspring of the Mind qua Father and Maker and no longer something beyond him as in the *Timaeus*, while the sensible offspring of this first god, πρῶτου θεοῦ, are the sun, moon, stars, earth and the ‘the all-embracing cosmos’. For the former we may perhaps think of the Mind and thoughts of a World Soul, while the latter correspond with Plato’s own view of the matter but also with the doctrines of the *Epinomis* and of Xenocrates (see §21), and with the ‘young

gods' of *Tim.* 42d. In between we have incorporeal *logoi* or powers inhabiting aether, air and water, which very much resemble Xenocrates' elemental divinities at §21 and the Stoics' at §21 and §24 (and at ch. 1.3.23). In the first place however, and rather precisely, these recall the aetherial, aerial and aqueous divinities inhabiting precisely aether, air and water of ps.Pl. *Epin.* 984b–985c. These aetherial and aerial beings are invisible to us and fulfil the role of *daimones* as intermediaries between stellar gods and humans, while the aqueous one are visible only intermittently. All in all a quite 'Early Academic' picture of Plato.

This exposition has early Middle Platonic features, but the absence of explicit levels of θεός cause it to differ from second century Platonist theology.

For parallels in Philonic passages (the Good, the Intellect, the Father and Maker, the intelligible world, the powers) see Runia (1999b) and esp. (2002).

§22[106] For Σωκράτης καὶ (deleted by Diels and others) see above ch. 1.3, Commentary D(d)§20[1–3].

§22[110] There is no need to alter ἔχγονα here and in l. 11, since it is often equivalent to ἔγγονα in later Greek (cf. LSJ ad loc.).

§22[113] Wachsmuth's conjecture ἔμπυροι καὶ is unnecessary if a Platonic four-element-universe is assumed.

§22[113–114] It is possible that the words τοῦ πρώτου θεοῦ ἔγγονα are a gloss as determined by Usener and followed by Wachsmuth. In this case αἰσθητὸς ὁ δὲ in the mss. need only be changed to αἰσθητὸς δὲ. But the words make sense in the context, referring back to ll. 6–7, so we follow Canter and Diels in emending to αἰσθητὰ δέ.

§22[114] For κόσμος 'heaven' see above, ch. 1.6 Commentary D(d)§1[7–29], and below, ch. 4.21 Commentary D(d)§1[23–24].

§23 For S's ὁμοίως Πλάτῳ cf. ch. 1.27.3 Πλάτῳ ἐμπερὶ (also the only parallel for a name-label in the dative). The interpretation of Aristotle is that of later sources such as AD cited section E(b)§23. See further Sharples (2002) 14–16.

§23[116] The formula ὁμοίως Πλάτῳ, substituted by S (or an intermediate hand interested in the harmony between Plato and Aristotle) for χωριστόν, is paralleled *Doxography A* at Stob. *Ecl.* 2.7.4a, p. 56.9, and Proclus in *Tim.* 3.124.25. For ὁμοίως in comparisons between doxai + name-labels cf. A 1.30.2, 2.28.6, for the equivalent συμφώνως cf. ch. 2.29.7 Πλάτῳ Ἀριστοτέλης οἱ Στωικοὶ οἱ μαθηματικοὶ συμφώνως and 5.30.6.

§24 Individual ingredients of the general Stoic doxa are paralleled at §10 and §§14–16 above, paragraphs dealing with individual Stoics, but not at §8 (Cleanthes); see our comments above.

§24[126–127] The text is corrupt in both P^{BE} and S, but the readings in P^G and Athenagoras make Beck's emendation at least probable.

§25 Usener fr. 355 rejects and others (e.g. fr. 257 Arrighetti²) omit the opaque sentence [131–133] ὁ δ' αὐτὸς ... καὶ στοιχεῖα. As to the text it may seem difficult to decide between ἄλλας and ἄλλως, but ἄλλας is better attested and the adverb is rare in A (only found elsewhere in ch. 1.12.3), so the former is to be preferred. Another problem is the antecedent of αὐταί, as we must choose between (τέσσαρας) φύσεις and ὁμοιότητας. Though farther away φύσεις will be the better choice, since in what sense the 'similarities' can be called elements is unclear. The first three of the four 'natures' can appositely be called elements, and that 'similarities' may be called by the name of *homoiomereiai* is not entirely unimaginable. If we assume that the opaque sentence pertains to the gods (it is after all part of a paragraph and a chapter dealing with the gods), we may presumably associate these *homoiomere* with the *quasi corpus* and *quasi sanguinem* (or *tamquam corpus* and *tamquam sanguinem*) attributed to the Epicurean gods at Cicero *ND* 1.49 (cited section E(a)§25) and criticized *ibid.* 1.66, 1.71, 1.73, 1.74, and 1.77. (For the meaning of *quasi corpus* cf. also Cicero *Tusc.* 1.20 *Xenocrates animi figuram et quasi corpus negavit esse ullum, numerum dixit esse.*) The gods like all other compounds consist of the 'imperishable' 'atoms and void'; they are moreover located in the 'imperishable' 'infinite'. And according to Cicero *ND* 1.48–49 (but the meaning and *constitutio* of this passage are disputed) they are sustained because 'an infinite likeness of most similar images derives from the innumerable atoms and streams towards the gods'. Cf. *Scholia in Epicurum RS* 1 (also cited section E(a)§25), 'he says that the gods are seen by reason, on the one hand as existing individually, on the other as existing with formal unity (καθ' ὁμοείδεια) from the continuous influx of the similar images (τῶν ὁμοίων εἰδῶλων) to the same place'. We may associate the ὁμοιότητας and ὁμοιομέρειαι and ὁμοείδειαν and ὁμοίων εἰδῶλων with this *simillimarum imaginum species*, the preformed ingredients that are like (Cicero says: 'most like') the parts of the gods themselves.

This entails a *retractatio* of part of the argument of Mansfeld (1993) 207–208 n. 80. Wigodsky (2004) argues convincingly against a common view that 'similarities' just means 'gods', but, apparently taking ὁμοιότητας as the antecedent of αὐταί, argues too philosophically and less convincingly that it means 'natural kinds', and that the atoms, the four elements, and the *homoiomereiai* ('types of compound bodies' according to him) are instances of such natural kinds. He is followed with some hesitation by Montarese (2012) 95–97. Wigodsky (2004) 541 believes that 'Aëtius was wrong to include the list' [sc. the opaque sentence] 'in his entry on Epicurus' theology'. But an interpretation that makes sense of the sentence in the context of a theological chapter is preferable.

e Other Evidence

(1) *Atheists*. Protagoras 80B4 DK famously said that he ‘did not know whether or not the gods exist and what their form (or: type) is’ (περὶ μὲν θεῶν οὐκ οἶδα οὐθ’ ὥς εἰσὶν οὐθ’ ὥς οὐκ εἰσὶν οὐθ’ ὅποιοί τινες ἰδέαν). This often cited fragment anticipates not only the existential question type of existence, but also the distinction between this question and that of the nature, or substance, of the gods. He uses ἰδέα where Aristotle and others use οὐσία. See further above at section B(2),

(2) *Philosophenkritik*. As already said above, the most important parallels for the overview of theological views at A §§2–25 are the remains of the Book 2 of the *Philosophenkritik* of the Epicurean Philodemus’ *De pietate* and Cicero *ND* 1.25–41, in the account of Cicero’s Epicurean spokesperson Velleius, plus, for §1, *ND* 1.117–121, the Academic spokesperson Cotta’s counter-doxography on the atheists including Epicurus. The order of name-labels and doxai in Cicero and (as far as visible and reconstructible) Philodemus is believed to be the same, and divides into three blocks: (1) early Philosophers, (2) from Plato to Strato, and (3) the allegorizing Stoic philosophers, cf. Obbink (2001) 206–207. This tripartition is not paralleled in the *Placita*.

Obbink’s long-awaited edition of *De pietate* Book 2 has not yet been published. We have used the columns of Philodemus next to Cicero’s text in Diels’ edition at *DG* pp. 531–550, the editions of Philodemus by Gomperz (1866), Schober (1923, publ. 1988), Henrichs (1974) and (1975), and Obbink (2001) and (2002), and looked at individual lemmata in fragment editions as well as in the relevant secondary literature. But it is the material based on his recent autopsy of the papyrus put at our disposal by Christian Vassallo that has been crucial.

(3) *Comparison between A, Cicero, and Philodemus*. The following comparison between A, Cicero and Philodemus is based also on Henrichs’ overview comparing Philodemus and Cicero at (1974) 94–95, Schober’s at (1988) 111–112, and Obbink’s at (2002) 196–197 (some name-labels may have gone missing when columns of the *De pietate* were lost):

Cicero and A share 15 name-labels plus doxai, namely, in order of appearance in A: Thales, Anaximander, Anaximenes, Anaxagoras, Democritus, Diogenes of Apollonia (see above at section D(d)§8), Cleanthes, Pythagoras, Speusippus, Zeno Stoicus, Parmenides, Empedocles, Xenocrates, Plato, and Aristotle. The following 12 name-labels plus doxai, again in order of appearance in A, are not in Philodemus and Cicero: Archelaus, Oenopides, Posidonius, Critolaus, Diodorus of Tarsus, Mnesarchus, Boethus, Melissus (though as Vassallo points out a reference may be lost in a lacuna), Zeno of Elea, Polemo, Stoics in general, and Epicurus (the positive account of Epicurus’ theology in another Book of Philodemus *De pietate* and *ND* 1.43–50 is a different matter). Heraclitus, present

in A and Philodemus, is absent in Cicero. The following eleven name-labels plus doxai in order of appearance in Cicero are not in A: Alcmaeon of Croton, Xenophanes, Protagoras, Xenophon, Antisthenes, Theophrastus, Strato, Aristo (Stoicus), Persaeus, and Chrysippus; three of these, namely Alcmaeon, Protagoras, and Aristo are missing in Philodemus. Accordingly the account of Philodemus, as far as legible, contains no name-labels plus doxai that are lacking in Cicero while extant in A, with the exception of a badly legible couple of lines on Heraclitus (but the contents of A 1.7.13 and *PHerc.* 1428 fr. 17 (6a Gomperz) are very different). To be sure, as Christian Vassallo has pointed out to us, the lacunae in Philodemus suggest that name-labels have been lost. But as long as we do not know more, we are unable to go further.

We do not know whether Cicero and Philodemus derive from a shared source, or whether Cicero in the first place followed Philodemus. Diels *DG* 121–128 already discussed the alternatives, and listed some parallels with what he calls the *Vetusta placita*, that is, with the anterior doxographical traditions. He spoke of Cicero's 'conviciandi furor', 'maledicentia', 'convicia', and so on, and of Philodemus' moderation. Cicero's spokesperson is explicit about both sides of the coin, whereas Philodemus sometimes omits to contradict. As McKirahan (1996) argues and is clear from the parallels collected by Diels in the apparatus at *DG* 531–550, Cicero occasionally may also have availed himself of at least one other source. Obbink (2001) again argues in favour of Philodemus as Cicero's source, but not, of course, of his exaggerations; Dyck (2003) 8 endorses. The similarities are indeed striking as well as numerous. One of Obbink's arguments is that when Cicero asked Atticus to lend him Phaedrus' *On gods* (*Att.* 13.39.2), he had already written the Epicurean section of *ND* Book 1 (*Att.* 13.38.1). But it is not certain that the reference is to this work, for *Tusculans* is another option; see Shackleton Bailey (1999) 113 n. 1, who accepts the view of Beaujeu. On the other hand, why, if the reference is to the completion of *ND* Book 1, should he ask for Phaedrus' treatise, if he did not intend to do some more work? Accepting that Cicero used Philodemus *On Piety* does not preclude his consultation of another Epicurean source, or sources, or even of his consultation or recollection of non-Epicurean sources.

We may further note that both Philodemus (at length, *Piet.* cols. 3.12–6.16, 8.14–9.8 Henrichs) and Cicero (briefly, *ND* 1.41) mention Chrysippus' and Digenes of Babylon's allegorical interpretations of the gods, as well as Chrysippus' accommodations of the myths of the poets (cols. vi.16–vii.12 Henrichs); this element is entirely lacking in A 1.7 (cf. above, section B). Velleius in the two paragraphs (*ND* 1.42–43) following his overview of the philosophers strongly criticizes, and totally rejects, the grotesque stories of the poets, the absurd doctrines of the Magi and the Egyptians, and the beliefs of *hoi polloi*. Philodemus

devotes much space to criticizing the views of the early poets and others he cites from the works of his Stoic opponents (*Piet.* pp. 73–110 Schober, coll. 278–306 Vassallo).

A 1.7 §1 with the arguments of the atheists is *de facto* critical both of much of the contents of A 1.6 and of the contents of A 1.7 §§2–25. Philodemus and Cicero's Velleius are critical of the doxai of other philosophers, not, however, in the name of varieties of atheism but in that of refined Epicurean theology. Naturally a parallel version of A's Epicurean doxa is not included in either Philodemus' or Cicero's list of doxai. Even so, we acknowledge the parallelism between the accounts of A on the one hand and those of Philodemus and Cicero on the other, in that all these authors combine exposition with criticism, though in rather different ways.

(4) On the existence–substance diaeresis in sources from Plato to Cicero see also Theiler (1982) 2.255–256.

eius, tantae scilicet, minus dei haberentur, quas colunt et Persarum magi et
Aegyptiorum hierophantae et Indorum gymnosophistae. Apol. c. 47 inventum
enim solummodo deum non ut invenerant disputaverunt, ut et de qualitate et de
natura eius et de sede disceptent. alii incorporalem asseverant, alii corporalem,
qua Platonici et Stoici (SVF 2.1034); alii ex atomis, alii ex numeris, qua Epi-
curus (—) et Pythagoras (—); alius ex igni, qua Heraclito (T 647a Mouraviev)
visum; et Platonici quidem curantem rerum factorem et actorem rerum con-
tra Epicurei otiosum et inexercitum, et ut ita dixerim, neminem rebus humanis;
positum vero extra mundum Stoici (SVF 2.1034), qui figuli modo extrinsecus
torqueat molem hanc; intra mundum Platonici (—), qui gubernatoris exemplo
intra id maneat, quod regat. ad Nat. 2.1.1–19 Borleff physico (sc. theologiae
generi) auctoritas philo(so)phorum ut mancipium sapientiae patrocinitur. ...
invento enim solummodo (d)eo, non ut invenerunt, exposuerunt, ut de qualitate
eius et de natura, etiam de sede disceptent: Platonici quidem curantem rerum
et arbitrum et iudicem, Epicurei (—) otiosum et inexercitum, et, ut ita dixerim,
neminem; positum vero extra mundum Stoici (—), intra mundum Platonici. ...
exstant testimonia tam ignoratae quam dubitatae inter phil(o)sophos divini-
tatis. Diogenes (—) consultus, quid in caelis agatur, numqu(am), inquit, ascendi.
item, an dei essent, nescio, inquit, nisi, ut sint, expedire. Thales Milesius (fr. 217
Wöhrle) Croeso sciscitanti, quid de deis arbitraretur, pos(t ali)quot deliberandi
commeatus, nihil renuntiavit. Socrates ips(e) deos istos quasi certus negabat;
idem Aesculapio gallinacium resecari quasi certus iubebat (Plato *Phd.* 118a).
et ideo cum tam incerta et in(—) definiendi de Deo philosophia deprehenditur,
quem potu(it metum habere) eius, quem non liquido tenebat determinare? (from
here = Varro *Rer.Div.* fr. 23 Cardauns, see ch. 1.6, section E(a)§1[37–69]). **Dio-
genes Laertius** *V.P.* 7.132 τὸν δὲ φυσικὸν λόγον διαίρουσιν (sc. οἱ Στωικοί—) ... καὶ
(sc. εἷς τε τὸν τόπον) περὶ ἀρχῶν καὶ στοιχείων καὶ (sc. εἷς τε τὸν τόπον) περὶ θεῶν.
Arnobius of Sicca *Adv.Nat.* 1.38, p. 32.25–33.2 Marchesi *qui, quod frugiferum
primo atque humano generi salutare, deus monstravit quid sit, quis, quantus
et qualis. Adv.Nat.* 2.56, p. 131.7–11 *sic et deos nonnulli esse abnegant prorsus;
dubitare se alii an sint uspiam dicunt; alii vero existere neque humana cur-
are: immo alii perhibent et rebus interesse mortalium et terrenas administrare**

rationes. Lactantius Epit.Inst. 4.3 Heck–Wlosok *longum est recensere quae de summo deo vel Thales* (fr. 258 Wöhrle) *vel Pythagoras* (—) *et Anaximenes* (—) *antea vel postmodum Stoici, Cleanthes et Chrysippus et Zeno* (—), *vel nostrorum Seneca* (fr. 125 Haase, but cf. Lact. *Inst.* 1.5.26) *Stoicos secutus et ipse Tullius* (ND 2.77) *praedicaverint, cum hi omnes et quid sit deus definire temptaverint et ab eo solo regi mundum adfirmaverint nec ulli subiectum esse naturae, cum ab ipso sit omnis natura generata. Ambrose of Milan Exam.* 6.40, p. 231.17–20 Schenkl *quid est deus? caro an spiritus? non caro utique, sed spiritus, cuius similis caro esse non potest, quia ipse incorporeus et invisibilis est, caro autem et comprehenditur et videtur. Isidore of Seville Etym.* 8.6.18–26 *theologi autem idem sunt qui et physici, dicti autem theologi, quoniam in scriptis suis de Deo dixerunt, quorum varia constat opinio, quid Deus esset dum quaererent. quidam enim corporeo sensu hunc mundum visibilem et quattuor elementis Deum esse dixerunt, ut Dionysius Stoicus* (—). *alii vero spiritaliter intellexerunt mentem esse Deum, ut Thales Milesius* (fr. 475 Wöhrle). (19) *quidam animum in omnibus commanentem et lucidum, ut Pythagoras* (cf. Cic. ND 1.27). *quidam Deum sine tempore incommutabilem, ut Plato* (—). *quidam mentem solutam, ut Cicero* (Tusc. 1.66). *quidam et spiritum et mentem, ut Maro* (Aen. 6.726–727). *inventum enim solummodo Deum, non ut invenerunt, exposuerunt, quia evanuerunt in cogitationibus suis. dicentes enim se esse sapientes stulti facti sunt.* (26 quoted from Tertulian Praescr.Haer. 7) *ubi materia cum Deo aequatur, Zenonis* (—) *disciplina est; et ubi quid de igneo Deo legitur, Heraclitus* (—) *intervenit.*

T1a Winiarczyk) 'γέρων ἀλαζών, ἄδικα βιβλία ψήχων', καὶ Διαγόρας ὁ Μήλιος (T 57 Winiarczyk) καὶ Πρόδικος ὁ Κεῖος (84B5 DK) καὶ Θεόδωρος (T 41 Winiarczyk) καὶ ἄλλοι παμπληθεῖς ὧν Εὐήμερος μὲν ἔλεγε τοὺς νομιζομένους θεοὺς δυνατοὺς τινὰς γεγονέναι ἀνθρώπους καὶ διὰ τοῦτο ὑπὸ τῶν ἄλλων θεοποιηθέντας δόξαι θεοὺς, Πρόδικος δὲ τὸ ὠφελοῦν τὸν βίον ὑπεκλήφθαι θεόν, ὡς ἥλιον καὶ σελήνην καὶ ποταμούς καὶ λίμνας καὶ λειμῶνας καὶ καρπούς καὶ πᾶν τὸ

τοιουτώδες. Διαγόρας δὲ ὁ Μήλιος (T 57 Winiarczyk) ... μεθρημόσατο εἰς τὸ λέγειν μὴ εἶναι θεόν. ... Κριτίας (cf. 88B25 DK) δὲ εἰς τῶν ἐν Ἀθήναις τυραννησάντων δοκεῖ ἐκ τοῦ τάγματος τῶν ἀθέων ὑπάρχειν φάμενος, ὅτι οἱ παλαιοὶ νομοθετοῦν ἐπίσκοπόν τινα τῶν ἀνθρωπίνων κατορθωμάτων καὶ ἀμαρτημάτων ἐπλασαν τὸν θεὸν ὑπὲρ τοῦ μηδένα λάθρα τὸν πλησίον ἀδικεῖν, εὐλαβούμενον τὴν ὑπὸ τῶν θεῶν τιμωρίαν. ἔχει δὲ παρ' αὐτῷ τὸ ῥητὸν οὕτως· 'ἦν χρόνος, ὅτ' ἦν ἄτακτος ἀνθρώπων βίος' κτλ. [the other lines of 88B25 DK follow] ... συμφέρεται δὲ τούτοις τοῖς ἀνδράσι καὶ Θεόδωρος ὁ ἄθεος (T 46 Winiarczyk) καὶ κατὰ τινος Πρωταγόρας ὁ Ἀβδηρίτης (80A12 DK) κτλ. **Clement of Alexandria** *Protr.* 24.2 ὦν δὴ χάριν ... θαυμάζειν ἐπεισὶ μοι, ὅτῳ τρόπῳ Εὐήμερον (T 20 Winiarczyk) τὸν Ἀκραγαντῖνον (*sic*) καὶ Νικάνορα τὸν Κύπριον καὶ Διαγόραν (T 63 Winiarczyk) καὶ Ἰππώνα (38A8 DK) τῷ Μηλίῳ τὸν τε Κυρηναῖον ἐπὶ τούτοις ἐκείνους (ὁ Θεόδωρος (T 43 Winiarczyk) ὄνομα αὐτῷ) καὶ τινας ἄλλους συγχούς, σωφρόνως βεβιωκότας καὶ καθεωρακότας ὀξύτερόν που τῶν λοιπῶν ἀνθρώπων τὴν ἀμφὶ τοὺς θεοὺς τούτους πλάνην, ἀθέους ἐπικεκλήκασιν, εἰ καὶ τὴν ἀλήθειαν αὐτὴν μὴ νευνοήκοτας, ἀλλὰ τὴν πλάνην γε ὑπωπτευκότας, ὅπερ οὐ σμικρὸν φρονήσεως ζώπυρον εἰς ἀλήθειας ἀναφύεται σπέρμα. **Arnobius of Sicca** *Adv.Nat.* 4.29.

§1[12–14] **Euhemerus: Sextus Empiricus** *M.* 9.17 Εὐήμερος (T 27 Winiarczyk) δὲ ὁ ἐπικληθεὶς ἀθεὸς φησιν· 'ὅτ' ἦν ἄτακτος ἀνθρώπων βίος' (Critias 88B25.1 DK) οἱ περιγενόμενοι τῶν ἄλλων ἰσχύι τε καὶ συνέσει ὥστε πρὸς τὰ ὑπ' αὐτῶν κελευόμενα πάντας βιοῦν, σπουδάζοντες μείζονος θαυμασμοῦ καὶ σεμνότητος τυχεῖν, ἀνέπλασαν περὶ αὐτοὺς ὑπερβάλλουσάν τινα καὶ θεῖαν δύναμιν, ἔνθεν καὶ τοῖς πολλοῖς ἐνομίσθησαν θεοί.

§1[24–26] **God's impotence: Irenaeus of Lyon** (cited Diels *DG* 171–172) *Haer.* 2.14.4 Rousseau–Doutreleau (trans. Rufini) *quod autem ex necessitate unumquidque in illa secedit ex quibus et factum esse dicunt, et huius necessitatis servum esse Deum, ita ut non possit mortali immortalitatem addere vel corruptibili incorruptelam donare, sed secedere unumquemque in similem naturae suae substantiam.*

§1[27–30] **Demiurge: Diogenes Laertius** *V.P.* 3.72 (on Plato) ὅτι καὶ τὸ ὑπόδειγμα ἐν ἡν ἄφ' οὗ αὐτὸν (sc. τὸν κόσμον) ἐδημιούργησε· σφαιροειδὴ δὲ διὰ τὸ καὶ τὸν γεννήσαντα τοιοῦτον ἔχειν σχῆμα.

§1[32–34] **Plato: Diogenes Laertius** *V.P.* 3.69 (on Plato) ἀτάκτως δὲ ποτε αὐτὴν (sc. τὴν ὕλην) κινουμένην ὑπὸ τοῦ θεοῦ φησιν εἰς ἓνα συναχθῆναι τόπον τάξιν ἀταξίας κρεῖττον αἰγισμένην.

§1[34–36] **Anaxagoras: Eusebius** *PE* 10.14.8–9 Ἀναξαγόρας ... οὐ γὰρ μόνον περὶ τῆς πάντων οὐσίας ἀπεφῆνατο, ὡς οἱ πρὸ αὐτοῦ, ἀλλὰ καὶ περὶ τοῦ κινουντος αὐτὴν αἰτίου. 'ἦν γὰρ ἀρχὴν', φησί (cf. 59B1 DK), 'τὰ πράγματα ὁμοῦ πεφυρμένα'. Νοὺς δὲ εἰσελθὼν αὐτὰ ἐκ τῆς ἀταξίας εἰς τάξιν ἤγαγεν.

§1[35–41] **Providence?: Cicero** *ND* 1.23 *an haec* (sc. caelum et terras), *ut fere dicitis, hominum causa a deo constituta sunt?*

§§2–25 **Theism: Varro** *Ant.Rer.Div.* fr. 8 Cardauns at Aug. *C.D.* 6.5.23–28 Dombart–Kalb 'secundum genus (sc. theologiae) est', *inquit* (sc. Varro), 'quod demonstravi, de quo multos libros philosophi reliquerunt; in quibus est, dii qui

sint, ubi, quod genus; quale est: a quodam tempore an a sempiterno fuerint dii; ex igni sint, ut credit Heraclitus (T 873 Mouraviev), an ex numeris, ut Pythagoras (—), an ex atomis, ut ait Epicurus (—). sic alia, quae facilius intra parietes in schola quam extra in foro ferre possunt aures'. Cicero ND 1.2 qui vero deos esse dixerunt tanta sunt in varietate et dissensione, ut eorum infinitum sit enumerare sententias. nam et de figuris deorum et de locis atque sedibus et de actione vitae multa dicuntur, deque is summa philosophorum dissensione certatur. Pliny Nat. 2.14 effigiem dei formamque quaerere inbecillitatis humanae reor. quisquis est deus, si modo est alius, et quacumque in parte, totus est sensus, totus visus, totus auditus, totus animae, totus animi, totus sui.

§2 **Thales:** Cicero Leg. 2.26 *Thales* (fr. 76 Wöhrle) *qui sapientissimus in septem fuit, homines existimare oportere omnia, quae cererent, deorum esse plena.* ND 1.25 *Thales enim Milesius* (fr. 72 Wöhrle), *qui primus de talibus rebus quaesivit, aquam dixit esse initium rerum, deum autem eam mentem quae ex aqua cuncta fingeret.* Seneca Nat. 1 praef. 13 *quid est deus? mens universi.* (cf. Minucius Felix Oct. 19.4, *Thales* fr. 229 Wöhrle). **Diogenes Laertius** V.P. 1.27 (on *Thales*, 11A1 DK) ἀρχὴν δὲ τῶν πάντων ὕδωρ ὑπεστήσατο, καὶ τὸν κόσμον ἔμψυχον καὶ δαιμόνων πλήρη. V.P. 7.135–136 (on Stoics, SVF 2.580) ἔν τε εἶναι θεὸν καὶ νοῦν καὶ εἰμαρμένην καὶ Δία· πολλαῖς τε ἐτέραις ὀνομασίαις προσονομάζεσθαι. (136) κατ' ἀρχὰς μὲν οὖν καθ' αὐτὸν ὄντα τρέπειν τὴν πᾶσαν οὐσίαν δι' ἄερος εἰς ὕδωρ· καὶ ὥσπερ ἐν τῇ γονῇ τὸ σπέρμα περιέχεται, οὕτω καὶ τοῦτον σπερματικὸν λόγον ὄντα τοῦ κόσμου τοιόνδε ὑπολιπέσθαι ἐν τῷ ὑγρῷ, εὐεργὸν αὐτῷ ποιοῦντα τὴν ὕλην πρὸς τὴν τῶν ἐξῆς γένεσιν. cf. V.P. 9.7 (on *Heraclitus*, 22A1 DK) ἐδόκει δ' αὐτῷ καθολικῶς μὲν τάδε· ... καὶ πάντα ψυχῶν εἶναι καὶ δαιμόνων πλήρη. **ps.Aristotle** Mu. 6 379b16–20 διὸ καὶ τῶν παλαιῶν εἰπεῖν τινες προήχθησαν ὅτι πάντα ταῦτά ἐστι θεῶν πλέα τὰ καὶ δι' ὀφθαλμῶν ἰδθαλλόμενα ἡμῖν καὶ δι' ἀκοῆς καὶ πάσης αἰσθήσεως, τῇ μὲν θείᾳ δυνάμει πρέποντα καταβαλλόμενοι λόγον, οὐ μὴν τῇ γε οὐσίᾳ. **Lactantius** Inst. 1.5.16 Heck–Wlosok (mostly following Cicero) *Thales Milesius* (fr. 254 Wöhrle) *qui unus e septem sapientium numero fuit ... aquam esse dixit ex qua nata sint omnia, deum autem esse mentem quae ex aqua cuncta formaverit. ita materiam rerum posuit in umore, principium causamque nascendi constituit in deo.* differently **Diogenes Laertius** V.P. 1.36 (on *Thales*, 11A1 DK) τί τὸ θεῖον—‘τὸ μῆτε ἀρχὴν ἔχον μῆτε τελευτήν’, cf. **Clement of Alexandria** Strom. 5.14.96.4 (on *Thales*, fr. 207 Wöhrle). differently **Augustine** C.D. 8.2.12–23 Dombart–Kalb *Thales* (fr. 311 Wöhrle) ... *aquam tamen putavit rerum esse principium et hinc omnia elementa mundi ipsumque mundum et quae in eo gignuntur existere. nihil autem huic operi, quod mundo considerato tam mirabile aspicimus, ex divina mente praeposuit.*

§3 **Anaximander:** Cicero ND 1.25 *Anaximandri* (12A17 DK) *autem opinio est nativos esse deos longis intervallis orientis occidentisque, eosque innumerabilis esse mundos. sed nos deum nisi sempiternum intellegere qui possumus?* **Hippolytus** Ref. 1.6.1 Ἀναξίμανδρος Πραξιάδου Μιλήσιος (12A11, B2 DK). οὗτος ἀρχὴν ἔφη τῶν ὄντων φύσιν τινὰ τοῦ ἀπείρου, ἐξ ἧς γίνεσθαι τοὺς οὐρανούς καὶ τοὺς ἐν αὐτοῖς κόσμους. ταύτην δὲ ‘αἰδίων’ εἶναι καὶ ‘ἀγήρω’, ἣν καὶ πάντας περιέχειν

τοὺς κόσμους. differently **Augustine** C.D. 8.2.23–30 Dombart–Kalb *Anaximander* (fr. 128 Wöhrle) ... *nec ipse aliquid divinae menti in his rerum operibus tribuens.*

§4 **Anaximenes: Philodemus Piet.** (PHerc. 1428) 3d Gomperz, fr. 8 Schober, col. 319 Vassallo καὶ Ἀναξίμ[ένη]ς (cf. at 13A9 DK) φ[ησὶν τὸν ἀέ]ρα τε (***) omittimus illegibilia) ἄ[ππειρο]ν οἷετ' εἶ[ναι λέγ]ων ἀέρα θεο[ν οὐδὲ] καλ[ῶς] θεωρεῖ τ[ὸν θε]όν ὥς ἐστερη[μένον | τῆς αἰσ]θήσεως, [φᾶς δ'] ἅπαντ[α] τὰ γενόμε[να | [καὶ] τὰ γινόμενα καὶ | [..(.) τὰ] ἐσόμεν[α] καὶ ||. **Cicero** ND 1.26 *post Anaximenes* (13A10 DK) *aëra deum statuit, eumque gigni esseque immensum et infinitum et semper in motu: quasi aut aër sine ulla forma deus esse possit, cum praesertim deum non modo aliqua sed pulcherrima specie deceat esse, aut non omne quod ortum sit mortalitas consequatur.* **Minucius Felix** Oct. 19.5 *Anaximenes* (fr. 59 Wöhrle) *deinceps et post Apolloniates Diogenes aëra deum statuunt infinitum et immensum; horum quoque similis de divinitate consensio est.* **Hippolytus** Ref. 1.7.1 Ἀναξίμενης (13A7 DK) ... ἀέρα ἄπειρον ἔφη τὴν ἀρχὴν εἶναι, ἐξ οὗ ... καὶ θεοὺς καὶ θεῖα γίνεσθαι. **Augustine** Conf. 10.6.25–26 *interrogavi auras flabiles, et inquit universus aër cum incolis suis: fallitur Anaximenes* (fr. 101 Wöhrle); *non sum deus.* C.D. 8.2.31–34 Dombart–Kalb *iste Anaximenes* (13A10 DK) *discipulum et successorem reliquit, qui omnes rerum causas aëri infinito dedit, nec deos negavit aut tacuit; non tamen ab ipsis aërem factum, sed ipsos ex aëre ortos credidit.*

§6 **Anaxagoras: Philodemus Piet.** (PHerc. 1428) fr. 9 Schober, col. 31 Vassallo (Anaxagoras 59A48 DK) καὶ κίν[η]σ[ιν τοῦ | ν]οῦ διακο[σμή]σαν|τος ἀ(ε)ῖ {ν} γεγονέναι τε | κ]αὶ εἶναι κα[ὶ] ἔσ[εσ]θ[αι] καὶ πάντ[ων] ἄρ[χ]η καὶ κρατεῖν καὶ | [νο]ῦν ἄπειρα ὄντα | με]μειγμένα τὰ σύμ[παντα] διακοσμή[σαι]. **Cicero** Luc. 118 *Anaxagoras* (59A49 DK) *materiam infinitam, sed ex ea particulas similes inter se minutas, eas primum confusas postea in ordinem adductas mente divina.* ND 1.26–27 *inde Anaxagoras* (59A48 DK), *qui accepit ab Anaximene disciplinam, primus omnium rerum discriptionem et modum mentis infinitae vi ac ratione dissignari et confici voluit. in quo non vidit neque motum sensu iunctum et {in} continentem infinito ullum esse posse, neque sensum omnino quo non ipsa natura pulsa sentiret. deinde si mentem istam quasi animal aliquod voluit esse, erit aliquid interius ex quo illud animal nominetur; quid autem interius mente: cingatur igitur corpore externo; (27) quod quoniam non placet, aperta simplexque mens nulla re adiuncta, quae sentire possit, fugere intellegentiae nostrae vim et notionem videtur.*

§7 **Democritus: Philodemus Piet.** (PHerc. 1428) 5d Gomperz, fr. 16 Schober, Henrichs (1975) 96, col. 32 Vassallo [τ]ῶν ἀνθρώπων κα[ὶ] ταφρονεῖν .. [...(.)] | θέρος ἐν τῇ [γ]ῇ | [καὶ] χε[ι]μῶν καὶ ἔ[αρ] καὶ | με[τ]{θ}όπων [κ]αὶ πᾶ[ν]τα ταῦτα ἄν[οι] (ω)θεν διειπετῇ γε(ίν)εται· διὸ δὴ καὶ τὸ ἐξεργαζόμενον γόνοντας | σέβεσθαι. οὐ φαίνεται δ' ἔμοι Δημόκριτος (68A75 DK) ὥσπερ ἐνιοι τὸν [θεόν] ||. **Cicero** ND 1.29 *quid? Democritus* (68A74 DK), *qui tum imagines eorumque circumitus in deorum numero refert, tum illam naturam quae imagines fundat ac mittat, tum sententiam intellegentiamque nostram, nonne in maximo*

errore versatur? cum idem omnino, quia nihil semper suo statu maneat, neget esse quicquam sempiternum, nonne deum omnino ita tollit, ut nullam opinionem eius reliquam faciat? Tertullian ad Nat. 2.2.18 Borleffs cum reliquo igni superno deos ortos Democritus (68A74 DK) suspicatur, cuius instar vult esse naturam Zenon (SVF 1.171).

§8 Diogenes: Cicero ND 1.29 *quid aër, quo Diogenes Apolloniates (64A8 DK, T7a Laks) utitur deo, quem sensum habere potest aut quam formam dei? ND 1.37 Cleanthes (SVF 1.530) autem ... tum ipsum mundum deum dicit esse, tum totius naturae menti atque animo tribuit hoc nomen, etc. Augustine C.D. 8.2.39–42 Dombart–Kalb Diogenes (64A8 DK) quoque Anaximenis alter auditor, aërem quidem dixit rerum esse materiam, de qua omnia fierent; sed eum esse compotem divinae rationis, sine qua nihil ex eo fieri posset. Cicero ND 1.37 (Cleanthes SVF 1.530). Differently Philodemus Piet. (PHerc. 1428) 6b Gomperz, fr. 18 Schober Διογένης (64A8 DK, T 6 Laks) Διογένης (64A8 DK) ἐπαι[νεῖ] τὸν “Ο[μ]ηρον ὡς ο[ὐ] μυθικ[ῶς] | ἄλλ’ ἀληθῶς ὑπὲρ το[ῦ] | θεοῦ διελεγμένον. | τὸν ἀέρα γὰρ αὐτὸν | Δία νομίζειν φησιν | ἐπειδὴ πᾶν εἶδ[ε]ναι τὸν Δία λέγει καὶ || and Cicero ND 1.29–30 *quid aer, quo Diogenes Apolloniates (64A8 DK) utitur deo, quem sensum habere potest aut quam formam dei? Philodemus Piet. (PHerc. 1428) col. ii.8–9 Henrichs γ[ρ]άψας Κλεάν[θη]ς (—).**

§9 Pythagoras: Philodemus Piet. (PHerc. 1428) 4b Gomperz, fr. 10 Schober, col. 31 Vassallo Πυ[θ]αγόρου (14.17 DK) δ’ αὐτοῦ γ’ | οὐδὲν φασί τινε[ς] | εἶναι τῶν ἀναφ[ε]ρ[ο]μένων παρὰ (?τὰ τρία ἐκείνα βιβλία?) [suppl. Diels]). Cicero ND 1.27 *nam Pythagoras (—), qui censuit animum esse per naturam rerum omnem intentum et commeantem, ex quo nostri animi carperentur, non vidit distractione humanorum animorum discerpi et lacerari deum, et cum miseri animi essent, quod plerisque contingeret, tum dei partem esse miseram, quod fieri non potest. cur autem quicquam ignoraret animus hominis, si esset deus? quo modo porro deus iste, si nihil esset nisi animus, aut infixus aut infusus esset in mundo? Pythagorica Hypomnemata at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK) at D.L. V.P. 8.25 ἀρχὴν μὲν τῶν ἀπάντων μονάδα· ἐκ δὲ τῆς μονάδος ὁρίστων δυάδα ὡς ἂν ὕλην τῇ μονάδι αἰτίῳ ὂντι ὑποστέχειν. Hippolytus Ref. 1.2.2 καὶ οὕτως μονάδα μὲν εἶναι ἀπεφήνατο (sc. Πυθαγόρας) τὸν θεόν (cf. Ref. 4.43.4, Ref. 5.15.4).*

§10 Posidonius: Diogenes Laertius V.P. 7.148 οὐσίαν δὲ θεοῦ Ζήνων (SVF 1.163) μὲν φησι τὸν ὅλον κόσμον καὶ τὸν οὐρανόν, ὁμοίως ... Ποσειδώνιος (F 20 E.-K. 344 Theiler) ἐν πρώτῳ Περὶ θεῶν. V.P. 7.138 τὸν δὴ κόσμον διοικεῖσθαι κατὰ νοῦν καὶ πρόνοιαν, καθά φησι ... Ποσειδώνιος (F 21 E.-K., 345 Theiler) ἐν τῷ τρισκαίδεκάτῳ Περὶ θεῶν, εἰς ἅπαν αὐτοῦ μέρος διήκοντος τοῦ νοῦ, καθάπερ ἐφ’ ἡμῶν τῆς ψυχῆς· ἄλλ’ ἢ δι’ ὧν μὲν μάλλον, δι’ ὧν δὲ ἥττον.

§11 Speusippus: Philodemus Piet. (PHerc. 1428) 6a Gomperz, fr. 17 Schober, col. 336 Vassallo (DK 1.165 app. ad Heracl. 22B67, cf. frs. 77(c), 79(b) Marcovich) καὶ | τὸ πῦρ θ[ε]όν, ἐν οἷς φη[σιν] ὅτι Ζεὺς Κεραυνὸς | π[α]ντ[α] οἶα | κίξει, κἀ(ε)ί[ζ]ων· σημ[αίνει] δὲ κα[ὶ] πόλλ’ ἐ[ν]αντία | θε[ο]ν[τ]ίαν εἶ[ναι], νύκτα || (ἡμεραν). Cicero ND 1.32 *nec multo secus Speusippus* (fr. 39a Lang, 89 Isnardi

Parente, 56a Tarán) *Platonem avunculum subsequens et vim quandam dicens, qua omnia regantur, eamque animalem, evellere ex animis conatur cognitionem deorum.*

§13 **Heraclitus: Diogenes Laertius V.P.** 9.7 (Heraclitus 22A1 DK) ἐκ πυρὸς τὰ πάντα συνεστάναι καὶ εἰς τοῦτο ἀναλύεσθαι· πάντα δὲ γίνεσθαι καθ' εἰμαρμένην καὶ διὰ τῆς ἐναντιοτροπῆς [prob. Dorandi, ἐναντιοδρομίας coni. Diels] ἡρμόσθαι τὰ ὄντα.

§14 **Zeno Stoicus: Cicero ND** 1.36 (scattered by von Arnim: SVF 1.162, 1.154, 1.161, 1.165, 1.167) (Velleius the Epicurean speaks) *Zeno autem, ut iam ad vestros Balbe veniam, naturalem legem divinam esse censet, eamque vim obtinere recta imperantem prohibentemque contraria. quam legem quo modo efficiat animantem intellegere non possumus; deum autem animantem certe volumus esse. atque hic idem alio loco aethera deum dicit: si intellegi potest nihil sentiens deus, qui numquam nobis occurrit neque in precibus neque in optatis neque in votis. aliis autem libris rationem quandam per omnium naturam rerum pertinentem vi divina esse adfectam putat. idem astris hoc idem tribuit, tum annis mensibus annorumque mutationibus. cum vero Hesiodi Theogoniam id est originem deorum interpretatur, tollit omnino usitatas perceptasque cognitiones deorum; neque enim Iovem neque Iunonem neque Vestam neque quemquam qui ita appelletur in deorum habet numero, sed rebus inanimis atque mutis per quandam significationem haec docet tributa nomina.*

§16 **Boethius: Diogenes Laertius V.P.** 7.148 Βόηθος (SVF 3 Boeth. 3) δὲ ἐν τῇ Περὶ φύσεως οὐσίαν θεοῦ τὴν τῶν ἀπλανῶν σφαῖραν.

§17 **Parmenides: Philodemus Piet.** (PHerc. 1428) 4d–5a Gomperz, frs. 12.8–13 Schober, coll. 323.31–324 Vassallo Παρμενείδης (T4 Coxon) δὲ | *** ἔοικ[ε δ]ὴ τόν | τε πρ[ώ]τον [θ]εὸν ἄ|ψυχον ποι[ε]ῖν, τ[ο]ύς | τε γεννωμένους ὑ|πὸ τ{α}<ο>ύτου τὰ μὲν | αὐτὰ τοῖς πάθεσιν | τοῖς περὶ ἀνθρώ|πους πάσχοντας. **Cicero ND** 1.28 *Parmenides* (28A37 DK) *quidem commenticium quiddam: coronae similem efficit* (στεφάνην appellat) *continentem ardorem lucis orbem, qui cingit caelum, quem appellat deum; in quo neque figuram divinam neque sensum quisquam suspicari potest. multaque eiusdem monstra, quippe qui bellum qui discordiam qui cupiditatem ceteraque generis eiusdem ad deum revocet, quae vel morbo vel somno vel oblivione vel vetustate delentur; eademque de sideribus, quae reprehensa in alio iam in hoc omittantur.* **Hippolytus Ref.** 1.11.1 Παρμενείδης (28A23 DK) ἐν μὲν τὸ πᾶν ὑποτίθεται αἰδιόν τε καὶ ἀγέννητον καὶ σφαιροειδές.

§18 **Melissus: differently Diogenes Laertius V.P.** 9.24 Μέλισσος Ἰθαγένους Σάμιος (30A1 DK). οὗτος ἤκουσε Παρμενίδου· ... ἐδόκει δ' αὐτῷ τὸ πᾶν ἄπειρον εἶναι καὶ ἀναλλοίωτον καὶ ἀκίνητον καὶ ἐν ὅμοιον ἑαυτῷ καὶ πλήρες· κίνησιν τε μὴ εἶναι, δοκεῖν δ' εἶναι. ἀλλὰ καὶ περὶ θεῶν ἔλεγε μὴ δεῖν ἀποφαίνεσθαι· μὴ γὰρ εἶναι γινώσιν αὐτῶν.

§19 **Empedocles: Cicero ND** 1.29 *Empedocles* (—) *autem multa alia peccans in deorum opinione turpissime labitur. quattuor enim naturas, ex quibus omnia constare censet, divinas esse vult; quas et nasci et extinguī perspicuum est et sensu omni carere.* **Clement of Alexandria Strom.** 4.23.150.1 φησὶ δὲ καὶ

ὁ Ἐμπεδοκλῆς τῶν σοφῶν τὰς ψυχὰς θεοὺς γίνεσθαι ὥδέ πως γράφων (31B146 DK follows). **Hippolytus** *Ref.* 1.3.1 οὗτος (sc. Empedocles, 31A31 DK) τὴν τοῦ παντός ἀρχὴν νεῖκος καὶ φιλίαν ἔφη, καὶ τὸ τῆς μονάδος νοερὸν πῦρ τὸν θεόν, καὶ συνεστάναι ἐκ πυρὸς τὰ πάντα καὶ εἰς πῦρ ἀναλυθῆσεσθαι. *Ref.* 7.29.14 ὁ Ἐμπεδοκλῆς (on 31B115 DK) ... θεὸν καλῶν τὸ ἐν καὶ τὴν ἐκείνου ἐνότητά ... *Ref.* 7.29.16 'δαίμονες οἷτε μακραίωνος λελάχασι βίοιο' (31B115.5 DK)—δαίμονας τὰς ψυχὰς λέγων, μακραίωνας ὅτι εἰσὶν ἀθάνατοι καὶ μακροὺς ζῶσιν αἰώνας.

§21 **Xenocrates**: **Cicero** *ND* 1.34 *nec vero eius* (sc. Aristotle's) *condiscipulus Xenocrates* (fr. 17 Heinze, 181 Isnardi Parente²) *in hoc genere prudentior est, cuius in libris qui sunt De natura deorum nulla species divina describitur; deos enim octo esse dicit, quinque eos qui in stellis vagis nominantur, unum qui ex omnibus sideribus quae infixae caelo sint ex dispersis quasi membris simplex sit putandus deus, septimum solem adiungit octavamque lunam; qui quo sensu beati esse possint intellegi non potest.* **Hippolytus** *Ref.* 1.2.6 = 4.51.4 (on Pythagoras) τῶν δὲ ἀριθμῶν ἀρχὴ γέγονε καθ' ὑπόστασιν ἢ πρώτη μονάς, ἥτις ἐστὶ μονάς ἄρσην, γεννώσα πατρικῶς πάντας τοὺς ἄλλους ἀριθμούς. δεύτερον ἢ δυάς, θῆλυς ἀριθμός.

§22 **Plato**: **Cicero** *ND* 1.30 (Velleius the Epicurean speaks) *iam de Platonis inconstantia longum est dicere, qui in Timaeo* (28c) *patrem huius mundi nominari neget posse, in Legum autem libris* (7.821a) *quid sit omnino deus anquiri oportere non censeat. quod vero sine corpore ullo deum vult esse (ut Graeci dicunt ἀσώματον), id quale esse possit intellegi non potest: careat enim sensu necesse est, careat etiam prudentia, careat voluptate; quae omnia una cum deorum notione comprehendimus. idem et in Timaeo* (34b, 40a) *dicit et in Legibus* (7.821b–c, 10.866d) *et mundum deum esse et caelum et astra et terram et animos et eos quos maiorum institutis accepimus. quae et per se sunt falsa perspicue et inter se vehementer repugnanti.* **Diogenes Laertius** *V.P.* 3.77 δοκεῖ δ' αὐτῷ (sc. τῷ Πλάτῳ) τὸν θεὸν ὡς καὶ τὴν ψυχὴν ἀσώματον εἶναι. **Hippolytus** *Ref.* 1.19.3 τὸν μὲν θεὸν φησὶν ἀσώματόν τε καὶ ἀνείδεον καὶ μόνοις σοφοῖς ἀνδράσι καταληπτὸν εἶναι. *Ref.* 1.19.6–7 τὸν δὲ θεὸν οἱ μὲν ἕνα φασὶν αὐτὸν εἰπεῖν, ἀγέννητον καὶ ἄφθαρτον, ὡς λέγει ἐν τοῖς Νόμοις (*Leg.* 4.715e)· 'ὁ μὲν δὴ θεός, ὥσπερ καὶ ὁ παλαιὸς λόγος, ἀρχὴν τε καὶ τελευτὴν καὶ μέσα τῶν ὄντων ἀπάντων ἔχων' (1B6 DK)—οὕτως (γάρ) ἕνα αὐτὸν τὸν διὰ πάντων κεχωρηκότα ἀποφαίνεσθαι—οἱ δὲ καὶ πολλοὺς ἀορίστους, ὅταν λέγῃ (*Tim.* 41a)· 'θεοὶ θεῶν, (ὧν) ἐγὼ δημιουργός τε καὶ πατήρ'.

§22[112–113] **Plato**: **Epiphanius** *Haer.* 1.185.18–22 **Holl** εἶναι δὲ πρῶτον αἴτιον καὶ δεύτερον καὶ τρίτον· καὶ τὸ μὲν πρῶτον αἴτιον θεόν, τὸ δὲ δεύτερον αἴτιον ἐκ θεοῦ γεγενῆσθαι τινὰς δυνάμεις, δι' αὐτοῦ δὲ καὶ τῶν δυνάμεων γεγενῆσθαι τὴν ὕλην.

§23 **Aristotle**: **Philodemus** *Piet.* (*PHerc.* 1428) 7b Gomperz, fr. 22.10–13 Schober παρ' Ἀριστοτέλει (fr. 26 R³, 25.2 Gigon, p. 73 Ross) δ' ἐν τῷ τρίτῳ Περὶ φιλοσοφίας **Cicero** *ND* 1.33 *Aristotelesque in tertio De philosophia libro* (fr. 26 R³, 25.1 Gigon) *multa turbat a magistro suo Platone dissentiens; modo enim menti tribuit omnem divinitatem, modo mundum ipsum deum dicit esse, modo alium quendam praeficit mundo eique eas partis tribuit ut replicatione*

quadam mundi motum regat atque tueatur, tum caeli ardorem deum dicit esse non intellegens caelum mundi esse partem, quem alio loco ipse designarit deum. quo modo autem caeli divinus ille sensus in celeritate tanta conservari potest? ubi deinde illi tot dii, si numeramus etiam caelum deum? cum autem sine corpore idem vult esse deum, omni illum sensu privat, etiam prudentia. quo porro modo mundus moveri carens corpore aut quo modo semper se movens esse quietus et beatus potest? **Philo of Alexandria** *Her.* 283 πέμπτη γάρ, ὡς ὁ τῶν ἀρχαίων λόγος, ἔστω τις οὐσία κυκλοφορητική. **Arius Didymus** fr. 9 Diels at Stob. *Ecl.* 1.22.1c, p. 196.5–16 (on Aristotle) περιέχεσθαι δὲ ταῦτα ὑπὸ τοῦ αἰθέρος, ἔνθα τὰ θεῖα διανενημεμένα κατὰ σφαίρας ἴδρυται τῶν λεγομένων ἀπλανῶν τε καὶ πλανωμένων ἀστέρων. ὅσας δὲ εἶναι τὰς σφαίρας, τοσούτους ὑπάρχειν καὶ τοὺς κινούντας θεοὺς ταύτας, ὧν μέγιστον τὸν πάσας περιέχοντα, ζῶον ὄντα λογικὸν καὶ μακάριον, συνεκτικὸν καὶ προνοητικὸν τῶν οὐρανίων. συνεστάναι δὲ τὰ ἄστρα καὶ τὸν οὐρανὸν ἐκ τοῦ αἰθέρος, τοῦτον δὲ οὔτε βαρὺν οὔτε κοῦφον, οὔτε γενητὸν οὔτε φθαρτὸν, οὔτε αὐξήμενον οὔτε μειούμενον ἐς αἰεὶ διαμένειν ἄτρεπτον καὶ ἀναλλοίωτον πεπερασμένον καὶ σφαιροειδῆ καὶ ἔμψυχον κινούμενον περὶ τὸ μέσον ἐγκυκλίως. fr. 17 Diels at Stob. *Ecl.* 1.56, p. 496.20–23 τοῦ δὲ κινητικοῦ κατὰ τόπον ὃ δὴ προσείπομεν ὀρμητικόν, τὸ πρῶτον κινοῦν, καὶ ἐν ἡμῖν καὶ ἐν τοῖς ἄλλοις ζώοις ἀκίνητον εἶναι. **ps.Aristotle** *Mu.* 6 397b24–30 τὴν μὲν οὖν ἀνωτάτῳ καὶ πρώτῳ ἔδραν αὐτὸς ἔλαχεν, ὑπατός τε διὰ τοῦτο ὠνόμασται, κατὰ τὸν ποιητὴν (e.g. *Il.* A 349) ‘ἄκροτάτῃ κορυφῇ’ τοῦ σύμπαντος ἐγκαθιδρυμένος οὐρανοῦ· μάλιστα δὲ πῶς αὐτοῦ τῆς δυνάμεως ἀπολαύει τὸ πλησίον αὐτοῦ σῶμα, καὶ ἔπειτα τὸ μετ’ ἐκείνου, καὶ ἐφεξῆς οὕτως ἄχρι τῶν καθ’ ἡμᾶς τόπων. **Clement of Alexandria** *Protr.* 66.4 οὐδὲν δὲ οἶμαι χαλεπὸν ἐνταῦθα γενόμενος καὶ τῶν ἐκ τοῦ Περιπάτου μνησθῆναι· καὶ ὃ γε τῆς αἰρέσεως πατήρ, τῶν ὄλων οὐ νοήσας τὸν πατέρα, τὸν καλούμενον ‘ὑπατον’ (cf. ps.Arist. *Mu.* 6 397b24–27) ψυχὴν εἶναι τοῦ παντός οἶται· τουτέστι τοῦ κόσμου τὴν ψυχὴν θεὸν ὑπολαμβάνων αὐτὸς αὐτῷ περιπίρεται. ὁ γὰρ τοι μέχρι τῆς σελήνης αὐτῆς διορίζων τὴν πρόνοιαν (cf. ps.Arist. *Mu.* 6 397b30–398a1), ἔπειτα τὸν κόσμον θεὸν ἡγούμενος περιτρέπεται, τὸν ἄμοιρον τοῦ θεοῦ θεὸν δογματίζων. **ps.Clemens Romanus** *Recogn.* 8.15.4 (trans. Rufini) *Aristoteles* (*de Phil.* fr. 27 Walzer/Ross) *etiam quintum introducit elementum, quod acatonomaston* (sc. ἀκατονόμαστον), *id est inconpellabile nominavit, sine dubio illum indicans, qui in unum quattuor elementa coniungens mundum fecerit.* **Hippolytus** *Ref.* 7.19.3 ἢ δ’ ἐπιφάνεια (sc. τοῦ οὐρανοῦ), πέμπτη τις οὐσα οὐσία, φυσικῶν (ἐστὶν add. Marcovich) ἀπηλλαγμένη στοιχείων πάντων, ἀφ’ ὧν ὁ κόσμος τὴν σύστασιν ἔχει, καὶ ἔστιν αὕτη {τις secl. Marcovich} ἢ πέμπτη κατὰ τὸν Ἀριστοτέλην οὐσία οἰοεὶ οὐσία τις ὑπερκόσμιος. *Ref.* 7.19.4 γέγονε δὲ αὐτῷ περὶ πέμπτης οὐσίας ἴδιος λόγος, ὃς ἐστὶν αὐτῷ θεολογούμενος. **Diogenes Laertius** *V.P.* 5.32 τὸν δὲ θεὸν ἀσώματον ἀπέφαινε (sc. Aristotle), καθὰ καὶ ὁ Πλάτων· διατείνειν δὲ αὐτοῦ τὴν πρόνοιαν μέχρι τῶν οὐρανίων καὶ εἶναι ἀκίνητον αὐτόν· τὰ δ’ ἐπίγεια κατὰ τὴν πρὸς ταῦτα συμπάθειαν οἰκονομεῖσθαι. εἶναι δὲ παρὰ τὰ τέτταρα στοιχεῖα καὶ ἄλλο πέμπτον, ἐξ οὗ τὰ αἰθέρια συνεστάναι. **Calcidius** in *Tim.* c. 223 (on the Peripatetics) *animam ... quae tamen recipiatur a corpore, quippe corpori perfectionem det ipsa sitque eius entelechia, res per semet ipsam immobilis, sicut sunt artes et disciplinae, ex*

accidenti vero aliquo mobilis propterea quod sit in animalibus quae, dum vivunt, moventur. **Vita Aristotelis Marciana** 39 Düring τῇ δὲ θεολογίᾳ (sc. προσέθηκε) τὸ μὴ τὰ πάντα ἐγκόσμια εἶναι, ὡς τὸ εἰκός, ἀλλ' εἶναι τι καὶ ὑπερκόσμιον· ἐν γὰρ τῷ πέμπτῳ τῆς φυσιολογικῆς τὸ πρῶτον (*Phys.* 5.1 224a26–29) μηδὲ κατὰ συμβεβηκός φησι κινεῖσθαι, τοῦ ἐγκοσμίου διὰ τὸ ᾧ συντέτακται κατὰ συμβεβηκός κινουμένου· καὶ ἐν τῷ ὀγδόῳ τῆς Φυσικῆς (*Phys.* 8.5) τὸ πρῶτως κινουὺν ἀκίνητον εἶναι βούλεται. **Vita Aristotelis vulgata** 27–29 Düring τῇ δὲ γε φυσικῇ προσέθηκε τὴν πέμπτην οὐσίαν· (28) τῇ δὲ θεολογίᾳ εἰ καὶ μηδὲν προσέθηκεν, ἀλλ' οὖν οὐδὲν περὶ αὐτῆς ἐλλίπες ἐπραγματεύσατο· (29) οὐ γὰρ τὰ ἐγκόσμια μόνα ἦδει, ὥς τινες ὑπολαμβάνουσιν, ἀλλὰ καὶ τὰ ὑπερκόσμια, ὡς δηλοῖ καὶ ἐν τῷ ὀγδόῳ λόγῳ τῆς Φυσικῆς ἀκροάσεως (*Phys.* 8.8–10), λέγων ὅτι τὸ πρῶτον αἴτιον οὐδὲ καθ' ἑαυτὸ κινήτὸν ἐστὶν οὐδὲ κατὰ συμβεβηκός, ἐκ τούτου ἐνδεικνύμενος ὅτι οὐδὲ σῶμά ἐστι τὸ θεῖον οὐδὲ παθητόν. cf. **Minucius Felix Oct.** c. 19.3–14.

§24 **Stoics: Cicero ND** 1.36 see above §14. **ND** 1.40 (*SVF* 2.1077) *idem-que* (sc. Chrysippus) *disputat aethera esse eum quem homines Iovem appellarent, quique aër per maria manaret eum esse Neptunum, terramque eam esse quae Ceres diceretur, similique ratione persequitur vocabula reliquorum deorum.* **ND** 2.57 Zeno (*SVF* 1.171) *igitur naturam ita definit ut eam dicat ignem esse artificiosum ad gignendum progredientem via.* **ND** 3.27 *naturae ... artificiose ambulantis ut ait Zeno* (*SVF* 1.171). **Diogenes Laertius V.P.** 7.134–136 (on Stoics, *SVF* 1.85, 2.300) τοῦτον (sc. τὸν θεόν) γὰρ αἰῖδιον ὄντα διὰ πάσης αὐτῆς (sc. τῆς ὕλης) δημιουργεῖν ἔκαστα. ... (135) (*SVF* 1.102, 2.580) ἔν τε εἶναι θεὸν καὶ νοῦν καὶ εἰμαρμένην καὶ Δία· πολλαῖς τε ἐτέραις ὀνομασίαις προσονομάζεσθαι. ... (136) καὶ ὥσπερ ἐν τῇ γονῇ τὸ σπέρμα περιέχεται, οὕτω καὶ τοῦτον, σπερματικὸν λόγον ὄντα τοῦ κόσμου, τοιόνδε ὑπολείπεσθαι ἐν τῷ ὑγρῷ, εὐεργὸν αὐτῷ ποιοῦντα τὴν ὕλην πρὸς τὴν τῶν ἐξῆς γένεσιν. **V.P.** 7.147 (*SVF* 2.1021) θεὸν δὲ εἶναι ζῶον ἀθάνατον λογικὸν τέλειον {ἡ νοερὸν} ἐν εὐδαιμονίᾳ, κακοῦ παντὸς ἀνεπίδεκτον, προνοητικὸν κόσμου τε καὶ τῶν ἐν κόσμῳ· μὴ εἶναι μέντοι ἀνθρωπόμορφον. εἶναι δὲ (αὐ)τὸν μὲν δημιουργὸν τῶν ὄλων καὶ ὥσπερ πατέρα πάντων, κοινῶς τε καὶ τὸ μέρος αὐτοῦ τὸ διήκον διὰ πάντων, ὃ πολλαῖς προσηγορίαις προσονομάζεται κατὰ τὰς δυνάμεις· Δία μὲν γὰρ φασι δι' ὃν τὰ πάντα, καὶ Ζῆνα δὲ καλοῦσι παρ' ὅσον τοῦ ζῆν αἰτίος ἐστὶν ἢ διὰ τοῦ ζῆν κεχώρηκεν, Ἀθηνᾶν δὲ κατὰ τὴν εἰς αἰθέρα διάτασιν τοῦ ἡγεμονικοῦ αὐτοῦ, Ἥραν δὲ κατὰ τὴν εἰς ἀέρα, καὶ Ἥφαιστον κατὰ τὴν εἰς τὸ τεχνικὸν πῦρ, καὶ Ποσειδῶνα κατὰ τὴν εἰς τὸ ὑγρόν, καὶ Δήμητραν κατὰ τὴν εἰς γῆν· ὁμοίως δὲ καὶ τὰς ἄλλας προσηγορίας ἐχόμενοι τινος οἰκειότητος ἀπέδωσαν.

§25 **Epicurus: Cicero ND** 1.48–49 *hominis esse specie deos confitendum est.* (49) *nec tamen ea species corpus est sed quasi corpus, nec habet sanguinem sed quasi sanguinem.* ... **Epicurus** (fr. 352 Usener) ... *docet eam esse vim et naturam deorum, ut primum non sensu sed mente cernatur, nec soliditate quadam nec ad numerum, ut ea quae ille propter firmitatem στερέμνια appellat, sed imaginibus similitudine et transitione perceptis, cum infinita similiumarum imaginum species ex innumerabilibus individuis existat et ad eos [adeos or ad deos mss.: ad deos prob. Pease, Long–Sedley : a deis Davies prob. Dyck, ad nos Lambinus Usener alii] adfluat* (etc.). **Scholia in Epicurum RS** 1 at D.L. 10.139 ἐν ἄλλοις

δέ φησι (Epicurus fr. 355 Usener) τοὺς θεοὺς λόγῳ θεωρητοὺς, οὓς μὲν κατ' ἀριθμόν ὕφεστώτας, οὓς δὲ κατὰ ὁμοειδεῖαν, ἐκ τῆς συνεχοῦς ἐπιρρύσεως τῶν ὁμοίων εἰδῶλων ἐπὶ τὸ αὐτὸ ἀποτετελεσμένων, ἀνθρωποειδεῖς. **Hippolytus Ref.** 1.22.2–3 (Epicurus—) ἐκ δὲ τῶν ἀτόμων συνελθουσῶν γενέσθαι καὶ τὸν θεόν ... (3) τὸν δὲ θεὸν ὁμολογῶν εἶναι αἰδῖον καὶ ἀφθαρτόν φησι μηδενὸς προνοεῖν, καὶ ὅλως πρόνοιαν μὴ εἶναι μηδὲ εἰμαρμένην, ἀλλὰ πάντα κατὰ αὐτοματισμὸν γίνεσθαι. καθῆσθαι γὰρ τὸν θεὸν ἐν τοῖς μετακοσμοῖς οὕτω καλουμένοις ὑπ' αὐτοῦ—ἔξω γάρ τι τοῦ κόσμου οἰκητήριον τοῦ θεοῦ ἔθετο εἶναι, λεγόμενον τὰ μετακόσμια—, ἥδεσθαι τε καὶ ἡσυχάζειν ἐν τῇ ἀκροτάτῃ εὐφροσύνῃ, καὶ (Epicurus RS 1) 'οὔτε αὐτὸν [αὐτὸ Epic. at D.L. V.P. 10.139] πράγματα ἔχειν οὔτε ἄλλω παρέχειν'.

Commentary

A *Witnesses*

(1) This chapter is only recorded in the tradition of P (but see below on Athenagoras). P^B, E and Q record it in full. P^G omits the first paragraph, which connects the chapter to 1.7, and in the next (his first) adds the words γινώσκουσιν ὁμοίως δαίμονας εἶναι καὶ οὐσίας ψυχικὰς, ‘they know that the demons are similarly psychic beings’. Tzetzes’ name-labels are the same, and with P and against Athenagoras he reads σωμάτων, but he actually modifies the doxa so that it means something quite different.

(2) Athenagoras clearly cites the text as found in P 1.8.2, using only the name-label Thales and applying the πρῶτος εὐρέτης motif. The text closely resembles what we find in P, but in the absence of S, it remains unclear whether his source was P or A. See further the comment at ch. 1.7 Commentary A(4).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The modest proximate tradition is limited to a few sentences in Varro (in Augustine), Porphyry and Calcidius.

(2) *Sources.* Among the sources of part of the tradition we may presumably think of the *Epinomis* and of Xenocrates, whose name is not mentioned

although he played an important part in the development of philosophical demonology, going much further than the passage on Eros in Plato's *Symp.* 202d–e. The exegesis of Hesiod's lines on the daemons also played its part. A debate between Stoics and Epicureans will be involved as well. Posidonius' treatise *On heroes and daemons* may have contributed, but we know next to nothing of its contents.

C Chapter Heading

(1) Representative of the umbrella type (περί τοῦ δεινᾶ) that dominates in the *Placita* (see above, ch. 1.1, Commentary C). Here it comprises existence (affirmed and denied) and substance (psychic). It is attested in all our primary witnesses, but not in Ath. Q writes *Über die hohen Kräfte, welche die Griechen 'Daimones' und 'Heroes' nennen*. Equivalents of the Greek terms are not found in Arabic, so Q has to transliterate and explain them. Cf. chs. 2.1[2–3], 3.7[6], 4.11.1[17], 4.12[9], and 4.19[7].

(2) G's inversion of the two terms is interestingly paralleled in the book title of Posidonius cited at section B(2).

D Analysis

a Context

The chapter follows on after 1.7 as an appendix, as stated *disertis verbis* in the authorial comment at §1. Perhaps A's phrase expresses a certain reluctance, understandably in view of his secular preferences. The chapter order 1.7–1.8 itself reflects the often-found hierarchical and sequential series gods–demons–heroes, examples of which are cited at section E(b)§1.

b Number–Order of Lemmata

(1) P^{BEQ} have all three lemmata, while P^G lacks §1 but has §§2–3 in the same order as P^{BEQ}.

(2) The order of §2 and §3 could have been inverted, but this time, in contrast to 1.7, we have the positive view first. There is no need to differ from Diels' order.

c Rationale–Structure of Chapter

Very simple: §1 announces the theme, while §2, attesting a belief in the existence of demons and heroes is diaphonically opposed to §3, which rejects this belief.

d Further Comments

Individual Points

§1 λόγος, ‘account’, here *de facto* means ‘chapter’. On the authorial remark see M–R 2.1.51–52.

§2 Wildberger (2006) 2.502 n. 151 argues that P confused daemons and heroes, since it is odd that the text should speak of evil heroes. Ath, she adds, was not happy with this either so he read ἀνθρώπων. She therefore proposes to emend σωματών to σπουδαίων, but this is not required when the Greek is constructed and translated as we have done.

e Other Evidence

(1) The Plutarchean passages cited section E(b)§2 show that the cluster of name-labels in A (viz., both the authorities in favour of demons and heroes and the Epicureans who are against) is shared with a substantial wider tradition.

(2) The accounts of demonology by Porphyry and Calcidius (references at section E(b) General texts) are among the most extensive ancient sources of information available. On the various issues see Boys-Stones (2018) 296–298.

§1 Authorial comment: **Plato** *Crat.* 397d–e τί οὖν ἂν μετὰ τοῦτο σκοποῖμεν;—δῆλον δὴ ὅτι δαίμονας τε καὶ ἥρωας καὶ ἀνθρώπους {δαίμονας} (cf. below §2). *Resp.* 392a περὶ γὰρ θεῶν ὡς δεῖ λέγεσθαι εἴρηται, καὶ περὶ δαιμόνων τε καὶ ἡρώων καὶ τῶν ἐν Ἄιδου. **Plutarch** *de E* 390E εἰσι γὰρ θεοὶ δῆπου καὶ δαίμονες καὶ ἥρωες, εἴτα μετὰ τούτους τὸ τέταρτον ἀνθρωποὶ γένος, ἔσχατον δὲ καὶ πέμπτον τὸ ἄλογον καὶ θηριῶδες. *Def.Or.* 415B Ἡσίოდος δὲ καθαρώς καὶ διωρισμένως πρῶτος ἐξέθηκε τῶν λογικῶν τέσσαρα γένη, θεοὺς εἴτα δαίμονας εἶθ' ἥρωας τὸ δ' ἐπὶ πᾶσιν ἀνθρώπους, ἐξ ὧν ἔοικε ποιεῖν τὴν μεταβολήν, τοῦ μὲν χρυσοῦ γένους εἰς δαίμονας πολλοὺς κάγαθούς τῶν δ' ἡμιθέων εἰς ἥρωας ἀποκριθέντων. *SR* 1035A ὁ Χρῦσιππος (*SVF* 2.1035) οἶεται δεῖν τῶν λογικῶν πρῶτον ἀκροᾶσθαι τοὺς νέους δεύτερον δὲ τῶν ἡθικῶν μετὰ δὲ ταῦτα τῶν φυσικῶν ὡς ἂν τέλος δὲ τούτοις τὸν περὶ θεῶν λόγον ἔσχατον παραλαμβάνειν. **Eusebius** *PE* 4.5.1 οἱ μὲν δὴ τὴν Ἑλληνικὴν θεολογίαν ἐξηκριβωκότες ... εἰς γένη τέτταρα πάντα τὸν λόγον διαιροῦντες, πρῶτιστα πάντων τὸν πρῶτον ἀφορίσαντες θεὸν εἰδέναι φασὶ τοῦτον εἶναι τὸν ἐπὶ πᾶσι πρῶτόν τε ὄντα καὶ πάντων θεῶν πατέρα τε καὶ βασιλέα, μεθ' ὃν γένος τὸ θεῶν ὑπάρχειν δεύτερον, ἐπόμενον δὲ τὸ δαιμόνων, τὸ δὲ ἡρώων τέταρτον. **Porphyry** *VP.* 38 παρῆναι δὲ περὶ μὲν τοῦ θείου καὶ δαιμονίου καὶ ἡρώου γένους εὐφημον εἶναι. **Iamblichus** *VP.* 146 τὸν περὶ θεῶν λόγον. **Hermias** in *Phdr.* 206.10 τὰ κρεῖττονα γένη, θεοὶ, δαίμονες, ἥρωες.

§2 Thales Pythagoras Plato Stoics: **Pap. Derveni** col. vi. **Plato** *Crat.* 398b–c τοῦτο τοῖνυν παντὸς μᾶλλον λέγει (sc. Hes. *Op.* 122–126, 252–255), ὡς ἐμοὶ δοκεῖ, τοὺς δαίμονας· ὅτι φρόνιμοι καὶ δαήμονες ἦσαν, 'δαίμονας' αὐτοὺς ὠνόμασεν· καὶ ἔν γε τῇ ἀρχαίᾳ τῇ ἡμετέρᾳ φωνῇ αὐτὸ συμβαίνει τὸ ὄνομα. λέγει οὖν καλῶς καὶ οὗτος καὶ ἄλλοι ποιηταὶ πολλοὶ ὅσοι λέγουσιν ὡς, ἐπειδὴν τις ἀγαθὸς ὢν τελευτήσῃ, μεγάλην μοῖραν καὶ τιμὴν ἔχει καὶ (c) γίγνεται δαίμων κατὰ τὴν τῆς φρονήσεως ἐπωνυμίαν. ταύτῃ οὖν τίθεμαι καὶ ἐγὼ {τὸν δαήμονα} πάντ' ἄνδρα ὃς ἂν ἀγαθὸς ᾖ, δαιμόνιον εἶναι καὶ ζῶντα καὶ τελευτήσαντα, καὶ ὁρθῶς 'δαίμονα' καλεῖσθαι. cf. quotation at **Theodoret** *CAG* 7.47 κὰν τῷ Κρατύλῳ (398b–c) δὲ τόνδε τὸν λόγον διεύρυνεν· ἐπαινεῖ γὰρ τὸν Ἡσίοδον καὶ τοὺς ἄλλους γε ποιητάς εἰρηκότας· ὡς ἐπειδὴν τις ἀγαθὸς ὢν τελευτήσῃ, μεγάλην μοῖραν καὶ τιμὴν ἐκεῖ ἔχει, καὶ γίγνεται δαίμων κατὰ τὴν τῆς φρονήσεως ἐπωνυμίαν· ταύτῃ οὖν τίθεμαι καὶ ἐγὼ τὸν δαήμονα ἄνδρα'. **Cicero** *Tim.* 38 *reliquorum autem, quos Graeci δαίμονας appellant, nostri opinor Lares, si modo hoc recte conversum videri potest, et nosse et nuntiare ortum eorum maius est quam ut profiteri nos scire audeamus.* **Plutarch** *Quaest.Rom.* 276E–277A καθάπερ οἱ περὶ Χρῦσιππον (—) (277A) οἶνται φιλόσοφοι φαῦλα δαιμόνια περινοστεῖν, οἷς οἱ θεοὶ δημίους χρώνται (καὶ) κολασταῖς ἐπὶ τοὺς ἀνοσίους καὶ ἀδίκους ἀνθρώπους. *Is.Os.* 360D–E (cited *Eus. PE* 5.5.1) βέλτιον οὖν οἱ τὰ περὶ

τὸν Τυφῶνα καὶ Ὅσιριν καὶ Ἴσιν ἱστορούμενα μήτε θεῶν παθήματα μήτ' ἀνθρώπων, ἀλλὰ δαιμόνων μεγάλων εἶναι (E) νομίζοντες, οὓς καὶ Πλάτων καὶ Πυθαγόρας (—) καὶ Ξενοκράτης (fr. 24 Heinze, 145 Isnardi Parente²) καὶ Χρῦσιππος (SVF 2.1103), ἐπόμενοι τοῖς πάλαι θεολόγοις, ἐρρωμενεστέρους μὲν ἀνθρώπων γεγονέναι λέγουσι καὶ πολὺ τῇ δυνάμει τὴν φύσιν ὑπερφέροντας ἡμῶν, τὸ δὲ θεῖον οὐκ ἀμιγές οὐδ' ἄκρατον ἔχοντας, ἀλλὰ καὶ ψυχῆς φύσει καὶ σώματος αἰσθήσει {ἐν} συνειληχός, ἡδονὴν δεχόμενον καὶ πόνον, καὶ ὅσα ταύταις ἐπιγενόμενα ταῖς μεταβολαῖς πάθη τοὺς μὲν μᾶλλον τοὺς δ' ἦττον ἐπιταράττει. γίνονται γάρ, ὥς ἐν ἀνθρώποις, κὰν δαίμοσιν ἀρετῆς διαφοραὶ καὶ κακίας. Is.Os. 361B–C (also cited Eus. PE 5.5.1) ὁ δὲ Ξενοκράτης (fr. 25 Heinze, 146 Isnardi Parente²) ... εἶναι φύσεις ἐν τῷ περιέχοντι μεγάλας μὲν καὶ ἰσχυράς, δυστρόπους δὲ καὶ σκυθρωπάς, αἱ χαίρουσι τοῖς τοιοῦτοις, καὶ τυγχάνουσαι πρὸς οὐθὲν ἄλλο χεῖρον τρέπονται. τοὺς δὲ χρηστοὺς πάλιν καὶ ἀγαθοὺς ὁ θ' Ἡσίοδος 'ἀγνοὺς δαίμονας' (Op. 122) καὶ 'φύλακας ἀνθρώπων' (Op. 123, 253) προσαγορεύει, 'πλουτοδότας καὶ τοῦτο γέρας βασιλῆον ἔχοντας' (Op. 126). (C) ὁ τε Πλάτων (Symp. 202d–203a) ἐρμηνευτικὸν τὸ τοιοῦτον ὀνομάζει γένος καὶ διακονικὸν ἐν μέσῳ θεῶν καὶ ἀνθρώπων, εὐχὰς μὲν ἐκεῖ καὶ δεήσεις ἀνθρώπων ἀναπέμποντας, ἐκείθεν δὲ μαντεῖα δεῦρο καὶ δόσεις ἀγαθῶν φέροντας. (cited Eus. PE 5.5.2) Ἐμπεδοκλῆς δὲ καὶ δίκας φησὶ διδόναι τοὺς δαίμονας ὧν {ἐν} ἑξάμαρτῳσι καὶ πλημμελήσωσιν (31B15.9–12 DK follow). Def.Or. 431B ὑπολαβὼν δ' ὁ Ἀμμόνιος 'οἶε γὰρ ἑτερόν τι τοὺς 'δαίμονας' (Op. 122) εἶπεν 'ἢ ψυχὰς ὄντας περιπολεῖν καθ' Ἡσίοδον 'ἡέρα ἐσσαμένους' (Op. 125);' Def.Or. 419A (cited Eus. PE 5.17.4) 'ἀλλὰ φαύλους μὲν, ἔφη, 'δαίμονας οὐκ Ἐμπεδοκλῆς (cf. 31B126, B139 DK) μόνον, ὧ Ἡρακλέων, ἀπέλιπεν, ἀλλὰ καὶ Πλάτων καὶ Ξενοκράτης (fr. 24 Heinze, 148 Isnardi Parente²) καὶ Χρῦσιππος (SVF 2.1104), ἔτι δὲ Δημόκριτος (cf. 68B166 DK) εὐχόμενος 'εὐλόγῳ ἐιδώλῳ' τυγχάνειν, ἢ δῆλος ἦν ἕτερα δυστράπελα καὶ μοχθηρὰς γιγνώσκων ἔχοντα προαιρέσεις τινὰς καὶ ὁρμάς'. **Diogenes Laertius** VP. 7.151 (on Stoics, SVF 2.1102) φασὶ δ' εἶναι καὶ τινὰς δαίμονας ἀνθρώπων συμπάθειαν ἔχοντας, ἐπόπτας τῶν ἀνθρωπείων πραγμάτων· καὶ ἥρωας τὰς ὑπολελειμμένας τῶν σπουδαίων ψυχὰς. *Pythagorica Hypomnemata* at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK, cf. Anon. Alexandri p. 236.15–16 Thesleff) at D.L. VP. 8.32 εἶναι τε πάντα τὸν ἄερα ψυχῶν ἔμπλεων· καὶ ταύτας δαίμονάς τε καὶ ἥρωας ὀνομάζεσθαι· καὶ ὑπὸ τούτων πέμπεσθαι ἀνθρώποις τοὺς τ' ὀνειρούς καὶ τὰ σημεῖα νόσους τε, καὶ οὐ μόνον ἀνθρώποις ἀλλὰ καὶ προβάτοις καὶ τοῖς ἄλλοις κτήνεσιν· εἷς τε τούτους γίνεσθαι τοὺς τε καθαρμούς καὶ ἀποτροπιασμούς μαντικὴν τε πᾶσαν καὶ κληδόνας καὶ τὰ ὅμοια. **Apuleius D.Socr.** 148 *daemones sunt genere animalia, ingenio rationabilia, animo passiva, corpore aëria, tempore aeterna*. [cited by Augustine e.g. C.D. 8.16.7–10 Dombart–Kalb; Augustine cited by Thomas Aquinas e.g. in *ii Sent.* dist. 8, qu. 1, art. 1, arg. 1]. *D.Socr.* 152–153 *est et secundo significatu species daemonum animus humanus emeritis stipendiis vitae corpori suo abiurans: hunc vetere Latina lingua reperio Lemurem dictitatum. ex hisce ergo Lemuribus qui posterorum suorum curam sortitus placato et quieto numine domum possidet, Lar dicitur familiaris; qui vero ob adversa vitae merita nullis {bonis} sedibus incerta vagatione ceu quodam exilio punitur, inane tericulamentum bonis hominibus, ceterum malis noxium, id*

genus plerique Larvas perhibent. Plat. 1.206 daemones vero, quos Genios et Lares possumus nuncupare, ministros deorum arbitratur custodesque hominum et interpretes, si quid a diis velint. Sextus Empiricus 9.74 (on Stoics, SVF 2.1105) εἰ οὖν διαμένουσιν αἱ ψυχαί, δαίμοσιν αἱ αὐταὶ γίνονται. Diogenes Laertius V.P. 1.27 (on Thales, 11A1 DK) ἀρχὴν δὲ τῶν πάντων ὕδωρ ὑπεστήσατο, καὶ τὸν κόσμον ἐμψυχον καὶ δαιμόνων πλήρη. 7.151 (on Stoics, SVF 2.1102) φασὶ δ' εἶναι καὶ τινες δαίμονας ἀνθρώπων συμπάθειαν ἔχοντας, ἐπόπτας τῶν ἀνθρωπείων πραγμάτων· καὶ ἥρωας τὰς ὑπολειμμένας τῶν σπουδαίων ψυχάς. Hippolytus Ref. 1.3.1 Ἐμπεδοκλῆς (31A31 DK) μετὰ τούτους γενόμενος καὶ περὶ δαιμόνων φύσεως εἶπε πολλά, ὥς ἀναστρέφονται διοικοῦντες τὰ κατὰ τὴν γῆν, ὄντες πλείστοι. Arnobius of Sicca Adv.Nat. 3.41 Varro (Ant. fr. 209† Cardauns) similiter haesitans (sc. ac Nigidius Figulus) nunc esse illos Manes et ideo Maniam matrem esse cognominatam Larum, nunc aërios rursus deos et heroas (pronuntiat) appellari, nunc

antiquorum sententias sequens Larvas esse (dicit) Lares, quasi quosdam genios et functorum animas mortuorum. Porphyry Abst. 38–39 αὐτὰ δ' αἱ ψυχαὶ δαίμονες μὲν καὶ αὐταί, καχοεργοὶ δ' ἂν εἰκότως λέγοντο. Augustine C.D. 7.6.15–18 Dombart–Kalb (Varro Ant. fr. 226 Cardauns) inter lunae vero gyrum et nimborum ac ventorum cacumina aërias esse animas, sed eas animo, non oculis videri et vocari heroas et lares et genios. Calcidius in Tim. cc. 135–136 erit ergo definitio daemonis talis: daemon est animal rationabile immortale patibile aethereum diligentiam hominibus impertiens [cf. above, Apul. D.Socr. 148; Calc. cited at Thomas Aquinas Quaest. de malo qu. 16, art. 1, arg. 8]. ... reliqui daemones neque ita probabiles neque ita commodi nec invisibiles semper, sed interdum contemplabiles, cum in diversas convertuntur figuras. exsanguium quoque simulacrorum umbraticas formas induuntur obesi corporis illuviem trahentes, saepe etiam scelerum et impietatis ultores iuxta iustitiae divinae sanctionem (sc. sunt daemones). ultro etiam plerumque laedunt; tanguntur enim ex vicinia terrae terrena libidine habentque nimiam cum silva communionem, quam malignam animam veteres vocabant. ... (136) plerique tamen ex Platonis magisterio daemones putant animas corporeo munere liberatas, laudabilium quoque virorum aethereos daemones, improborum vero nocentes, easdemque animas anno demum millesimo terrenum corpus resumere, Empedoclesque non aliter longaevos daemones fieri has animas putat (sc. 31B15.5 δαίμονες οἷτε μακράϊωνος λελάχασι βίοιο), Pythagoras etiam in suis Aureis versibus: 'corpore deposito cum liber ad aethera perges, evades hominem factus deus aetheris almi' (sc. Vers.Aur. 70–71 ἦν δ' ἀπολείψας σῶμα ἐς αἰθέρ' ἐλεύθερον ἔλθης, / ἔσσεαι ἀθάνατος θεὸς ἄμβροτος, οὐκέτι θνητός). Augustine Haeres. c. 86.24–25 Vander Plaetse–Beukers dicit sane ipse (sc. Tertullian) animas hominum pessimas post mortem in daemones verti. C.D. 9.11.1–3 Dombart–Kalb (~ tit.) De opinione Platoniorum, qua putant animas hominum daemones esse post corpora. dicit quidem (see above, Apul. D.Socr. 152–153) et animas hominum daemones esse et ex hominibus fieri lares, si boni meriti sunt; lemures, si mali, seu larvas; manes autem deos dici, si incertum est bonorum eos seu malorum esse meritorum. C.D.

10.9.37–45 Dombart–Kalb (Porphyry 293F Smith). **Proclus** in *Tim.* 1.76.30–77.23 (Numenius fr. 37 Des Places). **Hermias** in *Phaedr.* p. 213.14–16 ‘εἰ οὖν, φησὶν (cf. *Phdr.* 258e), ἴδοιεν οἱ τέττιγες οἱ ὑπὲρ κεφαλῆς ἡμῶν’ ὄντες, τουτέστιν αἱ θεαῖαι ψυχαὶ ἦτοι δαίμονες ἢ ἥρωες ἢ θεοὶ οἱ ὑπὲρ κεφαλῆς ἡμῶν ὄντες καὶ ὑπὲρ ἡμᾶς. *SVF* 2.1101–1105. **Plutarch** *Def.Or.* 420D (Epicurus fr. 394* Usener, *Hermarchus* fr. 50 (dubium) Longo Auricchio) λεγόντων πρὸς τοὺς εἰσαγομένους ὑπ’ Ἐμπεδοκλέους (—) δαίμονας, ὥς οὐ δυνατόν εἶναι φαύλους καὶ ἀμαρτητικοὺς ὄντας μακαρίους καὶ μακραίωνας εἶναι, πολλὴν τυφλότητα τῆς κακίας ἐχούσης καὶ τὸ περιπτωτικὸν τοῖς ἀναιρετικοῖς, εὐηθές ἐστιν.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The chapter is well attested in all three major witnesses.

(1) P^B, E and Q all record the same six doxai. G, however, does not include this chapter in the early part of his compendium (he uses other material in ch. 18 on the δραστική αἰτία). Ps uses only the heading.

(2) S devotes a separate chapter to the subject of matter, interweaving all of P's doxai with other material from AD and elsewhere.

(a) He commences the chapter with the definition also found as the first doxa in P, followed by a quote from Hermes Trismegistus.

(b) Next he records three doxai from A, which correspond to the next three lemmata in P. But for the third he has only the name-label Πλάτων, not Ἀριστοτέλης καὶ Πλάτων as in P, cf. *DG* 46, 64; S undoubtedly omits the name-label Aristotle because as a replacement he cites (as so often) a passage from AD, i.e. fr. 2 Diels, which p. 132.13–14 contains a phrase analogous to the *Placita* lemma, namely καὶ ἡ μὲν οὐ σῶμα, σωματική δέ. So here we have a case of P and T (for the latter see immediately below at section A(3)) in agreement against S, who has preserved the name-label but swapped the Aëtian doxa for an abstract from another source (cf. above, *General Introduction*, section 2.4), and below, ch. 1.28 Commentary A(1), ch. 2.20 Commentary A(2), and ch. 4.2 Commentary A(2)). The Platonic doxa is followed by a relevant quote from the *Timaeus* (50b–d).

(c) There follow three texts attributed to Aristotle, Zeno and Chrysippus that Diels persuasively identified as derived from AD. All three commence with the name in the genitive and not as part of the opening sentence, i.e. contrary to the style of the *Placita*.

(d) S then records the final two anonymous doxai in P, adding a further doxa attributed to the Stoics that is not found in P.

(e) The chapter concludes with another excerpt from AD with views of the Stoic Posidonius and a final quote from Plato's *Parmenides* (144b).

Though S has made some changes and interpolated other material his six doxai are basically the same as those of P, and they occur in the same order. This suggests that S preserved the microstructure of the chapter he copied out, and P refrained from abridging it.

(3) The main issue of the chapter, namely the opposition between a view of matter as continuous and one of matter as discrete, is anticipated in the cluster of anticipations in CAG 1.63, see ch. 1.3 Commentary A(5)(a). At M–R 1.274 this announcement is taken to pertain to ch. 1.3, but a hint at the excerpts from the chapter at CAG 4.13 is more likely. The reference to the earth as matter (οἱ μὲν ἐκ γῆς) anticipates Xenophanes at CAG 4.5 rather than his presence at ch. 1.3.1. T may have seen this view as particularly absurd, so worthy of being singled out. The fuller excerpts from the chapter are found in the cosmological Book 4, bearing the title ‘On matter and cosmos’ (T continues with excerpts from A 1.18 and a series of chapters of A Book 2). He paraphrases it at some length, adding three name-labels not found in P and S: Anaxagoras, Metrodorus, and Epicurus. In view of the agreement between P and S he may have added these himself (cf. M–R 1.287), though it is equally likely that he excerpted them from A (cf. below section D(d) §§2–3, and ch. 1.25, Commentary A). The other doxai he records can all be found in P and S, with one exception. He has a separate doxa for Aristotle (not exactly paralleled in E), no doubt based on the lemma of which P has epitomised the doxa away, keeping only the name-label and moving it to §4. This is one of the five significant cases of P and T in agreement against S (see General Introduction, section 2.5 with n. 42). S has replaced this Aristotelian lemma with an excerpt from AD (fr. 2 Diels). What is more, §8 (Stoics), not in P, is in both S and T, which proves again that T excerpted the source shared with S, namely A. Cf. Diels *DG* 46, and below ch. 1.18, Commentary A(3), ch. 1.27, Commentary A(2), and ch. 4.3 Commentary A(5).

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. Parallels are found, as is quite often the case, in AD and Diogenes Laertius. For the wider doxographical tradition we may cite Aristotle, while Calcidius' lengthy discussion of matter is of particular importance.

(2) *Sources*. Among the ultimate sources we recognize the *Timaeus* and, for certain phrases, Aristotle's *De generatione et corruptione*. At DG 215 Diels includes A 1.9.1 among his sparse examples of a close reading—according to him by A—of the text of Aristotle's *pragmateiai* ([i]psius Aristotelis doctrina ... ex accurata eius lectione hausta'; cf. chs. 1.23.2, 1.29.2, 4.8.6, 4.9.3, and 5.3.1 at Commentary B). He saw that the anonymous definition ὕλη ἐστὶ τὸ ὑποκείμενον πάσῃ γενέσει καὶ φθορᾷ καὶ ταῖς ἄλλαις μεταβολαῖς has been abstracted from Arist. GC 1.4 320a2–4 ἐστὶ δὲ ὕλη μάλιστα μὲν καὶ κυρίως τὸ ὑποκείμενον γενέσεως καὶ φθορᾶς δεκτικόν, τρόπον δέ τινα καὶ τὸ ταῖς ἄλλαις μεταβολαῖς. At ch. 1.3.20 its first part (but without πάσῃ), ὕλη δὲ τὸ ὑποκείμενον πρῶτον γενέσει καὶ φθορᾷ, is attributed to Socrates and Plato. This parallel underlines its generality. The doxa of §3 (perhaps somewhat surprisingly) derives from an important passage in *Met.* A, see section E(b)§3.

C Chapter Heading

Of the standard umbrella type 'about x', περὶ τοῦ δεῖνα. The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. This in principle covers more than one category and/or question-type; see above, ch. 1.3 Commentary C. Here it comprises substance, quality and relation. It is attested in both P and S, and paralleled as an embedded heading in Alcinous, as a heading in Calcidius, and as part of the title of treatises on *materia medica* by doctors.

D Analysis

a Context

This is the first of the long series of chapters (1.9–29) in Book 1 concerned with the foundational concepts of theoretical physics. They follow on after the introductory chapters (which include those dealing with the principles and elements, the generation of the cosmos and the number of kosmoi, and the divine). Solmsen (1960) 51 points out that already before Plato 'a set of physical questions had become *detached* from the body of cosmological subjects: ... Aristotle has a goodly number of subjects that find a more suitable place in physics than in cosmology' (our italics). The Stoics had such subjects too; see above, General Introduction 2.8.

(1) *Hinge function*. More particularly it is connected to the next, 1.10 'On idea', the link between matter and transcendental Form (plus form-in-matter) revealing a Middle Platonist background. A backward glance at chs. 1.6–7 adds the divinity, thus completing the Middle Platonist triad of principles (cf. Lachaud 1993, 89 n. 9; see above, ch. 1.3 Commentary D(a) and (d)§20, and also M–R 2.1.51, 2.1.69). In A we thus have God and then, at some distance, matter

followed by idea. This hinge function of ch. 1.9 nicely links the series of introductory chapters with the more theoretical series. In Apuleius (*Plat.* 190–193) the order is the same as in A, but in Alcinous it is the ascending series matter (*Did.* c. 8)—idea (c. 9)—God (c. 10). Philoponus in *Phys.* 3.1–8 points out that Aristotle in *Physics* Book 1 treats matter and form but matter more than form, and in Book 2 form more than matter. We may add that the divinity is at issue only much later in the *Physics*.

(2) *Compartmentalization*. Actually the rather meticulous division of themes over chs. 1.9 and 1.10 is another instance of the didactic compartmentalization so often found in A (think e.g. of the series of six rather short chs. on the earth, 3.9–14, where themes are separated that were treated together by Aristotle). Even so, in ch. 1.9 the εἶδη are already mentioned in §5 because after all matter receives them, while in ch. 1.10 ὕλαι are recalled in 1.10.1 because they are moulded by the idea, and ὕλη in 1.10.2 and 1.10.4 as what ideas and forms are either separate from, or not. Such didactic disassembling holds a fortiori for the dispersed treatment, several chapters down, of bodies in ch. 1.12, minimal parts in ch. 1.13 and the division (infinite or not) of bodies in ch. 1.16, subjects included for instance by Calcidius as ingredients of the part of his discussion of matter that is parallel to ch. 1.9.

b Number–Order of Lemmata

(1) There must be a separate Aristotelian lemma, as attested in T §5 and confirmed by the residual name-label in P §4. The order in S makes it likely that this lemma followed the Plato lemma and that P coalesced the two.

(2) We have split up §§6–7 in accordance with our usual practice. P has six, S seven and T five lemmata. §§3–5 are shared by all three sources, S, P and T; §1, §6 and §7 are shared by P and S, §5 by P and T, and §8 by S and T. The relative order is the same throughout, so should not be changed. The Stoics are mentioned in two lemmata, a feature occasionally also encountered elsewhere (e.g. Stoics at ch. 1.11.5 and 1.11.6, cf. Xenophanes at chs. 2.20.2 and 2.20.5, Parmenides at chs. 2.20.3 and 2.20.15).

c Rationale–Structure of Chapter

(1) *Definition*. Like seven other chapters that follow in Books 1, 2 and 3 our chapter begins with an anonymous definition of the technical meaning of a word or concept, in this way providing a preliminary explanation of the word or concept that is generally acceptable (see below at sections D(d)§1, D(e)2 and E(b)§1). These other chapters are 1.10 ‘On idea’, 1.11 ‘On causes’, 1.12 ‘On bodies’, 1.14 ‘On shapes’, 1.15 ‘On colours’, 2.32, ‘On the year, how great the time of (the revolution of) each of the planets is, and what the Great year is’, and ch. 3.1,

‘On the circle of the Milky Way’. In ch. 1.23 the technical definition of κίνησις, which in everyday language is not connected with ‘matter’, is attributed to Pythagoras and Plato. In ch. 2.1 the technical definition of κόσμος, which in common parlance means ‘order’, or ‘ornament’, is attributed to Pythagoras. These definitions, though signed, serve the same introductory purpose. Note that the anonymous definition of the present chapter derives straight from Aristotle, whose name-label is purposely omitted.

A definition which explains the meaning of a term is called *nominal*. This is already and also first so in Aristotle, who introduces the designation ὀνοματώδης, varieties of which became common usage. It can also be designated as a ὑπογραφή or ‘delineation’; in this sense this term, which came to be widely used as well, may be of Stoic descent (once Aristotle already uses the verb in this context, *de An.* 2.1 413a9–10). Another designation, presumably also of Stoic descent but also widely used, is ‘conceptual’ (ἐννοηματικός) definition. For Neoplatonist terminology see e.g. Elias in *Isag.* 8.12–13 ἔκτος (sc. definition of ‘philosophy’) ὁ ἐκ τῆς ἐτυμολογίας ὁ λέγων φίλῃα σοφίας, or David *Prolog.* 21.21 ἐκ τοῦ ὀνόματος ὅρον. The nominal sort has to be distinguished from the kind that states the ‘essence’ (οὐσιώδης, as in Aristotle), or the ‘particular individuality of something’ (as according to Chrysippus). In later literature such a proper definition is called a ὅρος τέλειος. Today this kind of definition is called *real*.

The *technical* meaning of the ‘name’ ὕλη in philosophical prose has to be explained, because in ordinary language it just means ‘wood’. It is assumed that a nominal or conceptual definition is generally acceptable, while conflict ensues when schools or particular individuals formulate their various definitions of the essence. The definitions proposed by the various authorities and schools that follow in the present chapter differ from each other, yet to some extent still agree with the definition at the beginning.

In the *Placita* there is an explicit reminder of the role of the preliminary definition in an added note in ch. 1.11.1: ‘it is sufficient (to do this) in the manner of a *hypographe*’, or ‘sketch’ (ἀρκεῖ γὰρ ὑπογραφικῶς). This is the only case where this clarification survives, and it does so in S’s fuller version not in P’s *Epitome*. Another definition found at the beginning of a chapter, also extant only in S, is likewise characterized as preliminary, this time by means of the word προηγούμενως (A 1.15.1, ‘Colour is the primarily visible quality of a body.’). A similar though not anonymous definition is found at the beginning of ch. 1.23 ‘On motion’. This definition too is elucidated by a comment, again extant only in S, namely: ‘this is the shared’ (or ‘common’) ‘definition of every (form of) motion’.

One may well wonder why so few *Placita* chapters begin with a preliminary definition. Presumably the reason is that chs. 1.9–14 are concerned with

abstract or second-order concepts that are rather far from ordinary language and experience, so actually need some sort of introductory presentation. The meaning of terms like ‘mixture’ (as used in ch. 1.17), or ‘sun’ (in ch. 2.20) and ‘moon’ (in ch. 2.25), to cite but a few examples, is not in need of elucidation, but as we have noticed in everyday parlance ὕλη means ‘wood’ not ‘matter’, so its nominal meaning in the specific context of ch. 1.9 has to be cited *disertis verbis*.

For species of definition see further below, section (e)(2) and section E(b).

(1) For preliminary accounts of definition in the *Placita* see M–R 2.1.32–33 and 246, index s.v. definition.

Lebedev (2016) 600–601 claims that each of the more than one hundred and thirty chapters in the source excerpted by P and S began with an ‘apodictic authorial definition’, as he calls it, of which only eight are now extant in P and S, plus perhaps two more found only in S alone (ibid., 604). But the extant instances are not ‘apodictic’ but nominal. What is more, given that P and S excerpted their common source independently, the possibility that out of much more than one hundred definitions they would select exactly the same eight examples is almost nil, as Edward Jeremiah elegantly proves in his paper ‘Statistical Explorations of the *Placita* of Aëtius’ at M–R 4. 295–297.

(2) *Diaphoniae*. The main diaphonia of the chapter’s contents, paralleled elsewhere, seems to be between those who posit a flexible and undetermined but determinable matter and those who posit an impassible matter, as in §2 and §3. More particularly, the *majority tradition* comprising the two main Successions (from Thales and Pythagoras) in §1 is opposed to the Atomist line in §2 (and by implication to §7 too), just as is explicitly the case in ch. 1.16.1–2. In ch. 16 the Stoics are not mentioned, but the entities line, surface, threedimensional, body, place, and time, listed ch. 1.16.1 as infinitely divisible, are Stoic incorporeals. We note that the atomism of the Pythagorean Ecphantus (chs. 1.3.17 and 2.3.3, see Commentary D(d)§17) is not taken into account, just as at ch. 1.16.1.

The opposition between corporeal and incorporeal provides a supplementary contrast, which however seems to be more a formal matter, or one of words, than of content. The ἀσώματον void next to matter (the atom) in §3 cannot itself count as matter, but is still opposed to (on a gliding scale) the σωματοειδῆ matter of §4, the σωματικὴ matter of §5, and the σῶμα of §6 and §8. Within the second horn of this opposition the more reserved or restricted terms σωματοειδῆ of §4 and σωματικὴν of §5 are distinguished from the more resolute σῶμα of §6 and §8. A third distinction, interesting but difficult, between the monists of §6 and the pluralists of §7 is that matter according to the former is ‘no longer without figure’ (οὐκέτι ἄμορφον), whereas that of the latter is ‘without figure’ (ἄμορφον).

Presumably a fine distinction is at issue between ‘figure’ (μορφή) in the sense of ‘quality’ (fire being hot, white; earth cold, black etc.) on the one hand and σχῆμα in the sense of ‘a surface or outline or a limit of a body’ on the other, as at 1.14.1. For atoms—and presumably also ‘partless’ particles—do have such shapes, as is confirmed within the *Placita* universe at ch. 1.14.4, οἱ ἀπὸ Λευκίππου τὰ ἄτομα πολυσχήμονα. Thus it is ἄμορφον and ἄποιον, but not ἀσχημάτιστον, to use the terminology of §3.

On the structure and paragraphs of this chapter see also the comments of White (2007) 41–49 (who discusses the entire chapter in S) and Gourinat (2011) 160–161.

d Further Comments

Individual Points

§1 That the anonymous definition is in fact one of Aristotle’s is understandable, because it was Aristotle who first gave the technical meaning of ‘matter’ to the word ὕλη which has the basic meaning ‘wood’. As to contents it agrees rather well with that of ‘idea’ at ch. 1.10.1 and the Plato lemma (ch. 1.10.2) of the next chapter.

§2 ‘Thales and Pythagoras and their followers, I mean those (philosophers) going down to the Stoics together with Heraclitus’: a brief reference to the Ionian and Italic Successions (see at ch. 1.3 above, Commentary B, D(a), (c), (d)§6 and d§20[142–143]), highlighting the opposition to atomism of these two main lines, cf. above, section D(d)(2). We have noticed that S considerably abridges this chapter, also as to its information about the Successions, so it is quite unlikely he added extra information this time. The Stoics belong with the Ionic line, and Heraclitus, as is so often the case, has been coupled with them (as in A at chs. 2.17.4 and 5.23.1 Ἡράκλειτος καὶ οἱ Στωικοί). The name-label ‘Heraclitus’ is confirmed for A by T and S against P, where it is absent: further confirmation of the importance of the T,S source for a lemma cited in all three witnesses. Possibly T’s extra name-label ‘Anaxagoras’ should also be included, because the infinite divisibility of his material principles distinguishes him from the Atomists. Diels, in the index nominum s.v. Anaxagoras, *DG* 661, refers to this passage as ‘de materia A I 9 2 (307 t^b 3)’, so accepts the name-label for A.

The Stoic material cited at section E(a)§2 has caused difficulties, esp. the Posidonius text which however should be read in the light of Calcidius in *Tim.* c. 290 (*SVF* 1.86); see Kidd (1988) 369–371. In our view there is no need to interfere with AD’s text; translate ‘the substance that exists according to subsistence differs from matter only conceptually’. There is no trace of this subtle rider in A.

§3 T's extra name-labels Metrodorus and Epicurus would make excellent company for P's and S's Democritus. In the index nominum s.v. Metrodorus, *DG* 687, and s.v. Epicurus, *DG* 679, Diels each time refers to this passage as 'τὰ πρῶτα ἀπαθῆ A I 9 2 (308 t^b 2)', so accepts the name-labels for A.

§4 This lemma, though ultimately based on the *Timaeus*, shows the clear influence of early Middle Platonism. Of the four α-privative terms used of matter only one is found in *Tim.* 48–52, i.e. ἄμορφος at 50d7. For the other three terms see the parallels cited in section E(a)§4 and section E(b)§4 (originally ἄποιος seems to be Stoic). All four terms are found at Alcinous *Did.* 8, p. 162.29–36 H. The qualifications *ad finem*, also paralleled at Alcinous, loc. cit., derive from the *Timaeus*: δεξαμενήν (53a, cf. 51a πανδεχές), τιθήνην (49a), ἐκμαγεῖον (50c), and μητέρα (50d). Like §1 this lemma pertains to both matter in itself (explicitly: ὅσον ἐπὶ τῇ ἰδίᾳ φύσει) and matter in relation to something else. For the distinction cf. Alcinous *Did.* c. 8, p. 162.29–36 H., cited section E(b)§4, who mentions the relation to something else first, and what matter is in itself (αὐτὴν δὲ καθ' αὐτήν) next.

§5 *Pace AD* the doctrine is not Aristotelian. The question, much discussed today, of the content and status of Aristotle's doctrine of (prime?) matter is not explicitly at issue in our chapter

The verb κέκληκεν is almost certainly an addition by T. It is only found in A at 2.7.1 (κεκλήκαμεν). But in T it is very common, e.g. at 3.104, 4.35, 5.13, 5.17–18, 5.24, 6.13–15 etc.

e Other Evidence

(1) Although A, as usual, endeavours to highlight the differences, the doxographical parallels as well as his own lemmata show that some of these doxai (§1, §2, §4) are quite similar and in reality differ only in minor respects. The background seems to be a Stoic-Aristotelian-Platonic κοινή, as is clear from the parallels cited at section E(b). Of indubitable interest in our context is the parallel account, three to four centuries later, of Calcidius in *Tim.* cc. 275–282 (not counting ch. 276 on the *Hebraei* and the extensive discussion of Aristotle, Pythagoras and Plato chs. 283 ff.). Calcidius treats the same contrast between the partisans of undetermined and those of (more) determined matter (name-labels included). This account comprises a detailed overview of the materialist monists of ch. 1.9.6 and some others, not all of which are relevant. This has been achieved by the incorporation of material paralleled in A's chapter on the principles, 1.3, enriched with evidence from a tradition close to Aristotle's account in *Metaphysics* A (see Waszink's edition of Calcidius in app. ad loc., and esp. Van Winden 1959, 71–74): it was often rewarding to leave the *rivuli* and to return to (intermediary sources closer to) the *fontes*. The inclusion of the monists in A

and Calcidius was perhaps originally inspired by Plato's remark on the στοιχεῖα at *Tim.* 48b, cited section E(b)§6. What we have here is a good example of the close relationship that occasionally obtains between doxography and Commentary literature, in this case the *Placita* and Calcidius in *Timaem*.

(2) *Definition: species and uses.* A passage in Sextus Empiricus and a quotation of Porphyry (F 70 Smith at Simp. in *Cat.* 213.10–28, cf. Barnes 2003, 57–60) that does not depend on Sextus (both cited below at *Textus alii II*, §1) deal with the distinction between conceptual, or nominal, and strict or essential definitions. Porphyry tells us that 'the conceptual definitions are agreed upon in common (κοινῇ—cf. ch. 1.21.1 πάσης κινήσεως κοινὸς ὅρος) by all, and are the same', and that 'the essential definitions differ from each other according to the school that propounds them, and are contradicted by those who hold a different opinion'. The latter is confirmed in the passage of Sextus, according to whom people become involved in 'endless diaphonia' as soon as they try to establish the definition of the essence.

Most likely this distinction goes back to Aristotle's recommendations at esp. *APo.* 2.10, according to which research may commence with a definition that provides a first impression of the meaning of a word, or 'name' or 'name-like expression', before one tries to find out whether the thing meant exists, and before one tries to determine what the definition of its essence (τὸ τί ἐστι, or οὐσία) should be: nominal definition as distinguished from essential definition. A clear explanation is provided by Themistius ad loc., in *APo.* 51.3–13. Aristotle expresses this distinction more colloquially (paralleled in other authors) as one between presenting something 'in outline' (τύπῳ) rather than—or eventually before—stating 'the exact account', or 'definition' (τὸν ἀκριβῆ λόγον), e.g. *Top.* 1.1 101a18–24: 'Let the above be a description in outline of the different kinds of reasoning, ... since we do not propose to give the exact definition of any of them but merely wish to describe them in outline (τύπῳ), considering it quite enough, in accordance with the method we have set before us, to be able to recognize each of them in some way or other' (trans. Forster, LCL). For common doxai or doxai shared by most people or by members of a group see e.g. *Arist. Phys.* 1.4 187a26–29, *Met.* B.2 996b27–29, or Theophrastus *Sens.* 37.

For the difference between ὅρος and ὑπογραφή in Stoicism see Antipater fr. *SVF* 3.23 at Diogenes Laertius *V.P.* 7.60, where the latter is *inter alia* described as 'a statement that introduces one in a rough way (τυπωδῶς) to the states of affairs'; cf. ps.Galen *Def.Med.* 19.349.6–350.2 K. (*SVF* 2.227). The Stoic distinction between the study 'of what each existing thing is, and what it is called' (Diogenes Laertius *V.P.* 7.83) is also pertinent. Clement of Alexandria *Strom.* 8.2.3.3–4 recommends starting from the meaning 'of a term' that is agreed (ἐκ τῆς προσηγορίας) among all those speaking the same language. The next

step is 'to inquire precisely about its nature, what this is' (ζητητέον τούτου τὴν φύσιν ἀκριβῶς, ὅποια τίς ἐστίν). Here 'nature', φύσις, is clearly equivalent to οὐσία, 'essence'. Plotinus *Enn.* 3.7.[45].1 provides an illuminating example of this approach by first providing preliminary definitions of time and eternity (the theme of the treatise), and next listing the plurality of views of the ancients to be scrutinized.

Discussing the meaning and reference of the term κρίσις, Gal. *Di.Dec.* 9.773.14–16 K. argues that one should begin with what can be understood 'from the word's meaning' (ἐκ τῆς προσηγορίας) before giving an account of 'the matter itself' (περὶ πράγματος αὐτοῦ). See also *Ars Med.* 1.4, p. 275.8–15 Boudon, 1.306.9–15 K. On the first page of the *De difficultate respirationis* (7.753.1–7 K.) he advises us that the 'name' (τοῦνομα) of the phenomenon to be discussed, δύσπνοια, shows that it applies to damaged respiration, but that its many varieties, their causes, or how one is to diagnose these cannot be learned 'from the name' (ἐκ τῆς προσηγορίας), but will be only become clear from 'the nature of respiration itself' (ἡ φύσις αὐτῇ τῆς ἀναπνοῆς). He is in fact very much aware of the doctrinaire differences between essential definitions upheld by various schools of thought whenever there is no agreement about the essence, or substance. See for instance his account at *Diff.Puls.* 8.703.18–704.14 K. of the particular definitions of the essence of the pulse of the Erasistrateans and Herophileans and all the other sects with the conceptual definition accepted by everyone (also cited below at section E(b, §1)). For his part, he argues that an essential definition (to be established or accepted) should agree with the conceptual definition, *Diff.Puls.* 8.708.8–14 K.

The distinction is also attested by Alexander of Aphrodisias *de Fat.* 165.15–19, though his approach is different. Instead of mentioning 'a common definition agreed by all', contrasting with 'definitions upheld by various schools', Alexander speaks of 'the preconception of men' (ἡ τῶν ἀνθρώπων ... πρόληψις) and 'the *common* nature of men, in accordance with which they hold the same opinions on certain subjects' (ἡ κοινή τῶν ἀνθρώπων φύσις, καθ' ἣν περὶ τινων ὁμοδοξοῦσιν ἀλλήλοις), as contrasting with 'being compelled to different positions according to certain opinions already laid down, through their desire to preserve consistency as to these doxai' (διὰ τινας προκαταβεβλημένας δόξας ὑφ' αὐτῶν διὰ τὸ σῶζειν βούλεσθαι τὴν πρὸς αὐτάς ἀκολουθεῖν ἄλλως ἀναγκάζονται λέγειν). This common and natural preconception tells us that fate 'is something and is the cause of some things', i.e. is relevant for the question types of existence and essence, and for the meaning of the word (i.e. for its conceptual or preliminary or nominal definition). For the latter cf. *in Met.* 5.25–27: 'Aristotle says that experts and wise men differ from practitioners in respect of knowledge, and establishes this on the basis of the *common* preconception, for according

to common parlance we call wise those who know' (τοῦτο συστήσας ἐκ τῆς κοινῆς προλήψεως, σοφοὺς γὰρ τοὺς εἰδότας καλεῖν πᾶσιν ἐν χρήσει). 'But as to *what* fate is and where it is located, the common preconception of men is no longer sufficient.' An inventory of conflicting views follows. Alexander concludes that 'On account of this *diaphonia* it is necessary for philosophers to enquire concerning fate, not whether it exists, but what it is' etc. (*de Fato* c. 2, p. 165.15–166.15 tr. Sharples, slightly modified; full text below at ch. 1.27, section E(a) General texts).

The Neoplatonist *Prolegomena* to Porphyry's *Isagoge* and the so-called *Commentaria in Dionysium Thracem* provide ample information on the definitions of 'definition'. So does Marius Victorinus *De definitionibus* 16.14–29.2 (cited below, section E(b)§1 Species of definition), who lists and describes no less than fifteen different species, though species two to fourteen are in fact conceptual definitions, see Pronay (1997) 228. Victorinus is excerpted by Cassiodorus *Inst.* 2.14 (partly cited *ibid.*), who in his turn is excerpted by Isidore of Seville *Etym.* 2.29.1–16, cf. Stangl (1888) 33, appar. testim. On lost Greek treatises as Victorinus' sources for these fifteen species see the discussion at Pronay (1997) 21–22.

Galen's Aristotelian distinction between 'Wort- und Sach-Definition' is already mentioned by Prantl (1855) 575; see now also Chiaradonna (2009) 62–66 and Hood (2010). On the 'signification of names' in this context see Charles (2000) 78–95, as well as Demoss–Devereux (1988) and Deslauriers (2007) 68–78 on 'nominal definition' (λόγος ὀνοματώδης) in Aristotle. On Stoic doctrines of definition see Rieth (1933) 36–54, 276–180, Long–Sedley (1987) 1.190–194, Brittain (2005), who also collects examples of actual Stoic definitions of various types, but works out a perhaps too intricate classification, Chiaradonna (2007) 215–225, and Crivelli (2010). On conceptual and substantial definition see Kotzia-Panteli (2000), who fails to mention the Stoic ὑπογραφή. For later Platonism and the Arabs see Hein (1985) 72–87. On definition in the *Placita* see also M–R 2.1.246, index nominum et rerum s.v. definition(s), and below, chs. 1.11, 1.15, and 1.23, all at Commentary D(d).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

Material from this chapter is found only in P and S. It is not utilized by T, who in CAG 4.14 jumps from the subject of 'matter' (A 1.9) to that of 'the void' (A 1.18). The early witness Athenagoras refers only to the title, which he may have derived from either A or P (or indeed elsewhere).

(1) The chapter is recorded by all four main witnesses to the tradition of P, who all write out the same four doxai (with some abridgement in G). It is the last chapter in Book 1 that E writes out. Ps again uses only the heading. Exceptionally P is also written out in the late 15th cent. paroemiographer Arsenius, who clearly copied his text verbatim from E, not from a ms. of P^B, but is a witness all the same and provides evidence for interest in doxography in unexpected quarters, perhaps because of the surmised theological aspect. P is in a position to abridge the Pythagoras doxa preserved in S away because the remaining doxai with name-labels amount to a diaphonic series that is sufficient and clear.

(2) S has a brief chapter on the ideas (plural), 1.12. He commences with the same definition as found at the beginning of P's chapter. It is followed by a doxa on Pythagoras that as we saw is not found in P. Thereafter he includes long excerpts from AD for Aristotle, Plato (followed by a quote, *Parm.* 132c–d), and Zeno. He thus does not include the final three doxai preserved in P. They have plainly been replaced by the material taken from AD.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* A clue to the proximate tradition of at least part of this chapter is given by the terse phrase at §1[2], *αἰτία τῶν οἷα ἐστὶν αὐτῇ* (left out by P and his tradition but extant in S). The only parallels for the phrase are provided by slightly longer passages in Arius Didymus and Alcinous: Arius Didymus fr. 1 Diels (at E *PE* 11.23.5 and at S 1.12.2a, p. 136.9–10 Wachsmuth) *αἰτίαν καὶ ἀρχὴν τοῦ ἑκάστων εἶναι τοιοῦτον, οἷα ἐστὶν αὐτῇ*, and Alcinous *Did.* c. 12, p. 167.6–9 H. *αἰτίας (καὶ) ἀρχῆς τοῦ ἑκάστων εἶναι τοιοῦτον, οἷα ἐστὶν αὐτῇ*. Of these Arius' version comes closest. A's cryptic phrase can only be fully understood with the support of these two parallels. Accordingly, the Aetian version must be an abstract from the source represented by Arius Didymus and Alcinous. (We cannot go into the subsidiary and much-debated question of whether and to what extent Arius is the source of Alcinous, or conversely. Göransson (1995) 105–136 studies the *Didascalicus* qua 'work of many sources'; Algra (2018) plausibly argues that Alcinous is the source of Arius.) The 'natural kinds' (τῶν κατὰ φύσιν ἐχόντων) derive from the definition of Xenocrates fr. 30 Heinze (14 Isnardi Parente²) as attributed in Proclus, cited section E(b)§1 (with anonymous parallels in Seneca, Alcinous, Diogenes Laertius and Calcidius—the attribution to Xenocrates is not certain). The formula τῆς τῶν αἰσθητῶν ὑποστάσεως is only paralleled in Sextus Empiricus, where it is found several times, e.g. *M.* 8.187.

(2) *Sources.* The ultimate sources will be works of Plato, Aristotle, and some Stoics.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖνα. The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. It is capable of comprising an implicit reference to the 'idea' both in itself (question type/category of οὐσία) and in relation to matter and visible things (category of πρὸς τι). It is paralleled as a book title for Xenocrates, Aristotle, Theophrastus and Heraclides Ponticus, and also as an embedded heading.

D *Analysis*

a Context

This is the second of the long series of chapters in Book 1 that are concerned with the foundational concepts of theoretical physics. More particularly the present chapter is connected to the previous one, 1.9 ‘On matter’ (*ubi vide* for more details), as the link between transcendental Form (plus form-in-matter) and matter reveals a (Middle) Platonist background. A backward glance at chs. 1.6–7 and the divine mind of §3 plus the implied absence of God in §4 add the divinity, thus completing the triad of principles for which see above at ch. 1.3, Commentary D(d)§20, and chs. 1.6 and 1.7, both times at Commentary D(a). The separation of the theme of the present chapter (and the previous one, ‘On matter’) from that of the next, 1.11 ‘On causes’, is didactic in the manner of the *Placita*. Matter and ἰδέα as well as εἶδος are causes too, as is clear from the prepositional formulas used in ch. 1.12. Compare the use of these formulas in Alcinous’ chapter on the idea, *Did.* 9 (so not separately). There is a good deal of system in the way that this block of three chapters is ordered.

b Number–Order of Lemmata

(1) P and his tradition have four doxai, in the order: P₁ definition, P₂ Plato, P₃ Aristotle and P₄ Stoics.

(2) S has only two doxai, only one of which, viz. S₁, corresponds with one in P, viz. P₁, the definition again. S’s second lemma, name-label Pythagoras, has no counterpart in P. S, as we saw at section A above, clearly has replaced lemmata for Aristotle, Plato and the Stoa in A by excerpts from AD. Diels in the *DG* put S₂ in his reconstructed chapter immediately after P₁/S₁, presumably because in S the unique Pythagorean doxa of S₂ follows immediately upon the definition in S₁ (= P₁). But the sequence of the excerpts from A plus AD in S, with Plato after Aristotle, fails to entail or suggest a significant order for the lemmata in A.

(3) It is clear that the Pythagoras lemma came after the definition in §1, but not clear precisely where. The best position for this lemma in A is between the Plato lemma and the Aristotle lemma, for reasons to be derived from the diaphonic structure of the chapter (see below, section D(c)). This has the additional advantage of allowing us to attribute the properties listed in §1 to the ideas posited by Plato in §2. For the unhistorical lemmata order Plato–Pythagoras cf. chs. 1.11.2–3 and 2.6.4–5. For the order Pythagoras (on numbers etc.)—Aristotle (on forms in matter) see below, ch. 1.11.3, with Commentary D(d) ad loc.

c Rationale–Structure of Chapter

(1) *Definition and lemmata*. For the distinction between nominal and real definitions see above, ch. 1.9, Commentary D(c) and (e)(2). Up to καθ' ἐαυτήν and again at πατὴρ ἐπέχουσα τοῖς αἰσθητοῖς τάξιν, the contents of the definition in §1 (on which see further below, section D(d)§1) are at odds with the immanentist doxai of §§3–5, but quite compatible with the contents of §2.

(2) *Diaphoniae*. The main diaphonia of the chapter is between §1 (in part, namely as to the idea qua ὑφ' ἐστῶσα καθ' ἐαυτήν) plus §2, and §§3–5, namely between the idea (or Idea/Form) as being in itself and separate on the one hand, and (the idea/form or *eidos*) as related to or inseparable from bodies or matter on the other. This contrast recalls the *kath' hautō*—*pros ti* diaeresis of the categories, important in philosophical discussion in the first centuries BCE and BCE. In §1 (for the most part) and §§3–4 the idea is presented in its relation to matter etc., thus in the first place as a concept in physics, which after all is what the *Placita* are concerned with. A subsidiary diaphonia is between §2, ideas as concepts in the mind of God, and §5, ideas as human concepts. Another subsidiary diaphonia is between §3 Pythagoras, which ahistorically modifies the εἶδη and ἰδέαι into immanent numbers (cf. Burkert 1972, 58 n. 28) and their 'harmonies' (combinations and relations), and §4, Aristotle, formally preserving both εἶδη and ἰδέαι (though all inseparable). The Stoics come last in §5, obviously because their in this context idiosyncratic and exceptional doctrine is farthest from the view expressed in the definition at §1. Their doxa produces a third subsidiary diaphonia with the doxai of all the other lemmata by excluding any presence whatsoever of (Platonic or Pythagorean or Aristotelian) ideas in the world around us. Thereby the Stoics seem to put themselves beyond the boundaries of physics, at least from a Platonist or Peripatetic point of view.

d Further Comments

Individual Points

§1 Although it lacks a name-label this is not a nominal definition. It is a virtually complete middle Platonist definition of what it is to be an idea in itself, qua incorporeal substance, and of what is its relation to perceptible and material things. It accords well with the previous chapter's anonymous definition of matter (ch. 1.9.1) and its Plato lemma (ch. 1.9.2). For the (Platonic) ἰδέα as οὐσία ἀσώματος see also ch. 1.3.20. The various suggestions to emend τῶν οἶα are not strictly necessary; it is also possible to follow Diogenes Laertius *V.P.* 3.77 and write οἶά(περ).

§2 For Σωκράτης καὶ (deleted by Diels) and the ideas in the conceptions and perceptions of God see above, ch. 1.3 Commentary D(d)§20.

§3 The immanent character qua mathematical entities of the Pythagorean ‘so-called forms and ideas’ (note the presence of both terms) is in line with the distinction between Pythagoreans and Plato argued by Arist. *Met.* A.6 987b10–13. But observe that Aristotle said that Plato raised the Pythagorean principles to a transcendental level, while here we read that, conversely, the (Platonic) transcendental level has been collapsed into the immanent level. At A 1.3.7 the level of the ‘numbers and the symmetries in them and the harmonies and the elements composed therefrom, called geometricals’ is distinguished (281a6, b4 πάλιν δέ) from that of the Platonizing or Academic, i.e. undoubtedly Neopythagorean ‘Monad and Indefinite Dyad’, and the (immanent and individual) εἶδη and γένη of e.g. ‘man’ and ‘horse’ are ranged under the Monad.

§4 The text of the final part of the Aristotelian doxa has given rise to much discussion. Diels *DG* ad loc. is right to suggest that its purpose is to indicate a diaeretic contrast with the Platonic view in §2 (but it could also be a gloss, or a sort of echo of §2 that has found its way into the text). None of the various conjectures which take the text in P^B as their starting-point are convincing. Taking our cue from Mras, we have started from the text as in the mss. of P^E and included γεγνώως from P^{B(11)}. As interpreted by Mras ad loc. (‘θεοῦ nml. ιδέας γένεσθαι, d.h. Ar. war über die Ansicht hinausgekommen, daß die Ideen von Gott geschaffen seien’) this at least makes sense. Mras suggests ιδέας γένεσθαι, but perhaps better is τῇ ὕλῃ προστίθεναι vel. sim. For parallels of the notion behind the latter see e.g. Alcinous *Did.* 12, p. 167.8–10 H. ἀναγκαῖον καὶ τὸ κάλλιστον κατασκευάσμα τὸν κόσμον ὑπὸ τοῦ θεοῦ δεδημιουργήσθαι (cf. the abstract of this passage at AD fr. 1 Diels at Eus. *PE* 11.23.6 ὑπὸ τοῦ δημιουργήσαντος ... ἀπειργάσθαι θεοῦ), Ath *Leg.* 15.14–15 Marcovich ἡ πανδεχῆς ὕλη ἄνευ τοῦ θεοῦ τοῦ δημιουργοῦ διάκρισιν καὶ σχῆμα καὶ κόσμον οὐκ ἐλάμβανεν, ps.Justin *de Res.* 6 καὶ ὁ μὲν Πλάτων φησὶν ὑπὸ τοῦ θεοῦ τὰ πάντα ἐκ τῆς ὕλης γεγονέναι. The attempt on the part of Q to make sense of the text is also interesting: reading ἐξ ὧν γεγονὸς τὸ ὑπὸ τοῦ θεοῦ, he links the phrase with the separated ideas in the previous clause (‘aus welcher geworden ist, was die Gottheit geschaffen hat’). It is unlikely that A would ascribe the view that God had created the cosmos to Aristotle, though not wholly impossible.

§5 As noted above in section D(c), the final doxa clearly introduces a further contrast with the Platonic view ascribing the ideas to God. Since §4 already has an adversative, it is justified to have one here too. We therefore follow G’s text, which does include the adversative δέ. We may moreover note that the fact that the ideas are concepts implies that the set of Stoic concepts has at the very least the same range of reference as that of Platonic ideas.

e Other Evidence

For parallels to §1 see above at section B.

(1) *εἶδος* and *ἰδέα*. Plato in the dialogues uses *ἰδέα* and *εἶδος* interchangeably; the distinction, of crucial relevance in our chapter, between transcendent *ἰδέα* and immanent *εἶδος* (or *idos*, as in Seneca) made in later Platonism is a consequence of Aristotle's criticism of the so-called Theory of Forms. Note, for instance, that Alcinous in his chapter on matter, *Did.* 8, only uses the word *εἶδος* (five times), but in his chapter on the idea, *Did.* 9, only the word *ἰδέα* (eleven times), and that with very rare exceptions he sticks to the distinction throughout his treatise. On the other hand we observe that at ch. 1.7.22 above the *χωριστὸν εἶδος* ('separate form—by 'separate' let that be understood which is free of all matter, not entwined with any of the bodily entities, and also not sharing affection with anything in nature that is passible') is the God of Plato, and that at 1.7.23 this *χωριστὸν εἶδος* is the God of Aristotle. So there *εἶδος* is used, not *ἰδέα*.

(2) *Antecedents of the Stoic position?* That a variety of the Stoic position is actually anticipated by Plato or in the Early Academy is uncertain. The suggestion of 'Socrates' at Plato *Parm.* 132c, that 'perhaps each of the ideas is a thought' (or 'concept', *νόημα*) 'in our souls' is immediately refuted by 'Parmenides', while the description of the soul as 'place of the forms', cited and then immediately criticized by Aristotle *de An.* 3.4 429a27–29 and frequently mentioned and discussed in later authors, remains unclear. This also holds for the relation of this notion to that of the *χώρα* of the *Timaeus* as the place of the immanent forms, *τόπον τῶν ἐνύλων εἰδῶν* (e.g. A 1.19.1 and Simplicius in *Phys.* 539.9–11). Proclus' attribution to Xenocrates of the view expressed in Aristotle's quotation has insufficient authority, since Aristotle (see section E(a)§1) explicitly attributes it to Plato; cf. the ambiguous discussion in *Parm.* 130c–d. Cicero *Varr.* 30 and two parallel passages in the earlier *Orator*, all cited section E(a)§§2 & 5, makes the (Antiochean) point that our mind (*mens*) is the sole judge of what is always simple and uniform and exactly such as it is, i.e. of what Plato and his followers called 'idea', but this does not divest the (Platonic) ideas of objective and permanent existence beyond our minds, as is especially clear from parallels at *Or.* 10 and 101.

Interestingly enough, the Stoic position is the only one that is still regarded as valid today.

Περὶ εἰδους.

§1 **Definition:** Plato *Sph.* 246b (cited Clem. Alex. *Strom.* 2.4.15.1) νοητὰ ἅττα καὶ ἀσώματα εἶδη βιάζομενοι τὴν ἀληθινὴν οὐσίαν εἶναι. *Parm.* 132d (cited Stob. *Ecl.* 1.12.2b, p. 136.16–19) τὰ μὲν εἶδη ταῦτα ὥσπερ παραδείγματα ἐστάναι ἐν τῇ φύσει, τὰ δὲ ἄλλα τοῖς τοῖς εἰσὶν καὶ εἶναι ὁμοιώματα, καὶ ἡ μέθεξις αὕτη τοῖς ἄλλοις γίνεσθαι τῶν εἰδῶν οὐκ ἄλλη τις ἢ εἰκασθῆναι αὐτοῖς. **Aristotle** *Met.* A.9 990a34 οἱ δὲ τὰς ιδέας αἰτίας τιθέμενοι. *Met.* A.9 991b3–4 ἐν δὲ τῷ Φαίδωνι (100b–c) οὕτω λέγεται, ὡς καὶ τοῦ εἶναι καὶ τοῦ γίνεσθαι αἴτια τὰ εἶδη ἐστίν. *Met.* A.3 1070a18–19 διὸ δὴ οὐ κακῶς Πλάτων ἔφη ὅτι εἶδη ἔστιν ὅποσα φύσει. **Seneca** *Ep.* 58.19 *quid sit idea, id est, quid Platoni esse videatur, audi: 'idea est eorum, quae natura fiunt, exemplar aeternum'*. **Festus** *Verb. Sign.* p. 340.40–42 Lindsay (*speciem*) *quam nos dicimus, εἶδος* (Graeci dixerunt; *Platon quidem idean*. **Alcinous** *Did.* c. 9, p. 163.23–24 H. ὁρίζονται δὲ τὴν ιδέαν παράδειγμα τῶν κατὰ φύσιν αἰώνιον (cf. above Calcidius in *Tim.* c. 330). **Proclus** in *Parm.* p. 2.888.13–15 Steel καθά φησιν ὁ Ξενοκράτης (fr. 30 Heinze, F 14 Isnardi-Parente²), εἶναι τὴν ιδέαν θέμενος αἰτίαν παραδειγματικὴν τῶν κατὰ φύσιν αἰεὶ συνεστώτων. **Plutarch** *Is. Osir.* 373F ὁ μὲν οὖν Πλάτων (*Tim.* 50c–d) τὸ μὲν νοητὸν καὶ ιδέαν καὶ παράδειγμα καὶ πατέρα ... ὀνομάζειν εἴωθεν. **Diogenes Laertius** *V.P.* 3.13 (Alcimus *Ad Amynt. FGRH* 560 F7, Epicharmus ad 23B2 DK) διὸ καὶ φησιν (Pl. *Parm.* 132d) ἐν τῇ φύσει τὰς ιδέας ἐστάναι καθάπερ παραδείγματα· τὰ δ' ἄλλα ταύταις εἰσὶν, τούτων ὁμοιώματα καθεστῶτα. **Alcinous** *Did.* 9, p. 163.14–15 H. ἔστι δὲ ἡ ιδέα ὡς μὲν πρὸς θεὸν νόησις αὐτοῦ. *Did.* 9, p. 163.23–24 H. ὁρίζονται δὲ τὴν ιδέαν παράδειγμα τῶν κατὰ φύσιν αἰώνιον. *Did.* c. 12, p. 166.39–41 H. ἐπεὶ γὰρ τῶν κατὰ φύσιν αἰσθητῶν καὶ κατὰ μέρος ὠρισμένα τινὰ δεῖ παραδείγματα εἶναι τὰς ιδέας. **Alexander of Aphrodisias** in *Met.* 196.25–27 εἶρηκε δὲ ἐν τῷ πρώτῳ ὅτι οὐσίας ὀριστικὰς αὐτὰς καθ' αὐτὰς ἔλεγον εἶναι τὰς ιδέας, κεχωρισμένας τῶν αἰσθητῶν, πρὸς παραδείγματα δὲ τὰς αἰσθητὰς τὸ εἶναι ἔχειν.

§§2–3 **Socrates Plato Pythagoras:** Aristotle *Met.* A.6 987b7–13 οὗτος (sc. Plato) οὖν τὰ μὲν τοιαῦτα τῶν ὄντων ιδέας προσηγόρευσε, τὰ δ' αἰσθητὰ παρὰ ταῦτα καὶ κατὰ ταῦτα λέγεσθαι πάντα· κατὰ μέθεξιν γὰρ εἶναι τὰ πολλὰ {τῶν συνωνύμων} ὁμώνυμα τοῖς εἶδεσιν. τὴν δὲ μέθεξιν τοῦνομα μόνον μετέβαλεν· οἱ μὲν γὰρ Πυθαγόρειοι μιμήσει τὰ ὄντα φασὶν εἶναι τῶν ἀριθμῶν, Πλάτων δὲ μετέξει, τοῦνομα μεταβαλὼν. **Alexander of Aphrodisias** in *Met.* 54.23–26 (cited Ascl. in *Met.* 49.25–29) εἰπὼν ἐν οἷς διαφωνοῦσι, νῦν λέγει τὴν αἰτίαν δι' ἣν οὐχ ὁμοίως Πλάτων τοὺς ἀριθμοὺς τῶν ὄντων ἀρχὰς ἔθετο τοῖς Πυθαγορείοις, ἀλλὰ καὶ τούτους ἐχώρισε τῶν αἰσθητῶν καὶ τὰς ιδέας ἄλλας τινὰς οὐσίας τε καὶ φύσεις παρὰ τὰς αἰσθητὰς οὐσίας ἐτίθετο. **Asclepius** in *Met.* 45.16–19 ἐφεξῆς τὴν Πλάτωνος ἐκτίθεται δόξαν καὶ φησιν αὐτὸν τὰ μὲν πολλὰ ἀκολουθεῖν τοῖς Πυθαγορείοις, ἔχει δὲ καὶ ἰδιά τινα ἡ

Πλάτωνος φιλοσοφία παρά τοὺς Ἰταλικούς· λέγει δὲ τὰς ἰδέας. ἰστέον δὲ ὅτι καὶ κείνοι ἔλεγον τὰς ἰδέας, ἀλλὰ ἀριθμοὺς ταῦτα ὑπετίθεντο.

§§2 & 4 *Socrates Plato Aristotle: Philo of Alexandria Leg.* 2.12 πρότερον μὲν ἐν τῇ ἐξαημέρῳ τὰ γένη τῶν παθῶν καὶ τὰς ἰδέας εἰργάζετο, νυνὶ δὲ τὰ εἶδη προσπλάττει. *Alcinous Did.* 4, p. 155.39–41 H. τῶν νοητῶν τὰ μὲν πρῶτα ὑπάρχει, ὡς αἱ ἰδέαι, τὰ δὲ δεύτερα, ὡς τὰ εἶδη τὰ ἐπὶ τῇ ὕλῃ ἀχώριστα ὄντα τῆς ὕλης. *Atticus fr.* 9.1–2.13–19 des Places (verbatim) at Eus. *PE* 15.13.1–2 αὐτῷ κανόνι καὶ κριτῇ τῶν ὑπὲρ αὐτὸν χρησάμενος (sc. Aristotle), ἀπέγνω τινὰς εἶναι ἰδίας φύσεις, οἷας Πλάτων ἔγνω, λήρους δὲ καὶ τερετίσματα (*APo.* 1.22 83a33) καὶ φλυαρίας ἐτόλμυσεν εἰπεῖν τὰ τῶν ὄντων ἀνώτατα. (2) τὸ μὲν οὖν ἄκρον τε καὶ ἔσχατον τῶν Πλάτωνος φιλοσοφημάτων ἐστὶ τὸ περὶ τὴν νοητὴν ταύτην καὶ αἰδίου οὐσίαν τὴν τῶν ἰδεῶν.

§2 *Socrates Plato: Cicero Or.* 10 *has rerum formas appellat* ἰδέας ille non intellegendi solum sed etiam dicendi gravissimus auctor et magister Plato, easque gigni negat et ait semper esse ac ratione et intelligentia contineri, cetera nasci occidere, fluere labi nec diutius esse uno et eodem statu. *Or.* 101 redeoque ad illam Platonis de qua dixeram rei formam et speciem, quam etsi non cernimus tamen animo tenere possumus (cf. Cicero *Luc.* 30, below §5). *Atticus fr.* 9.5.40–43 des Places (verbatim) at Eus. *PE* 15.13.5 τὰ τοῦ θεοῦ νοήματα πρεσβύτερα τῶν πραγμάτων, τὰ τῶν γενομένων παραδείγματα, ἀσώματα καὶ νοητά, κατὰ τὰ αὐτὰ καὶ ὡσαύτως ἔχοντα αἰεί. *Apuleius Plat.* 1.190 *rerumque formas, quas ἰδέας idem vocat.* *Plat.* 1.192 ἰδέας vero, id est formas omnium, simplices et aeternas esse nec corporales tamen; esse autem ex his, quae deus sumpserit, exempla rerum quae sunt eruntve. *Augustine C.D.* 7.28.15–23 Dombart–Kalb (*Varro Ant.Rer.Div.* fr. 206 Cardauns) *hinc etiam Samothracum nobilia mysteria in superiore libro sic interpretatur* (sc. Varro) *each se, quae nec suis nota sunt, scribendo expositurum eisque missurum quasi religiosissime pollicetur. dicit enim se ibi multis indiciis collegisse in simulacris aliud significare caelum, aliud terram, aliud exempla rerum, quas Plato appellat ideas; caelum Iovem, terram Iunonem, ideas Minervam vult intellegi; caelum a quo fiat aliquid, terram de qua fiat, exemplum secundum quod fiat.* *Ver.Rel.* 4 (where he also cites Cic. *Or.* 10 (cf. above §2) *cetera nasci occidere, fluere labi*). (cf. also above on chs. 1.3.20 and 1.7.31.)

§3 *Pythagoras: Aristotle Met.* A.5 985b23–32 οἱ καλούμενοι Πυθαγόρειοι (58B4 DK) τῶν μαθημάτων ἀψάμενοι πρῶτοι ταῦτά τε προήγαγον, καὶ ἐντραφέντες ἐν αὐτοῖς τὰς τούτων ἀρχὰς τῶν ὄντων ἀρχὰς ᾧήθησαν εἶναι πάντων. ἐπεὶ δὲ τούτων οἱ ἀριθμοὶ φύσει πρῶτοι, ἐν δὲ τούτοις ἐδόκουν θεωρεῖν ὁμοιώματα πολλὰ τοῖς οὐσι καὶ γιγνομένοις, ... ἔτι δὲ τῶν ἀρμονιῶν ἐν ἀριθμοῖς ὁρῶντες τὰ πάθη καὶ τοὺς λόγους κτλ. *Met.* A.8 1073a18–19 ἀριθμοὺς γὰρ λέγουσι τὰς ἰδέας οἱ λέγοντες ἰδέας. *Met.* N.3 1090a20–26 οἱ δὲ Πυθαγόρειοι (cf. ad 58B22 DK) διὰ τὸ ὅρᾶν πολλὰ τῶν ἀριθμῶν πάθη ὑπάρχοντα (ἐν) τοῖς αἰσθητοῖς σώμασιν, εἶναι μὲν ἀριθμοὺς ἐποίησαν τὰ ὄντα, οὐ χωριστοὺς δέ, ἀλλ' ἐξ ἀριθμῶν τὰ ὄντα. διὰ τί δέ; ὅτι τὰ πάθη τὰ τῶν ἀριθμῶν ἐν ἀρμονίᾳ ὑπάρχει καὶ ἐν τῷ οὐρανῷ καὶ ἐν πολλοῖς ἄλλοις. *Clement of Alexandria Strom.* 5.3.16.3 ἡ δὲ ἰδέα ἐννόημα τοῦ θεοῦ, ὅπερ οἱ βάρβαροι λόγον εἰρήκασιν τοῦ θεοῦ.

§4 Aristotle: Aristotle *Phys.* 4.3 210a21 ὅλως τὸ εἶδος ἐν τῇ ὕλῃ. *Met.* H.7 1032b1–2 εἶδος δὲ λέγω τὸ τί ἦν εἶναι ἐκάστου καὶ τὴν πρώτην οὐσίαν. *Met.* H.11 1037a29–30 ἡ γὰρ οὐσία ἐστὶ τὸ εἶδος τὸ ἐνόν, ἐξ οὗ καὶ τῆς ὕλης ἡ σύνολος λέγεται οὐσία. **Syrianus** in *Met.* 105.30–32 οὐ μὴν οὔτε ὁ ὁριστικός λόγος οὔτε τὸ ἐνυλον εἶδος καὶ τὸ ὁριστόν ἐστιν ἡ ἰδέα, ὡς ἐν τούτοις καὶ ἐν ἄλλοις ὁ Ἀριστοτέλης φησὶν οἰηθῆναι τὸν Σωκράτην.

§5 Stoic successors of Zeno: Plato *Parm.* 132b ‘ἀλλά, φάναι, ὦ Παρμενίδη, τὸν Σωκράτη, ‘μὴ τῶν εἰδῶν ἕκαστον ἢ τούτων νόημα, καὶ οὐδαμοῦ αὐτῷ προσήκη ἐγγίγνεσθαι ἄλλοθι ἢ ἐν ψυχαίς’. differently Aristotle *de An.* 3.4 429a27–29 καὶ εὖ δὴ οἱ λέγοντες τὴν ψυχὴν εἶναι τόπον εἰδῶν, πλὴν ὅτι οὔτε ὅλη ἄλλ’ ἡ νοητικὴ, οὔτε ἐντελεχεῖα ἄλλὰ δυνάμει τὰ εἶδη. **Cicero** *Varr.* 30 *mentem volebant rerum esse iudicem; solam censebant idoneam cui crederetur, quia sola cerneret id quod semper esset simplex et unius modi et tale quale esse. hanc illi ιδέαn appellabant, iam a Platone ita nominatam, nos recte speciem possumus dicere* (cf. *Or.* 10 et 101, above §2). **Cicero** *Or.* 9.3 *nec vero ille artifex cum faceret Iovis formam aut Minervae, contemplabatur aliquem e quo similitudinem duceret, sed ipsius in mente insidebat species pulchritudinis eximia quaedam, quam intuens in ea-que defixus ad illius similitudinem artem et manum dirigebat.* **Plutarch** *Is. Osir.* 374F τὸν τε νοῦν ἐνιοι (Arist. *de An.* 3.4 429a27) τόπον εἰδῶν ἀπεφάνησαντο καὶ τῶν νοητῶν οἶον ἐκμαγεῖον. **Alexander of Aphrodisias** *de An.* 85.5–10 διὸ καὶ οὐκ ἀλόγως τινὲς ἀπὸ τῆς τοῦ νοῦ δυνάμεως κινούμενοι τόπον εἰδῶν τὴν ψυχὴν (Arist. *de An.* 3.4 429a27–28) εἶπον εἶναι, ὃ τῷ κυριωτάτῳ τῆς ψυχῆς ὑπάρχει, τοῦτ’ ἐπὶ πάσαν αὐτὴν μεταφέροντες. τόπος δ’ ἂν εἴη τῶν εἰδῶν οὐ κατ’ ἐνέργειαν (οὐδὲν γὰρ κατὰ τὴν αὐτοῦ φύσιν τῶν εἰδῶν ἔχων ἐδείχθη), ἀλλ’ ὡς δυνάμενος αὐτὰ λαμβάνειν τόπος αὐτῶν ἂν εἴη δυνάμει κατὰ τοῦτο. **Themistius** in *de An.* 95.5–9 εὖ δὴ οἱ λέγοντες τὴν ψυχὴν τόπον εἶναι εἰδῶν, εἰ καὶ τῷ ὀνόματι καταχρῶνται τοῦ τόπου· πλὴν ὅτι οὔτε ὅλη ἡ ψυχὴ, ἀλλὰ αἱ δύο μόναι δυνάμεις καθ’ ἣν τε νοοῦμεν καθ’ ἣν τε αἰσθανόμεθα, οὔθ’ οὔτω τόπος ὡς περιέχειν, ἀλλ’ ὡς γίνεσθαι πως ἃ νοεῖ καὶ ὧν αἰσθάνεται. **Ammonius** in *Isag.* 40.6–10 ὁ τοίνυν Ἀντισθένης (fr. VA 149 Giannantoni, 149A Prince) ἔλεγε τὰ γένη καὶ τὰ εἶδη ἐν ψιλαῖς ἐπινοαῖς εἶναι λέγων ὅτι ‘ἵππον μὲν ὁρῶ, ἵππότητα δὲ οὐχ ὁρῶ’ καὶ πάλιν ‘ἄνθρωπον μὲν ὁρῶ, ἀνθρωπότητα δὲ οὐχ ὁρῶ’. ταῦτα ἐκεῖνος ἔλεγε τῇ αἰσθήσει μόνῃ ζῶν καὶ μὴ δυνάμενος τῷ λόγῳ εἰς μείζονα εὗρεσιν ἑαυτὸν ἀνενεργεῖν. **Simplicius** in *Cat.* 105.7–9 (*SVF* 2.278) ἄξιον δὲ ζητεῖν κατὰ τοὺς ὑπόστασιν διδόντας τοῖς εἶδεσιν καὶ γένεσιν εἰ ῥηθήσεται τάδε εἶναι· καὶ γὰρ καὶ Χρύσιππος (*SVF* 2.278) ἀπορεῖ περὶ τῆς ἰδέας, εἰ τόδε τι ῥηθήσεται (κτλ). **Philoponus** in *de An.* 165.24–27 (Xenocrates fr. 65 Heinze, F 117 Isnardi Parente²) ἀριθμοὺς δὲ τὰ εἶδη ἐκάλουν, ὡς εἴρηται· καὶ αὐτὸς (sc. Aristotle *de An.* 3.4 429a27–28) γοῦν ἐν τοῖς ἐξῆς φησιν ‘καὶ εὖ δὴ οἱ λέγοντες τὴν ψυχὴν τόπον εἰδῶν’. ἀριθμὸν μὲν οὖν διὰ τοῦτο, κινουντα δὲ αὐτὸν διὰ τὸ αὐτοζῶν αὐτῆς.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The evidence for the chapter on causes is confined to P and S.

(1) In P and his tradition the chapter is only found in P^B and Q. Both record the same four doxai. Note that P abridges by skipping §4 and omitting the two final paragraphs. The chapter is missing in E, and in G (who offers related information from a shared tradition). Ps again takes over the title only.

(2) S includes most of P's material, but also adds more.

(a) He opens his chapter *Ecl.* 1.13 with the conceptual definition of αἰτίον, which is the first doxa in P; on this definition see further below, section D(d)§1.

(b) He continues with the Platonic doxa (second in P) and, similarly to what he does with ch. 1.9.4, follows it with a quote from the *Timaeus* (28a–b).

(c) The next doxa is the same as the third in P, but has only the name-label Pythagoras while P has Pythagoras (plus) Aristotle. It is followed by another doxa attributed to Aristotle that is not in P. This lemma, printed by Diels as A 1.11.4, most likely derives from AD as suggested by Wachsmuth; see M–R 1.250–251 and 3.323. Also note that it comes immediately before the abstracts on the Stoics from AD at S 1.13.1c. It may have replaced an Aëtian paragraph with name-label Aristotle, whose doxa was epitomized away and whose name-label was added to the previous paragraph, just as happened in P at ch. 1.20.1, or in the opposite direction at ch. 4.4.12–13. But there are grounds for hesitation, and thus for doubting the rejection of attribution to A. Diels *DG* 64 believed that it was the paragraph as formulated in S that was deprived of its doxa, and whose name-label was included in the previous paragraph. The presence of the tell-tale term ἐφησε, characteristic for AD and nowhere found in A, is not sufficient, because S sometimes adds this word to a lemma of A, see e.g. ch. 2.3.9, where the paragraph is extant in both main sources. Decisive in our view, however, is that inclusion of the Aristotle lemma obstructs the reconstruction of the chapter. Preserving it entails acceptance of an unusually chaotic sequence of lemmata; this, though possible, is not our preference.

(d) The extracts from AD on the Stoics follow, showing typical stylistic features of his method. They give the partly differing views of Zeno, Chrysippus and Posidonius, replacing the Stoic doxa that comes last in P. See Mansfeld (2002a) 64 = M–R 3.410: 'The insertion of a substantial abstract from Arius Didymus on Zeno Chrysippus Posidonius on causes which replaces the Aëtian lemma with the name-label Stoics is more in the nature of an amplification than in that of a correction.'

(e) In S then follow three brief doxai not in P, so he has switched from A to AD and back again to A. The first two brief doxai deal with the 'first cause',

the last one distinguishes between sense-perceptible and noetic causes. S's chapter concludes with a quote from a pseudonymous work attributed to the Pythagorean Ocellus.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The proximate tradition is widely represented by passages in Cicero, Clement of Alexandria, Sextus Empiricus, Arius Didymus and Seneca, all cited at section E(a), to mention only the chief representatives.

(2) *Sources.* The intermediary sources (predecessors of among others Middle Platonist authors) are unknown, but the works of Plato, Aristotle, and some Stoics were of course the ultimate sources, however badly these are represented in the present chapter.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type 'about *x*', περί τοῦ δεῖναι. The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. For chapter headings in general see above, ch. 1.3 Commentary C. The heading of the present chapter covers the categories of quantity and action / passivity, or the question types of 'what is it' and 'how is it' and, of course, 'why is it', and the question type of cause is what the chapter deals with *per se*. The chapter heading is paralleled as a book title for Theophrastus, Strato, Erasistratus, Hegetor the Herophilean, Aristaeus and Galen, and also as an embedded heading.

D Analysis

a Context

(1) Diels *DG* 62 hypothesizes that §§8–9, not paralleled in P, originally were part of a separate chapter Περί τοῦ πρώτου αἰτίου, although there is no evidence in S for this chapter heading. See further section A above, *ad finem*.

(2) We need not dwell on the relation between the concept of cause and material, formal and moving principle in Aristotle, as set out in *Metaphysics* Book A (and as echoed in ch. 1.3 above). Our ch. 1.11 combines well with chs. 1.7, 1.9 and 1.10, because God, matter and idea (see above at ch. 1.9, Commentary D(a)) qua principles are also causes. All three occur or are involved in §2, while matter via the corporeal occurs in §3, via the sensible in §4 and via the corporeal again in §5, and First Causes are at issue in §3 and §§6–7. The next chapter, 1.12 'On bodies', links up well with 1.9 'On Matter' and with the references to the corporeal ingredient in the present chapter.

b Number–Order of Lemmata

(1) P (that is, only P^B plus P^Q) has four, S six lemmata, three of which, §§1(definition)–2(Plato)–3(Pythagoras) are shared with P, and occur in the same order, which therefore must have been that of A.

(2) Rather than assuming that P, using a habitual epitomator's ploy, inserted the name-label Aristotle to §3 to account for the abridging away of this separate lemma, we argue that S abstracted this other lemma from AD and therefore deleted the name-label in the previous lemma.

(3) One of P's lemmata, P₄ on the Stoics, is not paralleled in S because it was replaced by an excerpt from AD (fr. 18 Diels) as well, and three of S's lemmata are not paralleled in P because they are not of *Placita* descent. For reasons put forth below, at section D(c), we have modified the order of these final lemmata in S. And we do not believe that these lemmata (S 4–5–3 are now §§4–6–7) represent an original chapter Περί τοῦ πρώτου αἰτίου, as suggested by Diels *DG* 62 (cf. above section D(a)(1)), not only because they can be very well accommodated in the present chapter, but also because S₅/§4 is diaphonically bound up with P₄/§5.

c Rationale–Structure of Chapter

(1) *The definition of §1.* For the nature of the preliminary definition of the term 'cause' in the first lemma see above, ch. 1.9, Commentary D(c) and (e)(2). Its nominal, that is, not properly definitory nature is explicitly formulated and thereby confirmed in the little added note. The present sentence provides the first of only five occurrences of the adverb ὑπογραφικῶς, paralleled three times in the late Commentators, e.g. Simplicius (Syrianus?) in *de An.* 15.14–15, 'the distinction between the correctly and the so to speak descriptively and superficially formulated definitions'. For the sense of S's expression 'a preliminary definition suffices' (ἀρκεῖ ὑπογραφικῶς) cf. e.g. Aristotle *EN* 2.7 1107b14–15 'we now give a mere outline and summary, and find this sufficient' (νῦν μὲν οὖν τύπω καὶ ἐπὶ κεφαλαίου λέγομεν, ἀρκούμενοι αὐτῷ τούτῳ).

S's phrase is absent in P. M–R 1.223–224 hesitate in attributing this phrase to A. Mansfeld, e.g. (2002a) 29 = M–R 2.378, followed by Bottler (2014) 177, attributes the phrase to S. But we now accept that it does derive from A. Extra words in S (a *verbum declarandi*, or words from the chapter heading, or a name-label) are added when lemmata are quoted out of their original context, which is not the case here. It is too technical to be attributed to S himself (forms of the substantive ὑπογραφή or the verb ὑπογράφειν in this sense occur 11 more times in Book 2 of the *Anthology*, always in texts that have been excerpted, namely Ethical doxography A and the Stoic Ethical doxography B).

(2) *Diaeresis/diaphonia*. The three counts on which the doxai with name-labels differ (diaeresis), or disagree (diaphonia), are (a) the number of causes, category of quantity; (b) the incorporeality *vs.* the corporeality of causes, category of quality; and (c) the mobility *v.* the immobility of the first cause, category of action/passivity. Cf. Mansfeld (2002a) 22–23 = M–R 3.379–381.

(3) *Order according to number*. The numbers form a diaeretically ordered descending series, 3–2–1: according to §2 (Plato) causes are threefold (all three are listed), according to §3 (Pythagoras Aristotle) and §4 (Peripatetics) two, and according to §5 (Stoics) only one. §6 and §7 also mention only one cause. Although a bit unusual, for in the majority of cases ordering according to quantity starts with the lowest number, such a sequence is not unparalleled, see ch. 3.9.2–3, ‘two–one–and–finite’; also compare ch. 4.4.4–6 with Commentary D(c), and ch. 8.1–4 with Commentary D(c), and an early series of principles e.g. at Isocr. *Antid.* 268, discussed above, ch. 1.3 Commentary D(e) *ad init.*, and e.g. M–R 2.1.154–157. The diaphonia between incorporeality *vs.* the corporeality of causes on a gliding scale according to diaeresis is next: §3 (Pythagoras Aristotle) state that first causes are incorporeal and the others participate in or are attributes of the corporeal substructure. (These ‘others’ therefore are not, in themselves, fully corporeal.) Similarly §4, the Peripatetics, whose tenet is expressed in epistemic terms, posit that some causes are sensible (i.e. are corporeal) and others intelligible (i.e. are incorporeal). But the Stoics in §5 posit that causes are corporeal. The Peripatetic doxa of §4 belongs with the doxai of §5 and §3 both from the point of view of the opposition between the corporeal and the incorporeal and of the duality of causes, and clearly not in the final position, as in S, who presumably first skipped but then decided to preserve it. Finally there is the diaphonia of the two final lemmata, Thales and his followers (§6) holding that the first cause is unmoved and the Stoics (§7) that it is moved. These two doxai *ad finem* link up with the final clause of §2: ‘Plato ... most properly (regards) the ‘by which’ (as the cause). This is the agent, which is the Intellect’, thus lending the character of a ring composition to the chapter as an extra feature. And they are also linked to the ‘first causes’ (plural) of §3, for which see below, section D(d) further detailed comments at this paragraph.

(4) The order, with Pythagoras after Plato and Thales in penultimate position (his ‘followers’ make this a little bit less obvious), is of course not chronological but systematic and due to the variety of oppositions. And the Stoics occur in two lemmata with different doxai; for this feature cf. e.g. Stoics at ch. 1.9.2 and 1.9.8, Xenophanes at ch. 2.20.2 and 2.20.5, and Parmenides at ch. 2.20.3 and 2.20.15.

d Further Comments

General Points

For chance (τύχη) as cause (αἰτία) see below, ch. 1.29.

Individual Points

§1 The preliminary definition combines words that became, or had become, Stoic technical terms (δι' ὅ, ἀποτέλεσμα, συμβαίνει, τι *ad finem*). But note that δι' ὅ is a quite common formula, occurring for instance thirteen times in the *Corpus Platonikum* and twenty times in the *Corpus Aristotelicum*, in various causal or other meanings, and that συμβαίνει too is a quite common term. Even so, the emphasis on cause qua *una causa id quod facit* (to use the vocabulary of Seneca *Ep.* 65.4) shows a liking for the Stoically inspired preference for the moving cause, which is said to be the chief one also in §2.

§2 Aristotle, who alludes to the *agrapha dogmata* at *Met.* A.6 987b21–22 but who may quite well be thinking of the *Timaeus* as well, attributes two principles/causes to Plato in this chapter of *Metaphysics*, viz. the formal and the material. Theophrastus, who refers to Plato's philosophy of nature, i.e. the *Timaeus*, also attributes two principles/causes, viz. the material and the efficient/final (*Phys.Op.* fr. 9 Diels, 230 FHS&G). By combining these items and reducing the material cause occurring both times to a single occurrence one gets the three types of cause of the present lemma (someone must have practised retrograde contamination). The prepositional formulas are later (cf. Philo *Cher.* 125, Runia 1986, 171–173) but may be Peripatetic too, for the relevant combination of ὑφ' οὗ with ἐξ οὗ is occasionally found in Aristotle. The term τὸ ποιῶν for the moving cause can already be paralleled in Aristotle (*Phys.* 2.3 195a22, *GC* 2.9 335b27, *Met.* B.2 1013b24) and Theophrastus (*Phys.Op.* fr. 4 Diels = 228A FHS&G; *Phys.Op.* fr. 6 Diels = 227C FHS&G, verbatim). The primary importance of the moving cause, though anticipated in a fragment of Theophrastus, is in the first place a Hellenistic feature that makes 'Plato' more up to date, while expressions such as τὴν κυριωτέραν αἰτίαν/αἰ κυριώταται αἰτίαι are already paralleled in Aristotle (*GC* 2.9 335b34–35) and Epicurus (at D.L. 10.79). For the triad see further references at Mansfeld (2002a) 30–34, repr. M–R 3.385–389, and above ch. 1.3.20 where they are not called causes but principles, with comments at ch. 1.3 Commentary D(d)§20.

The final words in P ὅ ἐστι νοῦς, explaining τὸ ποιῶν, could be a gloss. They are not found in S. Cf. 1.13.1 with Commentary D(d)§1, and esp. 5.14.1 (with Commentary D(d)§1), where ὅ ἐστι σπέρματος and ὅ ἐστι ἀναστομοῦσθαι in P^B are not found in P^{GQ} and are not printed in the text by Diels. But they make good sense in the context of the present chapter and are also found in P^Q, so this time may be given the benefit of the doubt (exclusion should not be a matter of routine).

For such schoolmasterly addenda cf. immediately below at §3. See also ch. 3.5a.1 (formerly 3.18), where the explanatory phrase $\delta\varsigma\ \kappa\acute{\upsilon}\kappa\lambda\omicron\varsigma\ \phi\alpha\iota\upsilon\omicron\mu\epsilon\upsilon\omicron\varsigma\ \acute{\alpha}\lambda\omega\varsigma\ \kappa\alpha\lambda\epsilon\acute{\iota}\tau\alpha\iota$, $\delta\tau\iota\ \acute{\epsilon}\sigma\tau\iota\nu\ \acute{\alpha}\lambda\omega\ \pi\rho\omicron\sigma\epsilon\omicron\iota\kappa\acute{\omega}\varsigma$, is wrongly bracketed by Diels: it is neatly paralleled in the same context at Seneca *Nat.* 1.2.3 *ob hoc tales splendores Graeci 'areas' vocaverunt, quia fere terendis frugibus destinata loca rotunda sunt*.

§3 Presumably the incorporeal causes of Pythagoras are the One and the Dyad and of Aristotle the Unmoved Movers, see the parallels from chs. 1.3.7 plus 1.7.18 and 1.7.32 quoted at *Loci Aetiani* §3, where the material principles are also mentioned. The other causes of Pythagoras will be the numbers and harmonies and geometricals of ch. 1.10.3, of Aristotle the forms in matter of ch. 1.10.4. Also compare the distinction between principles and elements of ch. 1.2.

The final consecutive clause is not present in S. According to Diels ad loc. it has been added by P (cf. *DG* 65: 'inepta additamenta'). Cf. ch. 1.7.18, the words $\acute{\epsilon}\sigma\tau\iota\ \delta\acute{\epsilon}\ \kappa\alpha\acute{\iota}\ \acute{\omicron}\rho\alpha\tau\acute{\omicron}\varsigma\ \acute{\omicron}\ \kappa\acute{\omicron}\sigma\mu\omicron\varsigma$ at the end of the lemma (in P not S and banished to the apparatus by Diels, who refers to ch. 1.11.3), and the added explanation at 2.1.7 (in P not S, bracketed by Diels), $\acute{\omega}\sigma\tau\epsilon\ \{\omicron\upsilon\}\ \tau\acute{\omicron}\ \alpha\upsilon\tau\acute{\omicron}\ \acute{\epsilon}\iota\upsilon\alpha\iota\ \tau\acute{\omicron}\ \acute{\omicron}\lambda\omicron\nu\ \kappa\alpha\acute{\iota}\ \tau\acute{\omicron}\nu\ \kappa\acute{\omicron}\sigma\mu\omicron\nu$. But such schoolmasterly clauses appear to be part of A's style; cf. immediately above at §2, and chs. 1.27.4, 2.1.8, 2.24.3, 4.8.2. In addition it makes a significant philosophical point: the cosmos would not be produced as an effect in the form of a body if qualities resulting from 'participation' or 'attribution' were not present in matter. So the clause should be retained.

For the combination of prepositional phrases cf. A 5.30.1b, quoted above at *Loci Aetiani*.

§5 *pneuma* elsewhere functions as a cohesive cause ($\alpha\iota\tau\acute{\iota}\alpha\ \sigma\upsilon\nu\epsilon\kappa\tau\iota\kappa\acute{\eta}$, cf. Galen in *Aph.* 18a.128.18–20 K.), analogous to the formal cause of Aristotelian philosophy. For causation in relation to fate according to the Stoics see below, chs. 1.27.3 and 1.28.4, with parallels and Commentary ad loc.

§§6–7 Presumably the immobility of Aristotle's First Mover(s) is also attributed to the Succession beginning with Thales. The notion and doxa have been certainly stretched in order to achieve a strong diaphonia with the moving and flexible God of the Stoics. Cf. Goldschmidt (1953) 93: the Stoic doxa 'paraît si surprenante à un ancien historien de la philosophie [sc. A], qu'il l'oppose à tous les systèmes précédents'.

e Other Evidence

(1) The finer distinctions between the various kinds of causes according to the Stoics (see section E(a)§5 and section E(b)§5) are regrettably absent here, while for example even ps.Galen *HPh* c. 19 summarily lists them. Perhaps they were left out because the subject is so very complicated.

(2) Alcinous, whose order is matter–idea–God, has no separate chapter on causes. In *Did.* 9 (i.e. in the chapter on the idea, and in this chapter of the treatise alone) we encounter the somewhat looser prepositional formulas ἐκ τίνος pertaining to matter, ὑπό τίνος pertaining to the Demiurge, and πρὸς τι (or πρὸς ὅ) pertaining to the idea, see at section E(b) General texts. So he treats the causes in an inclusive way in relation to the idea qua bound up with matter and the divinity.

A 1.15.8 Δημόκριτος φύσει μὲν μηδὲν εἶναι χρώμα, τὰ μὲν γὰρ στοιχεῖα ἄποια, τὰ τε ναστὰ καὶ τὸ κενόν.

§5 A 1.23.4 Ἐπίκουρος δύο εἶδη κινήσεως, τὸ κατὰ στάθμην καὶ τὸ κατὰ παρέγκλισιν.

§6 A 1.3.15 Δημόκριτος τὰ ναστὰ καὶ κενόν. A 1.4.1 τῶν ἀτόμων σωμάτων ἀπρονόητον καὶ τυχαῖαν ἐχόντων τὴν κίνησιν συνεχῶς τε καὶ τάχιστα κινουμένων εἰς τὸ αὐτό, πολλὰ σώματα συνηθοῖσθαι, {καὶ} διὰ τοῦτο ποικιλίαν ἔχοντα καὶ σχημάτων καὶ μεγεθῶν. ἀθροιζομένων δ' ἐν ταύτῳ τούτων, τὰ μὲν, ὅσα μείζονα ἦν καὶ βαρύτερα, πάντως ὑπεκάθισεν· ὅσα δὲ μικρὰ καὶ περιφερῆ καὶ λεῖα καὶ εὐόλισθα,

ταῦτα καὶ ἐξεθλίβετο κατὰ τὴν σύνοδον τῶν σωμάτων εἰς τε τὸ μετέωρον ἀνεφέ-
 ρετο. A 1.9.3 οἱ ἀπὸ Δημοκρίτου ἀπαθῇ τὰ πρῶτα, τὴν ἄτομον καὶ τὸ κενὸν καὶ
 {τὸ} ἀσώματον. A 1.23.3 Δημόκριτος ἐν γένος κινήσεως τὸ κατὰ παλμόν. A 3.13.4
 Δημόκριτος κατ' ἀρχὰς μὲν πλάζεσθαι τὴν γῆν διὰ τε μικρότητα καὶ κουφότητα,
 πυκνωθεῖσαν δὲ τῷ χρόνῳ καὶ βαρυνθεῖσαν καταστήναι.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The evidence of this chapter depends again on P and S only.

(1) The tradition of P has five doxai, beginning as in the previous three chapters with a definition, or rather with three more or less complementary definitions. Only P^B and Q record these five doxai. Like in other chapters (1.13, 1.14, 15) P abridges by omitting the final lemmata, here §§6–7. As was the case for ch. 1.11, the chapter is missing in G (and E), though §1α is paralleled in G's brief ch. 23. Ps takes over the chapter heading, and to some extent echoes the contents of §1, §4, §3 and §2 (in that order).

(2) S's chapter 1.14 on bodies etc. combines material from A 1.12, 1.13 and 1.16 as his collective chapter heading indicates, as well from other sources (mainly AD).

(a) He commences at 14.1a by citing the definition of σῶμα from A, followed by the same next two doxai as in P. At 14.1b he interpolates S's version of A 1.16.3 (paralleled at P) because it preludes upon the next excerpt.

(b) This long further excerpt at 14.1c on Aristotelian doctrine has been identified as taken from AD (= fr. 5 Diels). It is followed at 14.1d by a final sentence on the motion of 'the fifth body'. Diels plausibly suggests that this is a final part of the doxa on Aristotle that was omitted by P. For the next doxa, 1.14.1e, which he also attributes to A, see ch. 1.16.4.

(c) The next block of texts consists of three doxai, the first two of which correspond to the fourth and fifth in P. The third, attributed to Democritus, will also have come from A, but has been abridged away by P. To it is attached a doxa which P attributes to the Atomists in ch. 1.16.2. It is then followed by a doxa attributed to Strato on weight, which will again have been taken from the present chapter in A.

(d) The remainder of the chapter adds material from A 1.13 and AD. It is most unlikely that the verses *ad finem* from Parmenides' poem (28B8.43–45 DK) have been taken from A, *pace* Diels' uncertainty at DG 31ub in app.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition is richer for the three definitions in §1 than for the individual doxai. Some information on the latter is provided by Cicero, Sextus Empiricus and Arius Didymus, but the information about the different views on weight is quite widespread.

(2) *Sources.* A decisive precedent and source for this issue is Aristotle's *De caelo*, which in the first chapter of Book 1 provides definitions of body just like our §1, and then is especially concerned with primary physical bodies both terrestrial and celestial. In A ch. 1.12, too, the bodies (apart from the definitions in §1) turn out to be not bodies in general, or bodies inclusive of those of living beings, but what Aristotle calls simple bodies, with their specific motions and respective weights in §§2–4, that is, the four (§2 and §4), or five (§3) *elements*. This too follows the *De caelo*, where the simple motions up or down and in a circle characterize the elements and are linked with the motion of the first body and the respective weights and specific motions of the four terrestrial bodies (*Cael.* Book 1 chs. 2–3, Book 4). In our chapter bodies according to the Hellenistic philosophers, too, turn out to be such bodies. The views of Epicurus, Democritus and Plato on the relation between elements and weight must ultimately derive from their original writings, though the doxai of Democritus and Plato may have percolated through Aristotle's *pragmateiai*, and those of the former even through his monograph on Democritus. The doxa of Strato, like his other doxai in the *Placita*, ultimately derives from the original works, but one does not know through what intermediary. Aristotle *Cael.* 4.3 309a19–21 points out that Anaxagoras and Empedocles did not have a theory of weight. Accordingly they are absent from the present chapter.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type 'about x ', περί τοῦ θεῖνα. The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. Because of its lack of specification it is able to comprise various issues that are not mentioned explicitly (cf. ch. 1.3 Commentary C). In the present case the emphasis is upon the property of weight (question type of quality) in relation to movement, the question type of cause, and the category of place.

D *Analysis*

a Context

(1) The chapter is the first of the block consisting of chs. 1.12–17, dealing with the corporeal in its various aspects. Diels *DG* 62 argued that ch. 1.16 'On the division of bodies' should have followed immediately (P '1.16 ... absurde a 1.12 ...

diremit'), and that S has preserved this arrangement. Similarly Leszl (2002) 178. But also elsewhere S combines in one of his chapters matters that are further apart in P; think for instance of chs. 1.18 at S 1.18.1 and 2.9 at 1.18.4: coalescence on the level not only of paragraphs but also of entire chapters.

(2) Ch. 1.12 is preceded by the block consisting of chs. 1.9–11, dealing with the related themes of matter, idea and cause, which were preceded by, among others, the introductory chs. 1.2–3 and 1.6–7 dealing with principles, elements, and the gods. Roughly, this order corresponds with that of the first sub-section of the Stoic φυσικὸς λόγος at Diogenes Laertius *V.P.* 7.132, cited below at section E(a) General texts. There, however, bodies are mentioned first, presumably because the next three subparts, namely principles, elements (cf. chs. 1.2–3), and gods (cf. ch. 1.7) are corporeals, while the last three, namely bounding entities (cf. chs. 1.14.1 and, presumably, 1.15), place (cf. ch. 1.19), and void (cf. ch. 1.18) are incorporeals. This prominent position of 'body' represents a shift in priorities compared with earlier ontologies, despite what was said above at section B, and Aristotle *Cael.* 3.1 298b1–3. See further at ch. 1 above, Commentary D(a), and the detailed exposition at M–R 2.1.97–109, also for the accommodation and integration of sequences of topics *more Aristotelico*.

b Number–Order of Lemmata

P has five lemmata, S seven of which the first five are parallel to those of P. When we disregard the abstracts from other chapters of A and from AD that have been interpolated among those belonging to the present chapter (see at section A above), it becomes clear that the order in S is the same as in P. The two final lemmata in S not paralleled in P are best left where they are. We therefore see no reason for changing Diels' order.

c Rationale–Structure of Chapter

(1) *Definitions*. The chapter begins with three different but unattributed definitions. As is clear from the parallels cited at section E(a)§1, and (b)§1, the first and second definition were acceptable, even in combination, to both Epicureans and Stoics, and esp. §1a is also widely paralleled. The third definition is best known as Stoic, but when slightly differently formulated not incompatible with Aristotle's view of physical body in a place, for body according to the Stoics is of course physical. Therefore we may see these definitions as preliminary (nominal or conceptual, cf. above, ch. 1.9, Commentary D(d) General points, and also D(e)(2)).

(2) *Diaphoniae*. Accordingly dissent only appears at the level of the property of weight, more explicitly heaviness and lightness, in relation to movement. The main diaphonia is between those who attribute weight as an intrinsic prop-

erty to bodies and those who describe it as an adventitious property depending on the circumstances. §2 Plato: no 'natural' weight, as body is heavy or light depending on its being in its own or in a foreign place (sc. in the cosmos), with concomitant movement away or towards. Opposed to §3 Aristotle: natural weight, since earth is heaviest, fire lightest, the other two being in between in various ways; negative information on the movement of the four elements only, esp. that fire, unlike the fifth, does not naturally move in a circle. The latter (as Diels ad loc. points out) is in contrast with §4 the Stoics, according to whom the aetherial light (i.e. fire) does move in a circle. The Stoic view of natural weight also contrasts with Plato's in §2, and to a lesser degree with Aristotle's in §3, because they posit two light and two heavy elements, which do have these properties naturally in virtue of their movement away from or towards the centre.

In contrast to the four elements of §§2–4 those of §5 Epicurus (and of §6 Democritus) are 'indefinitely many' in number. In contrast to those of §2 Plato the elements of Epicurus do possess (natural) weight, i.e., heaviness but not lightness, both when single and when combined. Their (primary) movement is not related to where they happen to be, but occurs always either in a straight line or by deviation (from this line). Upward movement may occur when they strike each other and rebound from each other, so is clearly secondary, and not natural in the sense in which the upward movement of the lighter elements is natural for Aristotle. The implication is that the primary movement is downward. In contrast to the natural weight of Epicurus' atoms those of Democritus lack weight (cf. ch. 1.3.16 above), and they move about by hitting each other in infinite space. We are not informed about what happens when atoms combine.

Finally, Strato §7 agrees with Aristotle §3 about the natural weight of the elements, but does not attribute the higher placement of the lighter ones to what happens in the cosmos at large or to their own activity, but to the tendency of the heavier elements to contract under their own weight, and so to expel the lighter stuff. His doxa comes last not only for chronological reasons, but also because this view is rather exceptional.

d Further Comments

General Points

We may feel that 'On weight' would have been a better chapter heading, but this neutral concept, comprising both lightness and heaviness, is not an ancient one. Nevertheless some further specification after the umbrella formula 'On bodies' would not have been amiss. The chapter belongs with the group in which more than one theme is set forth; here, both body in general and body in relation to weight, movement and place.

Individual Points

§1 The formula ὅσον ἐφ' αὐτῷ, just as its Latin counterpart *quantum in ipso*, in fact became quite common and so is not exclusively Stoic. But it is familiar from the Stoic definition of the ἀξίωμα (Diogenes Laertius *VP*. 7.65 = *SVF* 2.193). It is also found in one of the definitions of 'sound' (φωνή): Marius Victorinus *ArsGramm.* c. 2 (*FDS* 500) *vox est aër ictus auditu percipibilis, quantum in ipso est. Graeci qualiter? ἄῤῥ πεπληγῶς αἰσθητὸς ἀκοῇ τὸ ὅσον ἐφ' αὐτῷ ἐστίν*, Diomedes *ArsGramm.* p. 420.9 (*FDS* 501). On the Stoic background see W. Ax (1986) 169, and further his index s. νν. ὅσον ἐφ' αὐτῷ ἐστίν and *quantum in ipso est*. In combination with ἀντίτυπος it lends a Stoic flavour to the definition.

§2 The paired formulas οἰκείος τόπος—ἀλλότριος τόπος are Aristotelian; e.g. Arist. *Cael.* 1.8 276a12, then also Theophr. *Sens.* 88.

§4 ἀπὸ τοῦ ἰδίου μέσου: Lachenaud literally translates 'est léger par nature ce qui s'incline à partir du centre qui lui est propre'. But a light body does not have its own and proper centre. One understands why Q, or perhaps rather his Greek source, omitted ἰδίου. The centre of the cosmos must be meant, which coincides with that of the earth. According to an anti-Aristotelian argument in favour of a plurality of worlds at Plutarch *Def.Or.* 424A–425C each of the many kosmoi has its own centre (425A, ἔχει γὰρ καὶ μέσον ἕκαστος ἴδιον). So maybe, though rather unexpectedly, the Stoic position is here considered from a neutral point of view, which does not exclude a plurality of kosmoi. Another possibility is that these words are what remains of a lost lemma, dealing with an Atomist position that was coalesced *more doxographico* with the present one (see, for instance, what happened to ch. 1.20.1–2 in P). Yet it is also not unlikely that the words τῆς γῆς *vel sim.* have fallen by the wayside. Arguing against Anaximander's explanation of the central position of the earth, Aristotle writes (*Cael.* 2.13 295b25) τὸ δὲ φέρεσθαι πρὸς τὸ μέσον ἴδιον τῆς γῆς, which means 'motion towards the centre is peculiar to earth', but could have been misunderstood as 'motion towards the proper centre of the earth' (which is also that of the cosmos) and so suggested proper centers for each of the elements.

§§5–6 The remarkably similar expressions (full texts below section E(a)§§5–6) of Cicero *ND* 1.69 *Epicurus ... invenit quo modo necessitatem effugeret, quod videlicet Democritum fugerat* and Diogenes of Oenoanda fr. 54 col. 3.1–6 Smith ἐλευθέραν τινὰ ἐν ταῖς ἀτόμοις κείνησιν εἶναι, ἥ[ν] | Δημόκριτος μὲν οὐχ εὔρεν, Ἐπικούρος δὲ εἰς φῶς ἤγαγεν will derive from a shared tradition.

§5 The text of the first part of Epicurus' doxa is awkwardly phrased and not immediately clear. But it is not helpful to apply cruces to τὰ σώματα, καὶ τὰ πρῶτα δὲ ἀπλᾶ as done by Mau, following Diels *DG* 52 who put these words between asterisks, and argued 'cum elementis gravitatem exemit, peccat Aëtius contra Epicuri doctrinam'. ἀπερίληπτα pertains to atomic shapes elsewhere

(Diogenes Laertius *V.P.* 10.42) and will do so here as well (see also the explicit antithesis at ch. 1.3.16): the shapes i.e. qualities of the Epicurean elements are indefinitely many, and not four or five in number as with Plato, Aristotle and the Stoics mentioned in §§2–4. See also the sensible comments ad loc. of Torraca (1961) 447–448. The problem is solved by eliminating the comma after ἀπλᾶ, and having πάντα apply to both ἀπλᾶ and συγκρίματα, which moreover makes more sense for πάντα too.

§6 O'Brien (1981b) 282–290 rightly points out that the claim that a Democritean atom can be as big as the world cannot be reconciled with the evidence in Aristotle and Theophrastus that atoms are too small to be perceived. Mugler (1963) 399–401, forgetting that atoms in combination do have perceptible qualities (see Theophr. *Sens.* 73–76), argues that the imperceptibility of the individual atom is a matter of its lack of such qualities, not of its size. Asmis (1984) 273, inspired by Mugler, believes that in our world atoms are below the level of the perceptible, but that somewhere in the infinite universe there can be an atom as big as our world (one cannot help being reminded of Scott Fitzgerald's *Diamond as Big as the Ritz*). Taylor (1999) 173–174 seems to share O'Brien's preference, but *par acquit de conscience* cites a few far-fetched and of course hypothetical attempts to make sense of the cosmic atom. Other attempts to save the atom as big as the cosmos are cited by Fleischer (2016) 295 n. 50. O'Brien discusses several ways in which what in his view is a mistake may have come about during the transmission of the texts. To a large extent we agree with his explanation. If what we have here is a mistake it must be an early one. As Fleischer loc. cit. duly points out, the third cent. CE bishop Dionysius of Alexandria (who, like his predecessor Origen as head of the Alexandrian catechetical school, had received a good philosophical education), says something similar (cited below at section E(a)§6). Dionysius may be dependent on the wider *Placita* tradition (his account of cosmogony parallels that of ch. 1.4, see at 1.4 section E(a)) and so provides a proximate version of A. The idea of an atom, or atoms, of unlimited size may have been deduced from careless formulations such as one found in the doxography at Diogenes Laertius *V.P.* 9.44 'and the atoms are unlimited in size and number' (καὶ τὰς ἀτόμους δὲ ἀπείρους εἶναι κατὰ μέγεθος καὶ πλῆθος), where μέγεθος represents not 'size' but σχῆμα, 'shape'. Diogenes' source(s) may go back to a sentence in the verbatim fragment (fr. 1 Ross, 208R³, Democritus 68A37 DK) of Aristotle's *On Democritus* preserved by Simplicius in *Cael.* 295.7–8: 'he is of the opinion that the substances are *so small that they escape our senses*, and that they have all sorts of forms and shapes and differences as to size' (νομίζει δὲ εἶναι οὕτω μικρὰς τὰς οὐσίας ὥστε ἐκφυγεῖν τὰς ἡμετέρας αἰσθήσεις, ὑπάρχειν δὲ αὐτοῖς παντοίας μορφὰς καὶ σχήματα παντοῖα καὶ κατὰ μέγεθος διαφορὰς, or italics). The atoms of indefinitely numerous dif-

ferent sizes mentioned by Aristotle are still too small to be perceived by the senses. Theophrastus *Phys.Op.* fr. 8 Diels (229 FHS&G) at Simp. *in Phys.* 28.9–10 and 28.25–26 too speaks of an ‘infinite numbers of shapes, since there is no reason for them to be one shape than another’—not of sizes (τῶν ἐν αὐτοῖς σχημάτων ἄπειρον τὸ πλῆθος διὰ τὸ μηδὲν μᾶλλον τοιοῦτον ἢ τοιοῦτον εἶναι). Perhaps, as Laks–Most (2016j) 985 n. 1 = (2016g) 117 n. 1 suggest, someone inferred (polemically?) that an infinite number of shapes entail an infinite number of sizes. But this hypothetical interpreter forgot the limiting condition concerned with the imperceptible smallness of the atoms.

An alternative suggestion is to assume an early corruption and to emend ἄτομον to ἄτοπον (a very comprehensible *lapsus calami* in this account of atoms) and to translate ‘it would be *odd* (to suppose) that it is possible for one of the size of a cosmos to exist’. Cf. Lucretius *DRN* 2.496–499 (arguing against atoms of ‘immense magnitude’, *immani maximitate*), also cited below at section E(b)§6. It would follow that a view of Epicurus is attributed to Democritus. We have left the Aëtian text as transmitted, because as we have seen the reading of S (the only source for this paragraph) is confirmed by Dionysius, which makes it unadvisable it to emend the text of A. For ἄτοπον in the *Placita* cf. chs. 1.1.1 and 1.5.5; at the end of a sentence e.g. Plato *Phd.* 99a ἀλλ’ αἴτια μὲν τὰ τοιαῦτα καλεῖν λίαν ἄτοπον, Aristotle *Sens.* 3 440a15–17 τὸ μὲν οὖν, ὥσπερ οἱ ἀρχαῖοι, λέγειν ἀπόρροϊαν εἶναι τὴν χροάν καὶ ὁρᾶσθαι διὰ τοιαύτην αἰτίαν, ἄτοπον.

On the issue of weight see above, ch. 1.3, Commentary D(d) §16[116–118].

§7 For the metaphor in the final words see Aristotle *Phys.* 2.4 214a33–b1, where it is used to describe the compression of water in an argument against the existence of the void. The metaphor envisages a stone or a pip in fruit being squeezed out by compressing the flesh of the fruit. This is the only recorded instance of the verb before A. It is not unlikely that the use here derives from Strato himself and was inspired by the Aristotelian passage that he would have known well. Strato is recorded at Diogenes Laertius *V.P.* 5.59 as having written a book Περὶ κούφου καὶ βαρέος. A book on the void is not included in the list, but his opinion on the subject is found at A 1.18.4.

e Other Evidence

(1) For a discussion of body in general see Sextus Empiricus *M.* 9.359–367 (including limits), *P.* 3.38–55. For weight in the context of a discussion of body see e.g. *M.* 10.16. The Chrysippean account cited at *Testes secundi* above also comprises a discussion of the position and weight of the elemental cosmic layers (see below, ch. 1.14, also section E).

(2) Atticus fr. 5 des Places at Eusebius *PE* 15.7.2 states that the primary bodies (7.1, τῶν καλουμένων στοιχείων, τῶν πρώτων σωμάτων) are either hot or cold,

or dry or wet (cf. Aristotle in the *De generatione et corruptione*), or soft or hard, or light or heavy, or rare or dense (λεγόντων γοῦν ἡμῶν ὅτι πᾶν σῶμα ἢ θερμόν ἢ ψυχρόν, ἢ ξηρόν ἢ ὑγρόν, ἢ μαλακόν ἢ σκληρόν, ἢ κοῦφον ἢ βαρύν, ἢ ἀραιόν ἢ πυκνόν), and that the four elements are defined by combinations of these properties. In the present chapter, as in the parallel passages in *De caelo*, the essential qualities are limited to light and heavy.

(3) The doxai of Plato and Aristotle deal with ‘heavy’, ‘light’, and the ‘inclination’ or ‘turn of the scale’ (ρόπή, the latter in the Plato lemma only—note, however, that the term does *not* occur in the *Timaeus*), but there is no separate chapter dealing with ροπή in the *Placita*. Eutocius, in his commentary on Archimedes’ *De planorum aequilibriis*, procem. 3.264.2–15 Heiberg–Stamatis (Greek text cited below at section E(a) General texts) writes as follows on ροπή in his proem: ‘Aristotle, noblest Peter, says that the turn of the scale (ρόπή) is the common genus of heaviness and lightness, and so does Ptolemy who follows him. But Timaeus in Plato says that every turn of the scale depends on heaviness, for his point of view is that lightness is a deprivation. Those ambitious to learn may collect the doxai from the book *On Turnings of the Scale* written by Ptolemy and from Aristotle’s physical treatises and from Plato’s *Timaeus* and from those who have commented on these works. But Archimedes’ view in the present book is’ etc. This advice is absolutely fascinating, since as a matter of fact Eutocius advises us that if necessary one may, or even should, compile one’s own doxography, and tells us where to look for the evidence. He lists the diaphonia between the views of Aristotle (followed by Ptolemy) and Plato, and announces the more complicated doctrine of Archimedes. One may perhaps infer that Eutocius knew the *Placita* and was aware of what he sees as a lacuna. However this may be, doxographies composed by Eutocius himself are in fact found both in the *Commentarii in libros de sphaera et cylindro* 2.1 (a very extensive one), and in the proem of the *Commentarius in dimensionem circuli*.

Commentary

A *Witnesses*

The witnesses for this chapter are P and S.

(1) P records two doxai in P^B, as do also Q and G, who strangely has a chapter on the ἐλάχιστα σώματα, but not on bodies in general (Diels omits a reference to this chapter at *DG* 312). Ps takes over the chapter heading and the beginning of his chapter reveals slight influence from its contents.

(2) S refers to the chapter heading of A 1.13 in the collective heading of *Ecl.* 1.14 on bodies etc. and includes a block of four successive doxai, which follow on from the doxai of 1.13 and the first doxa from 1.16. The first two doxai are the same as in P, and in the same order. The remaining two are not in P and will have been abridged away by him, though part of the contents of §3, i.e. the reference to ἀμερῆ, ended up in the abridged §2. So like in other chapters (1.12, 1.14, 1.15) P abridges by omitting the final lemmata, here §§3–4. It would seem that S wrote out the entire chapter.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* Doxographical overviews of tenets concerned with the smallest elements are to be found in Sextus Empiricus and elsewhere; see further below, section D(e).

(2) *Sources.* It is to be noted that this chapter is anticipated in, or rather, dependent on, the account of 'body' in Aristotle's *De caelo* Book 1 ch. 1, and of body qua physical or elemental body in relation to weight *ibid.* Books 3–4. In *De caelo* 3.4–5 Aristotle, among other things, criticizes elemental theories that posit minimal bodies, viz. those of Leucippus and Democritus, of Plato in the *Timaeus*, and of various anonymous philosophers who make fire the element.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type 'about x ', περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. The question types/categories involved in the present chapter are substance (in the physical sense) and quality, as is the category of quantity (sc. size: smallest particles). It is paralleled as a book title for the Stoic Sphaerus.

D *Analysis*

a Context

The chapter is the second of the block consisting of chs. 1.12–17, which deals with body in its various aspects. A chapter on the smallest type of bodies quite naturally follows upon ch. 1.12 on bodies, and is followed by 1.14 on the shapes of the cosmos, the elements and the elementary particles. See also above at section B.

b Number–Order of Lemmata

P has two, S four lemmata of which the first two, as we noted at section A, are the same as those of P and in the same order. Moreover P's second lemma incorporates an element from S's third. Accordingly there is no reason to modify the order of S, which is also that of Diels.

c Rationale–Structure of Chapter

The *Placita* rather scholastically devotes a separate chapter to this subject, boosting the evidence on bodies in ch. 1.12 with extra lemmata about Empedocles and Heraclitus and omitting references to the ordinary Atomists. Rather exceptionally in a plurilemmatic chapter there is no clear diaphonia, but only a diaeretic overview on a gliding scale of various views concerned with minima.

Major differences pertain to the elements: four in §1 Empedocles, one in §2 Heraclitus, who are depicted as agreeing about the priority of the particles vis-à-vis the elements. Nothing is said about priority in §§3–4. §3 fails to advise us about the different natures of these partless minima in Xenocrates and Diodorus Cronus respectively. We only hear about the views concerning ἀμερῇ of the latter and possibly Epicurus below, at the anonymous lemma ch. 1.16.2. Anyhow the result is a series of *recherché* examples, pleasing to the doxographical taste.

d Further Comments

General Points

The genus *minima* (ἐλάχιστα) has ‘fragments’ (θραύσματα), ‘little filings’ (ψηγμάτια) and ‘partless entities’ (ἀμερῇ) as species, but it is not immediately clear in which respects these species are believed to differ from each other. Perhaps we may assume that unlike the atomic ἀμερῇ the θραύσματα and ψηγμάτια are not unsplittable. For the visible ἐλάχιστον and the atomic ἐλάχιστον, i.e. for the technical use of the term, see Epicurus *Ep.Hdt.* at Diogenes Laertius *VP.* 10.58–59.

Individual Points

§1 The additional words in P^B ὃ ἐστι στρογγύλα are confirmed as part of the P tradition by Q. Diels and other editors opted for exclusion, believing it to be a glossema. But P, the epitomator, is as a rule not prone to adding something. For other additional phrases using the phrase ὃ ἐστι (‘i.e.’, thus explaining the meaning of a word or adding a further elucidation), see above, ch. 1.11.2 with Commentary D(d)§2, and below, ch. 5.14.1, twice, with commentary D(d)§1. Even so, and though small things may well be round and round things small, ‘round’ as the explanation of ‘smallest’ is not immediately clear. The adjective στρογγύλος is used for descriptions of specific kinds of atoms (cf. e.g. 67A129, Democritus cited by Theophrastus; Epicurus at A chs. 3.4.5, 4.19.3), but there is no (other) evidence of its use in relation to Empedocles. Since it does not make sense to say that the smallest parts have similar parts (unless one thinks of Epicurus’ minimal parts, but this lemma is about Empedocles), the adjective ὁμοιομερῇ will pertain to στοιχεῖα: the elements have similar parts, namely their θραύσματα, earth consisting of small pieces of earth etc. ‘Round’ should pertain in the first place not to smallest parts but to the spherical shape of the elemental layers around the spherical earth. Perhaps however one may believe that, exceptionally, ὁμοιομερῇ pertains not to substance but to shape, round elements having round parts. A curious passage in ps.Alexander’s *Problems* (cited below at section E(b)§1) states that ‘water is a spherical element, just like the other elements’, and argues from the ‘roundness of a falling drop of water’ to the roundness of the element as a whole: ‘water as a whole is just like its part; there-

fore it consists of similar parts'. In the next chapter, 'On shapes' 1.14.2–3, the smallest parts according to Anaxagoras and the Atomists, viz. the 'things with like parts' and the atoms, are said to be of 'many shapes' (πολυσχήμονα), while according to the Pythagoreans the 'shapes of the four elements' (τῶν τεττάρων στοιχείων), except 'cone-like' (κωνοειδές) fire, are said to be 'spherical' (σφαιρικά τὰ σχήματα). The conical form of fire can only pertain to the elemental parts. Cf. below, ch. 1.14, Commentary D(d)§2, also for parallels of confusion between the shape of the elements qua wholes and of their smallest parts. Empedocles was often considered a Pythagorean, e.g. Theophrastus *Phys.Op.* fr. 3 Diels = 227A FHS&G at Simplicius in *Phys.* 25.20–21, Timaeus *FrGrH* 566 F14 at Diogenes Laertius *VP.* 8.54. So these parallels rescue P's extra phrase: ii is a typical doxographical oddity, or confusion.

For the interpretation of Empedocles in Atomist terms, or rather in terms of a doctrine pertaining to smallest parts, beginning with Aristotle see Gemelli Marciano (1991).

§2 Remarkably all four witnesses have rather different texts for this short doxa; see the critical apparatus above. We note the following, but are aware of the eclectic and hypothetical nature of our *constitutio*:

(1) The version of S has a periphrastic character (see below at section D(d)(2)), so some preference has to be given to P^B. But S's reading πρὸ τοῦ ἑνός, confirmed by Q but absent in P^B, should not be sacrificed. Mouraviev (2000) T 406 rightly translates 'avant l'élément unique'. We have refrained from adding <στοιχείου> in our text. §2 πρὸ τοῦ ἑνός (sc. στοιχείου) takes up §1 πρὸ τῶν τεσσάρων στοιχείων. as Heraclitus' single element is contrasted with Empedocles' four (see at section D(c) above). G too has resorted to paraphrase.

(2) Diels' kept ἐλάχιστα καὶ ἀμερῇ in the text of P, though in his apparatus he plausibly asserted that ἐλάχιστα καὶ ἀμερῇ have been imported from §3, presumably before P decided to omit this paragraph. It is indeed likely that P coalesced two paragraphs, as is so often his practice. It is surely surprising to find Heraclitus credited with minima; the phrase δοκεῖ τισι ('some people believe') shows that this interpretation of a remark in Aristotle (see below at section D(d)(4)) was not the *opinio communis*, see M–R 2.1.191.

(3) The verb εἰσάγειν is standard idiom in A, see Diels *DG* 746a s.v.: 'saepe de dogmatis velut ψηγμάτια, συγκρίσεις, μαντικὴν, πέμπτον σῶμα al.'. S's verb καταλείπειν does not occur (elsewhere) in A. εἰσάγει is supported by the agreement of P^B and G; we venture to amend to the infinitive after δοκεῖ τισι (as in S).

(4) Instead of P^B's ψηγμάτιά τινα S and G have ψήγματα (Aristotle *Cael.* 3.5 304a18–21, for which see below, has ψήγματος). Although the Aristotelian precedent favours the common word the more unusual reading should be retained (only four more cases in extant Greek literature, including κονιορτώδη ψηγμάτια

at Philoponus *in de An.* 67.22 = Democritus fr. 200 Luria, the familiar comparison of Democritus' atoms with 'motes of dust' visible in sunbeams shining through windows). ψήγματα means 'gold dust' or 'motes in the air'; our translation of ψήγματα follows Guthrie's rendering (LCL) of the Aristotelian precedent at *Cael.* 3.5 304a18–21 where no name-label is provided; cited below in section E(b)§2. The tradition on which the *Placita* depends 'knows' that Aristotle here means Heraclitus; for other instances of this sort of knowledge see above, ch. 1.3 Commentary D(d)§13 and below, ch. 1.21, Commentary B(2). Lebedev (1979 and 1980) has meritoriously noticed that the gist of our lemma is anticipated in Aristotle's text, which however lacks a name-label. He argues that Aristotle provides us with a genuine fragment of Heraclitus. But this identification of Aristotle's anonymus is a hyper-interpretation. For other, sometimes more plausible instances see ad ch. 3.10.4 below, where the *Placita* 'knows' that Aristotle at *Cael.* 2.13 293b34–294a1 means Leucippus, and in other lemmata where—one does not know on what authority—it provides the names of individual Pythagoreans, e.g. Philolaus at ch. 2.7.6 or Hicetas at ch. 3.9.2, while Aristotle had mentioned the cosmology of 'the Pythagoreans' in general, as at *Cael.* 2.13 293a17–27. Cf. above ch. 1.3, Commentary D(d)§15.

§3 In ch. 1.16.3 ἀμερῇ are attributed to 'those thinkers who introduce the atoms', but it is not immediately clear what exactly this term refers to. In ch. 1.3.18 (as also elsewhere) Diodorus Cronus is credited with partless bodies (ἀμερῇ σώματα) as minima. For Xenocrates the theory of indivisible lines must be meant, much different from Diodorus' atomism. Ch. 4.9.10 (no name-labels) puts those who posit ἄτομα or ὁμοιομερῇ or ἀμερῇ or ἐλάχιστα on a par without providing further information as to what these terms mean, or in what respect they differ; the atoms and the void are mentioned immediately before at ch. 4.9.9 and attributed to Leucippus, Democritus and Diogenes.

e Other Evidence

The account of smallest particles qua elements belongs with the final section of doxographical overviews of theories concerned with the elements starting with Thales. Compare e.g. ps.Galen *HPh* c. 18, *DG* pp. 610.20–611.2, and Sextus Empiricus *P.* 3.32, *M.* 9.363–364, *M.* 10.254, cited below section E(a) General texts and §§2–3. Alexander of Aphrodisias *Mixt.* 213.15–214.5, cited section E(a) General texts, opposes the various Atomists to those thinkers who favour infinite division (see full text as cited below, at chs. 1.16 and 1.17, section E(a) General texts). Note, on the other hand, that only Diodorus is cited for a view on minima in the chapter on the principles above (1.3.18). For references to minima in these other *Placita* chapters see the Commentary and at *Loci Aetiani*.

E Further Related Texts

a Proximate Tradition

General texts: Alexander of Aphrodisias *Mixt.* 213.15–214.5 οὐ γὰρ μόνον διη-
νέχθησαν πρὸς ἀλλήλους περὶ τοῦδε τοῦ δόγματος οἱ μίαν ὕλην ὑποκεῖσθαι πᾶσι
τοῖς ἐν γενέσει σώμασιν λέγοντες πρὸς τοὺς ἐκ διωρισμένων τε καὶ κεχωρισμένων
σωμάτων ποιούντας αὐτήν, ὧν οἱ μὲν ἄτομα σώματα ἄπειρα τῷ πλήθει, κατὰ σχῆμα

A 4.20.1 πᾶσα δ' ἐπιφάνεια ἀσώματος. συγκινεῖται μὲν γὰρ τοῖς σώμασιν, αὐτὴ δ' ἀσώματος πάντως καθέστηκεν, ὥσπερ ἐπὶ τῆς καμπτομένης ῥάβδου ἢ μὲν ἐπιφάνεια οὐδὲν πᾶσχει ἢ δ' ὕλη ἐστὶν ἢ καμπτομένη.

§2 A 2.6.2 Πυθαγόρας ἀπὸ πυρός καὶ τοῦ πέμπτου στοιχείου (sc. ἄρξασθαι φησι τὴν γένεσιν τοῦ κόσμου). A 2.6.5 Πυθαγόρας πέντε σχημάτων ὄντων στερεῶν, ἅπερ καλεῖται καὶ μαθηματικά, ἐκ μὲν τοῦ κύβου φησὶ γεγενῆσθαι τὴν γῆν, ἐκ δὲ τῆς πυραμίδος τὸ πῦρ, ἐκ δὲ τοῦ ὀκταέδρου τὸν ἀέρα, ἐκ δὲ τοῦ εἰκοσαέδρου τὸ ὕδωρ, ἐκ δὲ τοῦ δωδεκαέδρου τὴν τοῦ παντὸς σφαῖραν. A 2.2.2 ἄλλοι δὲ κωνοειδῇ (sc. τὸν κόσμον ἀπεφῆναντο). A 2.7.6[27] καὶ πάλιν πῦρ ἕτερον ἀνωτάτω, τὸ περιέχον.

§4 A 1.4.1[4–6] πολλὰ σώματα ..., ποικιλίαν ἔχοντα καὶ σχημάτων καὶ μεγεθῶν. A 4.3.5 Δημόκριτος πυρῶδες σύγκριμα ἐκ τῶν λόγῳ θεωρητῶν (sc. τὴν ψυχὴν), σφαιρικὰς μὲν ἔχοντων τὰς ἰδέας, πυρίνην δὲ τὴν δύναμιν. A 4.19.5[15–16] Δημόκριτος καὶ τὸν ἀέρα φησὶν εἰς ὁμοιοσχήμονα θρύπτεσθαι σώματα κτλ.

§5 A 2.14.2 Κλεάνθης κωνοειδεῖς (sc. τοὺς ἀστέρας). A 4.15.3 Χρῦσιππος κατὰ τὴν συνέντασιν τοῦ μεταξὺ ἀέρος ὄραν ἡμᾶς, νυγέντος μὲν ὑπὸ τοῦ ὀρατικοῦ πνεύματος, ὅπερ ἀπὸ τοῦ ἡγεμονικοῦ μέχρι τῆς κόρης διήκει, κατὰ δὲ τὴν πρὸς τὸν περιεχόμενον ἀέρα ἐπιβολὴν ἐντείνοντος αὐτὸν κωνοειδῶς κτλ.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The witnesses to this chapter are again P and S.

(1) P^B and Q record only two lemmata, the former a general, or nominal, definition of *σχῆμα*, the second a doxa attributed to 'Pythagoras and his follow-

ers'. Of these G retains only the former. As was the case for 1.13, Diels omits to include a reference to this chapter in his text at *DG* 312. Ps makes use of the title only. Like in other chapters (1.12, 1.13, 1.15) P abridges by omitting the final lemmata, here §§3–5.

(2) The five doxai in S are all found in his ch. 1.15 on shapes (for a detailed analysis of his procedure in this chapter see M–R 1.219–220). The two doxai matched in P are in the same order. He may have written out the entire chapter, interpolating other material between §1 and the succession of §§2–5 and adding a snippet from AD as final doxa at the end.

(a) He does not commence this time with A's definition, but first writes out three brief poetic quotes, including one from Empedocles (31B28.2 DK).

(b) He then quotes the first doxa in A, the definition of σχῆμα.

(c) Next he presents a brief doxa attributed to Plato on the sphericity of the cosmos which is probably his own work (on ch. 2.2 see further section D(d) below), followed by two quotes from Plato's *Timaeus* (33b, 62d–63a).

(d) Thereafter he cites the remaining doxa in P, followed by three further doxai on the shapes of primary bodies not found in P. The last of these has the name-label 'Cleanthes alone of the Stoics'. These three doxai are all very likely derived from A; the concluding phrase of the first (attributed to Pythagoras and his followers) anticipates the last doxa in the block. It is followed by a further doxa attributed to Zeno on the motion of fire, which Diels included in his S column, but which in view of its use of the verb ἔφασκε is best regarded as derived from AD.

(e) The remainder of S's chapter contains material from A Book 2 and a final quote attributed to Philolaus' *Bakchai* (on this text see Huffman 1993, 16).

B *Proximate Tradition and Sources*

(1) The *proximate tradition* is negligible.

(2) *Sources*. Naturally the ultimate sources for §§3–5 are the original writings of Anaxagoras, Leucippus, and Cleanthes, but the information ending up in §§2–5 arrived via secondary sources, among which (for the Atomist theory) perhaps Aristotle's monograph on Democritus, and/or passages in the school writings. For Anaxagoras too we may think of intermediate Peripatetic sources. §2 is a confused and typically doxographical fabrication (see section D(d)§2 below), composed from on the one hand Platonic, Peripatetic and Stoic views about the concentric elemental components of the cosmos, and on the other from Cleanthes' view that fire is conical, itself a revision of Plato's view that molecules of fire have the shape of a pyramid.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type ‘about *x*’, *περὶ τοῦ δεῖναι* (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter the heading pertains to the category of quality (*σχῆμα*, ‘shape’ itself) and that of quantity (the number of shapes involved). Its meaning ‘On rhetorical figures’ is paralleled as the title of treatises by e.g. Herodian and Apollonius Dyscolus, or of chapters, e. g. in ps.Longinus.

D Analysis

a Context

The chapter is the third of the block consisting of chs. 1.12–17, dealing with body in its various aspects. ‘Shape’ as defined here belongs with the subdivision of the eidetic Stoic division of physics at Diogenes Laertius *V.P.* 7.132, for which see above at ch. 1.12, Commentary D(a). Note that S 1.15.4 may have replaced an original Platonic lemma lost in P (since a reference to the Platonic atomic shapes might be expected). Cf. ch. 2.6.5 (where we have the name-label Pythagoras).

b Number–Order of Lemmata

(1) §6 in Diels has been rejected as out of context and most likely drawn from AD; cf. the discussion in M–R 3.324.

(2) P^B and Q have two lemmata, of which P^G only has the former. S has five lemmata, of which the first two are the same as those of P^{BQ}.

There is no need to change the order of the *DG*.

c Rationale–Structure of Chapter

(1) For the function of the nominal definitions in the first lemma cf. above, ch. 1.9, Commentary D(c) and (e)(2).

(2) *Diaeresis according to number*. The chapter is a mix of information on shape in general (the definition) on the one hand and particular shapes on the other, namely of the elements, or rather of the elementary particles. In §§2–4 we have a diaeretic list of elemental shapes according to number. When we accept the second phrase in §2 we have two shapes, if we reject it only one. According to §§3–4 we have to account for many shapes, the (many) elementary particles being contrasted with the four (or five) elements of §2, and their many shapes with the one or two shapes of that previous paragraph. The view of §5 is exceptional (doxography is interested in the bizarre), and appropriately comes last.

d Further Comments

Individual Points

§1 We note that ‘shape’ is defined as incorporeal, cf. ch. the puzzling lemma at ch. 4.8.9. At S 1.15.3a the name-label ‘Porphyrius’ has been preserved, but the text is lost. Volkmann erroneously concluded that §1 derives from Porphyry, see Diels *DG* 48 et n. 1, Wachsmuth ad loc.

§2 Diels (though he did not change his text accordingly) argued that the reference to the cosmos in S’s text has been brought in from the context (S 1.15.4 Plato’s *Timaeus*, 1.15.6b excerpts from A 2.2 on the sphericity of the cosmos) and that A’s original text is to be found in P^B (thus, we may add, also in P^Q). Eva Sachs (1917) 12 n. 1, 68 argued that S’s text is probably right (‘wahrscheinlich ... die bessere Fassung’), and it certainly makes some sense. That the cosmos is spherical (cf. A 2.2) follows from the spherical shape of the elemental layers (cf. Aristotle *Cael.* 2.4 287a30–b4), or rather conversely (cf. *Cael.* 2.4 287a2–11), which is worth remembering. Anyhow, the spherical shape of the four elements (from earth up to fire) should pertain to the spherical earth and the spherical layers of the intra-cosmic bodies of the three other elements, application to their atomic structure being out of the question. The (Cleanthean) cone-like shape of the fifth element, celestial fire, on the other hand can only be understood as pertaining to its quasi-atomic micro-structure. In the vicinity of cosmic layers this conical fire is a *Fremdkörper*. For this sort of hodgepodge, jumbling macro-shape and micro-shape together, we may compare Cleomedes 1.5.10–23 Todd (quoted below, ch. 3.10, section E(b) General texts), where in a polemical context various shapes of the earth qua cosmic body are discussed, such as flat, concave, and spherical, but also ‘square’, ‘rectangular’ and ‘pyramidal’, which can only pertain (originally) to the microstructure of earth qua element. Ps.Alexander *Probl.* 2.39 (see above, ch. 1.13 Commentary D(d)§1), arguing from the spherical shape of a drop of water to that of the element (and of the other elements) is the only other parallel we have found.

The present lemma, which perhaps sets up a straw doxa to be refuted (cf. Euclid *Phaen.* cited below section E(b)§2) conflicts with the Pythagorean lemma of ch. 2.6.5 below. The attribution of cone-like fire to the Pythagoreans perhaps is only a *lapsus calami*, anticipating the final lemma.

§3 Only A and his tradition (not illogically) attribute a plurality of shapes to the *homoiomere*. In §§3–4 the *homoiomere* are placed on a par with the atoms, as in ch. 4.9.10.

§5 Cleanthes’ idiosyncratic view that the shape of the stars and of fire is cone-like may perhaps be connected with the optical theory that the visual rays form a cone, professed by Chrysippus and other Stoics (for which see below ch. 4.15.2). Cleanthes’ view on the shape of the stars as recorded in A 2.14.2 is

not mentioned here, but if we add it to that of fire in general we have a mixture of cosmic body and elemental particle in this doxa too.

e Other Evidence

(1) For the contents of §1 we may look to mathematical or mathematically inspired literature (Euclid, Archimedes) echoed in other sources. For the concentric layers of the other elements around the spherical earth the evidence extends from Aristotle to Proclus.

(2) The parallel passage in Achilles (see at *Testes secundi*) is part of a Chrysippean cosmological account, which begins with a discussion of the weight, circular movement and position of the elements, themes of ch. 1.12 above. It is followed, in its turn, by accounts of the issue ascribed to ‘the Archimedean’ and ‘the Orphics’ (cf. 114F II Bernabé).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

Our knowledge of A's chapter on colours again depends on the evidence of P and S.

(1) P^B and Q preserve six doxai. P skipped §7 and edited out the whole final section §§7–12, even more than in chs. 1.12–14. All six are taken over by G in his *Epitome*, but the third and fourth have been coalesced into a single doxa in the mss. Ps retains the chapter heading and slightly abridges the nominal definition that opens the chapter.

(2) S in his chapter on colours (1.16) in all likelihood simply writes out the chapter as he found it in A, making one significant alteration. He joins together what in P are the second and fifth doxai, which have (in the version of P) very similar name-labels (οἱ Πυθαγορικοί, οἱ ἀπὸ Πυθαγόρου), for which S substitutes Πυθαγόρειοι ... The third doxa (in both P and S) attributed to Empedocles is also longer in S than what is preserved in P, for S here has a slightly different version of the lines τὰς δὲ διαφορὰς τῶν χρωμάτων ... καὶ τῶν ἀέρων in the Pythagorean lemma (he does not have καὶ τῶν ἀέρων the second time). S thus preserves 13 doxai in all, including all those found in P.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The *traditio proxima* is virtually non-existent. The few parallels in Hippolytus and Sextus Empiricus pertain to generalities.

(2) *Sources.* The relation of the chapter with Theophrastus *De sensibus* is less marked than Diels believed, though in some instances beyond reasonable doubt.

(a) In the first place there are no Pythagoreans in the *De sensibus*. The Pythagorean definition οἱ Πυθαγορικοί 'χροιὰν' ἐκάλουν τὴν ἐπιφάνειαν τοῦ σώματος in §2 ultimately derives from Aristotle *Sens.* 3 439a30 τὸ γὰρ χρῶμα ἢ ἐν τῷ πέρατί ἐστιν ἢ πέρας, διὸ καὶ οἱ Πυθαγόρειοι (58B42 DK) τὴν ἐπιφάνειαν 'χρόαν' ἐκάλουν, as Diels ad loc. and *DG* 215 already saw. He included it among the purported excerpts from the *pragmateiai* about the Pythagoreans listed at *DG*, loc. cit., almost all of which however have to be attributed not to A but to S; see below, ch. 1.18.6, Commentary D(d), individual points §6. For the doxa of 'the successors of Pythagoras' at §7, a later construct, see below section D(d), individual points §7.

(b) The Empedocles doxa in §3 that colour is what is fitting for the *poroi* of vision may ultimately derive from Aristotle *GC* 1.8 324b26–35, but perhaps more readily from the shorter account at Theophrastus *Sens.* 7, see *DG* 222. But Diels correctly stipulates that the *four-colour* theory is at variance with Theophrastus' account, who for Empedocles mentions only two colours and *Sens.* 17 argues that the other colours cannot be perceived, for the basis of perception is that of like by like.

(c) Plato's doxa in §4 is a virtually verbatim reproduction of Theophrastus *Sens.* 5 and 86. Theophrastus closely paraphrases *Tim.* 67c and preserves much of Plato's wording. What apparently gives the Theophrastean origin away is the phrase 'with the organ of sight' (πρὸς τὴν ὄψιν), a calque of Theophrastus' τῇ ὄψει (twice), not of Plato's ὄψει alone and of his 'with perception' (πρὸς αἴσθησιν). Theophrastus and A have ἀπὸ τῶν σωμαμάτων, while there is no preposition in Plato. Cf. Baltussen (2000a) 230; πρὸς, on the other hand, is again closer to Plato than to Theophrastus. But the final position of πρὸς τὴν ὄψιν corresponds with that of Theophrastus' τῇ ὄψει.

(d) On the other hand it is certain that Democritus' doxa in §8 does not derive from *Sens.* 60, 63 and 73–76 alone. Baltussen (1993) 224–225 hears '[a]t most a faint echo'. The compact presentation of atomist principles is based on Aristotle's classic account at *Met.* A.4 985b4–17 and (possibly, for the sentence may be by Simplicius citing Aristotle) Theophrastus *Phys. Op.* fr. 8 Diels = 229 FHS&G. Not, however, without interesting modifications of primary key terms, namely, instead of διαθιγῇ, ῥυσμῶ, τροπῇ the words ῥυθμῶ [normalization], διαταγῇ ['arrangement', found only here instead of διαθιγῇ], προτροπῇ ['impulse', 'exhortation', the original term apparently being too unfamiliar]. They are accompanied by the same explanatory substitutes τάξις 'order', σχῆμα 'shape' and θέσις 'position', as in Aristotle and Theophrastus (these substitutes, but not the (variations of) the original terms, are paralleled at A ch. 4.9.9). But the original Democritean terminology is not paralleled in the *De sensibus*. Their equivalents, plus as a fourth (or rather first) property 'size' (μέγεθος), are listed Theophrastus *Sens.* 60: 'he (sc. Democritus) distinguishes some (sense-data) by their sizes, others by their shapes, and several by their order and position' (τὰ μὲν τοῖς μεγέθεσι, τὰ δὲ τοῖς σχήμασιν, ἔνια δὲ τάξει καὶ θέσει διορίζει).

The denial of the existence of colour at the level of the individual atom is anticipated both at Aristotle *GC* 1.2 316a2–3 'he denies that colour exists, for colouring, he says, is due to position' (χροιὰν οὐ φησιν εἶναι τροπῇ γὰρ χρωματίζεσθαι), and Theophrastus *Sens.* 60 'he makes them states of the perceptive faculty' (ὁ μὲν γὰρ (sc. τὰ αἰσθητά) πάθη ποιῶν τῆς αἰσθήσεως). See also below, ch. 4.9.9. For different atomic shapes in this context according to Aristotle

see *Sens.* 4 442b10–13 = 68A126 DK. Theophrastus *Sens.* 61 rubs in the purported contradiction in Democritus between colours as on the one hand sense-data and on the other as one of the consequences of varieties at the level of uncompounded atoms, namely of size and shape. A similar point is made by Aristotle *Met.* Γ.5 1009b7–17, though less specifically. This contradiction is not paralleled in §8 of our chapter. We should anyway realize that ‘shape’ not only pertains to individual atoms but also to compounds. The atomic shape of a compound depends on the shape of the majority of the atoms of which it is composed. Individual atoms cannot be perceived, so also shape and size are only perceptible via compounds. A compound consisting of smooth elements can be perceived as white, of rough elements as black, of round elements (larger than those of soul) as red, and varieties of shape and arrangement also determine various shades of white or black or red or green (Theophrastus *Sens.* 73–76, cited section E(b)§8). In our present paragraph the colours are connected with shapes and arrangements. We should recall that compounds consisting of similarly shaped atoms of about the same size are formed by means of a natural process, when like meets with like in the precosmic or cosmic whirl.

Our information on Democritus’ views on perception is varied, because in some sources he is depicted as a true-blue Skeptic denying the possibility of knowledge in any form, and in others as someone who believes that there is a significant relation between the shapes and arrangements of the elements in compounds and the qualities that are perceived, though these qualities cannot be attributed to the individual elements or the compounds themselves.

(3) Apart from a brief reference in §7 there is no discussion of mixed colours, though for Plato and Democritus these are discussed at some length by Theophrastus. This is another difference between the present chapter and the *De sensibus*.

C Chapter Heading

Attested in both P and S, and again of the standard umbrella type ‘about x’, περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. Here the heading comprises the question types of substance, quality and existence, or the categories of substance, quality and quantity. The phrase is paralleled as the title of a treatise in the *Corpus Aristotelicum* that belongs with the present context, as a title of Strato, and as a heading in the ps.Alexandrian *Problemata*.

D *Analysis*

a Context

(1) The chapter is the fourth of the block of six chapters, 1.12–17, which deal with body in its various aspects. It follows not unnaturally on 1.12 ‘On bodies’, 1.13 ‘On smallest (bodies)’, and 1.14 ‘On shapes’, and is followed by 1.16, ‘On cutting of bodies’, which is closely related to the theme of 1.13, ‘On smallest (bodies)’. The structure of ch. 1.15 is quite complicated, because it takes several issues in its stride. These could very well have been distributed over several chapters. According to Diels *DG* 62 §§8–13, not paralleled in P, are a separate ‘quaestio’ dealing with the issue of whether colours are by nature or by convention etc., and he posits they originally formed a separate chapter, although there is no evidence in S for an appropriate chapter heading. We hesitate to follow Diels. Distribution of related themes over different chapters and their combination in a single one occur fairly equally.

(2) In various ways the chapter is related to ch. 4.13 ‘On vision, how we see’, and ch. 4.15, ‘Whether darkness is visible’. Thus, it is noteworthy that the colour theme is placed here, in Book 1, and not further down in Book 4 among the epistemological chapters dealing with perception, esp. those dealing with vision. In an uncontaminated Peripatetic environment this is where colour would be discussed in the first place, as in Aristotle’s *De sensu et sensibilibus* and Theophrastus *De sensibus*. Goethe in the first pages of the ‘historischer Theil’ of the *Farbenlehre* actually combined several lemmata of chs. 1.15 and 4.13, namely those having the same name-labels. The present positioning presumably depends on the preliminary definition of colour as ‘the primarily visible quality of a *body*’, itself not so very far from the modified Pythagorean view adopted by Aristotle, or from the Stoic view (cf. §6, §11). Thus, the shift from epistemology to ontology will have been caused by the position of the corporeal in Stoic thought, attested by the prominent place in Book 1 of ch. 1.12 ‘On bodies’, *ubi vide* at Commentary D(a). The definition in §1 explicitly ranges colour under the category of quality, but in a Stoicizing context qualities are corporeal. This nominal definition is also acceptable to those (e.g. the Platonists) who see quality as an incorporeal.

b Number–Order of Lemmata

P has six lemmata, S twelve, combining at Szab the second and fifth doxa with their similar Pythagorean name-labels, as noted above at section A. For the rest the order of the lemmata, which are shared by P and S, is the same, so we may follow that of the more complete S but emend his order by putting back Szb to the fifth position according to P. This is also Diels’ order in the *DG*.

c Rationale–Structure of Chapter

(1) *Definition*. For the preliminary and descriptive definition of a word, or concept (as here ‘colour’ in §1) see above ch. 1.9, Commentary D(c) and (e)(2). We used to think that προηγουμένως had been added by S, but have now come to the conclusion that it was left out by P. Like ch. 1.11.1 ἀρκεῖ γὰρ ὑπογραφικῶς and ch. 1.23.1 οὗτος πάσης κινήσεως κοινὸς ὅρος it serves to identify the definition as a preliminary and nominal, or conceptual, one. The definition places colour in the category of quality, but at section D(a)(2) above we have noticed that in a Stoicizing context qualities are corporeal.

(2) *Diaphoniae*. The first diaphonia opposes §§2–7 to §8, the former being concerned with the substance and corporeality of colour, while the latter denies its objective reality, claiming that it is the secondary result of the various ways primary corpuscles are arranged in combination. This combines the question types of substance and existence. §9 provides an addendum to the atomist doctrine of §8: bodies have no colour in the dark. This, in its turn, conflicts with §10, where according to Aristotle in darkness bodies do have colour, though not actually but potentially. The brief reference to Aristotle’s view with regard to coloured surfaces and the ‘transparent’ explains why the appeal to potentiality is justified, but this is only comprehensible, or so we believe, to one who is familiar with his complicated theory of the transparent. Finally §§11–13 to some extent summarize what has gone before (and thus are formally parallel to what is found at ch. 4.3.1 below): §11 opposes the realists of §§2–7 to the Atomists of §§8–9 and also to those of §13, who in their turn also recall §8–9, while a subspecies of those who assume primary corpuscles is added in §12, as an ally of the people mentioned in §11 and an opponent of those mentioned in §13.

(3) Other ingredients of colour theory are added here and there. The four-colour theory (category of quantity) is represented in §3 and §§7–8. Secondary and further colours that are the product of these main colours (by mixture) are mentioned in §7, but only play a very limited part, while Democritus (as discussed esp. in Theophrastus *De sensibus*), Plato, and Aristotle also discuss the ways primary colours mix to produce further colours.

d Further Comments

Individual Points

§§3 and 7–8 Diels *DG* 50 and 222, following his predecessors and of course with his theory of Theophrastus qua most important source of A in mind, argues that ὤχρὸν (‘ochre’, ‘yellow’) in §3 Empedocles, §7 Pythagoreans and §8 Democritus is corrupt (cf. Ierodiakonou 2005a, 11, who n. 16 cites other followers of Diels). The original reading would have been χλωρόν (‘green’), the last

of the four primary colours according to Theophrastus on Democritus at *Sens.* 75–82. Since ὥχρὸν occurs in all witnesses for §3 plus §§7–8 and, if it is indeed a corruption, has to be an ancient one (‘Aetius an librarius tam pertinaciter peccaverit nescio’, Diels says), he does not introduce χλωρόν in the text of the *DG*, flagging ὥχρὸν with asterisks instead. At *PPF* 5A92 (1901 p. 104) he keeps ὥχρὸν too, but adds, between brackets: ‘an i.q. χλωρόν cf. Galen. XV 554?’ [i.e. *HVA* p. 182.8 Mewaldt, where one reads ἔστι δὲ τὸ ὥχρὸν χρώμα] ‘at cf. Heraclit. fr. 10’ [i.e. 22B10 DK]; these two texts are quoted below at section E(b) General texts, where we have added a few more examples. Galen rather often provides the information that the two terms are equivalent although χλωρός is ‘ancient’ (but so, we must say, is ὥχρὸς, see below) and ‘Asian’, and ὥχρὸς standard usage. Diels also keeps ὥχρὸν in his quotations of §3 and §8 in the first edition of the *Fragmente der Vorsokratiker* (no change in all subsequent editions). In several four-colour lists, some of which are also quoted at section E(b) General texts, we do not find χλωρός but ὥχρὸς. This supports Galen’s point about the equivalence of the two terms. Both Pliny and the author of the *De mundo*, contemporaries of A, attribute a palette of four colours including ochre to the great painters of the past, or to the art of painting in general. See also Ferrini (1999) 105 on the interchangeability of these two terms, and compare the entries χλωρός and ὥχρὸς in the *Index Hippocraticus*. The Hippocratic treatise *De aere aquis locis* 15.15–16 τήν τε χροίην ὥχρην ἔχουσιν, ὥσπερ ὑπὸ ἱκτέρου ἐχόμενοι and similar passages in the *Corpus Hippocraticum* show that Galen’s claim that only χλωρός is ‘ancient’ is false. So *pace* a majority of scholars we need not assume a corruption or vulgarization, quite the contrary. What is more to the point, the fact that in the *De sensibus* Democritus’ fourth colour is χλωρός, while here it is ὥχρὸς (just as in §§7–8), shows that the four-colours theory of the present chapter does not derive from the *De sensibus* unchanged.

§1 χρώμα εἶναι ἀπεφαίνεται may well have been added by S (the verbal form ἀπεφαίνεται does not occur in P), but we have left it in the text.

§3 P^B, S attribute the intromission theory of vision, while Q presents the extramission theory. We return to this below.

Primavesi (2001) 512 posits that the lines τὰς δὲ διαφορὰς ... παρὰ τῶν τροφῶν τὰς ποικιλίας (see app. crit.), occurring in virtually the same form in our §7 (= the second part of S2), which were rejected by Diels and Wachsmuth as repetitive, are to be left in §3, and as to contents to be attributed to Empedocles. That the contents are arguably Empedoclean is correct, see below, section D(d)§7, where however their ascription to the Pythagoreans is explained. What is against the *constitutio* as defended by Primavesi is that S combined what in P’s chapter is divided over two paragraphs, P2 and P7, by adding the latter to the former. By mistake S then repeated this move, omitting the refer-

ence to the four colours of §7 because there is already one in §2, and abridging the end from *παρὰ τὰς ποικιλίας τῶν τροφῶν καὶ τῶν ἀέρων* to the shorter *παρὰ τῶν τροφῶν τὰς ποικιλίας*.

That the colours are equal in number to the elements does not entail that each element has, or produces, its own specific colour (see Ierodiakonou 2005a). The point of Empedocles' simile in 31B23 DK is that just as in painting you need no more than four colours, so in cosmology you need no more than four elements. According to 31B71 DK the elements produce all the various colours, but it is not said—though not excluded either!—that each element contributes its own specific colour. At 31B21.3–5 DK the sun is 'white to look on' and 'warm', and the other heavenly bodies are 'flooded with white light', while rain is 'dark' (these lines about sun and rain are also cited by Aristotle). Theophrastus *Sens.* 7 attests that for Empedocles the pores of fire of the eyes 'know' white and those of water 'know' black, and *Sens.* 59 tells us that for Empedocles fire is white and water black. (See already Arist. *GA* 5.1 779b15–20). Theophrastus does not mention the other two elements, or the other two primary colours, though at *Sens.* 17 he speaks of 'grey and other mixed colours', sc. mixed from black and white. It is not certain, however, that he is right in doing this, for—to give an example—he also makes the astonishing mistake of stating that Plato discusses only two senses, hearing and sight (*Sens.* 5). A mistake that is not as innocent as it has been made out to be by some scholars, because the sequential ordering of doctrines according to the number of senses at issue is one of the structural determinants of the Theophrastean treatise. We assume that we may argue from a certain to a possible mistake; the actual number (two) is incidental to this argument.

The list of the four 'roots of all things' represented by four divinities at 31B6 DK begins with fire and ends with water, the first being 'white Zeus' (Ζεὺς ἀργῆς). So water at the other end may represent 'black' (cf. the rain at 31B21.5 DK cited above), while no clue is provided as to the colour of earth and air, which are in between. Contrary evidence however seems to be provided by 31B67, where black is linked to heat. It is hard to believe that air and water have no colour at all, for how can one see something that is colourless? According to 31B109 'we see earth with earth, water with water, divine air with air, but annihilating fire with fire, love with love, and strife with baneful strife'. The separate visibilities of the individual elements suggest that each has a colour, but love and strife presumably lack one, so the verb 'to see' in this fragment is not used in a purely visual sense.

That all colours can be perceived if one departs from black and white as the opposite ends of the spectrum has been plausibly argued by Ierodiakonou (2005a). Now blood is red; there is no Empedoclean text telling us that this is so,

but one can hardly doubt that he will have known. Blood is what we think with (31B105 DK etc.), and what we think with and are able to do what we are good at is said to consist of all four elements in more or less equal proportions, 1:1:1:1 (Theophrastus *Sens.* 10–11, 31A86 DK). So we should perhaps assume that air and earth too are white and black, respectively, especially if these colour terms are made to comprise a multiplicity of shades.

If, as seems to be the case, the attribution to Empedocles of the four-colour theory is an interpretation rather than a report based on unambiguous textual evidence, it will be based on a creative reading of the painter simile of 31B23 DK. As to elements and colours, although Parmenides, whose theory of two elements inspired Empedocles' theory of four, is not explicit, he certainly gives a hint by the names he gives to the pair: *φλογός αἰθέριον πῦρ* and *νύκτ' ἄδαή* (28B8.56 and 59 DK), or *φῶς καὶ νύξ* (28B9.1)—'fire' or 'light' and 'night' or darkness, which amounts to their being white and black, respectively.

At ch. 4.13.12, in the chapter on vision, both competing theories concerned with vision are attributed to Empedocles, namely that of extramission, the visual rays stretching out to the objects, and that of intromission, the effluences from the objects reaching the eyes. See below, ch. 4.13, Commentary D(d)§12. In ch. 1.15.3, the present lemma, the Greek tradition consisting of P^B, P^G and S, representing one side of this diaphonia, has 'Empedocles (says) that colour is what fits the pores of the eyes', while Q, representing the other side, has *Empedokles war der Meinung, daß die Farbe etwas ist, worauf die Sehstrahlen fallen*. This difference cannot be due to a mistranslation on Q's part, so represents a genuine reading, or rather tradition. Possibly the Aëtian lemma at ch. 1.15.3 originally presented both views, just as ch. 4.13.11, and P^B as well as S lost one half and P^Q the other. For other genuine readings preserved by Q see e.g. at ch. 2.20.13[35] *den Berg ..., welcher 'Olympos' genannt wird*, and ch. 5.30.2[6] *Herophilos glaubte*.

§5 Ἀρίσταρχος Σάμιος μαθηματικός, ἀκουστής Στράτωνος. Because this is the first mention of Aristarchus in A he is given both his ethnicon and professional status. That he is a pupil of Strato enlists him in a philosophical Succession. He is cited at §9 below, and at chs. 2.24.7 and 4.13.4 (where he follows directly after 4.13.3 Strato). An edition of his fragments is still lacking.

§7 The reading of τροφῶν in S (τὰς ποικιλίας τῶν τροφῶν) is probably to be preferred to G's and Q's τόπων and to τροπῶν in P (where it is emended to τροφῶν by Corsinus). The *varia lectio* may have been caused not so much by stories about animal mimicry (for which see Theophrastus frs. 365A–D FHS&G, Philo *Ebr.* 172–175) as by the association of τόπων with ἄερων, as in the famous Hippocratic title. Aristotle *GA* 5.6 treats the varying colours of animal species and individual animals from a different perspective, though he also allows for

changes due to environmental factors. And so does Theophrastus *CP* 2.16.6; see further Amigues (2012) 220 n. 12, with references to other Aristotelian passages. For the ‘varying foodstuffs’ (ποικίλη τροφή) on the other hand see Plutarch *Quaest. Conv.* 663A (with Empedocles 31B90 DK) cited at section E(b)§7, a text adduced by Primavesi (2011) 512 to justify his transposition of lines from the Pythagoreans in §7 to Empedocles in §3 (for which see above, app. crit. and section D(d)§3).

The phrase γένη τῶν χρωμάτων varies Aristotle’s formula εἶδη χρωμάτων (e.g. *Sens.* 3 440b23–24). According to Aristotle *Sens.* 4 442a20–21 there are exactly seven species of primary colours, but according to the present chapter, which agrees with what is a very common view, there are just four. The attribution to the Pythagoreans of the four elements is to be explained by the interpretation of the ῥιζώματ(α), contained in the *tetraktys* (‘tetrad’, quaternary number) of the famous Pythagorean oath, as the τέσσαρα πάντων ῥιζώματα of Empedocles 31B6 DK. (On the oath see above ch. 1.3, Commentary D(d)§7[72–73]).

Empedocles, at any rate, was often seen as a Pythagorean, or a Pythagorean in part: Theophrastus *Phys. Op.* fr. 3 Diels = 227A FHS&G at Simplicius in *Phys.* 25.20–21, Timaeus *FrGrH* 566 F14 at D.L. 8.54, Neanthes *FrGrH* 84 F26 at Diogenes Laertius *V.P.* 8.55, etc. So the four roots with their purported colours could be projected back upon the archegete Pythagoras. There is in fact quite a lot of evidence for the attribution of the four elements to Pythagoras and his followers, often explicitly linked to the oath, or at any rate to the *tetraktys*. Some examples: Sextus Empiricus *M.* 7.100 tells us that the number ‘four pertains to the solid; for when we hang a fourth over three points a pyramid results, which is the first shape of the solid; rightly therefore the *tetraktys* is the fount of all nature’ (ἡ τετρακτὺς πηγή τῆς τῶν ὅλων φύσεως ἐστίν). Theon *Exp.* p. 97.4–12 Hiller tells us that ‘the fourth *tetraktys* is that of the simple bodies, fire, air, water, earth’. Hippolytus *Ref.* 6.23.4 says that the Pythagoreans swear by the ‘symphony of the four elements’ (ὄρκος τίς ἐστὶ τοῖς Πυθαγορικοῖς ἢ τῶν τεσσάρων στοιχείων συμφωνία), then cites the oath, adding that ‘the *tetraktys* is the principle of the physical and solid bodies’. Ps.Iamblichus *Theol. Ar.* p. 22.18–22 De Falco attributes the oath to both the Pythagoreans and Empedocles (ἐπώμνυον δι’ αὐτῆς τὸν Πυθαγόραν οἱ ἄνδρες ... καθά που καὶ Ἐμπεδοκλῆς), and p. 23.19–23 lists the four elements among the wonderful products of the *tetraktys*. See further Anatolius *de Dec.* pp. 7.22–8.7 Heiberg, Eusebius *L. Const.* 6.5. 5–7 τὴν τῶν στοιχείων τετρακτὺν ἐπινοήσας, γῆν, ὕδωρ, ἀέρα, πῦρ, πηγὰς ἀενάους εἰς τὴν τοῦδε τοῦ παντὸς προὔβαλετο χορηγίαν, Hierocles in *Carm. Aur.* 20.19.1–4, Proclus in *Tim.* 3.67.29 τὴν τῶν στοιχείων τετρακτὺν, and the substantial accounts of David *Prol.* 48.23–31 and David/Elias in *Isag.* 4.18–28 Westerink. The *Lexicon* of Hesychius

at τ 625 explains τετρακτὺς as ‘Pythagorean oath pertaining to the four elements’ (Πυθαγορικὸς ὄρκος, ἡγουν τῶν τεσσάρων στοιχείων σημαίνων). Again the *Placita* are among the first sources to inform us about a particular and widespread Neopythagorean doctrine. Another early one is Vitruvius 2.2.1, whose brief overview of physical elements, derived from an unknown source, lists Thales’ water, Heraclitus’ fire, and next says that the Pythagoreans added air and earth (*Pythagoreorum vero disciplina adiecit ad aquam et ignem aëra et terrenum*). The Pythagoreans rather than Empedocles and even *two* further elements, not earth only, as Aristotle has it *Met.* A.3 984a8–9 (Ἐμπεδοκλῆς δὲ τὰ τέτταρα, πρὸς τοῖς εἰρημένοις γῆν προστιθείς τέταρτον).

This purported ἐμπεδοκλίζειν of the Pythagoreans also helps to understand the final sentence about the various colours of the living beings as depending on their nurture and environment. At ch. 5.19.6 [20–23] (Empedocles 31A72 DK) the various kinds of living beings move to inhabit the various elements depending on their elementally mixed constitution (‘the more *moist* ones having an impulse towards the *water* (τὰ μὲν ὑγρότερα εἰς τὸ ὕδωρ), others flying up to the *air*, namely those in which the *fiery* element (πυρῶδες) predominates’). In our present chapter we first have the various mixtures of the colours, then the various colours of the living beings according to their environment. Perhaps we may include the mixed elemental constitutions in thought, and the colours at ch. 5.19.5. The variety of foodstuffs has been mentioned above.

§8 See above at section B, sources.

§§9–10 For the issue of what or whether one sees in the dark see below, ch. 4.15, ‘Whether darkness is visible’, which (just as ch. 4.13 ‘On vision’) is closely connected qua theme with the present chapter.

§9 It does not seem plausible to have two different spellings of χροιά c.q. χρόα in the one chapter. We have changed the occurrence of χρόαν in §9 and §10 to the χροιάν as in §2, which is attested by both P and S.

§11 Attributed to the Stoics as *SVF* 2.419 by Von Arnim *SVF* 2 p. 137 in app. ad loc., who compares *SVF* 1.91 (consisting of P5 of the present chapter plus G4 because of its phrase ἐπίχρωσιν τῆς ὕλης). But ps.Aristotle *Col.* 1 791a1–10, cited section E(b)§11, provides the perfect parallel. For the third-century Peripatetics in this context see Ganson (2004).

e Other Evidence

(1) Plato’s theory of colours at *Tim.* 67d–68d is part of his account of sense perception. In Aristotle too colour is part of an account of sense perception at *Sens.* 3–4, then a theme at *Mete.* 3.4 (colours of the halo and the rainbow), but not the subject of a monograph of its own. Therefore the pseudepigraphic monobiblos *On Colours*, which has been dated to the generation of Strato, fills a gap in the

Corpus Aristotelicum, whether or not it was meant to. Theophrastus critically discusses earlier theories of colour in the *De sensibus*, with special attention to Empedocles, Plato, and Democritus.

(2) Alcinous' *Didascalicus*, which in its chapters on sense-perception contains echoes of Theophrastus' treatise, fails or declines to mention colour in this context.

Empedocles 31B96 DK at Arist. *de An.* 1.2 410a4–6 'ἢ δὲ χθὼν ἐπὶ ἥρος ἐν εὐστέροις χροάνοισιν / τῷ δύο τῶν ὀκτῶ μερέων λάχε νῆστιδος αἴγλης, / τέσσαρα δ' Ἡφαίστιοι· τὰ δ' ὅστέα λευκὰ γέγοντο'. cf. comment on this passage of Simplicius (Priscianus?) *in de An.* 68.10–14 μίγνυσι δὲ πρὸς τὴν τῶν ὁστών γένεσιν τέσσαρα μὲν πυρὸς μέρη, διὰ τὸ ξηρόν καὶ λευκὸν χρώμα ἴσως πλείστου λέγων αὐτὰ μετέχειν πυρός, δύο δὲ γῆς καὶ ἐν μὲν ἀέρος ἐν δὲ ὕδατος· ἃ δὴ ἄμφω 'νῆστιν αἴγλην' προσαγορεύει (31B96.2 DK), 'νῆστιν' μὲν διὰ τὸ ὑγρὸν ἀπὸ τοῦ νάειν καὶ ρεῖν, 'αἴγλην' δὲ ὡς διαφανῇ. Empedocles 31B98 DK at Simp. *in Phys.* 32.1–10 ἄκουσον αὐτοῦ τῶν ἐν τοῖς Φυσικοῖς λεγομένων, ἐν οἷς καὶ τῆς ἐνταῦθα δημιουργικῆς συγκράσεως τὴν Ἀφροδίτην ἦτοι τὴν Φιλίαν αἰτίαν φησί. καλεῖ δὲ τὸ μὲν πῦρ καὶ Ἡφαίστον καὶ ἥλιον καὶ φλόγα, τὸ δὲ ὕδωρ ὄμβρον, τὸν δὲ ἀέρα αἰθέρα. λέγει οὖν πολλαχοῦ μὲν ταῦτα, καὶ ἐν τούτοις δὲ τοῖς ἔπεσιν 'ἢ δὲ χθὼν τούτοις ἴση συνέκυρσε μάλιστα / Ἡφαίστω τ' ὄμβρῳ τε

καὶ αἰθέρι παμφανώνντι, / Κύπριδος ὀρμισθεῖσα τελείους ἐν λιμένεσσιν, / εἴτ' ὀλίγον μείζων εἴτε πλέον ἐστὶν ἐλάσσων. / ἐκ τῶν αἱμὰ τε γέντο καὶ ἄλλης εἶδεα σαρκός'. **Aristotle** *GC* 1.8 324b26–33 τοῖς μὲν οὖν δοκεῖ πάσχειν ἕκαστον διὰ τινων πόρων εἰσιόντος τοῦ ποιούντος ἐσχάτου καὶ κυριωτάτου, καὶ τοῦτον τὸν τρόπον καὶ ὁρᾶν καὶ ἀκοῦειν ἡμᾶς φασὶ καὶ τὰς ἄλλας αἰσθήσεις αἰσθάνεσθαι πάσας, ἔτι δὲ ὁρᾶσθαι διὰ τε ἀέρος καὶ ὕδατος καὶ τῶν διαφανῶν, διὰ τὸ πόρους ἔχειν ἀοράτους μὲν διὰ μικρότητα, πυκνοὺς δὲ καὶ κατὰ στοίχον, καὶ μάλλον ἔχειν τὰ διαφανῆ μάλλον. οἱ μὲν οὖν ἐπὶ τινων οὕτω διώρισαν, ὥσπερ καὶ Ἐμπεδοκλῆς (31A87 DK). *GA* 5.1 779b15–28 τὸ μὲν οὖν ὑπολαμβάνειν τὰ μὲν γλαυκὰ πυρώδη, καθάπερ Ἐμπεδοκλῆς (31A91 DK) φησὶ, τὰ δὲ μέλανα πλεῖον ὕδατος ἔχειν ἢ πυρός, καὶ διὰ τοῦτο τὰ μὲν ἡμέρας οὐκ ὀξύ βλέπειν, τὰ γλαυκὰ, δι' ἔνδειαν ὕδατος, θάτερα δὲ νύκτωρ δι' ἔνδειαν πυρός, οὐ λέγεται καλῶς, εἴπερ μὴ πυρὸς τὴν ὄψιν θετέον ἄλλ' ὕδατος πᾶσιν. ἔτι δ' ἐνδέχεται τῶν χρωμάτων τὴν αἰτίαν ἀποδοῦναι καὶ κατ' ἄλλον τρόπον, ἄλλ' εἴπερ ἐστὶν ὥσπερ ἐλέγχθη πρότερον ἐν τοῖς Περὶ τὰς αἰσθήσεις (*Sens.* 2 438a16) καὶ τούτων ἔτι πρότερον ἐν τοῖς Περὶ ψυχῆς (*de An.* 3.1 425a4) διωρισμένοις, καὶ ὅτι ὕδατος καὶ δι' ἣν αἰτίαν ὕδατος ἄλλ' οὐκ ἀέρος ἢ πυρὸς τὸ αἰσθητήριον τοῦτ' ἐστὶ, ταύτην αἰτίαν ὑποληπτέον εἶναι τῶν εἰρημένων. οἱ μὲν γὰρ ἔχουσι τῶν ὀφθαλμῶν πλεον ὑγρόν, οἱ δ' ἔλαττον τῆς συμμετροῦ κινήσεως, οἱ δὲ σύμμετρον. **Theophrastus** *Sens.* 7 (on Empedocles, 31A86 DK) τοὺς δὲ πόρους ἐναλλάξ κεῖσθαι τοῦ τε πυρός καὶ τοῦ ὕδατος, ὧν τοῖς μὲν τοῦ πυρός τὰ λευκὰ, τοῖς δὲ τοῦ ὕδατος τὰ μέλανα γνωρίζειν· ἐναρμόττειν γὰρ ἑκατέρους ἑκάτερα. φέρεσθαι δὲ τὰ χρώματα πρὸς τὴν ὄψιν διὰ τὴν ἀπορροήν. *Sens.* 17 (on Empedocles, 31A86 DK) ἔτι δ' ἐν ταῖς κατὰ μέρος συμβαίνει γὰρ τῷ ὁμοίῳ γίνεσθαι τὴν γνώσιν· τὴν γὰρ ὄψιν ὅταν ἐκ πυρός καὶ τοῦ ἐναντίου συστήσῃ, τὸ μὲν λευκὸν καὶ τὸ μέλαν δύναται· ἂν τοῖς ὁμοίοις γνωρίζειν, τὸ δὲ φαῖον καὶ τὰλλα χρώματα τὰ μικτὰ πῶς; οὔτε γὰρ τοῖς τοῦ πυρός οὔτε τοῖς τοῦ ὕδατος πόροις οὔτ' ἄλλοις ποιεῖ κοινούς ἐξ ἀμφοῖν ὁρώμεν δ' οὐδὲν ἦττον ταῦτα τῶν ἀπλῶν. *Sens.* 59 Ἐμπεδοκλῆς (31A69a DK) δὲ καὶ περὶ τῶν χρωμάτων καὶ ὅτι τὸ μὲν λευκὸν τοῦ πυρός, τὸ δὲ μέλαν τοῦ ὕδατος. **Philo of Alexandria** *Mos.* 2.88 τὰς δὲ τῶν ὑφασμάτων ὕλας ἀριστίνδην ἐπέκρινεν ἐκ μυρίων ὧσων ἐλόμενος τοῖς στοιχείοις ἰσαριθμούς, ἐξ ὧν ἀπετελέσθη ὁ κόσμος, καὶ πρὸς αὐτὰ λόγον ἔχουσας, γῆν καὶ ὕδωρ καὶ ἀέρα καὶ πῦρ· ἡ μὲν γὰρ βύσσος ἐκ γῆς, ἐξ ὕδατος δ' ἡ πορφύρα, ἡ δ' ὑάκινθος ἀέρι ὁμοιοῦται—φύσει γὰρ μέλας οὗτος—, τὸ δὲ κόκκινον πυρὶ, διότι φοινικὸν ἑκάτερον.

§4 Plato: *Plato Tim.* 67c τέταρτον δὴ λοιπὸν ἔτι γένος ἡμῖν αἰσθητικόν, ὃ διελέσθαι δεῖ συχνὰ ἐν ἑαυτῷ ποικίλματα κεκτημένον, ἃ σύμπαντα μὲν χροᾶς ἐκαλέσαμεν, φλόγα τῶν σωμάτων ἐκάστων ἀπορρέουσιν, ὅψιν σύμμετρα μόρια ἔχουσιν πρὸς αἴσθησιν. **Theophrastus** *Sens.* 5 (on Plato) τὸ χρῶμα φλόγα τιν' ἀπὸ τῶν σωμάτων σύμμετρα μόρια τῇ ὄψει ἔχουσιν. *Sens.* 86 τὸ δὲ χρῶμα φλόγα εἶναι ἀπὸ τῶν σωμάτων σύμμετρα μόρια ἔχουσιν τῇ ὄψει· λευκὸν μὲν τὸ διακριτικόν, μέλαν δὲ τὸ συγκριτικόν.

§5 Aristarchus: *Aristotle de An.* 2.6 418b11 τὸ δὲ φῶς οἷον χρῶμά ἐστὶ τοῦ διαφανοῦς.

§6 Zeno Stoicus: *Plutarch SR* 1054A–B (on Stoics, *SVF* 2.449) τὴν ὕλην ἀργὸν ἐξ ἑαυτῆς καὶ ἀκίνητον ὑποκεῖσθαι ταῖς ποιότησιν ἀποφαίνουσι, τὰς δὲ (B)

ποιότητας πνεύματα ούσας και τόνους αερώδεις, οἷς ἂν ἐγγένωνται μέρεσι τῆς ὕλης εἰδοποιεῖν ἕκαστα καὶ σχηματίζουσιν.

§7 Pythagoreans: Aristotle *Sens.* 3 440b23–25 διὰ τίνα δ' αἰτίαν εἶδη τῶν χρωμάτων ἐστὶν ὠρισμένα καὶ οὐκ ἄπειρα ... ὕστερον ἐπισκεπτέον. *GA* 5.6 786a2–7 μάλιστα δὲ μεταβάλλουσι καὶ τὰ φύσει ὁλόχροα μὲν ὄντα τῷ γένει δὲ πολύχροα (sc. τὰ ζῶα) διὰ τὰ ὕδατα· τὰ μὲν γὰρ θερμὰ λευκὴν ποιεῖ τὴν τρίχα τὰ δὲ ψυχρὰ μέλαιναν ὥσπερ καὶ ἐπὶ τῶν φυτῶν. αἴτιον δ' ὅτι τὰ θερμὰ πνεύματος πλεόν ἔχει ἢ ὕδατος, ὁ δ' ἄλλῃ διαφανόμενος λευκότητα ποιεῖ καθάπερ καὶ τὸν ἀφρόν. **Theophrastus** *CP* 2.16.6 εἰ δὲ καὶ ἐπὶ τῶν ζώων τοῦτο συμβαίνει (sc. ἡ μεταβολὴ γίνεσθαι) καθάπερ φασὶν ἐπὶ τῶν ὀρνίθων καὶ χρώμασι καὶ σχήμασι καὶ δυνάμεσι καὶ τοῦτο καθ' ἕκαστον ἐνιαυτὸν οὐκ ἐν πλήθει χρόνου πλείονι. **Plutarch** *Quaest. Conv.* 663A εἴτε γὰρ ἐξ ὁμοίων ἀναλαμβάνει τὸ οἰκεῖον ἢ φύσις καὶ εἰς τὸν ὄγκον αὐτὸθεν ἢ ποικίλῃ τροφῇ πολλὰς μετεῖσα ποιότητας ἐξ ἑαυτῆς ἐκάστῳ μέρει τὸ πρόσφορον ἀναδιδωσιν, ὥστε γίνεσθαι τὸ τοῦ Ἐμπεδοκλέους (31B90 DK)· 'ὥς γλυκὺ μὲν γλυκὺ μάρπτε, πικρὸν δ' ἐπὶ πικρὸν ὄρουσεν, ὄξυ δ' ἐπ' ὄξυ (σπεῦ)δ' [e.g. Primavesi, alii alia], ἄλερον δ' ἄλερου λάβετ' ὦκα'. **Anon. Photii** c. 239, p. 238.20–23 Thesleff ὅτι ἡ ὄψις κατὰ Πυθαγόραν καὶ Πλάτωνα καὶ Ἀριστοτέλην τῶν δώδεκα χρωμάτων ἐστὶ κριτική, λευκοῦ καὶ μέλανος καὶ τῶν μεταξύ, ξανθοῦ φαιοῦ ὠχροῦ ἐρυθροῦ κυανοῦ ἀλουργοῦ λαμπροῦ ὀρφνίνου.

§8 Democritus: Democritus 68B9, B125, 68A49 DK at *Gal. Elem. Hipp.* 2.12, 1.417.9–13 K. 'νόμῳ γὰρ χροὴ νόμῳ γλυκὺ νόμῳ πικρὸν, ἔτεῃ δ' ἄτομα καὶ κενόν' ὁ Δημόκριτός φησιν ἐκ τῆς συνόδου τῶν ἀτόμων γίγνεσθαι νομίζων ἀπάσας τὰς αἰσθητάς ποιότητας ὡς πρὸς ἡμᾶς τοὺς αἰσθανομένους αὐτῶν, φύσει δ' οὐδὲν εἶναι λευκὸν ἢ μέλαν ἢ ξανθὸν ἢ ἐρυθρὸν ἢ γλυκὺ ἢ πικρὸν. **Plutarch** *Adv. Col.* 1110E τὸ γὰρ 'νόμῳ χροὴν εἶναι καὶ νόμῳ γλυκὺ' καὶ νόμῳ σύγκρισιν (ἀπάσας perperam add. Westman) ('ἔτεῃ δὲ τὸ κενὸν καὶ add. Wytttenbach alii) τὰς ἀτόμους' εἰρημέων φησιν (sc. Colotes) ὑπὸ Δημοκρίτου (fr. 61 Luria) (μάχεσθαι add. Reiske alii) ταῖς αἰσθήσεσι. **Plotinus** *Enn.* 3.6 [26].12.22–24 εἴ τις οὖν ἐνταῦθα τὸ (νόμῳ χροὴ) καὶ τὰ ἄλλα (νόμῳ) λέγοι τῷ τὴν φύσιν τὴν ὑποκειμένην μηδὲν οὕτως ἔχειν, ὡς νομίζεται, οὐκ ἂν ἄτοπος εἴη τοῦ λόγου (—).

Aristotle *Phys.* 1.5 188a22–26 Δημόκριτος (68A45 DK) τὸ στερεὸν [πλήρες *Simp. in Phys.* 44.16] καὶ κενόν, ὦν τὸ μὲν ὡς ὄν τὸ δὲ ὡς οὐκ ὄν εἶναι φησιν· ἔτι θέσει, σχήματι, τάξει. ταῦτα δὲ γένη ἐναντίων· θέσεως ἄνω κάτω, πρόσθεν ὀπίσθεν, σχήματος γεγωνιόμενον ἀγώνιον, εὐθὺ περιφερές. *GC* 1.2 315b33–316a1 ὅμως δὲ τούτοις ἀλλοίωσιν καὶ γένεσιν ἐνδέχεται ποιεῖν {καθάπερ εἴρηται} τροπῇ καὶ διαθιγῇ μετακινουντα τὸ αὐτὸ καὶ ταῖς τῶν σχημάτων διαφοραῖς, ὅπερ ποιεῖ Δημόκριτος (68A123 DK). διὸ καὶ χροῖαν οὐ φησιν εἶναι· 'τροπῇ' γὰρ χρωματίζεσθαι. *Sens.* 4 442b10–12 ... ὥσπερ Δημόκριτος (68A126)· τὸ γὰρ λευκὸν καὶ τὸ μέλαν τὸ μὲν τραχύ φησιν εἶναι τὸ δὲ λείον. *Met.* A.4 985b4–19 Λεύκιππος (67A6 DK) δὲ καὶ ὁ ἐταῖρος αὐτοῦ Δημόκριτος στοιχεῖα μὲν τὸ πλήρες καὶ τὸ κενὸν εἶναι φασί, ... οὗτοι τὰς διαφορὰς αἰτίας τῶν ἄλλων εἶναι φασιν. ταύτας μέντοι τρεῖς εἶναι λέγουσι, σχήμα τε καὶ τάξιν καὶ θέσιν· διαφέρειν γὰρ φασὶ τὸ ὄν ῥυσμῷ καὶ διαθιγῇ καὶ τροπῇ μόνον· τούτων δὲ ὁ μὲν ῥυσμὸς σχήμα ἐστὶν ἢ δὲ διαθιγὴ τάξις ἢ δὲ τροπὴ θέσις. διαφέρει γὰρ τὸ μὲν Α τοῦ Ν σχήματι, τὸ δὲ ΑΝ τοῦ ΝΑ τάξει, τὸ δὲ Ι τοῦ Η θέσει. *Met.* Γ.5

1009b7–17 ἔτι δὲ καὶ πολλοῖς τῶν ἄλλων ζώων τάναντία {περὶ τῶν αὐτῶν} φαίνεσθαι καὶ ἡμῖν, καὶ αὐτῷ δὲ ἐκάστω πρὸς αὐτὸν οὐ ταῦτά κατὰ τὴν αἴσθησιν αἰεὶ δοκεῖν. ποῖα οὖν τούτων ἀληθῆ ἢ ψευδῆ, ἄδηλον· οὐθὲν γὰρ μάλλον τάδε ἢ τάδε ἀληθῆ, ἀλλ' ὁμοίως. διὸ Δημόκριτος (68A112) γέ φησιν ἥτοι οὐθὲν εἶναι ἀληθές ἢ ἡμῖν γ' ἄδηλον. ὅλως δὲ διὰ τὸ ὑπολαμβάνειν φρόνησιν μὲν τὴν αἴσθησιν, ταύτην δ' εἶναι ἀλλοίωσιν, τὸ φαινόμενον κατὰ τὴν αἴσθησιν ἐξ ἀνάγκης ἀληθές εἶναι φασιν· ἐκ τούτων γὰρ καὶ Ἐμπεδοκλῆς (—) καὶ Δημόκριτος καὶ τῶν ἄλλων ὡς ἔπος εἰπεῖν ἕκαστος τοιαύταις δόξαις γεγένηται ἔνοχοι. **Simplicius in Phys.** 29.15–19 (**Theophrastus Phys.Op.** fr. 8 Diels, 229 FHS&G) Δημόκριτος ὁ Ἀβδηρίτης (68A38 DK) ἀρχὰς ἔθετο τὸ πλήρες καὶ τὸ κενόν ... ὡς (γὰρ) ὕλην τοῖς οὐσι τὰς ἀτόμους ὑποτιθέντες τὰ λοιπὰ γεννῶσι ταῖς διαφοραῖς αὐτῶν· τρεῖς δὲ εἰσιν αὐταί· ῥυσμὸς τροπὴ διατηγῆ, ταῦτ' οὖν δὲ εἰπεῖν σχῆμα καὶ τάξις καὶ θέσις. **Theophrastus Sens.** 60–61 Δημόκριτος (68A135) δὲ πάντα (sc. τὰ αἰσθητά) πάθη τῆς αἰσθήσεως ποιῶν. ... Δημόκριτος μὲν οὖν οὐχ ὁμοίως λέγει περὶ πάντων, ἀλλὰ τὰ μὲν τοῖς μεγέθεσι, τὰ δὲ τοῖς σχήμασιν, ἕνα δὲ τάξει καὶ θέσει διορίζει. ὥστε δόξειεν ἂν ... ἐναντίως τῇ ὑποθέσει λέγειν. **Sens.** 73–76 (68A135) τῶν δὲ χρωμάτων ἀπλᾶ μὲν λέγει τέτταρα. λευκὸν μὲν οὖν εἶναι τὸ λεῖον. ὃ γὰρ ἂν μὴ τραχὺ μὴδ' ἐπισκιάζῃ μὴδὲ δυσδιοδόν ἦ, τοιοῦτον πᾶν λαμπρὸν εἶναι. δεῖ δὲ καὶ εὐθύτροπα καὶ διαυγῆ τὰ λαμπρὰ εἶναι. τὰ μὲν οὖν σκληρὰ τῶν λευκῶν ἐκ τοιούτων σχημάτων συγκεῖσθαι οἶον ἢ ἐντὸς πλᾶξ τῶν κογχυλίων· οὕτω γὰρ ἂν ἄσκια καὶ εὐαγῆ καὶ εὐθύπορα εἶναι. τὰ (δὲ) ψαθυρὰ καὶ εὐθρυπτα ἐκ περιφερῶν μὲν λοξῶν δὲ τῇ θέσει πρὸς ἄλληλα καὶ κατὰ δύο συζεύξει, τὴν δ' ὄλην τάξιν ἔχειν ὅτι μάλιστα ὁμοίαν. τοιούτων δ' ὄντων ψαθυρὰ μὲν εἶναι, διότι κατὰ μικρὸν ἢ σὺναψις· εὐθρυπταδ', ὅτι ὁμοίως κεῖνται· ἄσκια δὲ, διότι λεία καὶ πλατέα· λευκότερα δ' ἀλλήλων τῷ τὰ σχήματα τὰ εἰρημένα καὶ ἀκριβέστερα καὶ ἀμειγέστερα εἶναι καὶ τὴν τάξιν καὶ τὴν θέσιν ἔχειν μάλλον τὴν εἰρημένην. τὸ μὲν οὖν λευκὸν ἐκ τοιούτων εἶναι σχημάτων. τὸ δὲ μέλαν ἐκ τῶν ἐναντίων ... ἐρυθρὸν δ' ἐξ οἴωνπερ καὶ τὸ θερμόν ... τὸ δὲ χλωρὸν ἐκ τοῦ στερεοῦ καὶ τοῦ κενοῦ συνεστάναι μεικτὸν ἐξ ἀμφοῖν ... τὰ μὲν οὖν ἀπλᾶ χρώματα τούτοις κεκρῆσθαι τοῖς σχήμασιν. **Epicurus Ep.Hdt.** at D.L. 10.54 καὶ μὴν καὶ τὰς ἀτόμους νομιστέον μηδεμίαν ποιότητα τῶν φαινομένων προσφέρεσθαι πλὴν σχήματος καὶ βάρους καὶ μεγέθους καὶ ὅσα ἐξ ἀνάγκης σχήματος συμφυῆ ἐστί. ποιότης γὰρ πᾶσα μεταβάλλει· αἱ δὲ ἄτομοι οὐδὲν μεταβάλλουσιν. **Scholia in Epicurum Ep.Hdt.** at D.L. 10.44 τὸ δὲ χρῶμα παρὰ τὴν θέσιν τῶν ἀτόμων ἀλλάττεσθαι ἐν ταῖς δώδεκα στοιχειώσεσιν φησι (**Epicurus** fr. 56 Usener). **Lucretius DRN** 2.730–738 *nunc age dicta meo dulci quaesita labore / percipe, ne forte haec albis ex alba rearis / principiis esse, ante oculos quae candida cernis, / aut ea quae nigrant nigro de semine nata; / nive alium quemvis quae sunt inbuta colorem, / propterea gerere hunc credas, quod materiai / corpora consimili sint eius tincta colore; / nullus enim color est omnino materiai / corporibus, neque par rebus neque denique dispar.* **Alexander of Aphrodisias in Sens.** 56.11–15 ὡς ἄρα τοῦ ὁρᾶν κατὰ τὴν ἀπὸ τῶν ὁρωμένων ἀπορροῖαν γινομένου· εἰδῶλα γὰρ τινὰ ὁμοιόμορφα ἀπὸ τῶν ὁρωμένων συνεχῶς ἀπορρέοντα καὶ ἐμπίπτοντα τῇ ὄψει τοῦ ὁρᾶν ἡτιώντο. τοιοῦτοι δὲ ἦσαν οἵτε περὶ Λευκιππον καὶ Δημόκριτον (67A29 DK), οἱ καὶ ἐκ τῆς τῶν ἀοράτων διὰ μικρότητα παραθέσεως τὴν τῶν μεταξύ χρωμάτων (sc. intermediate between black and white)

φαντασίαν ἐποιοῦν. **Plotinus Enn.** 3.6[26].12.22–24 εἴ τις οὖν ἐνταῦθα τὸ νόμῳ χροίη καὶ τὰ ἄλλα νόμῳ λέγοι τῷ τὴν φύσιν τὴν ὑποκειμένην μηδὲν οὕτως ἔχειν, ὥς νομίζεται, οὐκ ἂν ἄτοπος εἶη τοῦ λόγου (—). See also below, ch. 4.9, section E(b)§9.

§9 Epicurus: Plutarch Adv.Col. 110C–D αὐτὸς γὰρ οὖν ὁ Ἐπίκουρος ἐν τῷ δευτέρῳ τῶν Πρὸς Θεόφραστον (fr. 29 Usener, in part verbatim) οὐκ εἶναι λέγων τὰ χρώματα συμφυῇ τοῖς σώμασιν, ἀλλὰ γεννᾶσθαι κατὰ ποιᾶς τινας τάξεις καὶ θέσεις πρὸς τὴν ὄψιν, οὐ μᾶλλον φησι κατὰ τοῦτον τὸν λόγον ἀχρωμάτιστον σῶμα εἶναι ἢ χρῶμα ἔχον. ἀνωτέρω δὲ κατὰ λέξιν ταῦτα γέγραφε· ‘ἀλλὰ καὶ χωρὶς τοῦτου τοῦ μέρους οὐκ οἶδ’ ὅπως δεῖ τὰ ἐν τῷ σκότει ταῦτ’ ὄντα φῆσαι χρώματα ἔχειν. καίτοι πολλάκις ἀέρος ὁμοίως σκοτώδους (D) περιεχυμένου οἱ μὲν αἰσθάνονται χρωμάτων διαφορὰς οἱ δὲ οὐκ αἰσθάνονται δι’ ἀμβλύτητα τῆς ὀψews· ἔτι δ’ εἰσελθόντες εἰς σκοτεινὸν οἶκον οὐδεμίαν ὄψιν χρώματος ὀρώμεν, ἀναμείναντες δὲ μικρὸν ὀρώμεν.’ οὐ μᾶλλον οὖν ἔχειν ἢ μὴ ἔχειν χρῶμα ῥηθήσεται τῶν σωματῶν ἕκαστον. **Lucretius DRN** 2.795–819 *praeterea quoniam nequeunt sine luce colores / esse neque in lucem existunt primordia rerum, / scire licet quam sint nullo velata colore; / qualis enim caecis poterit color esse tenebris? / lumine quin ipso mutatur propterea quod / recta aut obliqua percussus luce refulget. ... (817) non certis certa figuris / est natura coloris et omnia principiorum / formamenta queunt in quovis esse nitore.* **Servius Auctus in Aeneid.** p. 2.47 Thilo–Hagen on 6.272 ‘*nox abstulit atra colorem*’: *hoc et videmus et tractatur ab Epicureis, rebus tollere noctem colorum varietatem: unde etiam apud inferos omnia nigra esse dicuntur.*

§10 Aristotle: Aristotle Sens. 2 439b11–12 ὥστε χρῶμα ἂν εἴη τὸ τοῦ διαφανοῦς ἐν σώματι ὠρισμένῳ πέρας. *de An.* 2.7 417b31–418a1 πᾶν δὲ χρῶμα κινητικόν ἐστι τοῦ κατ’ ἐνέργειαν διαφανοῦς, καὶ τοῦτ’ ἐστὶν αὐτοῦ ἡ φύσις· διόπερ οὐχ ὁρατὸν ἄνευ φωτός, ἀλλὰ πᾶν τὸ ἐκάστου χρῶμα ἐν φωτὶ ὁράται. *de An.* 2.8 420a27–28 ὥσπερ γὰρ ἄνευ φωτός οὐχ ὁράται τὰ χρώματα. *de An.* 3.2 426a20–25 οἱ πρότερον φυσιολόγοι τοῦτο οὐ καλῶς ἔλεγον, οὐθὲν οἰόμενοι οὔτε λευκὸν οὔτε μέλαν εἶναι ἄνευ ὀψews, οὐδὲ χυμὸν ἄνευ γεύσεως. τῇ μὲν γὰρ ἔλεγον ὀρθῶς, τῇ δ’ οὐκ ὀρθῶς· διχῶς γὰρ λεγομένης τῆς αἰσθήσεως καὶ τοῦ αἰσθητοῦ, τῶν μὲν κατὰ δύναμιν τῶν δὲ κατ’ ἐνέργειαν, ἐπὶ τούτων μὲν συμβαίνει τὸ λεχθέν, ἐπὶ δὲ τῶν ἐτέρων οὐ συμβαίνει. *de An.* 3 5.430.16–17 τρόπον γὰρ τινὰ καὶ τὸ φῶς ποιεῖ τὰ δυνάμει ὄντα χρώματα ἐνεργείᾳ χρώματα. **Alexander of Aphrodisias de An.** 42.6–7 εἴ γε χρώμα ἐστὶ τὸ κινητικὸν τοῦ κατ’ ἐνέργειαν διαφανοῦς. *in Sens.* 51.24 τὸ πέρας ἄρα τοῦ ὠρισμένου διαφανοῦς, καθὼ διαφανές, χρώμα ἐστὶ. **Alexander of Aphrodisias? de An.Mant.** c. 16 tit. p. 147.26 ‘Ὅτι τὸ χρῶμα πέρας τοῦ διαφανοῦς. *An.Mant.* c. 16, p. 147.29–30 ἔστι γὰρ ἡ διαφάνεια ὅλη πως χρώματος. *Probl.* 1.2, p. 5.2–3 τὸ χρῶμα ὠρίσατο Ἀριστοτέλης πέρας τοῦ ὠρισμένου διαφανοῦς ἢ διαφανές. **Thomas Aquinas in de An.** 2.14.403.8 *et quia diaphanum non fit in actu nisi per lumen, sequitur quod color non sit visibilis sine lumine.*

§11 Anonymi: ps.Aristotle Col. 1.791a1–10 ἀπλᾶ τῶν χρωμάτων ἐστὶν ὅσα τοῖς στοιχείοις συνακολουθεῖ, οἷον πυρὶ καὶ ἀέρι καὶ ὕδατι καὶ γῇ. ἀήρ μὲν γὰρ καὶ ὕδωρ

καθ' ἑαυτὰ τῇ φύσει λευκά, τὸ δὲ πῦρ καὶ ὁ ἥλιος ξανθά. καὶ ἡ γῆ δ' ἐστὶ φύσει λευκή, παρὰ δὲ τὴν βαφὴν πολύχρους φαίνεται. ... τὸ δὲ μέλαν χρῶμα συνακολουθεῖ τοῖς στοιχείοις εἰς ἄλληλα μεταβαλλόντων.

§12 *Anonymi: Theophrastus Sens.* 59 οἱ δὲ ἄλλοι τοσοῦτον μόνον, ὅτι τό τε λευκὸν καὶ τὸ μέλαν ἀρχαί, τὰ δ' ἄλλα μιγνυμένων γίνεται τούτων. καὶ γὰρ Ἀναξαγόρας (59A92 DK) ἀπλῶς εἶρηκε περὶ αὐτῶν.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

Texts belonging to this chapter are found in P and S.

(1) P^B and Q record three doxai. G does not include it. Ps lacks a chapter on the subject and so does not testify to the title.

(2) S absorbs the contents of this chapter into his ch. 1.14, as his collective chapter heading indicates. But the four doxai he preserves are scattered throughout the chapter.

(a) Diels acutely saw that the third Aristotelian doxa in P was placed in between extracts from A 1.12 and AD.

(b) He then argued that a rather long doxa attributed to Chrysippus on the cutting of bodies and other subjects was taken from the present chapter. However, from a stylistic point of view (note the tell-tale *ἔφασκε*) it is more likely to have been drawn from AD. It is not impossible that it replaced a Stoic doxa in A. But the Stoic doctrine falls under the first doxa and the diaeresis with three views did not need to be expanded further. So we have left out this lemma.

(c) The second doxa in P is then found coalesced with the Democritean doxa from ch. 1.12.6, which meant that a change of name-label was required (P has the Atomists).

(d) Finally the first doxa in P is placed after the citation of the final doxa A 1.12.7 of the earlier chapter on bodies. It was the last one remaining. There is no more material in S's chapter that he can have derived from A's chapter.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The rather rewarding proximate tradition is mostly limited to Arius Didymus, Cicero, Seneca, Sextus Empiricus and Calcidius (see section E(a) below).

(2) *Sources*. The ultimate sources of §2 are clearly the writings of the Atomists, and of §3 those of Aristotle, while for §1 we may think of Platonists, Stoics and mathematicians (the purported successors of Pythagoras). We recall that Aristotle in the first chapter of the *De caelo* closely links three-dimensionality of ‘body’ (generously ambiguous between mathematical and physical body) and infinite divisibility in all directions. But (ultimately in the wake of the *De caelo* too) the term ‘bodies’ (ch. 1.12) here brings about an association with ‘smallest bodies’ (heading of 1.13), a subject that crops up again in §2 of our present chapter. The intermediary sources are unknown.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type ‘about *x*’, περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter we note a specialized version of the standard type through addition of the term ‘cutting’, which moreover does not pertain to any kind of division whatsoever but only to that of bodies. Body here means not only physical but also three-dimensional geometrical body. The umbrella also covers the categories of place (place is defined as what is occupied by body at chs. 1.12.1 and 1.20.1) and time, analogous to place in respect of divisibility according to Aristotle (this aspect is not mentioned in chs. 1.21–22). Remarkably it is not precisely paralleled elsewhere as a title or embedded heading.

D Analysis

a Context

The chapter belongs with the block consisting of chs. 1.12–17, dealing with body in its various aspects, but would perhaps have been better placed immediately after 1.12, ‘On bodies’. See Diels *DG* 62, who goes a bit far in calling the present arrangement absurd (‘Plutarchus I 16 ... absurde a c. 12 diremit’). Lachenaud ad loc. (1993) 231 points out that Aristotle at *GC* 1.10 327b31–328a5 discusses infinite divisibility together with mixture, the theme of the next chapter, 1.17 ‘On mixture and blending’, which appropriately follows. These processes variously depend on matter as either corpuscular (here §2) or continuous (here §1). For place see chs. 1.19–20, for time 1.21–22.

b Number–Order of Lemmata

(1) We may be confident that the three-lemmatic chapter is complete, as S did not combine further material that would have belonged in 1.16 with lemmata with other name-labels (Plato, Heraclitus etc.) from the chs. A 1.12 and 1.13 he abstracted for *Ecl.* 1.14 as well.

(2) P and S have the same three lemmata, but the order of S is the converse of that of P. It seems safest to interpret S's order as depending on his rather intricate coalescence of the Aëtian doxai and other material. We therefore, in this case just as Diels in the *DG*, have stuck to the order of P, which also has the obvious advantage from the point of view of the chapter's rationale in allowing the compromise Aristotelian doxa to be placed at the end.

c Rationale—Structure of Chapter

(1) A simple and clear structure, opposing in diaphonia the followers of Thales and Pythagoras (that is, the two main Successions), who posit infinite division, to the Atomists who reject it; cf. ch. 1.9.1, which explicitly adds the Stoics to the grand tradition. Line, surface, three-dimensional body, place, and time are Stoic incorporeals. We note that the atomism of the Pythagorean Ecphantus (attested for ch. 1.3.17 by S and T not P, and for 2.3.3 by S not P) is not taken into account where we have P alone. Aristotle's doctrine of potentially, not actually, infinite division is presented *ad finem* as a compromise between Thales and Pythagoras and their followers on the one hand and the Atomists on the other. A nice example of an a-historical doxographical construct, for originally Aristotle's view of infinite divisibility as potential was directed against Zeno of Elea's paradoxical assumption of infinite divisibility in actuality.

(2) We may compare ch. 2.3 on providence, where similarly the Atomists are opposed (even) to 'all others', and Aristotle's is the second of two compromise positions that are listed.

d Further Comments

Individual Points

§2 A participle is definitely required at the beginning of the doxa to complete the periphrastic reference to the Atomists. Mau's suggestion, which we have incorporated in our text, is an excellent one, cf. chs. 1.13.2, 1.23.4, 1.24.2, 5.1.1, though it cannot be considered certain. Diels *ad loc.* writes 'audiendum λέγοντες', but his parallels are not good enough, and Q's '*welche behaupten*' not decisive, since he often adds a *verbum declarandi*.

According to Simplicius (see below section E(b)§2), Leucippus and Democritus attributed partlessness (τὸ ἀμερές) to the atoms, but Epicurus did not do so because of Aristotle's criticism. The term ἀμερῆ (for ἀμειγῆ, non prob. Dorandi), pertaining to the smallest parts that constitute the indivisible atom, has been introduced by conjecture in Epicurus *Ep.Hdt.* 10.59 (also cited below section E(b)§2), but this reading has by no means been universally accepted. For discussion see Verde at Spinelli–Verde (2010) 162–176 and Verde (2013) 58–73, in favour of ἀμερῆ.

In the present paragraph the early Atomists may be meant to the extent that physical division is meant, while if Epicurus is involved as well theoretical division may also be at issue. However, building on the ambiguity of ἀμερῇ denoting on the one hand whole atoms (Leucippus Democritus) and on the other smallest atomic parts (Epicurus) is perhaps too subtle for a doxographical lemma. Epicurus unfortunately does not figure in ch. 1.13, 'On smallest parts'. In this earlier chapter 'minima' (ἐλάχιστα) are attributed to Empedocles Heraclitus Xenocrates Diodorus Cronus Heraclides, and ἀμερῇ indiscriminately to Xenocrates and Diodorus (for the latter see also ch. 1.3.18). Ch. 4.9.10 (no name-labels) puts those who posit ἄτομα or ὁμοιομερῇ or ἀμερῇ or ἐλάχιστα on a par without providing further information as to what these terms mean, or in what respect they differ; the atoms and the void are mentioned immediately before at ch. 4.9.9 and attributed to Leucippus, Democritus and Diogenes.

e Other Evidence

Epicurus argued against Aristotle's argument against the assumption of the earlier Atomists that the atoms are not only in reality but also theoretically indivisible, and in reply developed his theory of the minimal parts of the atom (Furley 1967b). For the Stoics, here absent, see AD at S 12.14.1e, p. 142.2–7 (printed by Diels as A 1.16.4, but below at section E(b) General texts) and in general SVF 2.482–491 'de infinita divisione'. The majority of these texts, however, are not about division *ad infinitum*.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

The witnesses to this chapter are P and S, presenting the same lemmata in the same order.

(1) ^{PB} and ^Q have four doxai. G includes all four, but shortens the final two. ^{Ps} makes use only of the title.

(2) S has a chapter with the same title as A (also 1.17) and writes out the four doxai found in P at the beginning of his chapter. This suggests that he copied out at least part of the chapter of A in full (for possible omissions see below section D(b)). The remaining texts in his chapter are drawn from AD.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The proximate tradition in AD and Philo is for the most part devoted to Stoic thought.

(2) *Sources.* The main concepts ultimately depend in various ways on the discussion of alteration according to Anaxagoras, Empedocles, the Atomists and Plato (read, of course, and excerpted by Aristotle), and of mixture, in Aristotle's *De generatione et corruptione*. Aristotle does not provide a detailed dialectical overview of other views, which is made good by Alexander of Aphrodisias *Mixt.* ch. 1 (see section E(b) General texts), who must have used doxographical sources along with Aristotle's treatise.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type 'about x ', περί τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter comprising the question types/categories of substance and quality. The headings Περί μίξεως and Περί κράσεως are quite often paralleled, their combination far less often (Hipp. *Ref.* 5.21.12, see section E(b), chapter heading).

D Analysis

a Context

(1) The chapter is the last of the block consisting of chs. 1.12–17, dealing with body in its various aspects. It is appropriately preceded by ch. 1.16 dealing with smallest particles, as these are one of the pair of decisive factors in ch. 1.17. It is followed by the triad of chapters 1.18–20 dealing with the void, place, and space, so we have body first, then the environment where it may find itself.

(2) The overarching diaphonia is prefigured in Aristotle's chapter on mixture (GC 1.10); see section E(b) General texts.

b Number–Order of Lemmata

(1) Both main witnesses have four lemmata and these are the same, so the chapter may be complete in spite of the omission of the Stoic view(s). The lemmata order too is the same (and not interrupted by interpolated matter in S), and capable of a satisfactory explanation (see below, at section D(c)). Thus there is no reason to modify this order, which is also that of Diels.

(2) Even so, P may have omitted Aristotle's and the Stoic's views, and S, as so often, may have replaced them with abstracts from Arius Didymus. For the Plato doxa in final position, after that of his pupil Xenocrates, see below, section D(c)(4).

c Rationale–Structure of Chapter

(1) Parmenides' introduction of the concept of elements that cannot change into each other, which was accepted and revised by Anaxagoras, Empedocles and the Atomists, necessitated the introduction of the concept of mixture as a combination of parts of such elements, and so of the idea that they must be divisible into parts.

(2) In the present chapter mixture and blending are restricted to the basic blending and mixture of simple bodies, the conditions for which are formulated. The first two lemmata present a standard overarching diaphonia, namely between alteration (ἀλλοίωσις) and juxtaposition (παράθεσις) of elemental parts, which are preconditions for contrasting ways of mixture. We should assume that in §1 the elements are the standard four: water, air, fire and earth, and in §2 smallest particles: atoms and *homoiomere*.

(3) §3 presents a special case of juxtaposition, combining the notion of the standard four (as in §1) with that of smallest particles (as in §2) by positing that each of the four is a primary blend, or compound, of 'smaller masses' of water, of air, and so on. What is not said but follows is that more complicated mixtures of water and earth and so on are brought about by the juxtaposition of various such small 'elements prior to elements' (ch. 1.13.1, στοιχεῖα πρὶν στοιχεῖων), that is, of small, or smallest, masses of water to small masses of earth, and so on.

(4) §4, on the other hand, presents a special case of alteration which is an exception to the axiom formulated in §1, namely that of only three out of these four elements changing into each other while the fourth, earth, does not change into either of the others, and conversely. It is thus a compromise position, presenting mixture according to change (fire air water) as well as to juxtaposition (earth), and is appropriately placed last.

d Further Comments

Individual Points

§1 The unclear name-label οἱ ἀρχαῖοι in P is a unique occurrence in the texts of P^B, P^G and S. G records οἱ παλαιότεροι, which is also unique and equally vague. There can hardly be any doubt that preference should be given to Θαλῆς καὶ οἱ ἀπ' αὐτοῦ in S, which also occurs elsewhere in the *Placita*. See similar name-labels at chs. 2.12.1, 3.9.1, 3.10.1 (but at 2.1.2 and 2.28.5 these are the result of

abridgement of P, who thus emulates the practice of A that he had observed elsewhere in the compendium).

e Other Evidence

In Aristotle, mixture, treated in a sort of appendix at the end (ch. 10) of Book 1 of *De generatione et corruptione* and again at *GC* 2.7, is not a concept that is discussed prominently, but still an important one, since all compounds are mixtures. See Alexander of Aphrodisias *Mixt.* 228.7–10 on the brevity (συντομία) of Aristotle's treatment of the subject, which prevented his view from becoming widely known. The subject became more prominent in Hellenistic philosophy, the Stoic theory of continuous and infinitely divisible matter being the competitor of the Epicurean theory of discrete matter. Alexander's monograph *De mixtione* was intended to fill a gap in the Peripatetic panoply. Surprisingly, in our present chapter the complex Stoic theory is absent (Alexander criticizes it at appropriate length; it is criticized briefly at Sextus Empiricus *P.* 3.56–62, and again by Plotinus *Enn.* 2.7[37], who is believed to have used Alexander's account). For the terms relating to the four states of mixture according to the Stoics, namely παράθεις, μίξις, κράσις and σύγχυσις, see below A 1.24.3, where they are attributed to 'Pythagoras and all those who assume that matter is passive'. The difference between Plato and Aristotle is not mentioned explicitly, but perhaps Aristotle is included among the followers of Thales in §1, and Plato excluded. In S's ch. 1.17 with the same heading as our chapter the Aristotelian and Stoic views are represented by abstracts from AD, the former briefly (fr. 4 Diels), the latter at some length (fr. 28 plus fr. 38 Diels), so S (provided A's chapter has been transmitted complete, see above at section D(b)) must have noticed what was missing. Blending is discussed by Sextus Empiricus *P.* 3. 56–62 (omitted in *P^G* chs. 1–25, not in *M.*).

A 2.5a.4 Φιλόλαος ... τὸ δὲ ἡγεμονικὸν (sc. τοῦ κόσμου) ἐν τῷ μεσαιτάτῳ πυρί, ὅπερ τρόπεως δίκην προϋπεβάλλετο τῇ τοῦ παν-τός (σφαίρᾳ) ὁ δημιουργὸς θεός. A 2.7.6 Φιλόλαος πῦρ ἐν μέσῳ περὶ τὸ κέντρον,

ὅπερ ἐστὶν τοῦ παντὸς καλεῖ καὶ Διὸς οἶκον καὶ μητέρα θεῶν, βωμόν τε καὶ συν-
οχὴν καὶ μέτρον φύσεως καὶ πάλιν πῦρ ἕτερον ἄνωτάτω, τὸ περιέχον. πρῶτον
δ' εἶναι φύσει τὸ μέσον κτλ. A 3.11.3 Φιλόλαος ὁ Πυθαγόρειος τὸ μὲν πῦρ μέσον,
τοῦτο γὰρ εἶναι τοῦ παντὸς ἐστὶν.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) The chapter is represented in all three main sources, P, S, and T. The witnesses for P are P^B, P^G and P^Q (E did not include P chs. 1.2–3 and 1.10–30 among his excerpts from Book 1). P^B and P^Q have the same lemmata, but §2 has gone missing in P^G. P has mechanically combined P₁ and P₂ in such a way that the view of Empedocles is attributed to the Pythagoreans (not in P and the rest of his tradition). Did G's copy of P read something like P's οἱ ἀπὸ Πυθαγόρου οἱ φυσικοὶ κτλ., and did he replace ἀπὸ Πυθαγόρου by ἀπὸ Θάλεω? For he did preserve the important phrase ἔνδοθεν γὰρ εἶναι τόπον πύρινον, while P's reading has been corrupted to εἶναι γὰρ αὐτὸν πύρινον.

(2) In S the lemmata of our chapter are found mixed with those of A chs. 1.19, 1.20 and 2.9 (!)—sometimes coalesced with each other—in a chapter with the collective heading Περί κενοῦ καὶ τόπου καὶ χώρας ('On void and place and space'). A separate problem is provided by S 1.18.1c, the long and interesting lemma printed by Diels with some misgivings in the right column as ch. 1.18.6, which we exclude from the present chapter (see below, section D(d)§6), since for systematic reasons we prefer the bizarre lemma of P. The contents of the lemmata which S shares with P are virtually the same.

(3) The abstract of this chapter in T is found in the cosmological Book 4, bearing the title 'On matter and cosmos' (following abstracts from A 1.18 and continued with a series chapters of A Book 2). T as to the lemmata he preserves agrees with S (minus S's 1.18.1c lemma) and in his usual way partly rewrites the sentences; see M–R 1.278–279. Pace Bottler (2014) 219–220 T's simpler version of the Atomist doxa (§3) should not be given the same weight as that of P and S, let alone more. Whenever these two main witnesses agree, as here in respect of a multiplicity of name-labels and a specific doxa, we always have to start from their agreement as providing our evidence for A. What is more, T agrees with S against P in providing the Strato lemma, which proves that he also here abstracted A directly. Cf. Diels *DG* 46, Mansfeld at M–R 4.174–195 and cf. above, ch. 1.9 Commentary A(3), ch. 1.27, Commentary A(2), and below, ch. 4.3 Commentary (5), ch. 4.7 Commentary A(2).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* For the proximate tradition we may presumably include the passage from the anonymous Commentary on the Aristotelian *Categories* in the Archimedes palimpsest printed below at section E(a) under General texts; probably by Porphyry, see Tchernetska and Wilson at Netz (2011) 253–257, Chiaradonna & alii (2013). This text—interestingly enough—cites the (contents of) three lemmata in the order of T (the Empedocles lemma found in T and S is an appendix to the one before it). Note however that the wording of the tenet of its third proposition (πρότασις, Plato plus Aristotle) does not correspond to ch. 1.18.1 (which includes Plato) plus 1.18.6 (Aristotle) but to ch. 2.9.4, thus underscoring for us the interdependence of these two *Placita* chapters on the void (or perhaps rather the advantage of combining them), as is also implied by S, who combined extracts from both in his ch. 1.18. The intersection of a Commentary and the *Placita* tradition is itself of great interest, as is of course Porphyry's(?) explicit use of the term diaeresis for the presentation of the diaphoniae. That the lemmata are here called 'propositions', προτάσεις, and not *doxai* or *dogmata* or *kephalaia*, is due to the fact that the commentator explains a logical treatise. He clearly knew what doxography is about and how it works.

The Aristotelian lemma at S 1.18.1c, which Diels reluctantly printed as A §6, is also relevant for the *traditio proxima*; see below.

(2) *Sources.* The sources appear to be a mixed bag. §2, name-label Empedocles, finds a surprising, singular and interesting parallel in ps.Arist. *MXG* (31B14 DK). Moreover §3, the Atomist lemma, echoes a fragment of Aristotle's treatise against Democritus rather precisely. The tenet of §5 is rather widely paralleled. For the very complicated tradition(s) relating to §6 see below, section D(d)§6. For the Aristotelian background see below, section D(c). And for the tradition relating to 1.18 and 2.9 see further below, at section D(a).

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter it comprises the question types of existence and quality, and the categories of place and quantity. It is confirmed by the three witnesses for P, and by S's collective heading. It is also paralleled in Aristotle as an imbedded indication of the subject to be treated, see section E(b) Chapter heading.

D Analysis

a Context

(1) Ch. 1.18 is the first of a trio of chapters 1.18–20 dealing with the traditionally related issues of void / place / space. The first sub-section of the Stoic *φυσικός λόγος* (quoted above ch. 1.1, *Testes secundi*, §1) contains in succession *inter alia* a part about the void and one about space. For Aristotelian precedents see below section D(c), and for reverberations in the sequential arrangement of chapters in the *Placita* see M–R 2.1.97–109.

Such triads of related chapters also occur elsewhere in the *Placita*, e.g. chs. 1.6–8 on knowledge of gods / existence and substance of God / daemons and heroes, and chs. 4.13–15 on vision / mirror images / visible darkness. In the present case the parcelling out of chapters with different headings is rather scholastic. *κενόν* also occurs in 1.20, *χώρα* in both 1.19 and 1.20, and 1.20 is a sort of appendix to 1.18–19.

(2) We have seen that there are important links with a later chapter dealing with the void, 2.9 ‘On what is outside the cosmos, whether a void exists’, for which see M–R 2.2.426–427 and our treatment below. On ch. 1.18 see also M–R 2.1.220 and 2.2.421, which we now no longer follow in the case of the final lemma. The presence of closely related themes in two different books of the *Placita* is also to be explained by a *proprium originis* attesting the tenacity of the tradition; cf. M–R 2.1.101, 135–138. For Aristotle, too, discusses the void in several places, namely both in the *Physics* and the *On the Heavens*: in the *Physics* esp. at 4.6–9, chs. 4.6–8 being about the void *per se* and the assumption of a void outside the cosmos, ch. 4.9 about internal void; and in *On the Heavens* in chs. 1.9 279a11–18, 2.4 287a11–22, 3.7 305b16–20, and 4.2 309a6–16. Cf. also *GC* 1.8, on the purported relation between void and motion. Both in Aristotle and in the *Placita* such questions may clearly have both a general and preliminary, i.e. a conceptual, character, and a more specific one, i.e. one at home in a cosmological context.

(3) We note in particular that ch. 1.18.1–3 are about the void *per se*, while 1.18.4–6 are about the void in relation to the cosmos, just like the four lemmata of ch. 2.9. Yet the heading of ch. 2.9 intimates that the issue of the existence or not of the void is included, and this is confirmed by the content of its lemmata.

b Number–Order of Lemmata

(1) All three witnesses, P, S and T, have five lemmata (counting §2 as an appendix to §1), but not always the same. A lemma with the name-label Strato is found as both S4 and T4 but not in P (but there is a significant proximate parallel with this name-label in the passage from the Commentary on the *Categories* cited below at section E(a)§4), while P’s final lemma with name-label

Aristotle is not paralleled in either S (who replaces it with other material) or T. The order of the first three lemmata is the same in P and S, so this sequence of §§1–3 should be accepted for A. §4 is lacking in P and present in S, so that (including the lemma missing in P) the order of §3 followed by §5 in P is the same as that of §3 followed by §4 followed by §5 in S. This not only makes the order §1–§5 secure for A, but also leaves only the final position, §6, for the Aristotle lemma found only in P. This order entirely agrees with that of Diels in the *DG*, who as usual follows P's order.

(2) T has not only modified the wording but also the order of his excerpts, presumably in order to emphasize the oppositions better. Thus we find the lemma corresponding to §3 as T1 before the lemma corresponding to §1 as T2 (still followed, as in P and S, by §3 the Empedocles lemma as T3). In the same way T4 before T5 corresponds to §5 after §4.

c Rationale–Structure of Chapter

(1) *Diaphoniae*. The diaphonic structure is quite complex, but easily followed. There is, first, an opposition of §§1–2: no void (cf. ch. 2.9.4), to §§3–6: various forms of acceptance of a void (cf. ch. 2.9.1–3). Next we have an opposition between §3: infinitely large (and clearly omnipresent) void, and §§4–6: varieties of void that are related to the cosmos and qualified in different ways. There is a strong opposition between §4: no void outside the cosmos but possible within, and §5: no void within the cosmos but infinite void outside. Finally there is the opposition between §5: infinite void outside the cosmos and §6: a relatively small void outside (cf. the contrast between ch. 2.9.2 and ch. 2.9.3).

A discussion of opposed views is said to be necessary in this context in Book 4 of Aristotle's *Physics*, 4.6 213a19–22: 'We must begin the investigation by looking at what those who say that it (sc. the void) exists say and what those who deny this say (λαβοῦσιν ἃ τε λέγουσιν οἱ φάσκοντες εἶναι καὶ πάλιν ἃ λέγουσιν οἱ μὴ φάσκοντες), and thirdly at the common views'. His representative of those against is Anaxagoras (not mentioned explicitly in our chapter, but not excluded either in §1 or presumably falling under the general label in §1), while those in favour are represented by Democritus and Leucippus and numerous other natural philosophers (cf. §3), and subsequently also by the Pythagoreans (cf. A ch. 2.9.1).

(2) *Question types*. We also note the presence of question types: the diaphonia of §§1–2 versus §§3–6 is concerned with the question of existence ('whether it exists or not', εἰ ἔστιν ἢ μὴ), just as is the case for ch. 2.9 according to the second part of its heading, 'whether the void exists' (εἰ ἔστι κενόν). This agenda was set by Aristotle *Phys.* 4.6 213a12–14: 'in the same manner it is to be assumed that it is the task of the natural philosopher to inquire about the

void as well, whether it is or not, and how it is, and what it is, just as about place' (τὸν αὐτὸν δὲ τρόπον ὑποληπτέον εἶναι τοῦ φυσικοῦ θεωρῆσαι καὶ περὶ κενοῦ, εἰ ἔστιν ἢ μή, καὶ πῶς ἔστι, καὶ τί ἐστίν, ὥσπερ καὶ περὶ τόπου). The question type of the attribute ('how it is', πῶς ἔστι) is represented by the categories: §§3–6 are concerned with quantity, and §§4–6 also with place. Note the explicit subdivision into number and size in the category of quantity at §3 (cf. for this subdivision Arist. *Met.* Δ.13 1020a8–10). But the question type 'what it is' (τί ἐστίν) is not at issue in our chapter: void is not defined. For a definition we have to wait till ch. 1.20.1, name-label Zeno and his followers: τὸ μὲν κενὸν εἶναι ἐρημίαν σώματος, 'void is vacancy of body'. Compare the definitions cited by Aristotle *Phys.* 4.1 208b26–27, 'the void should be a place bereft of body' (τὸ ... κενὸν τόπος ἂν εἴη ἐστερημένος σώματος), or 4.7 213b31, 'the void is believed to be a place in which there is nothing' (δοκεῖ δὴ τὸ κενὸν τόπος εἶναι ἐν ᾧ μηδὲν ἐστίν), as well as the general definition cited from Arist. *Phys.* 4.1 208b26–27 at Anon. *in Cat.*, Archimedes-palimps. fol. 78^v + 75^r20–21, 'for the void is believed to be a place bereft of body' (τοῦ γὰρ κενοῦ) δοκοῦντος εἶναι τόπος [scripsimus, vid. below] ἐστερημένος σώματος). The reason, as rather often, is that in the other location of the doxography an effective (or more effective) diaphonia can be obtained, as clearly occurs in ch. 1.20.

d Further Comments

General Points

For a preliminary reconstruction and discussion of the chapter see Mansfeld (2014).

§1 plus §3 These lemmata oppose sections of Successions to each other: §1 the Ionian succession from Thales to Plato (no void), §3 the Italian (or perhaps rather Eleatic) Succession of Atomists from Leucippus to Epicurus (void). We note that the *physikoi* in §1 exclude the Atomists, listed §3; that is because the former belong with the Ionian and the latter with the Italian (or Eleatic) Succession. Of G Diels *DG* 13 rightly says 'Pythagorae memoria citra Plutarchi fidem inlata est'. For chapters beginning with the earliest archegetes, Thales and/or Pythagoras, see M–R 2.1.94–95, so G's alternative name-label Pythagoras is perhaps not so surprising. Q may have made a mistake in translation, or read the different verbal form ἐπέγνωσαν. We note that T here omits the name-labels and just mentions 'all the others'. S at *Ecl.* 1.18.1a, where he quotes §1, omits the name-label Plato. We have noted that elsewhere too, to begin with his abridgements of paragraphs of ch. 1.3, he leaves out details pertaining to Successions. He does so also here because further down in his chapter (at 1.18.4c) he coalesces the tenet of ch. 1.19.1 (preserving the name-label Plato) with ch. 2.9.4 (now omitting both name-labels) followed by an abstract from

the *Timaeus* (32c–33a plus 33b) at 1.18.4c. Thus S's mini-cento combines two passages in A with an excerpt from the original Platonic source, a type of expansion by appending found in his case also elsewhere (see Diels *DG* 75 n. 2, and M–R 1.249–254). It is quite unlikely that epitomator P added the words μέχρη Πλάτωνος *suo Marte*, but entirely in character that he omits the phrase ὡς ὄντως κενόν, for τὸ κενόν alone already suffices for his purpose.

Individual Points

§1 The first lemma might seem problematic because G's version, apparently confirmed by Q, states the opposite of the parallel lemmata in P^B, S and T: the existence of the void is not denied but accepted. But these three parallels (T and S also deriving from A directly) outweigh G's and Q's evidence.

§2 Empedocles is cited to exemplify the physicists, so the lemma is a sort of appendix to §1. The meaning of οὐδὲ περιττόν is clarified by the parallel at 31B14 DK (πότεν οὐδὲ τίς κ' ἐπέλθοι;), for there is nothing beyond the All that could come in to fill a vacuum.

§3 On this lemma see Algra (1995) 41–58. Crönert (1906) 105 n. 503 argues that Δημήτριος is a dittography of Δημόκριτος, but De Falco (1923) 20 defends the reading. Again it is extremely unlikely that P would have added this obscure name-label. Metrodorus presumably is not the Epicurean Metrodorus of Lampsacus (the younger; not to be confused with Anaxagoras' contemporary Metrodorus of Lampsacus the elder, no. 61 DK), but the Democritean Metrodorus of Chios (no. 70 DK), who appears to be the only Metrodorus cited in the *Placita*. Cf. Simplicius in *Phys.* 648.15, cited below at section E(b) General texts, and Diels *DG* 686–687, s. vv. Metrodorus Chius and Metrodorus (Lampsacenus). Even so, the fact that he is cited after Demetrius Laco may be a reason for doubt.

§4 Lemmata on void and place with name-label Strato are extant only in S 1.18 (and on the void in the passage from the Commentary on the *Categories* cited below section E(a)§4). Note that at *Ecl.* 1.18.4b, p. 160.9–14, S inserted the first three lemmata of ch. 2.9, and as first item of 1.18.4c the fourth lemma of this chapter, which he coalesced with 1.18.1 (here omitting the name-labels). Wachsmuth's division of paragraphs 4b and 4c is unfortunate, because it cuts right through the sequential quotation of the whole of ch. 2.9. For the contents of the present paragraph see further Algra (1995) 58–69, esp. 63–64.

§5 On this lemma see Algra (1995) 263–281.

§6 The final lemma is the most difficult. For G's text see above, section A. Diels *DG* 316^b14–317^b21 included in his right-hand column the long lemma with name-label Aristotle found at S 1.18.1c (printed partly in the app. crit. and as a whole below at section E(a)§6) as S's version of ch. 1.18.6, but in his apparatus ad loc. and at *DG* 75 n. 2 he expressed well-founded doubts. Here as elsewhere, in

his view, snippets ('frustula') from Arius Didymus could have been blended in. But he refrained from identifying them. The correspondence of S 1.18.1c with the final lemma of P is indeed unsatisfactory. It is clear that the view P attributes to Aristotle himself ('Plutarchea ut ridicule perversa sunt' says Diels) is basically the one Aristotle himself attributed to the Pythagoreans, as is documented by means of the two *laudationes*—ἐν δὲ τῷ Περὶ τῆς Πυθαγόρου φιλοσοφίας γράφει: fr. 201 R³ = *de Pyth.* 11 Ross and ἐν τετάρτῳ Φυσικῆς γράφει: *Phys.* 4.6 213b22–27—in the first section of S 1.18.1c, p. 156.8–15 = *DG* 316^b14–317^b4. Yet at *DG* 215 Diels is more optimistic about the Aristotelian connection, comparing the two titles together with their verbatim quotations in our present paragraph with ch. 2.29.4, *DG* 360^b1–3: 'according to the research of Aristotle and the assertion of Philip of Opus' (κατὰ τὴν Ἀριστοτέλειον ἱστορίαν καὶ τὴν Φιλίππου τοῦ Ὀπουντίου ἀπόφασιν) as evidence for his belief that Aristotle 'in testimonium vocatur'. In ch. 2.29.4 the sentence referring to Aristotle and Philip is not found in P. Note that Diels *DG* 215–216 argues that references to Aristotelian book titles at S 1.24.2, p. 201.1–23 Wachsmuth (λέγει γοῦν ἐν τοῖς Περὶ τῆς φυσικῆς ἀκροάσεως καὶ οὐρανοῦ λόγοις οὕτως) were added by S to A's terse Aristotelian lemma 2.11.3, so would be an interpolation. Finally, P^B (not contradicted by P^Q, not yet known to Diels) has a plus compared with S, viz. 'for it is fiery' (εἶναι γὰρ αὐτὸν πύρινον), to which 'inside there is a fiery place' (ἐνδοθεν γὰρ εἶναι τόπον πύρινον) in P^G corresponds. This supplementary piece of information, as Diels ad loc. duly noted, is in favour of accepting P's lemma as Aëtian, for P epitomizes his source and does not make things up. Subsequently Diels printed Arist. fr. 201 R³ at 58B30 DK as from S, not from A. We are aware that this argument has the drawback of showing up A's lack of knowledge of basic views in Greek philosophy, in this case Aristotle's view on the void.

The sequel in S, p. 156.15–25 = *DG* 317^b4–21 Diels, from 'and he says elsewhere' (καὶ ἐν ἄλλοις λέγει) onwards, is not paralleled in the left-hand column (Diels rightly points out that 'cetera, loci motus infiniti definitiones ab hoc capite abhorrere videntur').

ἐν ἄλλοις, meaning 'elsewhere', need not refer to more than a single work, book, section, or even line. References to works without a title are found in the *Scholia in Epicurum* at D.L. 10.66, 10.74, and 10.139; to one with a title at *V.P.* 10.135, *μαντικὴν δ' ἄπασαν ἐν ἄλλοις ἀναίρει* (sc. Epicurus), ὡς καὶ ἐν τῇ Μικρᾷ ἐπιτομῇ. καὶ φησι κτλ. See also Diogenes Laertius *V.P.* 2.65 ὡς ἐν ἄλλοις εἰρήκαμεν, a telling reference to 3.36; Aristotle *de An.* 3.3 427a24–25, two references to single lines of Empedocles, the second of which is announced with the formula καὶ ἐν ἄλλοις λέγει (cf. *Pol.* 8.3 1338a27–30, καὶ ἐν ἄλλοις δὲ φησιν, citing *Od.* 9.7–8), as well as some of Aristotle's references to his own works, e.g. *EN* 10.4 1174b3, reference to *Phys.* Books 6–8, *GA* 2.3 736a37 referring to *de An.* 2.4, *GC* 1.3 317b13

referring to *Phys.* 1.6–9. A *TLG* search for ἐν ἄλλοις plus *verbum declarandi* in the *Scholia in Homerum* alone produced almost a hundred instances.

Primavesi (2018) has proved that the text from καὶ ἐν ἄλλοις λέγει consists of excerpts from *Physics* Book 4, viz. ch. 4.212a20–21 + ch. 6.213a15–18 + ch. 6.213a31–b2 + ch. 7.214a26–30 (and 6.213b4–14) + ch. 4.187b7–9 (and 6.213b22–27). The caesura between the two parts of the lemma at 1.18.1c, p. 317^b4, may therefore be less strong than one would suppose at a first glance. Earlier David Runia had argued that the second part, from p. 317^b4–5 καὶ ἐν ἄλλοις λέγει, should be attributed to AD, though he pointed out that the puzzle had not been solved entirely. See Runia (1996) at M–R 3.324–325, and M–R 1.251–252.

We have come to believe that the first part of S 1.18.1c, pp. 316^b14–317^b4, need not be attributed to A either, so no longer follow the analysis of M–R 2.1.220 and 2.2.421. In the first place it is far from clear how P, practising his standard technique of epitomization and abridging things away, could have derived the text of his final lemma from the first section of the text as found in S. The formula τοσοῦτον ... ὥστ', 'precisely large enough in order to', though perfectly at home in P's chapter where it shores up a diaphonia in the category of quantity, fails to correspond to the lemma in S, where a void that should be limited in this way is not mentioned. This in fact constitutes the perfect fit of §6 in P's version in the diaeretic exposition of ch. 1.18, which is responsible for our conviction that in its present form (however bizarre this may seem from the point of view of the combination of name-label and contents) it precisely performs the diaphonic function it should perform—an aspect which Diels, as so often, did not take into account. This function is not performed by the Pythagorean section of S's Aristotle lemma, which if attributed to A should be considered to fall within the category of exceptional tenets placed at the end of a chapter because they do not fit its diaeresis; see Runia (1996), cited above.

It is, however, clear that the contents of P's final lemma ultimately derive from a source that is not dissimilar to the first section (*DG* 316^b14–317^b4 with its *laudationes*) of S's text. In the course of transmission the original information was rephrased in order to suit the purposes of discussion better. The last lemma in P as a matter of fact presents us with an Aristotle who has been turned into a sort of Pythagorean, which is not too surprising in a (late Hellenistic) environment that—like some of our contemporaries—strived to admit other philosophers as members of a wider Pythagorean school of thought (the Aristotelian categories are originally Pythagorean according to the evidence of ps.Archytaς Περὶ τοῦ καθόλου λόγου ἥτοι τῶν κατηγοριῶν, and his physics originally Pythagorean according to the evidence of ps.Ocellus Lucanus Περὶ τῆς τοῦ παντός φύσεως). A, as has been pointed out at M–R 2.1.99, 175, 192, and 217, takes

Neopythagorean views into account. Thus, in A's lemma as witnessed at P Aristotle is made to adopt the view of philosophers he in reality only quoted. We may say that he is included among οἱ ... ἀπὸ Πυθαγόρου, who declare that ἐκτὸς εἶναι τοῦ κόσμου κενόν, εἰς δ' ἀναπνέει ὁ κόσμος καὶ ἐξ οὗ (2.9.1).

We are furthermore convinced that the originally Aristotelian information on the Pythagoreans does not constitute the only ingredient of P's lemma. The τοσοῦτον ... ὥστ' formula calls the ὅσον in a lemma of the related chapter dealing with the void to mind, viz. ch. 2.9 (on the void outside the cosmos): 'Posidonius (says that the void) is not infinite, but large enough to be sufficient for the dissolution (of the cosmos)' (2.9.3, paralleled without attribution to Posidonius at Ach c. 8, cited above at *Testes secundi*). To be sufficiently large to sustain the expansion of the cosmos at its dissolution is similar to being sufficiently large to provide it with room for breathing. See already Algra (1993) 484–485. The false Aristotelian view of A at P §6 plays the same part vis-à-vis the Stoic view of §5 as the dissident view of Posidonius at 2.9.3 does vis-à-vis the general Stoic view at 2.9.2. P's lemma, then, will be the result of a very doxographical conflation of the view of 'Aristotle' with that of Posidonius.

Whether S's text, from 'elsewhere he says', really derives from AD or not we do not know, though another candidate is hard to find. This type of coalescence is after all found more often in the *Anthology*, see Diels *DG* 75 n. 2, M–R 1.249–254, and Jeremiah at M–R 4.286 and 353. The fact that, if this attribution is correct, we would, in one and the same chapter in S, have not only a fragment dealing with Chrysippus at 1.18.4d, but also one before it dealing with Aristotle at 1.18.4c, is a further argument in favour of the attribution. The remains of AD on physics almost without exception deal with either the Peripatetics or the Stoics. In the individual chapters of his first Book S often quotes a Didymean passage on Aristotle (and/or the Peripatetics) *plus* one on Chrysippus (and/or on the Stoics, or other Stoics), e.g. in ch. 1.8 'On the substance and parts of time and of how many things it is the cause'. Here we find at 1.8.40c Aristotle (AD fr. 6 Diels), 1.40d Aristotelians (AD fr. 7), 1.40e Zeno (AD fr. 26), and 1.42 Apollodorus, Posidonius, and Chrysippus (also AD fr. 26). This important fact is obscured because Diels in the *DG* (perhaps inspired by the lay-out of the ethical doxography in S Book 2, or just obeying the dictates of chronology) separated the physical fragments of AD dealing with the Peripatetics (frs. 2–17) from those dealing with the Stoics (frs. 18–40).

A second and more important argument in favour of the attribution is that, as we saw, the section of S's text at 1.18.c beginning with καὶ ἐν ἄλλοις λέγει deals with a number of themes, viz. 'loci / motus / infiniti / definitiones', as Diels correctly pointed out; it also mentions the void. Exactly the same analysis of contents applies to S 1.18.4d, AD fr. 25, on Chrysippus: this, too, is a mixed bag.

It deals with and defines place (τόπος), describes the void, tells us that outside the cosmos the void is infinite, and indeed mentions the infinite *per se* as well. Placing these two texts next to each other in a double column would immediately show where and how they correspond to each other.

These arguments for the attribution of this section to AD seem compelling. They may be capped by the observation that S also omitted the Aristotle lemma of ch. 1.19.2 (*ubi vide*), clearly believing that its contents are amply represented by the Aristotelian definition of τόπος included at 1.18.1c, p. 156^b15–16 Wachsmuth, τόπον εἶναι τὸ τοῦ περιέχοντος πέρας ἀκίνητον, ἥ ἐν ᾧ μένει τε καὶ κινεῖται τὰ σώματα.

Accordingly, we hypothesize that, finding A's lemma mistaken or at the very least insufficient (cf. Algra 1993, 483), S looked for and then substituted a better account, as he often does where Plato or Aristotle or the Stoics are concerned. S can hardly have failed to see that the name-label Aristotle of the first lemma in ch. 1.18 (as now known to us in P's version) is at odds with that of the first lemma of ch. 2.9, which he quotes further down at *Ecl.* 1.18.4b: 'Pythagoras and his followers (say that) a void outside the cosmos exists, into which and from which the cosmos breathes', for the doxai are virtually the same. (This was also noticed by a copyist of Q, see Daiber (1980) 361–362). He also must have thought that the attribution of a void outside the cosmos to Aristotle is flagrantly contradicted by 2.9.4 (a lemma he transcribed as well), according to which 'Plato and Aristotle (declare that) there is no void either outside the cosmos or inside'. So he looked for better material on Aristotle, and found it. His interest in Pythagoras and Pythagoreanism generally must also be taken into account, as this should have motivated him to look for better evidence for the Pythagorean doxa as well. S then not inelegantly coalesced these two accounts, that of Aristotle on the Pythagoreans and AD on Aristotle, which he introduced with the word 'and elsewhere he says' (καὶ ἐν ἄλλοις λέγει). As to S's source for the former, we may refuse a chronological association with A or P, and think of a Commentary on the Aristotelian *Physics*.

Our preference for the final clause of ch. 1.18.1 as preserved by P^G, 'inside there is a fiery place', derives from the fact that Philolaus according to ch. 2.7.6 said that 'there is a fire in the middle around the centre (of the cosmos), which he calls the universe's hearth and Zeus' house' etc. (cf. also ch. 3.11.3). This fire is 'primary'. The central fire (of the Pythagoreans—no mention of Philolaus) is already mentioned at Arist. *Cael.* 2.13 293a21, 'for they say there is a fire at the centre' (ἐπὶ μὲν γὰρ τοῦ μέσου πῦρ εἶναι φασί). That the cosmos itself is fiery, as the reading of P^B has it, seems to be less plausible, although this consideration is not decisive against the reading itself, which after all is of doxographical quality and perhaps echoes another item also in ch. 2.7.6, viz. the fire at the

circumference of the cosmos: ‘and again another fire, at the highest place, the surrounding (firmament)’ (καὶ πάλιν πῦρ ἕτερον ἀνωτάτω, τὸ περιέχον). But as Primavesi has shown (not yet published, cited Jas 2018b, 8–9) the fact that the cosmos inhales from the void to cool the fire at the centre is consistent with Philolaus’ view at 44A27 DK (cited below at E(b)§6)—so with a Pythagorean doctrine—that the inhalation of cold air from outside serves to cool our bodies.

e Other Evidence

(1) There is a certain overlap between issues concerned with the infinite, with the void, and with place. Aristotle treated these questions separately, the infinite at *Phys.* 3.4–8, the void at *Phys.* 4.6–9, place at *Phys.* 4.1–5, but did not keep them strictly apart. A Pythagorean infinite outside the cosmos is mentioned at *Phys.* 3.4 203a6–8, which at 4.6 213b22–26 becomes a ‘void that enters the cosmos out of the infinite breath’ (the latter passage is quoted by AD, see below section E(b)§6). At 4.1 208b25–26 he says that those who posit the existence of the void accept that of place, as ‘the void would be place bereft of body’ (τὸ γὰρ κενὸν τόπος ἂν εἴη ἐστερημένος σώματος). We note that in the *Placita* the void and place have changed places compared with Aristotle’s *Physics*; this may be due to the presence of the ‘infinite’ in ch. 1.18.

(2) Surprisingly enough there is no reference either here or in ch. 1.23 ‘On motion’ to the well-known view of Melissus or the Atomists (e.g. Melissus fr. 30B7.(7–10) DK and at Aristotle *Phys.* 4.6 213b12–14; Leucipp. fr. 67A7 DK at Arist. *GC* 1.8 325a23–32; Epicurus *Ep.Hdt.* 67) that motion is only possible because of the existence of the void. However, a version of the Early Pythagorean view of the void is present (in disguise) even when one eliminates S 1.18.1c on Aristotle from the chapter, as we argue one probably should.

Commentary

A Witnesses

The witnesses for this brief chapter are rather limited, namely P (represented by P^B and P^Q) and S, who have only one lemma and the chapter heading in common. It is absent from P^E and P^G. Psellus in his chapter on *topos* utilized the heading and paraphrased the first two lemmata of P 1.19, augmenting the text with exegetic material. For S's omission of the Aristotle doxa see below, section D(b)(1).

B Proximate Tradition and Sources

(1) *Proximate tradition.* The proximate tradition is virtually non-existent for the three extant lemmata.

(2) *Sources.* As to the sources we must note that the theme and structure of this chapter as well as the gist of the alternative definitions that it provides derive without exception from Aristotle's account and overview in Book 4 of the *Physics*. *Phys.* 4.4 211b6–9 lists exactly four possible denotations of τόπος: (1) form (μορφή or εἶδος), (2) matter (ὕλη), (3) the interval between the extremities, or (4) the extremities themselves. Aristotle then argues in favour of the fourth. These different options are also listed by e.g. Sextus Empiricus *M.* 10.24, and Simplicius *in Phys.* 571.21–31, so may be seen as having become standard. Three of these four are present in our chapter: (2) matter, (4) the extremities, and (3) the interval between the extremities. So the first listed, τόπος as form, is lacking, presumably because it had never been adopted by any individual or school.

§1 is a virtually verbatim reproduction of a conflation of two passages in Aristotle (with the addition of Platonic designations of χώρα) that provide a critical account of Plato's view of space, *Phys.* 4.2 209b11–17 plus 209b33–210a2 (see

section E(b)§2): ‘Plato says in the *Timaeus* that matter (τὴν ὕλην) and space (τὴν χώραν) are the same; for what partakes (τὸ ... μεταληπτικόν: A preserves Aristotle’s verbal form) and space (τὴν χώραν) are one and the same thing. His account of what partakes differs in the *Timaeus* and the so-called Unwritten Doctrines, but he still declared that place and space are the same (ὅμως τὸν τόπον καὶ τὴν χώραν τὸ αὐτὸ ἀπεφώνητο). [...] One has to inquire of Plato ... why the Forms and numbers are not in place, if place is what partakes (sc. of them, εἴπερ τὸ μεθεκτικὸν ὁ τόπος)’. By this interpretative move Plato’s view of τόπος is made to dovetail into the pattern of the four options, filling the slot of theoretical option (2), ‘matter’. This background also helps to explain the presence of the lemma under the heading Περὶ τόπου rather than under Περὶ χώρας. Even so we note that Aristotle’s claim (not reproduced in the lemma) that according to Plato place and space are one and the same preludes upon the theme of the next chapter, 1.20, where the differences, or lack of difference, of the denotation(s) of void, place, and space are at issue. The suppressed or at any rate hidden past of 1.19.1 apparently contributed to the thematic agenda of our triad of *Placita* chapters.

§2 is an abridged version of one of the formulae in the *Physics*, 4.4.212a5–7, ἀνάγκη τὸν τόπον εἶναι ... τὸ πέρας τοῦ περιέχοντος σώματος (καθ’ ὃ συνάπτεται τῶ περιεχομένῳ). It corresponds to the last of Aristotle’s four options listed above, i.e., (4) the extremities themselves. The *Placita* passage here proves its importance for the text of the *Physics*, for the words καθ’ ὃ ... περιεχομένῳ are not in the Greek mss. but found in the Arabo-Latin translation and the late commentators.

§3 corresponds to the third of Aristotle’s options, (3) the interval between the extremities.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type ‘about x’, περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter it pertains to definitions of the (incorporeal) substance, or question type of ‘what it is’. It is paralleled in Aristotle as embedded indication of the subject that is to be treated, see section E(b) Chapter heading.

The indication of the theme in the heading is indispensable for understanding the chapter, since the word for place, τόπος, is not found in the lemmata. As the text in P shows, the mentions of τόπος in S’s §§1 and 3 are added for the sake of his process of coalescence. Diels’ method of double columns meant he had to retain them.

D *Analysis*

a Context

Ch. 1.19 is the second of the triplet of chapters 1.18–20 dealing with the traditionally related issues of the void, place, and space. See Commentary D(a) at ch. 1.18 above.

b Number–Order of Lemmata

(1) Both P and S have two lemmata. S has omitted the Aristotle lemma extant as P2, clearly believing that its contents are amply represented by what is in the large abstract (to be attributed to AD) concerned with Aristotle's views of place and void at his 1.18.1c. On the other hand he has preserved a Strato lemma not found in P, just as is the case with the Strato lemma in ch. 1.18 (but there is a lemma with this name-label in the passage from the Commentary on the *Categories* cited above, ch. 1.18, at section E(a) General texts). He furthermore coalesced these two Strato lemmata at 1.18.1b, citing first the lemma from ch. 1.18 with name-label and next that from ch. 1.19 without it, and placed his abstracts concerned with Plato further down in his chapter, at 1.18.4c. This explains why his quotation of the Plato lemma of ch. 1.19.1 comes second after his quotation of the Strato lemma, whereas the first position of the Plato lemma in P will be original. The lemmata at §2 and §3 that we have obtained by combining the evidence of P and S obviously form a pair. The sequence of lemmata this time is not only systematic but also chronological, as is often the case also elsewhere in the *Placita*, see M–R 2.1.94–95 (and Jeremiah at M–R 4.310–319): Plato–Aristotle–Strato. Our reconstruction of the order has the same result as reached by Diels in the *DG*.

(2) The absence of lemmata with the Stoic and Epicurean definitions of place is noteworthy, esp. because ch. 1.20 is about the ways Zeno and his followers and Epicurus use the terms void, τόπος, and space. A brief version of the Stoic definition is actually found at ch. 1.20.1 Ζήνων καὶ οἱ ἀπ' αὐτοῦ ... τὸν ... τόπον τὸ ἐπεχόμενον ὑπὸ σώματος (cf. AD fr. 25 Diels = *SVF* 2.503 at Stob. *Ecl.* 1.18.4d, p. 161.8–11 τόπον δ εἶναι ὁ Χρύσιππος ἀπεφαίνετο τὸ κατεχόμενον δι' ὅλου ὑπὸ ὄντος ἢ τὸ οἶόν (τε) κατέχεσθαι ὑπὸ ὄντος καὶ δι' ὅλου κατεχόμενον εἶτε ὑπὸ τινὸς (εἴτε) ὑπὸ τινῶν). One of the reasons, presumably, is that they can be subsumed under the definition of §3, see Simplicius in *Phys.* 571.21–24, cited below at section E(b) General texts. The other is that the presence of the Stoic definitions in ch. 1.20 makes for a more inclusive diaphonia with the Epicurean view. Cf. the presence of the Stoic doctrine of vision in 4.15 instead of in 4.13.

c Rationale—Structure of Chapter

(1) *Diaphoniae*. The structure is simple. §2 is diaphonically opposed to §3: place either clings to the object on the outside or is the interior distance from side to side. This alternative is paralleled in other sources, from Aristotle to Simplicius. The pair of §§2–3 in its turn is opposed to Plato's purported and very different view of place as the matter that participates in the Forms. The agenda for this chapter (just as for ch. 1.18 and in identical terms) was set by Aristotle, *Phys.* 4.1.208a27–29 *ὁμοίως δ' ἀνάγκη καὶ περὶ τόπου τὸν φυσικὸν ὥσπερ καὶ περὶ ἀπείρου γνωρίζειν, εἰ ἔστιν ἢ μὴ, καὶ πῶς ἔστι, καὶ τί ἔστιν.*

(2) *Question types*. All three lemmata are concerned with the category and question-type of the τί ἐστίν, 'what is it' (we have three definitions here). The question-type of the attribute (πῶς ἔστι) is also at issue in the various qualifications of the notion of place in each of the three lemmata. And because it is 'about place' the chapter is, obviously, also concerned with the category of place—*per se*, so to speak, but also, paradoxically, with the place of 'place'. For of the two alternative doxai the first (§2) places place at the periphery of the object, as 'the outermost of what surrounds connecting with what is surrounded', while the other (§3) puts it inside, as 'the interval between what surrounds and what is surrounded'. The question-type of existence (εἰ ἔστιν ἢ μὴ) is not included.

d Further Comments

General Points

For a preliminary reconstruction and discussion of the chapter see Mansfeld (2014).

Individual Points

§3 Lemmata on void and place with name-label Strato are extant only in S (and in the passage from the Commentary on the *Categories* cited above, ch. 1.18, at section E(a) General texts). Gottschalk's emendation is attractive, but superfluous in the doxographical context. Sharples (2011a) 73, who accepts the emendation, comments: 'the place of the water in a jar is the interval between the inner surface of the container on opposite sides, or between the outer surface of what is contained—it makes no difference, as the two are contiguous'.

e Other Evidence

Sextus Empiricus discusses place at *M.* 10.1–36 and *P.* 3.119–135 (including discussion of the void). Rich documentation on the topic is found at Simplicius' *Corollarium de loco*, translated by Urmson (1992); extracts cited below in section E(b) General texts.

Commentary

A *Witnesses*

The witnesses for the lemmata of this brief and dilemmatic chapter are again P and S. S has two lemmata. P (represented by P^B and P^Q) has only one lemma, combining Zeno (generalised to ‘Stoics’) and Epicurus by lifting the name-label ‘Epicurus’ (generalising it to ‘Epicureans’) from the second lemma and including it in the first, thus attributing to the latter to opposite of what is attributed in §2. The chapter is not found in P^E. G not unintelligently edits out the void and paraphrases the rest of P’s single lemma, on place and space. But he unnecessarily replaces §1[1] *διαφέρειν* (‘differ’) with its synonym *διαλλάττειν*, which reminds one of S’s *παραλλάττειν*. This suggests that a remnant of §2 survived as a *varia lectio* in his copy of P. Ps’ paraphrase leaves out the void too.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. The proximate tradition is limited to a fragment of AD cited at section E(a)§1. The partial parallel with the account in Sextus Empiricus cited at section E(b)§1 seems to show that the chapter reflects the main Hellenistic philosophical views that were current.

(2) *Sources*. The source of §2 is without doubt the passage from the *Letter to Herodotus* cited at section E(b)§2, or a similar but lost verbatim passage.

C *Chapter Heading*

(1) Attested in both P and S, and of the standard umbrella type ‘about *x*’, *περὶ τοῦ δεῖναι* (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type, in the present chapter pertaining to the question type of ‘what it is’. The word *χώρα* occurs here for the first time, but the chapter is not about views concerned with *χώρα* alone in the way ch. 1.18 is about the void, but only with the difference or lack of difference as to the meaning of all three terms *κενόν* *τόπος* *χώρα* according to the authorities listed.

(2) *Περὶ χώρας*, unlike the headings of chs. 1.18 and 1.19 is not paralleled in Aristotle; in fact, this formula is never found elsewhere with reference to an

account or discussion of place or space in the strict sense, but usually means ‘about a country’ and is preceded by words like ‘war’.

D *Analysis*

a Context

Ch. 1.20 is the third of the triplet of chapters 1.18–20 dealing with the traditionally related issues of the void, place, and space. See Commentary D(a) at ch. 1.18 above. It is a sort of appendix dealing with semantic matters.

b Number–Order of Lemmata

(1) The two lemmata have been coalesced by P, who from the point of view of both philosophy and doxography blundered by omitting §2 and including its name-label in §1 (cf. at ch. 1.11.3 above), thus jettisoning the diaphonia. See Diels *DG* 64. For a similar coalescence cf. e.g. ch. 4.7.1–2 (cf. ch. 4.7 Commentary A), or ch. 4.13.12–13. There is however a partial parallel for this coalescence, or perhaps proof of its influence, elsewhere, for Sextus Empiricus *M.* 10.2–4, cited below at section E(b) General texts, formulates Epicurus’ view in such a way that the difference with the Stoic view is somewhat less; see M–R 2.1.101.

(2) There is no reason to change the order of S, also because P (abridging Ζήνων καὶ οἱ ἄπ’ αὐτοῦ to οἱ Στωικοί, as he also does elsewhere) included the name-label Epicurus from §2 *after* the name-label Stoics of §1.

c Rationale–Structure of Chapter

The structure of this bilemmatic chapter is simple and effective: a strong diaphonia between the Stoics, who carefully distinguish between the meaning of the three terms, and Epicurus, who treats them as equivalent.

d Further Comments

General Points

For a preliminary reconstruction and discussion of the chapter see Mansfeld (2014).

A reference to the principle of the *χώρα* of the *Timaeus* that one would have expected to find in a chapter with this heading is absent because of the interpretation of this concept as being equivalent to ὕλη, see above, ch. 1.19.1 (though the term is not used there). Aristotle *Phys.* 4.2 209b11–12 said that according to Plato ὕλη and *χώρα* are the same, so this quasi-tenet could have been deployed as a lemma, but as Plato rejected the void only these two terms were available, not three as in the other two lemmata.

Individual Points

§2 There is no need to eliminate πᾶσιν with Usener, as the adjective underlines that all the concepts at issue in chs. 1.18–20 are involved. Note that Sedley (1982) 187–188, and Long and Sedley (1987) 1.30, argue in favour of Sextus Empiricus' presentation at *M.* 10.2 cited at section E(b) General texts. That different words (names) are irrelevant as long as one knows that what is meant is the same thing is a thought often expressed by Galen too, e.g. *PHP* 2.5.81.

e Other Evidence

For the distinction between Stoics and Epicurus, though more low-key, see Sextus Empiricus *M.* 10.2–4 at section E(b) General texts.

E Further Related Texts

a Proximate Tradition

General texts: Philo of Alexandria *Somn.* 1.184 δικαίως οὖν ἐφοβήθη καὶ εἶπε θαυμαστικῶς· 'ὡς φοβερός ὁ τόπος οὗτος' (*Gen* 28:17)· ὄντως γὰρ τῶν ἐν φυσιολογίᾳ τόπος ἀργαλεώτατος, ἐν ᾧ ζητεῖται, ποῦ καὶ εἰ συνόλως ἐν τινὶ τὸ ὄν, τῶν μὲν λεγόντων, ὅτι πᾶν τὸ ὑφ' ἐστῶς χώραν τινὰ κατεῖληφε, καὶ ἄλλων ἄλλην ἀπονεμόντων, ἢ ἐντὸς τοῦ κόσμου ἢ ἐκτὸς αὐτοῦ μετακόσμιόν τινα (cf. ch. 1.18), τῶν δὲ φασκόντων, ὅτι οὐδενὶ τῶν ἐν γενέσει τὸ ἀγέννητον ὅμοιον, ἀλλὰ τοῖς ὅλοις ὑπερβάλλον.

§1 *Zeno Stoicus:* Arius Didymus fr. 25 Diels at Stob. *Ecl.* 1.18.4d, p. 161.8–26 τόπον δ' εἶναι ὁ Χρῦσιππος (*SVF* 2.503) ἀπεφαίνετο τὸ κατεχόμενον δι' ὅλου ὑπὸ ὄντος ἢ τὸ οἶον (τέ) κατέχεσθαι ὑπὸ ὄντος καὶ δι' ὅλου κατεχόμενον εἶτε ὑπὸ τινὸς (εἶτε) ὑπὸ τινῶν. ἐὰν δὲ τοῦ οἴου τε κατέχεσθαι ὑπὸ ὄντος τί μὲν κατέχεται, τί δὲ μή, τὸ ὅλον (οὔτε) κενὸν ἔσσεσθαι οὔτε τόπον, ἕτερον δέ τι οὐκ ὠνομασμένον· τὸ μὲν γὰρ κενὸν τοῖς κενοῖς ἀγγείοις λέγεσθαι παραπλησίως, τὸν δὲ τόπον τοῖς πλήρεσι· χώραν δὲ πότερον τὸ μείζον οἶον τε κατέχεσθαι ὑπὸ ὄντος καὶ οἶον μείζον ἀγγεῖον σώματος ἢ τὸ χωροῦν μείζον σώμα; τὸ μὲν οὖν κενὸν ἄπειρον εἶναι λέγεσθαι· τὸ γὰρ ἐκτὸς τοῦ κόσμου τοιοῦτ' εἶναι· τὸν δὲ τόπον πεπερασμένον διὰ τὸ μηδὲν σώμα ἄπειρον εἶναι. καθάπερ δὲ τὸ σωματικὸν πεπερασμένον εἶναι, οὕτως τὸ ἀσώματον ἄπειρον, ὃ τε γὰρ χρόνος ἄπειρος καὶ τὸ κενόν. ὥσπερ γὰρ τὸ μηδὲν οὐδὲν ἐστὶ πέρας, οὕτως οὐδὲ τοῦ μηδενός, οἶον ἐστὶ τὸ κενόν. κατὰ γὰρ τὴν αὐτοῦ ὑπόστασιν ἄπειρόν ἐστι· περατοῦται δ' αὐτοῦτο ἐκπληρούμενον· τοῦ δὲ πληροῦντος ἀρθέντος οὐκ ἔστιν αὐτοῦ νοῆσαι πέρας. fr. 5 Diels at Stob. *Ecl.* 1.15.1c, p. 141.17–19 (on Aristotle) πληρωτικὸν γὰρ εἶναι τοῦ τόπου τὸ σώμα, καθάπερ καὶ τὸν τόπον τοῦ σώματος δεκτικόν.

§2 *Epicurus:* Plutarch *Adv. Col.* 1112E–F 'Ἐπικούρου (fr. 76 Usener) δὲ λέγοντος 'ἢ τῶν ὄντων φύσις σώματ' ἐστὶ καὶ τόπος', πότερον οὕτως ἀκούωμεν ὡς ἄλλο τι τὴν (F) φύσιν παρὰ τὰ ὄντα βουλομένου λέγειν (ἢ) τὰ ὄντα δηλοῦντος ἕτερον δὲ μηθέν, ὥσπερ ἀμέλει καὶ κενοῦ φύσιν αὐτὸ τὸ κενόν, καὶ νῆ Δία τὸ πᾶν 'παντὸς φύσιν' ὀνομάζειν εἴωθε. Hippolytus *Ref.* 1.22.1–2 'Ἐπικούρου (Usener fr. 271 adn.) ... ἀρχὰς μὲν τῶν ὄλων ὑπέθετο ἀτόμους καὶ κενόν—κενὸν μὲν οἶον τόπον τῶν ἐσομένων, ἀτόμους δὲ τὴν ὕλην, ἐξ ἧς τὰ πάντα.

b Sources and Other Parallel Texts

General texts: *Sextus Empiricus M.* 10.2–4 προληπτέον, ὅτι κατὰ τὸν Ἐπίκουρον (fr. 271 Usener) τῆς ἀναφοῦς καλουμένης φύσεως τὸ μὲν τι ὀνομάζεται κενόν, τὸ δὲ τόπος, τὸ δὲ χώρα, μεταλαμβάνομένων κατὰ διαφόρους ἐπιβολὰς τῶν ὀνομάτων, ἐπεὶ περ ἡ αὐτὴ φύσις ἔρημος μὲν καθεστηκυῖα παντὸς σώματος κενὸν προσαγορεύεται, καταλαμβάνομένη δὲ ὑπὸ σώματος τόπος καλεῖται, χωροῦντων δὲ δι' αὐτῆς σωμάτων χώρα γίνεται. κοινῶς μέντοι φύσις ἀναφῆς εἴρηται παρὰ τῷ Ἐπικουρῷ διὰ τὸ ἐστερηθῆαι τῆς κατὰ ἀντίβασιν ἀφῆς. (3) οἱ Στωικοὶ (*SVF* 2.505) φασι κενὸν μὲν εἶναι τὸ οἷον τε ὑπὸ ὄντος κατέχεσθαι μὴ κατεχόμενον δέ, ἢ διάστημα ἔρημον σώματος, ἢ διάστημα ἀκαθεκτούμενον ὑπὸ σώματος, τόπον δὲ διάστημα ὑπὸ ὄντος κατεχόμενον καὶ ἐξισαζόμενον τῷ κατέχοντι αὐτόν, (νῦν δὲ καλοῦντες τὸ σῶμα, καθὼς καὶ ἐκ τῆς μεταλήψεως τῶν ὀνομάτων ἐστὶ συμφανές), χώραν δὲ φασι εἶναι διάστημα κατὰ μὲν τι κατεχόμενον ὑπὸ σώματος κατὰ δέ τι ἀκαθεκτούμενον. (4) ἔτι οἱ δὲ χώραν ἔλεξαν ὑπάρχειν τὸν τοῦ μείζονος σώματος τόπον, ὡς ταύτῃ διαφέρειν τοῦ τόπου τὴν χώραν, τῷ ἐκείνῳ μὲν μὴ ἐμφαίνειν μέγεθος τοῦ ἐμπεριεχομένου σώματος (κἂν γὰρ ἐλάχιστον περιέχῃ σῶμα, οὐδὲν ἦττον τόπος προσαγορεύεται), τὴν δ' ἀξιόλογον ἐμφαίνειν μέγεθος τοῦ ἐν αὐτῇ σώματος.

Chapter heading: *Sextus Empiricus M.* 10.5 περὶ δὲ τοῦ τόπου καὶ τῆς συζυγούσης τούτῳ χώρας, ἥτις καὶ αὐτὴ κατὰ τὸ γένος ἐστὶ τόπος, ἐπὶ τοῦ παρόντος σκεψόμεθα.

Commentary

A *Witnesses*

(1) This short chapter is witnessed by the Byzantine mss. of P and the translation of Q (who has one lemma more than P^B and S). It is found in an abridged (or lacunose) and muddled form in G. P^{Ps} utilises only the title.

(2) It is also found complete (except for the extra lemma in Q) but dispersed in S's long chapter on time, which apart from a large collection of poetic fragments and a few apophthegms comprises the lemmata of A 1.21–22, AD frs. 6 and 7 Diels on Aristotle and the Aristotelians, AD fr. 26 Diels on Zeno, Apollodorus, Posidonius, and Chrysippus (interwoven between Zeno and Apollodorus with a Hermetic fragment), then ch. 3.8.1 followed by ch. 2.1–4, by a prose paraphrase of a fragment of Scythinus (Heraclitus 22C3.2 DK, note verse restoration by Wilamowitz), by an excerpt from Plutarch's *Numa*, and concluding with one from Plato's *Timaeus* preceded by a combination of chs. 1.21.2, 1.22.9 and 1.22.1. For further details see the analysis at M–R 1.226–228, and also below at ch. 1.22, Commentary D(b). With some hesitation we have revised earlier suggestions and included Q's Aristotle lemma, retaining Daiber's numbering with 2α, because it seems after all unlikely that it was added on Q's initiative. Q is quite often at a loss to understand his Greek source yet still provides a sort of translation, which makes the occasional nugget, when more or less unexceptionable in itself, all the more gratifying.

(3) P, or rather A, has distributed material on time over two chapters that could just as well have been placed in a single chapter, just as in S, see Cavagnaro (1994) 239. See below at section C. He just attempted to follow the tradition, as is clear from Sextus Empiricus' parallels for the distinction between 'on time' and 'on the substance/essence of time' (cf. sections C and D(a) below). The distinction between chs. 4.2 'On soul' (soul qua incorporeal, so without substance in the sense of matter), and 4.3 'On the substance of soul' (soul qua corporeal entity) is much clearer at a first glance. As the authorial remark at ch. 4.3.1 tells us *disertis verbis*, 'all those arrayed previously [sc. in ch. 4.2] assume that the soul is incorporeal', while the doxai that follow list corporeal entities.

(4) Sharples (2011a) 90–91 prints the material for chs. 1.21–22 from S alone in its Stobaeian order as Strato fr. 33, as follows: A 1.21.1 plus 1.21.3 (both in both S and P) plus 1.22.7–8 (both in both S and P) plus 1.22.2 (not in P) plus 1.22.3–6 (not in P), strangely omitting to add 1.22.8 (in both S and P). He rejects Diels' reconstruction of A, and argues that Diels 'inserts a reference to Plato in his Stobaeus column', i.e. at ch. 1.21.2, as if Diels took this from P instead of from S 1.8.45 (but he does not cite the other evidence of S 1.8.45 either). He also argues that Diels 'inserts a heading "On Time"' and 'one "On the Being of Time"' in the S column of 1.21 and 1.22, as if these derive from P alone, and omits to tell us that the first ingredient of the heading of S's own chapter is an epitomized combination of those in P. He also rejects other details of Diels' reconstruction, but on the other hand retains a phrase from AD fr. 26 Diels (without revealing its provenance) that has been inserted by S in the midst of the Aëtian material. But then, surprisingly, he concludes that 'Diels' reconstruction of the original sequence in Aëtius may be correct', but that does not alter the potentially misleading nature of the way in which he presents the text of Stobaeus. One wonders what particular purpose can be served by presenting the *rudis indigestaque moles* of S. It certainly does little or nothing for the interpretation of Strato. It is also a good example of what happens when an individual witness is cited in isolation without taking into account the need to reconstruct the original text of A.

(5) Bobzien (2015) 293–312 rejects Diels' reconstruction of chs. 1.21–22 from P and S. She argues that the attribution of the Stoic view of time as διάστημα τῆς τοῦ κόσμου κινήσεως (for which cf. below, ch. 1.22 Commentary D(d) individual points §2) to Plato in ch. 1.21.2 must be due to a textual corruption that occurred somewhere in the tradition, because it cannot be derived from something Plato really said or meant. She therefore posits (307 n. 81) that Diels was wrong in inserting the five lemmata 1.22.3–7 (Xenocrates, Hestiaeus, Strato, Epicurus, Antiphon and Critolaus) from S in ch. 1.22, and suggests (in rather cavalier fashion) that S excerpted them 'from one or more additional sources'. 'In this way' (she adds) 'no long gap has to be postulated for' P. According to her reconstruction (o.c. 307–308, inclusive of italics and bold characters) the text must have looked as follows in S's source (note that P's chapter headings are omitted):

Πυθαγόρας τὴν σφαῖραν τοῦ περιέχοντος. Πλάτων αἰῶνος εἰκόνα κινήτην, ἢ διάστημα τῆς τοῦ κόσμου κινήσεως. Ἐρατοσθένης τὴν τοῦ ἡλίου πορείαν. [Πλάτων] οὐσίαν χρόνου τὴν τοῦ οὐρανοῦ κίνησιν. οἱ Στωικοὶ (χρόνου οὐσίαν) αὐτὴν τὴν κίνησιν. Οἱ πλείους ἀγέννητον τὸν χρόνον. [Πλάτων] γενητὸν δὲ κατ' ἐπίνοιαν.

Although in the exactly parallel versions of P the name-label Πλάτων actually occurs each time, Bobzien has bracketed it both times because in S's Plato

lemma at *Ecl.* 1.8.45, coalesced (as we have seen) from three Aëtian lemmata, the name-label occurs only with the first excerpt, as he did not need repeat it. We stipulate that adding ⟨χρόνου οὐσίαν⟩ for the Stoics is unnecessary, since these words occur both in the previous lemma and in the chapter heading (rejected by Bobzien). Deleting the five lemmata of 1.22.3–7, notwithstanding their perfect Aëtian form and presentation, is a consequence of arguing towards a conclusion rather than from the evidence, and is entirely unwarranted (for Aëtian enclaves or micro-environments in S see above, General Introduction sections 2.4 and 3.3). Nevertheless, concluding that sections of chs. 1.21.2 and 1.22.1 should be combined in the above way, Bobzien goes on to emend the text of ch. 1.21.2 in the following elegant way:

... Πλάτων αἰῶνος εἰκόνα κινητήν, ἢ ⟨τὴν τοῦ κόσμου κίνησιν· οἱ Στωικοί⟩ διάστημα τῆς τοῦ κόσμου κινήσεως. ...

Note a minor slip: 1.22.1 reads οὐρανοῦ, not κόσμου. What is more important is that uncoupling the contents of chs 1.21.2 and 1.22.1 was not Diels' doing, since they are already distributed over different chapters in P (confirmed by Q and G). In S's coalesced Plato lemma the two lemmata are included in the same order as they have in P on either side of the chapter division, namely of 1.21.2 first and of 1.22.1 second, and are separated from each other by a stray lemma from the next chapter on time, namely 1.22.9.

Even so, this emendation is probably correct as far as the wider tradition of A is concerned. But we need not involve ch. 1.22.1 and the rest of ch. 1.22 (thus preserving 1.22.3–7 for A), and can afford to limit the hypothetical emendation to the *prehistory* of ch. 1.21.2. What happened, as Bobzien saw, is that the name-label οἱ Στωικοί (or something similar) has at some time fallen by the wayside. Accidents or occurrences of this nature are not unusual in A, as could have been learned at Diels *DG* 64, or M–R 1.192–193.

To repeat some of Diels' examples: At ch. 1.20 P coalesced A's two lemmata (both extant in S) *suo more* by adding (note the adventitious καί) the name-label Ἐπίκουρος to the name-label οἱ Στωικοί (S has Ζήνων καὶ οἱ ἄπ' αὐτοῦ), taking the false attribution of a Stoic doctrine to Epicurus in his stride; see above ch. 1.20, Commentary D(b). An even better parallel is provided by ch. 4.7.1–2, where the parallel in T (S is almost entirely lost for this chapter) shows that the name-label Ἡράκλειτος has fallen out unintentionally or been omitted in P, with as a consequence that a doxa originally ascribed to Heraclitus has now by mistake though in itself not implausibly been attributed to Πυθαγόρας Πλάτων; see below ch. 4.7, Commentary A. At ch. 4.13.12–13, again, P abridged his predecessor so as to produce a single lemma, epitomizing away both the name-label

Ἑστιάιος of §13 and the Empedoclean tenet of §12, thus combining the Ἑστιάιος doxa with the name-label Ἐμπεδοκλήης. Finally ch. 3.3.13–14, where P has coalesced two lemmata by omitting the first lines of the second, including the name-label Στράτων; cf. ch. 3.3, Commentary A. We may add another example, namely ch. 4.23.1–2, where a bizarre new lemma is produced by *saut du même au même* in part of P's tradition; see ch. 4.23 Commentary D(d)§§1–2.

The fact, as noted above, that P and S have transmitted the text of 1.21.2 in exactly the same form demonstrates that this was already A's text. Mistakes may become part of the tradition! We note that the improbable Plato doxa is also found in Philo (as it seems, cf. *Aet.* 52) and Alcinous (see below, section D(d)§2), so it infiltrated a Middle Platonist strand of the tradition without causing offence. Later Platonists do not repeat the mistake.

Bobzien's reading not only entails obliterating P's chapter division, which is only permitted when the evidence warranting such a surgical intervention is unavoidable, but also means rewriting A's text, which of course we should not do at all. If a corruption occurred, as is indeed most likely, this must have happened in one of A's doxographical predecessors. Which in its turn would entail that some lemmata in this source of A had the same terse structure as the majority of A's lemmata, which constitutes a quite important piece of information.

B Proximate Tradition and Sources

(1) *Proximate tradition.* Examples of the proximate tradition are found as far apart as in Sextus Empiricus and Simplicius, blended with that for ch. 1.22. Parallels virtually constituting a rather full summary of the proximate tradition concerned with chs. 1.21 and 1.22 together are found in Plotinus *Enn.* 3.7[45] *On time and eternity*. See esp. the summary at *Enn.* 3.7[45].7.17–27, cited below section E(b) General texts, and section D(e).

(2) *Sources.* The link with Aristotle *Phys.* 4.10 218a31–b10 is unmistakable (cf. Burkert 1972, 75–76) and decisive; this text may therefore count as an ultimate source. Aristotle first asks 'what time is and under what category it falls' (τί δ' ἐστὶν ὁ χρόνος καὶ τίς αὐτοῦ ἢ φύσις), giving as examples two anonymous doxai echoed in our two *Placita* chapters, though now with name-labels added, namely 'Pythagoras' in the echo at A 1.21.1 and 'Plato' in the not fully verbatim echo at 1.22.1; we note that, again, the *Placita* 'knows' who are meant here (cf. above, ch. 1.3, Commentary D(d)§14). Aristotle argues that 'time is most usually supposed to be motion and a kind of change' (ἐπεὶ δὲ δοκεῖ μάλιστα κίνησις εἶναι καὶ μεταβολή τις ὁ χρόνος, τοῦτ' ἂν εἴη σκεπτέον), a point of view that corresponds with the overarching focus of 1.21.2–3 and 1.22.1–5. Accordingly Aristotle first speaks of time as an accident—or incorporeal—, namely 'the motion of the

whole', and then as a substance, or physical entity—something corporeal—, namely 'the sphere itself' (see for this pair §1 with the first part of §2).

Aristotle then concentrates on the specifics of the incorporeal entity, namely of 'time qua something belonging to motion' (*Phys.* 4.11 219a8–10).

The Plato doxa at §2 has been modified by the incorporation, as it would seem in the course of the transmission, of a Stoic notion at §2b (see above at section A). The Aristotle doxa in the third lemma (§2α, provided we may include it) amounts to a remarkable misunderstanding of his doctrine, perhaps based on identifying his summary of someone else's view at *Phys.* 4.14 223b21–23 (cited below at section E(b)§2α) as representing his own doctrine. It would also fit in between ch. 1.22.1 and 1.22.2. The Eratosthenes doxa at §3 is an addition to the earlier material, but we do not know by what route these contents have travelled to our chapter.

C Chapter Heading

(1) Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter it encompasses physical substance as well as a number of accidents (or incorporeals), namely time, which of course is a category by itself, plus motion in the categories of place and quantity. For more information see below ch. 1.22, Commentary C.

(2) We note that P's headings Περί χρόνου (1.21) and Περί οὐσίας χρόνου (1.22) have been coalesced into Περί χρόνου οὐσίας as the heading of S 1.8 (note the modified word order), who also adds further specifications. The difference between the heading of the present chapter and that of the next, which includes οὐσίας, suggests that there must be a meaningful difference between them, but this is not so easy to discover. For the distinction and connection between Περί τοῦ δεῖναι and Περί οὐσίας τοῦ δεῖναι see above, ch. 1.3, Commentary C ad init., and for similar problems below at chs. 1.25–26 and 1.27–28. The distinction between and conjoined treatment of 'time' and 'the οὐσία of time' is paralleled *disertis verbis* at Sextus Empiricus *M.* 10.170–181, 10.215–219, 10.227–229, and P. 3.136–138 (partly cited below section E(a) General texts, and at 1.22, section E(a) General texts). Leszl (2002) 174–175 and, following him, Botler (2014) 229–230, who have difficulties with the relation between our twin chapters, fail to mention this parallel discussion, which at least proves that we have to take the duality seriously. See further below at section D(c).

D Analysis

a Context

The twin chapters 1.21 ‘On time’ and 1.22 ‘On the substance of time’ appositely follow upon chs. 1.18–20, the triad of chapters dealing with the void, place, and space. They are appropriately followed by the two chapters 1.23, ‘On motion’ (motion already plays an important part in chs. 1.21–22) and 1.24, ‘On coming to be and passing away’. Appropriately, because already since Aristotle the concept of motion is closely bound up with the concept of time and conversely, and the concept of time with those of coming to be and passing away. There is also a connection of ch. 1.22 with ch. 2.4, ‘Whether the cosmos is indestructible’, since the issue of the coming to be and passing away of the cosmos versus its eternity or indestructibility is associated with the question of time. See esp. ch. 2.4.1, ‘Pythagoras and Heraclitus (say that) the cosmos is generated in thought (κατ’ ἐπίνοιαν), but not in time’, which is parallel to ch. 1.22.9, ‘Plato (says that it, sc. time, is) generated in thought (κατ’ ἐπίνοιαν)’. This association is formulated *disertis verbis* by Sextus Empiricus *M.* 10.169, cited below at section E(a) General texts, and present in Diogenes Laertius *V.P.* 7.141 = *SVF* 2.589 (reproduced *Suda* s.v. X 533 χρόνος).

b Number–Order of Lemmata

P^B and S provide three lemmata, Q four. The relative order of P₁ and P^B₃ + Q₄ is the same as that of S₁ and S₂. S took §2 on Plato away from this chapter to coalesce it, in his usual way, with 1.22.1 and 1.22.9 as a preamble to his lengthy abstract from the *Timaeus* on time at 1.8.45 (cf. ch. 1.22 Commentary D(b)). If §2α, the Aristotle lemma preserved in Q, is genuine, we must suppose that S left it out (compare his handling of §2 Plato), because he preferred to replace it with AD frs. 6 and 7 Diels on Aristotle and the Aristotelians on time at 1.8.40c–d, and that for whatever reasons it was epitomized away by P^B. To indicate the hypothetical nature of this consideration we have preserved Daiber’s numbering.

We may in any case preserve the order of P, just as Diels did. This time the lemmata are presented in a relative chronological sequence.

c Rationale–Structure of Chapter

(1) *Corporeal vs. incorporeal*. As we have seen above at section C, according to Sextus Empiricus *M.* 10.215, 10.218, 10.227–229 and *P.* 3.138 the issue of the οὐσία of time is concerned with its being corporeal or incorporeal. This diaeresis has no explicit counterpart here in A, though the explicit distinction between incorporeal and corporeal does figure elsewhere in the *Placita*, see M–R 2.1.14, 2.1.57–58, and 2.1.147. Nevertheless it is reflected in the present chapter. In chs. 1.21 and 1.22 we only find a single doxa that certainly pertains to body, namely

1.21.1: 'the sphere of the encompassing', and another one that possibly does so, namely the 'image of eternity' of 1.21.2 qua collection of functioning heavenly bodies. But §2b, Plato's purported (and originally Stoic) second definition, is about the dimension of the motion of the cosmos, i.e. an incorporeal.

(2) *Diaphoniae and diaeresis*. There is a gradual diaeresis from §2b to §3 in that §2b is about the motion of the cosmos as a whole, §2α (if we may include it) about the motion or its quantitative aspect of a more limited entity, namely of the outer heaven, and §3 about even an even further restricted motion of this nature, namely that of the sun alone. Accordingly the diaphonia is between §1 (and §2α): physical substance(s), and §§2b–3 accidents. This opposition ultimately derives from Arist. *Phys.* 4.10 218a33–b10, see above at section B. The accidents themselves are ordered diaeretically on a gliding scale, as their differences seem to be partial rather than complete and are a matter of emphasis rather than pointers to noticeable variety. §§1–7 and presumably §8 of the next chapter are all about accidents, i.e. incorporeals, while §9, Plato's generated time, is an incorporeal in the next chapter, but a corporeal if we look at §2α of the present chapter. Ch. 1.22.1–7, comprising only doxai pertaining to incorporeals, is a natural sequel to the second part of ch. 1.21, although, as already pointed out, all the doxai (so also including 1.22.8–9) could have been collected in a single chapter under a single heading.

(3) *Chronology?* As a subsidiary reason for the presence of two chapters we may perhaps assume that ch. 1.21, a sort of calque of Aristotle's account at *Phys.* 4.10–11 (see above at section C), is earlier than ch. 1.22, with its more generous selection of Hellenistic doxai. We may anyhow conclude that the presence in our chapter of both corporealist and incorporealist doxai is to be explained by its descent from Aristotle's brief overview. For this piece of *Quellenforschung* we do have the *Quelle*. That all the doxai apart from that of Pythagoras in §1 (plus perhaps that of Plato in §2α) pertain to properties or incorporeals is not surprising, because no one apart from the rather primitive anonymous authority cited by Aristotle (Pythagoras according to our chapter) saw time as a physical entity.

d Further Comments

General Points

Chs. 1.21–22 are translated in Mejer's overview of doxography at (2006) 24–26, and critically discussed as representative examples of Aëtian chapters.

For the diaeresis between corporeal and incorporeal (οὐσίᾱ) in general see Szlezák (1972) 171, and below section E(b) ad fin.

Individual Points

§1 (1) It is noteworthy that in the case of the first lemma, S is compacter than P, not including the subject of the doxa and the verb in the infinitive as found in P. Usually it is the other way around, with S having the longer form. With some hesitation we have opted for S, since the abridged form is what is most commonly found in A.

(2) Aristotle's remark *Phys.* 4.10 218a33–34 that 'some people say that time is the sphere itself (of the All)' is applied to Pythagoras by the doxographer, and to the Pythagoreans by people who may have misunderstood Archytas or some of the Stoics according to Simplicius (*in Phys.* 700.19–22). This view, according to Simplicius in the same passage (*in Phys.* 700.28–30), is not refuted by Aristotle because it is entirely implausible. It may actually be early and perhaps even Pythagorean, as it is based on the idea that things really *are* numbers. A parallel in the *Placita* for 'Pythagoras' on the sphere of the All is at ch. 2.6.5, where the dodecahedron derives from a *Timaeus interpretatus* (55c), cf. *Timaeus* Locrus p. 216.20–21 Thesleff τὸ δὲ δωδεκάεδρον εἰκόνα τῷ παντὸς ἐστάσατο, ἐγγιστα σφαῖρα ἐόν, and the comments of Cornford (1937) 218–221.

A possible parallel for the sphericity of the heavens in Hellenistic Pythagoreanism is ps.Philolaus 44B12 DK, if one of the conjectures of Zeller (1876) 376 n. 3 is accepted, namely ὅλ{κ}ας for mss. ὀλκός, see Mansfeld (2016b). For the phrase τῆς ὅλης σφαίρας cf. Arist. *Mete.* 2.7 365a23–24, AD fr. 23 Diels at Stob. *Ecl.* 1.19.4, p. 166.13; for the Doric genitive ἄλλας σφαίρας Archim. *Fluit.* pp. 3.10.6, 3.12.12 (γεγράφθω τις ἄλλας σφαίρας ἐπιφάνεια περὶ κέντρον).

§2 The double definition attributed to Plato is paralleled in the *Didascalicus*, the introduction to Plato's philosophy of the Middle Platonist Alcinous, and Philo knew it both as a Stoic (*Aet.* 4, 54) and, perhaps, a Platonic view (cf. *Aet.* 52), see below section E(a)§2. Note however that the phrase διάστημα τῆς τοῦ κόσμου κινήσεως is generally quoted as Stoic (also by Simplicius), see section E(b) General texts and §2 and ch. 1.22.2 with section E(b)§2, and that only the first part of the doxa corresponds to the genuine Plato. Even so, κινήσεως διάστημα to some extent catches the element of succession that is characteristic of time also according to Plato, so one sees why it came to be tolerated. For the emendation proposed by Bobzien see above, section A(5) *ad finem*. In the next chapter an *early* doxa that is anonymous in Aristotle comes to be attributed to the Stoics, see at 1.22.2.

§2α For the inclusion of the lemma found only in Q see above at section D(b). S 1.8.40c–40d presumably preferred AD fr. 6 Diels on Aristotle on time and fr. 7 Diels on the Aristotelians on time.

§3 This text is not included in Jacoby's rather limited collection at *FrGrH* 2.1010–1021 (Nr. 241). Given that S confirms P^B, the inferior reading of κόσμου

rather than ἡλίου may have been introduced by G and Q from §2 independently of each other. G's inferior version of 1.22.1–2 (*ubi vide*) attributes τὴν τοῦ ἡλίου πορείαν of 1.21.3 (Eratosthenes) in the paraphrased version ἡλίου τὴν κίνησιν to the Stoics and as τὴν πορείαν τούτου to Plato, thus once again exposing his cavalier handling of ingredients of lemmata, because the preservation of variety and/or conflict is the only thing that matters to him.

e Other Evidence

(1) A fair selection of doxai, decorated with a poetic quotation, is found at Plutarch *Platonic Questions* 1006F–1007D, cited below section E(b) General texts, remembered either from a doxography similar to what is in A, or from a doxographical excursus in a *Timaeus* Commentary.

(2) Time is discussed at length by Sextus Empiricus at *M.* 10.169–247 and *P.* 3.136–150, accounts that are to some degree indebted to doxographical traditions comparable to A. Here (*M.* 10.215, *P.* 3.138) the οὐσία of time applies to the distinction between incorporeal and corporeal that is often found in Sextus. At *M.* 10.215 and 10.219 Epicurus (cf. A ch. 1.22.6) and at 10.228 Strato (cf. A ch. 1.22.5) are made to hold that time is an incorporeal. His representative for the view that time is a body, namely Aenesidemus at *M.* 10.216, 10.230 and *P.* 3.138 (frs. B28A–C Polito), is not paralleled in A, who instead mentions Pythagoras. A detailed discussion of the doxographical material on time up to and including Sextus is found at Bobzien (2015) 296–321, see above at section A(5). See also the next chapter, 1.22.2.

(3) Time was also discussed by Galen in the *De demonstratione*, see Chiara-donna (2009) 54–62.

(4) In the first chapter of his treatise ‘On eternity and time’ (3.7.1), cited section E(b) General texts, Plotinus begins with what is in fact a preliminary and conceptual definition (cf. above, ch. 1.9, Commentary D(c) and (e)(2)) of the dialectically opposed words and concepts ‘time’ and ‘eternity’, by stating that we more or less know what these words mean and what they refer to; such an introductory definition is not a feature of our chapter. He then provides a noteworthy description of the use and utility of, among other things, a doxography: ‘(W)hen we try to concentrate on them (sc. eternity and time) and, so to speak, to get close to them, we find again that our thought runs into difficulties; we consider the statements of the ancient philosophers about them, who differ from one another, and perhaps also different interpretations of the same statements. ... Now we must consider that some of the blessed philosophers of ancient times have found out the truth; but it is proper to investigate which of them have attained it most completely, and how we too could reach an understanding about these things’ (trans. Armstrong, LCL). Aristotle’s over-

arching contrast between motion and a substance that is moved (cf. above, at section B) is paralleled at *Enn.* 3.7[45].2.2–3, where Plotinus mentions the Pythagorean view first, just as our *Placita* chapter, (though anonymously). But at *ibid.* 3.7[45].7.18–20 he briefly presents a tripartition, first mentioning (just as Aristotle) motion and secondly the (corporeal) thing moved, and thirdly what he calls ‘something belonging to motion’, which is not paralleled in this diaeresis, but at *Phys.* 4.11 219a8–10 prepares Aristotle’s own definition. Both Plotinian texts are cited below section E(a)§1; for the tripartition itself cf. further below, ch. 1.22, Commentary D(c). In *Enn.* 3.7.7–10 the detailed doxographical overview concerned with time (likewise cited below at section E(b) General texts), comprising doxai paralleled in A chs. 1.21–22, then follows; in these chapters ‘(ist) die Zeit doxographisch behandelt’ (Harder & *alii* 1967, 513). See also the detailed discussion of Kalligas (2014) 600–602. Among the doxai cited by Plotinus is the view that time is the ‘dimension of the motion’ (διάστημα τῆς κινήσεως), which is Stoic and by mistake attributed to Plato at 1.21.2 and elsewhere (see above, section A(5), and AD fr. 26 at section E(b)§2 below). This is not found in Aristotle, so the dialectical discussion at *Phys.* 4.10 218a30–b20 is not Plotinus’ only point of departure, as is of course also clear from the other parallels with post-Aristotelian tenets. E.g. *Enn.* 3.7.10.1–8 briefly cites and criticizes Epicurus’ view. Strange (1994) argues that Plotinus’ dialectical method derives from Aristotle’s, with modifications, which of course is right to an important extent. But he fails to discuss the *Placita* chapters, and seems to be unaware of the fact that the dialectical method (a critical discussion of views of predecessors) had become a quite general tool of research and is relied upon and used by numerous authors, as has been pointed out by us *usque ad abundantiam*. See e.g. Cicero in the first book of the *De natura deorum*, Galen in many places (see now Tieleman 2018), Alexander of Aphrodisias (in the introduction to his *De fato*), as well as Sextus Empiricus, *passim*. And so on.

Plotinus apparently remembered or used a text resembling our chs. 1.22.1 and 1.22.2. The references in the *apparatus fontium* (thus on p. 383) of Henry-Schwyzler are in this respect insufficient.

(5) Rich documentation, above all concerned with developments that are much later, is to be found in Simplicius’ *Corollarium de tempore*, translated by Urmson (1992) and discussed by Meyer (1969) and Sonderegger (1982). Simplicius’ observation (*in Phys.* 700.22–24, cited below section E(b) General texts) that Aristotle’s ‘tripartite division of the doxai on time leaves out the mythological examples and actually comprises all the options’ (τρεῖς γὰρ ἱστορεῖ περὶ χρόνου δόξας τὰς μυθικωτέρας παρείς· ἐν αἷς ἐκ διαιρέσεως εἰλημμέναις πάσας συνείληφεν) is valuable from a methodological point of view, for this secular presentation is also what an Aëtian chapter aims at.

E Further Related Texts

a Proximate Tradition

General texts: (N.B. pertains to both ch. 1.21 and ch. 1.22; see also below ch. 1.22 section E(a) General texts) **Sextus Empiricus** *M.* 10.169–170 πειρασόμεθα καὶ περὶ χρόνου ζητεῖν· τάχα γὰρ καὶ περὶ τούτου ὁ λόγος ἄπορος φανεῖται τοῖς τε αἰώνιον ὑποτιθεμένοις εἶναι τὸν κόσμον φυσικοῖς καὶ τοῖς ἀπὸ τίνος χρόνου λέγουσιν αὐτὸν συνεστάσθαι (cf. ch. 2.4). (170) καὶ δὴ τινές (*SVF* 2.513) φασὶν χρόνον εἶναι διάστημα τῆς τοῦ κόσμου κινήσεως (cf. ch. 1.21.2), οἱ δὲ αὐτὴν τὴν τοῦ κόσμου κίνησιν. *M.* 10.176 Ἀριστοτέλης (*Phys.* 4.11 219b2–9) δὲ χρόνον ἔφασκεν εἶναι ἀριθμὸν τοῦ ἐν κινήσει πρώτου καὶ ὑστέρου. *M.* 10.215 ἐνέσται δὲ τοῦτο ἀπορεῖν καὶ ἀπὸ τῆς οὐσίας, ὡς καὶ ἀπὸ τῆς ἐννοίας προηπόρηται. αὐτίκα γὰρ τῶν δογματικῶν φιλοσόφων φασὶν οἱ μὲν σῶμα εἶναι τὸν χρόνον οἱ δὲ ἀσώματον, καὶ τῶν ἀσώματων φαμένων οἱ μὲν ὡς καθ' αὐτὸ τι νοούμενον πρᾶγμα, οἱ δ' ὡς συμβεβηκὸς ἐτέρῳ. *M.* 10.218 ὥσθ' οὗτοι μὲν σῶμα ποιοῦσι τὸν χρόνον, οἱ δὲ ἀπὸ τῆς Στοᾶς φιλόσοφοι (*SVF* 2.331) ἀσώματον αὐτὸν ᾤθησαν ὑπάρχειν. *M.* 10.228 Πλάτων δὲ ἔλεγεν, ὡς δὲ τινες Ἀριστοτέλης (*Phys.* 4.11 219b1–2), χρόνον εἶναι ἀριθμὸν τοῦ ἐν κινήσει προτέρου καὶ ὑστέρου, Στράτων δὲ ὁ φυσικός (fr. 79c Wehrli, 35 appar. (218a32) ἔκ τε τῶν παραδεδομένων ἄδηλόν ἐστιν ... οἱ μὲν ... οἱ δὲ ... **Cicero** *ND* 1.21 *saecla nunc dico non ea quae dierum noctiumque numero annuis cursibus conficiuntur; nam fateor ea sine mundi conversione effici non potuisse; sed fuit quaedam ab infinito tempore aeternitas, quam nulla circumscriptio temporum metiebatur, spatio tamen qualis ea fuerit intellegi potest, quod ne in cogitatio-*

nem quidem cadit ut fuerit tempus aliquod nullum cum tempus esset. Seneca Ep. 88.33 magna et spatiosa res est sapientia. vacuo illi loco opus est: de divinis humanisque discendum est, de praeteritis de futuris, de caducis de aeternis, de tempore. de quo uno vide quam multa quaerantur: primum an per se sit aliquid; deinde an aliquid ante tempus sit sine tempore; cum mundo coeperit an etiam ante mundum quia fuerit aliquid, fuerit et tempus. Alexander of Aphrodisias On Time 1.1–7, p. 92.31–93.34 Théry Those who disagree with us concerning place raise a difficulty by saying that it has three dimensions; and similarly there is a difficulty to resolve in what is said by those who think concerning time that it is neither the heavenly sphere (cf. §1), nor its motion (cf. ch. 1.22.1), nor the number of its motion (cf. §2α). We have indeed already spoken at length elsewhere about time; now we will speak briefly, though we may perhaps, even while abbreviating, mention here things, which we did not mention there. What is said by those who say that time is the heavenly sphere itself (cf. §1) is empty, and the person who says this deserves to be laughed at. For there are many spheres at a single moment, but not many times at a single moment. And time includes what is past and what is future, but the spheres are not like that. And what is said by those who think that motions, that is the motions of the sphere (cf. ch. 1.22.1), are time is feeble. For the parts of time, when they are spoken of, are time, but on the other hand the parts of a circular motion, when they are spoken of, are not circular motion. And what is said by those who think that time is motion, simply (cf. ch. 1.22.7), need not be accepted; for motion is in the moving thing and in the place in which it moves, (whereas time is neither in the moving thing nor in the place in which it moves), but in every place. And again, one motion is swifter than another, since the motion of the highest sphere, which does not pause or cease, is swifter than the motion of Saturn, and the motion of Saturn is slower; but ‘swift’ and ‘slow’ are not applicable to time, but rather to motion. And similarly the motion of the sphere of the Moon is swifter than the others; but ‘swift’ and ‘slow’ are only determined in relation to time, since a swift motion is one which takes place in a small time, and a slow motion one which takes place over a great time. Some however think that time is not any of these things, nor yet the number of the motion of the heavenly sphere; they think it is a single thing that other things encounter. For they say that if we were to think of the sphere standing still, its standing still would be in time; and since its standing still would be in time, its motion would be in time; (and if its motion is in time, the attendant number of its motion is in time too). But what they say is not true; for if we were to think of the sphere standing still, time would be done away with. If time exists and is the number of the motions of the sphere, what harm does it do if it is thought of as different from that? For even if people think that the globe of the moon touches the globe of the earth, (this) does not affect it in its being and essence, which is raised above the earth and unaffected by what affects the earth. But they ask about the essence of that time (cf. ch. 1.22 tit.), and what has made it to be time, indeed,

what proof there is of its being, and whether it is not to be thought that there is some other (time) existing after time itself (trans. Sharples 1982, slightly modified). **Stobaeus** *Ecl.* 1.8.40a, p. 102.7–8 Θαλής (fr. 342 Wöhrlé) ἐρωτηθεὶς, ‘τί σοφώτατον’; ἔφη, ‘χρόνος· ἀνευρίσκει γὰρ τὰ πάντα’. **Proclus** *in Tim.* 3.8.28–35 χρόνου μὲν οὖν ἔννοϊαν καὶ συναίσθησιν καὶ οἱ πολλοὶ τῶν ἀνθρώπων ἔχουσιν, εἰς τε τὴν (τῶν) ὑπὸ σελήνην καὶ τὴν τῶν οὐρανίων κίνησιν ἀποβλέποντες καὶ κινήσεως τι τὸν χρόνον εἶναι νομίζοντες, ὅσον ἀριθμὸν ἢ παράτασιν ἢ ἄλλο τι τοιοῦτον. αἰῶνος δὲ οἱ περιττότεροι προήλθον εἰς ἐπίστασιν, κατιδόντες οὐχὶ κίνησιν ἀπλῶς, ἀλλὰ κίνησιν αἰδίου οὖσαν ἐν τῷ παντὶ καὶ τεταγμένην καὶ αἰεὶ ὡσαύτως ἀνακυκλουμένην. *in Tim.* 3.95.7–15 ἔτι δὲ κάκεινο ληπτέον ἀπὸ τῶν προειρημένων, ὅτι πολλοῦ δεῖ τοιοῦτον ὑπονοῆσαι τὸν χρόνον ὁ Πλάτων, ὅσον οἱ ἀπὸ τῆς Στοᾶς (*SVF* 2.521) ὑπέλαβον ἢ τῶν ἐκ τοῦ Περιπάτου πολλοί, οἱ μὲν κατ’ ἐπίνοιαν ψιλὴν αὐτὸν συνιστάντες ἀμενηνὸν καὶ ἔγγιστα τοῦ μὴ ὄντος (ἐν γὰρ ἦν τῶν παρ’ αὐτοῖς ἀσωμάτων ὁ χρόνος, ἃ δὴ καταπεφρόνηται παρ’ αὐτοῖς ὡς ἀδρανῆ καὶ οὐκ ὄντα καὶ ἐν ἐπινοίαις ὑφιστάμενα ψιλαῖς), οἱ δὲ συμβεβηκὸς τῆς κινήσεως λέγοντες. *Inst.Phys.* 2 “Οροι τοῦ δευτέρου p. 30.17–18 Ritzenfeld xiii. χρόνος ἐστὶν ἀριθμὸς κινήσεως οὐρανίων σωματῶν. **Simplicius** *in Phys.* 700.11–25 δείξας (sc. ὁ Ἀριστοτέλης) ... ὅτι ἀδηλὸν ἐστὶ τὸ εἶναι τὸν χρόνον, εἴπερ οὕτως εἰσὶ πιθανοὶ καὶ οἱ λέγοντες μὴ εἶναι λόγιοι, ἐφεξῆς φησὶν ὅτι καὶ τὸ ‘τί ἐστὶν ὁ χρόνος καὶ τίς ἡ φύσις αὐτοῦ’, εἴπερ τις ἐκ τῶν παραδεδομένων ἐπιχειρήσει σκοπεῖν, ὁμοίως ἀδηλὸν εὐρήσει. ... ἀδηλὸν οὖν καὶ τὸ τί ἐστὶν, εἴπερ ‘οἱ μὲν’ τὴν τοῦ ὅλου κίνησιν’ (*SVF* 2.516) καὶ περιφορὰν τὸν χρόνον εἶναι φασιν, ὡς τὸν Πλάτωνα νομίζουσιν ὁ τε Εὐδήμος (fr. 82a Wehrli) καὶ ὁ Θεόφραστος (*Phys.Op.* fr. 15 Diels, 150 FHS&G) καὶ ὁ Ἀλέξανδρος· ‘οἱ δὲ τὴν σφαῖραν αὐτὴν’ τοῦ οὐρανοῦ, ὡς τοὺς Πυθαγορείους (cf. ch. 1.21.1) ἱστοροῦσι λέγειν οἱ παρακούσαντες ἴσως τοῦ Ἀρχύτου (ps.Archytas *Categ.* p. 24.15–16 Thesleff) λέγοντος καθόλου ‘τὸν χρόνον διάστημα τῆς τοῦ παντὸς φύσεως’, ἢ ὡς τινες τῶν Στωϊκῶν (*SVF* 2.516) ἔλεγον· ‘οἱ δὲ τὴν κίνησιν ἀπλῶς· τρεῖς γὰρ ἱστορεῖ περὶ χρόνου δόξας τὰς μυθικωτέρας παρεῖς· ἐν αἷς ἐκ διαιρέσεως εἰλημμέναις πάσας συνείληφεν. ἢ γὰρ κίνησις ὁ χρόνος ἐστὶν ἢ τὸ κινούμενον πρῶτως ἢ τοῦ παντὸς σφαῖρα. *in Phys.* 702.24–703.6 ὁ δὲ Ἀλέξανδρος φιλονεικῶν δείξαι τοῦ Πλάτωνος οὖσαν δόξαν τὴν λέγουσαν χρόνον εἶναι τὴν τοῦ οὐρανοῦ φορὰν, πρῶτον μὲν τὸν Εὐδήμον (fr. 82b Wehrli) μαρτύρεται λέγοντα· ‘ἡκολούθησε δὲ καὶ Πλάτων τῇ δόξῃ ταύτῃ καὶ μάλα ἀτόπως· πρὶν γὰρ οὐρανὸν γενέσθαι, φησὶ κίνησιν εἶναι ἄτακτον (*Tim.* 30a). οὐ λῖνον δὴ λίνῳ συνάπτει, εἴπερ πᾶσα κίνησις ἐν χρόνῳ.’ ἔπειτα οὐκ ἀποδέχεται τῶν λεγόντων ὅτι καὶ ὁ Πλάτων συμφωνῶς τῷ Ἀριστοτέλει τὸν χρόνον ἀριθμὸν λέγει κινήσεως εἰπὼν· ‘κατ’ ἀριθμὸν ἰοῦσαν αἰώνιον εἰκόνα’ (*Tim.* 37d). ‘οὐ γὰρ ἀριθμὸν κινήσεως’, φησὶ, ‘λέγει τὸν χρόνον, ἀλλὰ κατὰ ἀριθμὸν κίνησιν, ὅ ἐστι κατὰ τάξιν’. ταῦτα μὲν ὁ Ἀλέξανδρος. ἐμὲ δὲ ὑποδείξει χρεῶν, πρῶτον μὲν πόθεν ὁ Εὐδήμος ὑπενόησε χρόνον λέγειν τὸν Πλάτωνα τὴν τοῦ οὐρανοῦ περιφορὰν, εἴτα ὅτι οὐκ ἀκολουθεῖ τοῦτο τὸ ἄτοπον τῷ Πλάτῳ, ὡς ὁ Ἀλέξανδρος συνελογίσαστο, τὸ χρόνον εἶναι πρὸ χρόνου. ‘εἰ γὰρ πᾶσα κίνησις’, φησὶν, ‘ἐν χρόνῳ, δῆλον ὅτι καὶ ἡ πλημμελὴς καὶ ἄτακτος κίνησις ἐν χρόνῳ. εἰ οὖν ἡ τοιαύτη κίνησις ἦν πρὶν οὐρανὸν γενέσθαι, δῆλον ὅτι καὶ χρόνος ἦν πρὸ τῆς τοῦ οὐρανοῦ περιφορᾶς. εἰ οὖν αὕτη ὁ χρόνος, εἴη ἂν χρόνος πρὸ χρόνου.’ *in Phys.* 785.12 (coroll. de tempore) τὰς δὲ τῶν προτέρων περὶ τοῦ χρόνου δόξας ἐπίσκε-

ψώμεθα. *in Cat.* 350.10–21 τὴν δὲ τοῦ χρόνου φύσιν θεωρητικώτερον παραδιδούς ὁ Ἰάμβλιχος (fr. 106 Dalsgaard Larsen) τὸν Ἀρχύταν (ps.Archytas *Categ.* p. 24.15–16 Thesleff) πάλιν ἡγεμόνα προῖσταται, ὅς φησιν ὅτι ‘ἔστιν ὁ χρόνος κινάσιός τις ἀριθμὸς ἢ καὶ καθόλου διάστημα τὰς τοῦ παντός φύσεως’, οὐ τὴν Ἀριστοτέλους καὶ τῶν Στωικῶν δόξαν εἰς ταῦτὸ συλλαμβάνων, ὥς τινες οἴονται, διότι ὁ μὲν Ἀριστοτέλης (*Cael.* 1.9 279a14–15) ἀριθμὸν κινήσεως εἶναι φησι τὸν χρόνον, τῶν δὲ Στωικῶν Ζήνων (*SVF* 1.93) μὲν πάσης ἀπλῶς κινήσεως διάστημα τὸν χρόνον εἶπεν, Χρύσιππος (*SVF* 2.510) δὲ διάστημα τῆς τοῦ κόσμου κινήσεως. οὐ γὰρ δύο ὅρους εἰς ταῦτὸν συνάπτει, ἀλλ’ ἕνα ὁρισμὸν ποιεῖται καὶ ἰδιάζοντα τοῦτον παρὰ τὰς τῶν ἄλλων ἀποφάσεις· οὐ γὰρ εἶπεν κινήσεως ἀριθμὸν τῆς πάσης, ὥσπερ Ἀριστοτέλης ἀφωρίσματο, ἀλλὰ κινήσεως τινός, οὐ τῶν ἐν μέρει, οἷον τῆς τοῦ οὐρανοῦ ἢ τῆς τοῦ ἡλίου ἢ ἄλλης τινός ἐν τοῖς καθ’ ἕκαστα διωρισμένης.

Commentary

A *Witnesses*

(1) This chapter, which forms a diptych with the previous chapter 'On time', 1.21, has the same witnesses. In P it is severely reduced, and further garbled in G. In S a much fuller presentation of its contents is found, see at section D(b) below, and for the contents of S's chapter as a whole ch. 1.21 above at Commentary B.

(2) Sharples in his edition of the fragments of Strato (2011a) 89–91 prints what is found at S 1.8.40b, i.e. the mixture of lemmata from A 1.21 and A 1.22. His comments at p. 91, however, are not to the point, as noted above in ch. 1.21.1, Commentary A(4). It is true that Diels deviates from what is found in S, but the transmitted text of Stobaeus is a reworking of what was originally found in A and has no independent value except for those interested in the anthologist's methods.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* In the proximate tradition (Sextus Empiricus and Simplicius, cited below section E(a) General texts; cf. above ch. 1.21 section E(a) General texts) the evidence for the present chapter is blended with that for ch. 1.21. The eternity or generation of time is also discussed in Philo *Aet.* 4 and 52–54 (cf. below, E(b)§9, namely as an issue concerned with the debate about the eternity of the cosmos). See also above, ch. 1.21, Commentary D(d)§2.

(2) *Sources.* For the connection with Aristotle *Phys.* 4.10 218a31–b10 see above, ch. 1.21, at Commentary B. The final diaphonia §§8–9 between the majority and Plato derives straight from *Phys.* 8.1 251b10–19 (Πλάτων δὲ γεννᾷ

μόνος). Plato's cosmogony-in-time has been interpreted not literally as by Aristotle, but (as so often in the wake of Speusippus and Xenocrates, see below section E(b)§9) as being presented in the way it is for pedagogical reasons.

C Chapter Heading

(1) Attested in both P and S, and of the standard umbrella type 'about x ', *περὶ τοῦ δεῖναι* (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter we note a specialized version of the standard type through addition of the term *οὐσία*. This specification suggests some sort of meaningful difference from the umbrella heading of the previous chapter, 1.21 *Περὶ χρόνου*, but as pointed out there at Commentary C, it is not immediately clear what this is. According to Sextus the issue of the *οὐσία* of time is concerned with its being corporeal or incorporeal. We assume that this distinction plays a role here as well. For other chapters entitled *Περὶ* + substantive twinned with others entitled *Περὶ οὐσίας* + substantive see also below at chs. 1.25–26 and 1.27–28. The question type of 'what it is' can be formulated in every category. In the present chapter it clearly pertains (like at ch. 1.21.2–3) to accidents, that is, to incorporeals: here especially motion in the categories of quantity and place, then also coming to be (a species of motion), and the category of time.

The formula *Περὶ οὐσίας* plus substantive denoting a matter at hand is also found at 1.26 *Περὶ οὐσίας ἀνάγκης*, 1.28 *Περὶ οὐσίας εἰμαρμένης*, 2.20 *Περὶ οὐσίας ἡλίου*, and 2.25 *Περὶ οὐσίας σελήνης*. The first two of these parallel headings, 1.26 *Περὶ οὐσίας ἀνάγκης* and 1.28 *Περὶ οὐσίας εἰμαρμένης*, likewise serve to distinguish the chapters from their companion chapters, 1.26 *Περὶ ἀνάγκης* and 1.28 *Περὶ εἰμαρμένης*, with their umbrella headings. In the same way our chapter *Περὶ οὐσίας χρόνου* is distinguished from its predecessor 1.21 *Περὶ χρόνου*. The formula *οὐσία χρόνου* is only paralleled in late authors: Simplicius in *Cat.* 346.31 etc., Philoponus in *Phys.* 712.7–8.

(2) The parallel headings in Book 2 serve to distinguish chs. 2.20 and 2.25 on the substance (in the sense of physical substance) of sun and moon from chs. 2.21–24 and 2.26–30, which deal with sun and moon from other categorical points of view. Similar headings, all of which are about physical entities, or corporeals, are those of ch. 2.11, *Περὶ οὐρανοῦ, τίς ἢ τούτου οὐσία*, abridged to *Περὶ τῆς οὐρανοῦ οὐσίας* in S, 2.14, *Τίς ἢ οὐσία τῶν ἄστρον, πλανητῶν καὶ ἀπλανῶν*, abridged to *Περὶ οὐσίας ἄστρον* in S. The physical substance is also at issue in ch. 3.9 *Περὶ γῆς καὶ τίς ἢ ταύτης οὐσία καὶ πόσαι*, ch. 4.3 *Εἰ σῶμα ἢ ψυχὴ καὶ τίς ἢ οὐσία αὐτῆς*, on souls qua corporeals (combined with ch. 4.2 *Περὶ ψυχῆς*, on souls qua incorporeals), and ch. 5.3 *Τίς ἢ οὐσία τοῦ σπέρματος*. It is therefore

quite remarkable that here the formula $\pi\epsilon\rho\iota\ \oupsilon\sigma\acute{\iota}\alpha\varsigma$ refers to incorporeals. But as the issue concerned with the $\oupsilon\sigma\acute{\iota}\alpha$ may pertain to the distinction between corporeals and incorporeals, so that the $\oupsilon\sigma\acute{\iota}\alpha$ may be characterized as either corporeal or incorporeal, this is entirely legitimate.

D *Analysis*

a Context

For chs. 1.21–22 together see at ch. 1.21, Commentary D(a).

b Number–Order of Lemmata

(1) The relation between the evidence in the tradition of P and in S is complex. P drastically reduces the number of lemmata from nine to four, forming two contrasting pairs. For Bobzien's unnecessary suggestion that the lemmata in S not shared by P should be rejected see above, ch. 1.21 at Commentary A(5).

(2) The lemmata order can be determined with confidence if the somewhat erratic procedure followed by S is understood (see the detailed analysis in M–R 1.226–228). He includes all the lemmata in his chapter on time, proceeding as follows:

(a) He reserves the two Platonic doxai (= P₁, P₄) for his subsequent presentation of Plato's views in *Ecl.* 1.8.45, including them in his introduction to the quotation of *Tim.* 37c–38b (cf. above at ch. 1.21 Commentary D(b)).

(b) He then writes out the next lemma on the Stoics (= P₂).

(c) He then follows with the next doxa as found in P (P₃).

(d) Thereafter there is a block of six doxai commencing with Xenocrates, none of which were included by P. Of these the second deviates from the others in placing the name-label Chrysippus at the end. As Diels acutely saw, it is an interpolated quote from the long lemma in AD cited at *Ecl.* 1.8.42a, p. 106.6–7. It is inserted because both views introduce the notion of 'measure'. The remaining five doxai will have come from A and no doubt are cited in their original order.

(e) Later at 1.8.45 S then writes out the two Platonic lemmata he had earlier passed over.

(3) If this reconstruction is correct, then S deviates from the original order in A not only in his treatment of Plato, but also in placing the anonymous doxa that time is ungenerated (= P₃) *before* the block of five doxai rather than after it as in A. It is difficult to understand why he did this. The suggestion made at M–R 1.228 is that he saw a connection with Xenocrates' view that time was everlasting motion and so placed it ahead of that doxa. This explanation is not entirely satisfactory. The alternative would be to place the block of five *after* the anonymous doxa (and its twin Platonic lemma). But this would mean that

the seven views on the nature of time (§§3–7 in our text) are broken up by this couplet (§§8–9). What is certain is that Diels must be wrong in inserting the block between the first two doxai in P. This destroys the clear diaphonia between these first two views in P. For Sharples' comments see at section A(2) above, and at ch. 1.21 Commentary A(4).

c Rationale–Structure of Chapter

The chapter organises a good deal of material according to a series of criteria. It falls into four parts, of which the first three, i.e. §§1–5, §6 and §7 are on a gliding scale. See also above at ch. 1.21, Commentary D(c).

(1) §§1–5 are about time *qua* *συμβεβηκός*, but still regard it as something that subsists in reality. §6 defines time as something at several removes from physical substance but as still having some reality, but §7 defines it as something entirely conceptual.

(2) §§8–9 diaphonically address a different issue, namely whether time has come into being. Unexpectedly the majority are made to say that it has not (the implications for the Presocratics are apparently irrelevant, and the alternative that it has come into being is ignored), while Plato says it came into being only conceptually, which entails its being real (see above at section B). So the chapter ends by implicitly acknowledging the subsistence of time, thus achieving a ring composition with its Platonic ending corresponding to its Platonic beginning.

(3) On the other hand, comparing the structure of the first six paragraphs with the distinction between the first and third types of Plotinus' tripartition of traditional views on time at *Enn.* 7.2.7[45].18–20 (cf. above, ch. 1.21, Commentary B), we observe that §§1–4 are about motion (*κίνησις*) and §§5–6 about an aspect of motion (*κινησεώς τι*, 'something belonging to motion').

d Further Comments

General Points

Chs. 1.21–22 are translated in Mejer's overview of doxography at (2006) 24–26, and critically though not entirely satisfactorily discussed as representative examples of Aëtian chapters.

Individual Points

§§1–2 For the first two lemmata the text in G differs substantially from the remaining P tradition. The name-labels Stoics and Plato are reversed. The being of time according to the Stoics is said to be the motion of the sun, and for Plato in the next doxa its course. G's notion of the sun's *πορεία* is derived from the doxa of Eratosthenes in A at P 1.21.3 It is difficult to reconstruct how G could

have made these errors. On the other hand, what happened is instructive in showing how more or less bizarre doxographical lemmata may come about.

§1 The Plato doxa is *ad sententiam* the same as the (falsely attributed) second part of the doxa of ch. 1.21.2.

§2 P's οἱ πλείους (τῶν Στωϊκῶν) anticipates the οἱ μὲν πλείους of his next lemma, while S's χρόνου οὐσίαν repeats the gist of the chapter heading and was probably added by himself. AD fr. 26 Diels attests the definition of time as 'the dimension of motion (κινήσεως διάστημα), and this is also the measure and criterium of speed and slowness, how (each thing) is', for Zeno; as 'the dimension of the motion of the cosmos (τῆς τοῦ κόσμου κινήσεως διάστημα)' for Apollodorus; as 'the dimension of motion (διάστημα κινήσεως) or the measure of speed and slowness' for Posidonius; and as 'the dimension of motion (κινήσεως διάστημα), according to which it is said to be the measure of speed and slowness, or the dimension that accompanies the motion of the cosmos (τὸ παρακολουθοῦν διάστημα τῇ τοῦ κόσμου κινήσει) and according to time all things do move and exist' for Chrysippus. The Aëtian lemma, speaking of 'motion itself', appears to favour a formula that includes times of all sorts, both general cosmic time and whatever other times there may be, so is a drastic reduction of all these definitions, though a bit closer to Zeno's than to the others, which seem to be elaborations of Zeno's view, just as later formulations of the Stoic *summum bonum* are elaborations of the view of Zeno. Rist (1969) 273, following Bréhier, believes that our paragraph is a mistake. At ch. 1.21 Commentary A(5) we have seen that and possibly how the significantly Stoic phrase διάστημα τῆς τοῦ κόσμου κινήσεως came to be attributed to Plato in the world of the *Placita*.

One would have expected to be notified that time according to the Stoics is an incorporeal, cf. Sextus Empiricus *M.* 10.218 (*SVF* 2.331), Diogenes Laertius *V.P.* 7. 141 (*SVF* 2.520).

§4 Hestiaeus, who is recorded as a pupil of Plato and a member of the Academy (see Dorandi at *DPhA* 3.677), is cited elsewhere in A only at ch. 4.13.5 (on vision). The epithet φυσικός is often used of Strato by Sextus Empiricus (e.g. *P.* 3.33) and others, so Krische's suggestion to move it to the following lemma is attractive, but too speculative to be followed in our text.

§6 Heeren's suggestion to add συμπτωμάτων in order to make the doxa consistent with Epicurus' customary definition of time (cf. Sextus Empiricus *P.* 3.137, *M.* 10.219, 10.238 etc.) has been accepted by all subsequent editors. But in a simplifying doxographical lemma such meticulousness is not needed, and at Diogenes Laertius *V.P.* 10.73 we just find σύμπτωμα. For σύμπτωμα and παρακολούθημα together cf. ch. 1.29.1, παρακολούθημα καὶ σύμπτωμα.

§7 Sharples in his apparatus at (2011a) 89 is wrong in stating that Wachsmuth reads Ἀντιφᾶν. Close examination of Wachsmuth's text shows that there

is a typo, with only half of the omega showing. Physical doxai are attributed to the sophist Antiphon in the *Placita* on three further occasions (chs. 2.20.4, 2.28.4, and 2.29.3), and the name-label Ἀντιφῶν also occurs in the *Index* of Photius at *Bibl.* cod. 167, p. 115a28.

Critolaus' view may be connected with what Aristotle says about time in relation to the counting soul at *Phys.* 4.14 223a16–29 (cited section E(b)§7), but goes further.

e Other Evidence

Rich documentation concerned with later concepts of time is found in Simplicius' *Corollarium de tempore*, translated by Urmson (1992) and discussed by Meyer (1969) and Sonderegger (1982). Discussion of the doxographical material as a whole is found at Bobzien (2015) 296–321. See further the previous chapter, Commentary A(5) and D(e).

Evidence on Galen's view of time qua 'substance' in the later Greek and the Arabic tradition is discussed by Chiaradonna (2009) 54–57; also see Adamson (2012), who says more about the Arabic tradition. But, as far as we can see, it is not clear in what sense of 'substance' this was meant. For two Greek texts criticising Aristotle's definition as cited in 1.21.2a see above, ch. 1.21 section E(a)§2a.

Commentary

A *Witnesses*

(1) The abridged version of the chapter in the P tradition is found only in P^B and Q, with the material in Ps telling us little more than that he found the chapter in his copy of P^B. G declined to excerpt it.

(2) The chapter is basically written out in full in S at the beginning of his ch. 1.19 *Περὶ κινήσεως*, but with extensive material from AD (much too extensive to be from A) replacing A on Aristotle for almost the entire doxographical excerpt, except the name-label and the synonym ἐνέργεια for ἐντελέχεια. Thus P2 corresponds to S10, the AD fragment placed by S *ad finem*. This type of coalescence is found more often in the *Anthology*, see Diels *DG* 75 n. 2, M–R 1.249–254, and Jeremiah at M–R 4.286 and 353. Diels printed this AD material

(quoted below section E(a)§2) in the right-hand column of the Aëtian text at *DG* 319, but in the apparatus ad loc. (with backward reference to p. 75 n. and p. 215, see below at section B) said ‘addubitavi an Stobaeis Ariana admixta essent’. Wachsmuth ad loc. agrees. The fact that this same Stobaeian chapter comprises substantial abstracts from AD (frs. 22–24 Diels) on the Stoics, too, strengthens this assumption, since S often places abstracts from AD on Aristotle as well as on the Stoics in one and the same chapter. The extant Aëtian material oddly lacks a Stoic doxa about motion, while S’s version of this chapter includes three substantial AD extracts on the Stoics (one each for Chrysippus, Zeno, and Apollodorus, AD frs. 3–5 Diels). It appears that, apart from his substitution of an AD fragment for a lemma in A, S wrote out the chapter in full.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition is limited to a couple of lines in Lucretius parallel to §4, and the Stobaeian passage overgenerously parallel to §2, which Diels in spite of his doubts printed in the right-hand Aëtian column, but which we have thought better to assign to Arius Didymus.

(2) *Sources.* Without doubt most of the information percolated through the wider doxographical tradition. At *DG* 215 Diels includes §2 among his rare examples of a close reading—according to him by A, but see at section A above—of the text of Aristotle’s *pragmateiai* ([i]psius Aristotelis doctrina ... ex accurata eius lectione hausta; cf. chs. 1.9.1, 1.29.2, 4.8.6, 4.9.3, and 5.3.1 at Commentary B). He refers to *Phys.* 3.2 202a7(–8) and 8.1 251a9(–10). A’s definition ἐντελέχεια κινήτου is indeed an abridgement of *Phys.* 3.2 202a7(–8) ἡ κίνησις ἐντελέχεια τοῦ κινήτου, ἥ κινήτόν.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type ‘about *x*’, περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter it comprises various categories and/or question types, viz. quantity, quality, and existence. Note moreover that there is no Aristotelian category of ‘motion’. According to Theophrastus in Book 3 of his *On Motion* ‘there are as many types of motion as there are categories’, while others are of a different opinion. Cf. above ch. 1.prooem., Commentary D (e)(3b), and see below section E (b) General texts *ad finem* for Simplicius in *Cat.* 139.34–140.6, who cites several views, among which that of Theophrastus.

D *Analysis*

a Context

The chapter comes quite naturally before 1.24 ‘On coming to be and passing away’, and equally naturally follows upon the two chapters on time, in both of which motion plays an important part. In Aristotle’s œuvre the books of *Physics* dealing with motion (referred to by him as ἐν τοῖς Περὶ κινήσεως, e.g. *Cael.* 1.5 272a30–31) are followed by *On the Heavens* and *On Coming To Be and Passing Away* (cf. *Mete.* 1.1 338a20–25).

b Number–Order of Lemmata

(1) P has 6 lemmata, S 10. Diels *DG* prints 8 lemmata because he does not give separate lemmata to Epicurus, ‘some’, and ‘others’, as we habitually do. All of P’s lemmata are paralleled in S.

(2) There is a discrepancy in order between P and S in relation to §§8–9. We have followed S, not only because he provides an apparently solid block (except the Aristotle doxa), but also because of the patent diaphonia of §9 Herophilus with §10 Asclepiades.

(3) Meineke persuasively argued that a lemma with a third genus had fallen by the wayside. Diels accepted this but later changed his mind, see *DG* 853a and Wachsmuth ad loc. He believed that §3 could count as first, §4 as second plus third, §5 as fourth, so no missing lemma. We have not followed this move, for this is not how numerical lists are constructed. What we now have is one, two (i.e., not second and third), and then a fourth i.e. one added to the triad that has dropped out, then five: a gap clearly remains. Usener’s attempt to fill this gap (see app. crit. ad loc.) is not helpful.

c Rationale–Structure of Chapter

The chapter presents much material according to a series of criteria.

(1) *Definition*. First we find a definition (§1, name-labels Pythagoras Plato) that *disertis verbis* is said to hold for every variety of motion, so is conceptual. S has preserved an important comment, namely that ‘it is the shared (or ‘common’, κοινός) definition of every (form of) motion’. (Despite its being called ‘common’ we have been unable to find a parallel for this phrase, so this is perhaps postulated because of its specific function rather than based on actual precedent.) The elucidation should be accepted as genuine A, see M–R 1.223. For the distinction between common or conceptual definition on the one hand and essential (i.e. real) definition on the other see at ch. 1.9 above, Commentary D(c) and (e)(2).

The first lemma is followed by no less than nine lemmata that provide contrasting definitions of motion, so here too the nominal definition is followed by

essential definitions that are sectarian. The first of these, in §2 with name-label Aristotle, is still fairly general too.

(2) *Order according to number.* A block of four lemmata follows, §§3–6, listing the (3) species of motion according to number on a rising scale, from one to five (as Meineke and (originally) Diels saw, a lemma for the number three has been lost; see our comment at section D(b) above). One for the number six may also have been lost, see Plato's six species of locomotion at ch. 3.15.10 below. This is a diaeresis according to the category of quantity.

(3) *Question of existence.* Four doxai, concerned with other matters than the first two plus four, conclude the chapter. The first of these, §7 Diodorus Cronus, comes close to the zero-position of stating that motion does not exist at all, as it denies its actuality and paradoxically only allows that things have moved. Apparently Diodorus represents the Eleatics, whose ban on motion to our surprise is not mentioned now but presented in the next and related chapter, 1.24.1. His doxa conflicts with that of §8, because (in the *first* half of the lemma) Heraclitus is said to have abolished rest, the perfect and traditional counterposition to the famous thesis of Parmenides and Melissus discussed by Plato, Aristotle, and others.

(4) *Intelligible vs. sensible.* The *second* half of §8 goes with §9 Herophilus and §10 Asclepiades. Heraclitus divides motion into two, eternal and perishable (category of time), Herophilus in an analogous manner likewise into two, namely into motion observable by reason and sense-perceptible motion. §10 Asclepiades, sense-perceptible motion only, conflicts with §9. We may on the other hand compare the bipartite motion of §§8–9 with that of §4, and the single motion of §10 with that of §3, although the specific differences belong with a different register. The distinction between sense-perceptible and observable by reason of §9 corresponds with that between the (sense-perceptible) motions of §§3–5 and the intelligible motion of §6.

d Further Comments

General Points

A preliminary reconstruction of the chapter and a discussion of its methodology as being typical for A were provided by Runia (1999b) 199–206 = M–R 3.525–532.

Individual Points

§1 The practice of commencing with a definition in direct speech is found more often in Book 1, but not when attributed to particular philosophers as here. Ch. 1.25.1, in direct speech too, is not a general definition. In P the direct

speech is continued for §2, but in the absence of S we do not know if this is taken over from A. Mau continues the direct speech for §§3–4, but this is unnecessary, as Diels *DG* saw, given the evidence of S.

§2 The information provided by Aristotle about the number of species of motion to be posited varies, so the doxographer's decision to cite only the present definition is probably a wise one.

§§3–4 Note that not two but three kinds of motion are attributed to Epicurus at ch. 1.12.5 above, by Lucretius *DRN* 2.284–293, and by Cicero *Fat.* 22: perpendicular through weight, spontaneous deviation, and the one absent here: by a blow (collision). We arrive at this triad if (inspired by Diels) we add the single motion attributed to Democritus in §3 to Epicurus' two, but a paragraph with a real triad is still missing. §4 can be better understood if we are allowed to consider motion by weight and spontaneous deviation as the two primary kinds, and collision as a result of the interaction of these two.

§8 S omitted the quasi-quotation ἔστι γὰρ τοῦτο (sc. στάσις) τῶν νεκρῶν. Did he do this because of the similarity between στάσις νεκρῶν and the Christian ἀνάστασις νεκρῶν?

The meaning 'standing still' for στάσις is much more rare than 'strife', though prominent in Plato's *Sophist* (e.g. 250a) as opposed to 'motion', κίνησις. Even so, the striking phrase στάσις ἔστι τῶν νεκρῶν may well go back to Heraclitus.

As Gutas (1982) 122 notes, there is a discrepancy between Daiber's translation of the Arabic equivalent of ἐκ τῶν ὄλων on p. 133 and his apparatus on p. 369. It appears that the translation *aus der Gestalt* renders the reading of the mss., whereas the apparatus gives Daiber's conjecture for the original Arabic text. However, the transmitted reading could be the ἐκ τῶν λόγων of P^B Marcianus 521.

The final verb ἀπεδίδου is missing in P and not included by its editors. But its presence in S suggests it will have stood in A. In his edition of Heraclitus, Marcovich fr. 40(*d*¹) adds it to the text of P, followed by Mouraviev T412. We revise the view of Runia (1999a) 202 = M–R 3.528.

§10 On the basis of a comparison with P (cf. app. crit. at ch. 1.7.3) it appears that S added the verb ἀπεφάνητο also here, cf. Runia (1999a) 202 = M–R 3.528.

e Other Evidence

(1) A lemma presenting the doxa of Plato (see section E(b) General texts) that there are six kinds of motion (as there are six kinds of place) is absent. The Stoic view, as pointed out at section A above, is likewise conspicuously absent.

(2) Motion is discussed at length at Sextus Empiricus *M.* 10.37–168 (including accounts of the 'place' where it occurs, and of divisibility) and *P.* 3.63–91 (also including an account of the 'place' where it occurs). Views are arranged

according to the category of quantity at *M.* 10.37–38 (in a decreasing order, from ‘Aristotle’s six’ species to ‘Aenesidemus’ two’). Only the former is listed *P.* 3.64, anonymously.

A 1.16.1 οἱ ἀπὸ Θάλεω καὶ Πυθαγόρου παθητὰ (τὰ) σώματα καὶ τμητὰ εἰς ἄπειρον, καὶ πάντα τὰ συνεχῆ, γραμμὴν ἐπιφάνειαν στερεὸν σῶμα τόπον χρόνον. A 1.17.4 Πλάτων τὰ μὲν τρία σώματα (οὐ γὰρ θέλει κυρίως αὐτὰ εἶναι στοιχεῖα ἢ προσονομάζειν) τρεπτὰ εἰς ἄλληλα, πῦρ ἀέρα ὕδωρ.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) The witnesses for this chapter are the same as for the previous chapter from which it follows on, with the important difference that P^G has retained all three lemmata in a slightly revised form. For P there is the evidence of the Byzantine mss. and Q, as well as G (while Ps only uses the title).

(2) S writes out the entire chapter (as it seems) at the beginning of his chapter with the same title, but intersperses it with some other material.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition consists of a few headings and of Arius Didymus on Zeno c.s. on coming to be and passing away cited at section E(a)§2, as well as on Stoic theories of mixture cited at section E(a)§3.

(2) *Sources.* The main division derives from a combination of dialectical arguments and overviews in Aristotle's *De caelo* and *De generatione et corruptione*, passages from which are quoted below section E(b) General texts. Aristotle had of course studied the Presocratics as well as Plato and the Early Academics. See also below at ch. 1.30 'On nature', Commentary B. In the Hellenistic period Epicurus was added to Democritus and his colleagues, as has also happened elsewhere, e.g., chs. 1.18.3, 2.3.2 and 4.13.1.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. In the present chapter it comprises the category/question type of substance and the question type of existence (see §1–2 in contrast to §3). It is rather widely paralleled (mostly in relation to Aristotle's treatise), see section E(b) Chapter heading.

D *Analysis*

a Context

The chapter follows quite naturally on from ch. 1.23 ‘On motion’, which pertains to a closely related concept, but it is also closely related to ch. 1.17 ‘On mixture and blending’, as is clear from its contents; so it would equally be at home close to 1.17. The five chapters that follow deal with a very different series of issues, namely necessity, fate, and accident. It is only with ch. 1.30 ‘On nature’, the position of which remains something of a riddle, that we return to the theme of the present chapter. In Aristotle an entire treatise entitled *On Coming to Be and Passing Away* (or a substantial part of it) follows on after the *On the Heavens*, which in its turn comes after the books of the *Physics* dealing with motion. In the *Placita* the subjects of the *On the Heavens* are for the most part to be found subsequently, in Book 2.

b Number–Order of Lemmata

(1) Both P and S have three lemmata, which are the same as to contents and listed in the same relative order, which there is no reason to modify. In S 1.20.1b a reference to Heraclitus (T 796 Mouraviev, quoted from Plato *Crat.* 402a = 22A6 DK) ‘Ἡράκλειτός φησιν, ὅτι πάντα χωρεῖ καὶ οὐδὲν μένει· καὶ ποταμοῦ ῥοῇ ἀπεικάζων τὰ ὄντα λέγει ὥς ‘δῖς ἐς τὸν αὐτὸν ποταμὸν οὐκ ἂν ἐμβαίης’, and the lemma ch. 2.4.9 have been interpolated between the first and second lemmata of the present chapter. Mansfeld in (2002b) 281–282 = M–R 3.427–430 suggests that S may have substituted (as so often) a quote from his favourite Plato for a *Placita* lemma, this time for one with name-label Heraclitus (epitomized away by P, perhaps because seen as duplicating A 1.23.8). This may have resembled the Heraclitean doxa opposed to those of the Eleatics (cf. §1 of the present chapter) and Hesiod on *genesis*, *Cael.* 3.1 289b29–32: ‘others say that all other things come to be and are in flux and that nothing is stable, and that only one thing remains underneath, from which all these (other) things derive by change of shape; this seems to be what many others and Heraclitus the Ephesian (fr. 40 (*b*²) Marcovich) want to say’. The supposition, however, is not strong enough to include something the text.

(2) There is no Stoic lemma in our chapter, though the Stoic theory of mixture is echoed in §3 *ad finem*, see below, section D(d)§3. Immediately after his abstracts from ch. 1.24 at 1.20.1d S at 1.20.1e has a short AD extract (fr. 36 Diels) on Zeno Cleanthes Chrysippus Panaetius, so may have substituted this for an Aëtian lemma omitted by P.

c Rationale–Structure of Chapter

The structure is simple and clear. The diaphonia is between §1, denial of coming-to-be and passing-away, and §§2–3, acceptance of coming-to-be and passing-away, with the subsidiary diaphonia between §2, acceptance but not ‘in the true sense’, and §3, acceptance ‘in the true sense’. This subsidiary diaphonia, which is also a sort of compromise position (cf. ch. 1.30 below) is determined by the opposition between the doctrines of matter: corpuscular in §2, continuous in §3.

d Further Comments

General Points

A preliminary reconstruction of the chapter and a discussion of its methodology is provided by Mansfeld (2002b) = M–R 3.415–445.

Individual Points

§1 Parmenides’ other follower Zeno, whose multiple arguments against motion are of course familiar but who according to our other evidence did not argue against coming to be and passing away, presumably was thrown in for good measure. This also happens elsewhere in the *Placita*, see ch. 1.7.18 and elsewhere in the tradition, see ps.Plutarch *Strom.* §6 (after §4 Xenophanes and §5 Parmenides) ‘Zeno of Elea put forward no views of his own, but argued further on these matters’, tr. Sandbach LCL (Ζήνων δ’ ὁ Ἐλεάτης ἴδιον μὲν οὐδὲν ἐξέθετο, διηπόρησε δὲ περὶ τούτων ἐπὶ πλείον). Zeno is here omitted by S, though he did include him at A 1.7.18.

§2 We note the application of the categories of quality and quantity. Remarkably, editors of Democritus, with the exception of Taylor (1999) fr. 79.b, have overlooked the present doxa.

§3 The text follows the interpretation given by Mansfeld (2002b) 284–286 (= M–R 3.433–435), in which the genitives γενέσεως καὶ φθορᾶς are explained as the result of perseveration, i.e. continuing the previous four genitives. If amended to accusatives, they are the first subjects of the verb γίνεσθαι in the accusative and infinitive construction.

The Neopythagorean Pythagoras has become the archegete of what in effect are the early monists (referred to anonymously by Aristotle as well), and of the Stoics, as is clear from the four modes of mixture according to the Porch listed *ad finem*. In ch. 1.9.2 he shares this honour with Thales, *ubi vide* Commentary D(c)(2). Note the technical terminology deriving from the Stoic theory of mixture, for which cf. Arius Didymus, and Alexander of Aphrodisias cited at section E(b)§3.

e Other Evidence

(1) Coming to be and passing away are the theme of one of Aristotle's major physical treatises, the *De generatione et corruptione*. These concepts are critically discussed at Sextus Empiricus *M.* 10.310–350, which begins with a historical overview of the physical principles from which things are generated according to the philosophers (*M.* 10.310–318, cited in full at ch. 1.3 above, section E(a) General texts), and *P.* 3.109–114 (from a different perspective). *M.* 10.310–318 is discussed and compared with *M.* 9.360–364 by Warren (2015) 368–372.

(2) Parmenides at 28B8.4–5 DK seems to derive 'being ungenerated and imperishable' from being 'entire, unique, unmoved (ἀτρεμές)', but at B8.26–28 DK he clearly derives Being's motionlessness from the successful banishment of generation and perishing. Melissus at 30B1 DK derives being ungenerated from the thesis that coming to be entails coming to be from nothing, which is impossible, and in 30B2 DK argues that having an end is entailed by having a beginning (so is also impossible). Thus he does not derive being ungenerated and imperishable from being motionless, while being motionless itself follows from Being's fullness (30B7 DK). Also cf. Melissus 30B8(1–2) DK. In our §1 the resulting immobility is not attributed to Being, but to the All into which Parmenides' and Melissus' Being have meanwhile been transposed, a move prepared by Arist. *Met.* A.5 986b16–17. The word πᾶν is applied in the verbatim fragments to the Being of Parmenides (28B8.5, B8.22, B8.25, B8.48) and to that of Melissus (30B2, B7(1), B7(4)), but as a predicate. Consequently the *Placita* lemma modifies the priorities in the Eleatic arguments, presumably because of the emphasis by Plato and esp. Aristotle of the anti-physical stance about motion of Parmenides and Melissus, see above ch. 1.5 Commentary C, and further Mansfeld (2002b) 277–281 = M–R 3.422–427, Mansfeld (2016c) 86–92, and Mansfeld (2018e). We note in passing that this anti-physical stance cannot not so easily be matched with all those lemmata in the *Placita* where Parmenides is credited with fairly standard physical tenets, for which see Mansfeld (2016a).

οὐ μὴν φθαρησόμενόν γε προνοίᾳ καὶ συνοχῇ θεοῦ.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) The chapter is attested by all the major witnesses except E. For the tradition of P there are P^B, Q and a full rendering in G (Ps uses the chapter heading only). P abridged the chapter by leaving out the penultimate §4.

(2) S in his ch. 4 combines the present chapter with the next and intersperses other material. He copied out all five lemmata in succession, but interpolated a Hermetic text between §1 (where his reading interestingly differs from P's) and §2. From the next chapter he interpolated the Plato lemma ch. 1.26.3 before ch. 1.26.5, coalescing them to form a single lemma with only one name-label. At the end he added a quotation from the *Timaeus*. Wachsmuth omits to number the lemmata.

(3) T announces at the beginning of his Book 6 that he will examine the ‘Hellenic doxai’ on the concepts of fate and chance and necessity as opposed to divine providence, thus anticipating the main key words (CAG 6.4), see ch. 1.3 Commentary A(5)(a). A few pages later he cites excerpts from A, beginning at 6.13 with doxai from the present chapter. Chs. 1.25 plus 1.26–29 have been excerpted at CAG 6.13–15 in the chapter order they have in P, but not from P but from A, as is clear from the two lemmata at 1.27.4–5 shared by T and S that are absent in P. Book 6 of the CAG has the title ‘On divine providence’, so the abstracts on necessity, fate and chance belong there as a matter of course. Cf. above, *General Introduction*, section 2.5; also Mansfeld at M–R 4.178, 4.181.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. The proximate tradition is limited to a few passages in Diogenes Laertius and one in Hippolytus.

(2) *Sources*. The ultimate source for §4 is of course the *Timaeus*, while §3 echoes some of Parmenides’ own words. That according to §3, doxa of Democritus, and §4, doxa of Leucippus, necessity and fate are identical may well derive from Epicurus’ critique, *Letter to Menoeceus* at Diogenes Laertius *V.P.* 10.133–134. The doxa of §2 is related to the doxa of ch. 1.21.1 (cf. ch. 1.21 Commentary B(2)) and may derive from a similar context, see Burkert (1972) 75–76. The source of §1 is presumably a collection of sayings of the seven wise men.

C *Chapter Heading*

Attested in both P and S, and of the standard umbrella type ‘about x ’, περί τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. It forms a pair with the Περί οὐσίας ἀνάγκης of the next chapter. On this pairing of headings see above, ch. 1.22 Commentary C, and below section D(c). In the present chapter the heading comprises the question type ‘what is it?’ (so also what it is not), and the categories of quality (§1) and place (§2). Our heading is only paralleled in the descendants of A and as an interpolation (?) in Vettius Valens 4.25.48. The long version in S conflicts with A’s secular preferences.

D *Analysis*

a Context

(1) This is the first chapter of the block of five interrelated chapters dealing with necessity (ἀνάγκη, two chapters), fate (εἰμαρμένη, two chapters), and chance

(τύχη, one chapter). We have noticed above at section A that one plus three chapters have been excerpted at T CAG 6.13–15 in precisely the order they have in P.

(2) The opposition between necessity (chs. 1.25–26) and fate (chs. 1.27–28) on the one hand and chance (ch. 1.29) on the other needs no comment. Successive treatment of these issues can moreover be paralleled in for instance ps.Plutarch *De fato* and Calcidius in *Timaeum*; also cf. Maximus of Tyre, *Diss.* 5.80–144 Trapp. Tacitus *Ann.* 6.22, citing the disagreement among the wise men of old and their competitors, wonders whether our lives depend on fate and necessity or on chance, and whether there is room for a free will; the famous passage (see Theiler 1946) is cited below section E(b) General texts. In S ch. 1.4 on divine necessity and ch. 1.5 on fate are followed by ch. 1.6 on chance. A's somewhat imprecise distribution over different sets of *Placita* chapters of the related concepts of necessity and fate (occasionally inter-defined, as at chs. 1.25.3, 1.27.1) is worthy of note.

(3) An interesting distinction between this set of two chapters on necessity and that of two chapters on fate as distinguished by their headings, is that the former is concerned with the Presocratic philosophers and Plato and do not proceed beyond Plato, and that only the chapters on fate add and so contain Hellenistic doxai, though of Stoic provenance only. Presumably the explanation is that it is especially in Stoic thought that *fate* is important, whereas the concept of necessity also plays a not unimportant part in various ways in Presocratic and Platonic as well as Aristotelian contexts.

(4) Judging from the extant evidence Epicurus the anti-fatalist makes only a surprisingly late *Placita* appearance in ch. 1.29, 'On chance', where at 1.29.3 necessity is said to be one of the three types of cause he recognizes (the others being choice and chance). But as noted at section B(2) above there may be an implicit echo of an Epicurean point of view in the ascription at A 1.25.3–4 to Democritus and Leucippus of the identity of necessity and fate. On Epicurus in the *Placita* see Runia at M–R 4.377–432.

b Number–Order of Lemmata

(1) The evidence of P and S is quite straightforward. P has four doxai. Of these the last ascribed to Plato is erroneously attached to the following chapter in P^B and P^Q, but correctly placed in P^G. It is possible that it was also already misplaced in Ioannes Lydus' copy of P, for like S he coalesces it with the Platonic lemma in 1.26. There can be no doubt that it belongs in ch. 1.25. See also Lachenaud (1993) 98 n. 1, who agrees with Diels but conservatively keeps the lemma in 1.26, as in P^B and P^Q. P's four doxai are found in the same order in S, but with the extra doxa of Leucippus placed between the third and fourth doxa in P.

(2) T's evidence must also be taken into account. He records the second and third lemmata in P,S, but splits up the second of these (= P₃,S₃) into two doxai. For the former he gives three name-labels, of which only one (Democritus) occurs in P,S. Chrysippus may have been taken from 1.27.2, but there is no equivalent for Epicurus in P,S (as we saw in chs. 1.25–29 Epicurus is only mentioned at 1.29.5 on τύχη). We cannot be certain that Epicurus received a mention in A in this context, for T could have added his name. The latter part of the doxa is ascribed to Parmenides (as less clearly in P,S), and he includes Δάμωνα (paralleled in PS at ch. 2.7.1[8]!) among the concepts that are said to be equivalent to ἀνάγκη in this doxa. This most likely derives from A. The fact that extra names in T can occasionally be attributed to A would be in favour of doing so also here, but in the end we have decided to include δάμωνα in the body of the doxa, but (perhaps inadvisedly) not the name-labels Χρύσιππον and Ἐπίκουρον. See further below at section D(d)§§3–4.

c Rationale–Structure of Chapter

(1) *Conceptual definitions.* The chapter has to be studied in connection with its companion chapter (ch. 1.26) and the two chapters on fate and the οὐσία of fate (chs. 1.27–28), and even with that on chance (ch. 1.29). Here we concentrate on the distinction between ch. 1.25 ‘On necessity’ and ch. 1.26 ‘On the οὐσία of necessity’. One may be tempted to interpret the distinction between the two chapters as one between a collection of nominal, or conceptual, definitions (1.25) and one of real, or essential definitions (1.26). For nominal definitions and their role in the *Placita* see above, ch. 1.9 Commentary D(c) and (e)(2). One may also be inclined to think in terms of the distinction between actuality on the one hand and essence, or substance, on the other, advocated by ps.Plutarch and Calcidius (see below, ch. 1.27 Commentary D(a)). What is clear, however, is that the doxai of ch. 1.25 are concerned with (a preliminary impression of) the meaning and reference of the term ‘necessity’, so are indeed conceptual definitions. Note that the enigmatic, therefore typically Pythagorean doxa at §2 only tells us where to locate necessity, but not what it is or what the word means. This only becomes clear by association with the other lemmata, just as the meaning of the word in the final lemma (Plato) only becomes clear by association. This overall agreement as to sense of §§1–4 confirms that we are dealing with varieties of a conceptual definition. The three doxai of ch. 1.26, on the other hand, are all concerned with necessity as a physical entity. One should recall the distinction between incorporeals and corporeals (see e.g. ch. 1.21 at Commentary B, C, and D(c)), and note that our two chapters do not refer in any way to logical necessity, although elsewhere in the *Placita* the word ἀνάγκη is used in a logical sense, namely at chs. 1.3.16[118] (Epicurus), 1.5.4[19], and 3.5.4[4].

(2) *Diaphoniae*. The main diaphonia is between §§1–4, agreeing on and emphasizing the dominant role of Necessity, and §5, which divides the roles between Providence (mentioned first) and Necessity (mentioned second), in an order corresponding to that of the treatment one before the other of the Demiurge (whose providence is mentioned *disertis verbis* at *Tim.* 44c) and the Errant Cause, or Necessity, in Plato. A minor difference among §§1–4 is that §4 Leucippus is credited not only with the idea of Necessity but also with that of Fate (cf. chs. 1.27–28), which now is said to be the same as Necessity.

d Further Comments

Individual Points

§1 S presents the Thales doxa in the gnomic form often associated with the seven sages (also found at Plutarch *Sept.Sap.Conv.* 153D, Diogenes Laertius *V.P.* 1.35 and *Gnomologium Vaticanum* 320 Sternbach). Cf. the section on time at S 1.8.40a, with utterances attributed to Thales, Periander and the Cnidian physician Euryphon. Preference should be given to the doxa as found in P, who unusually uses *oratio recta* here to preserve the customary form of the pronouncement but significantly lacks the *verbum dicendi*. The version found here is cosmological, as befits a treatise on physics, while the poetically sounding parallel ‘it rules over all things’ at Diogenes Laertius (κρατεῖ γὰρ πάντων) and *Gnomologium Vaticanum* (κρατεῖ γὰρ ἀπάντων) has a more general purport.

§2 περιχεῖσθαι: presumably κύκλω. The verb recalls περιέχειν, familiar from early cosmological contexts, e.g. Arist. *Phys.* 3.4 203b11–12 (Anaximander 12A15 DK) περιέχειν ἅπαντα καὶ πάντα κυβερνᾶν.

§§3–4 The attribution of the quotation in §4 to Leucippus (in a treatise of which the title is also cited) necessitated the repetition in quasi-identical form of the first part of §3 πάντα κατ’ ἀνάγκην, τὴν αὐτὴν δ’ εἶναι εἰμαρμένην as §4 πάντα κατ’ ἀνάγκην, τὴν δ’ αὐτὴν ὑπάρχειν εἰμαρμένην. The word ὑπάρχειν instead of εἶναι is the only difference. As to doctrine Democritus and Leucippus could of course have been accommodated in a single lemma. An alternative arrangement of the material in §§3–4 could therefore have read:

§3[♦] Λεύκιππος Δημόκριτος πάντα κατ’ ἀνάγκην, τὴν δ’ αὐτὴν ὑπάρχειν εἰμαρμένην· λέγει γὰρ ἐν τῷ Περὶ νοῦ· ‘οὐδὲν χρήμα μάτην γίγνεται, ἀλλὰ πάντα ἐκ λόγου τε καὶ ὑπ’ ἀνάγκης’.

§4[♦] Παρμενίδης πάντα κατ’ ἀνάγκην, τὴν αὐτὴν δ’ εἶναι Δαίμονα καὶ Δίχην καὶ πρόνοιαν καὶ κοσμοποιόν.

It seems that something like this is what T did, assuming it is not what he abstracted from his source, which after all remains a definite possibility. P and

S agree in combining the name-labels Parmenides and Democritus in §3, and the doxa cited is also identical. Following T entails imputing a *folie à deux* to P and S, which is in favour of assigning their text of §3 to A as we have done, though a *non liquet* is arguable. T omits the name and quote of Leucippus. S's extra lemma derives from A in the usual way.

§3 Dührsen (1998) 117–118 argues that in T's phrase καὶ Δαίμονα κέκληκε καὶ Δίκην the word Δαίμονα is to be attributed to A as well, because it corresponds to Parm. fr. 28B12.3 DK and T says κέκληκε. We indeed also recognize Parmenides' 'logical' Δίκη (Justice) and Ἀνάγκη (Necessity) as found in 28B10.6–7 and B8.30–31 (though functioning differently in the latter), who on this hypothesis would have been combined with the cosmological Ἀνάγκη of 28B10.6–7 DK and the cosmological steering Δαίμων (Goddess) of 28B12. But the *verbum dicendi* can hardly be cited on its own in favour of authenticity, because it equally pertains to πρόνοιαν (for κέκληκε see also below, ch. 1.27 at Commentary D(d)§1). A better argument is that S at ch. 2.7.1 (where P is much shorter) reads ἦντινα καὶ Δαίμονα κυβερνήτην καὶ κληδοῦχον ἐπονομάζει, Δίκην τε καὶ Ἀνάγκην. Here the *verbum dicendi* ἐπονομάζει (not a rare word, though a hapax in the *DG*) belongs to A, and here Δαίμονα, Δίκην, and Ἀνάγκην are again identified with each other. So A would have been consistent in mentioning all three entities both at ch. 1.27.1 and in the present lemma. We have therefore included the word in our text, noting that all these divinities here have a cosmological role, just as in ch. 2.7.1 (cf. Mansfeld 1981, 266–270).

Accordingly Parmenidean motifs have been reinterpreted, and coalesced with a reinterpreted motif of Democritus. The introduction of 'fate' and even 'providence' is anachronistic, and caters to a Hellenistic audience. Still, providence as a term for what happens in Parmenides' cosmogony is not entirely off the mark, though it goes entirely against the grain for Democritus.

§4 It is not certain that the famous quotation is verbatim. What is noteworthy is that the Περὶ νοῦ is here not attributed to Democritus, as in the catalogue at Diogenes Laertius *VP*. 9.46, but to Leucippus. This has caused the attribution to be doubted, though the catalogue contains another title attributed to Democritus and then at once also to Leucippus (*VP*. 9.49 Μέγας διάκοσμος, ὃν οἱ περὶ Θεόφραστον Λευκίππου φασὶν εἶναι). This entails that some attributions were, and so are, uncertain, as after all is only normal. For Περὶ νοῦ as book title or chapter heading see below, ch. 4.5a, section E(b) Chapter heading. It would be the earliest instance if genuine.

We have found no parallel for the phrase ἐκ λόγου in the above meaning.

§5 This lemma in the mss. is placed after the chapter heading of 1.26 to be the first lemma of that chapter. Diels rightly saw that it was better placed in ch. 1.25 as in the text of G and we follow his decision. Mau and Lachenaud too

conservatively retains the order of the mss. (as noted by Jas 2016, 131, Mau's note in his app. crit. on Wytttenbach is incorrect).

e Other Evidence

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) The witnesses for this compact chapter differ from those of its companion piece ch. 1.25 in two respects. The P tradition is represented by P^B, Q and G (who copies it out almost verbatim). In addition, for chs. 1.26–28 we have the evidence of the Laurentianus manuscript, which copies out all the lemmata in P except 1.28.4 (it also cites a phrase from 1.25.5, but may have taken this from its text of 1.26; see further below section D(b)).

(2) S includes it in his chapter on necessity, but surprisingly leaves out one lemma.

(3) T passes over this chapter, in contrast to his treatment of 1.25.

B Proximate Tradition and Sources

See at ch. 1.25, Commentary B.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖνα (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. Here we note a specialized version of the standard type through addition of the term οὐσία. It forms a pair with the Περί ἀνάγκης of the previous chapter. On this pairing of headings and the problem of finding a meaningful difference see above, ch. 1.22 Commentary C; also cf.

below section D(c). In the present chapter the heading pertains to the question type or category of substance in the physical sense.

D *Analysis*

a Context

This is the second chapter of the block of five dealing with the related subjects of necessity (ἀνάγκη, two chapters), fate (εἰμαρμένη, two chapters), and chance (τύχη, one chapter). See further ch. 1.25 above at Commentary D(a).

b Number–Order of Lemmata

(1) Unusually S has less material than P. His deletion of the Democritus lemma (= P2) is quite unusual (cf. M–R 1.234). Admittedly he cited Democritus (together with Parmenides) for ch. 1.25.3 and Leucippus for 1.25.4, but these lemmata do not give as much insight into Atomist views as the omitted doxa. The chapter is likely to be complete as transmitted by the tradition of P. The (chronological) order of P need not be changed.

(2) Ioannes Lydus combines material from several chapters, see quotation at ch. 1.25 *Testes primi* and comments at 1.25 Comm. A(1) and D(b)1.

c Rationale–Structure of Chapter

(1) *Definitions*. We have noted above (ch. 1.9 Commentary D(c) and (e)(2)) that a discussion of the οὐσία may be concerned with the distinction between nominal and real definitions. The present chapter seems to be about real definitions and (for the most part) corporeal realities. All paragraphs deal with physical forces or entities, while §2–3 include compromise positions in that both a physical entity and (incorporeal) attitudes are presented.

(2) *Diaphoniae*. In §1 necessity is superior to the principles and elements it makes use of, in §2 it is the behaviour of matter, i.e. it is on the same level as matter, in §3 it is on the one hand identified with matter and on the other (in another shape) associated with a cause (or entity) beyond matter that effectively informs it. This ‘maker’ links up with the ‘cause that makes use of the principles and elements’ of §1, so lends the chapter a sort of ring composition.

d Further Comments

Individual Points

§1 For Necessity in relation to the principles and elements and the combination of ingredients from both Empedoclean poems see above, ch. 1.3 Commentary D(d)§19.

§3 The Platonic doxa is obviously based on the *Timaeus*, as was the case for the doxa attributed to the same thinker in the previous chapter, 1.25.5. S

is right in seeing a link with *Tim.* 47e–48a (after citing A 1.26.3 and 1.25.5 in that order, he continues with the quote 47e5–48a2). The identification of *nous* with the demiurge and necessity with matter is an easy, if superficial, way of understanding the two causal factors introduced by Plato. The second view on necessity is most likely linked with the passage at *Tim.* 68e–69a, where the demiurge makes use of the secondary causes associated with necessity. Compare Cornford's often cited description (1937, xv–xviii) of Timaeus' account, distinguishing the works of reason (*Tim.* 29d–47e) from what comes about of necessity (*Tim.* 47e–69a) and from the co-operation of reason and necessity (*Tim.* 69a–92c).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) For this chapter in the P tradition we have to do without the evidence of G, who passes it over and gives the following chapter the title Περὶ εἰμαρμένης (§42). But this loss and the lemmata absent in S (see section A(2) immediately below) are well compensated for by the contribution of T, who includes three doxai in his brief survey of views on fate. As is the case for chs. 1.26 and 1.28 the chapter is succinctly excerpted by Ioannes Lydus. P contributes three lemmata, viz. §§1–3, of which only the first is shared with S.

P abridges the chapter by omitting the three lemmata §§4–6 *ad finem*.

(2) S interweaves material from this chapter and the next in his chapter on the same subject, *Ecl.* 1.5. He contributes four lemmata, viz. (in S's order) §4, §1, §5 and §6. See further below, section D(b).

(3) It is striking that two lemmata, §4 Chrysippus and §5 Zeno, lacking in P, are shared by S and T, which again proves that T excerpted the source shared with S, namely A. Cf. Diels *DG* 46, and see above, *General Introduction*, section 2.5; also Mansfeld at M–R 4.178, 181.

B Proximate Tradition and Sources

(1) *Proximate tradition*. The proximate tradition for this chapter and the next consists of doxographical overviews in the treatises *On Fate* of Cicero and Alexander of Aphrodisias, cited at section E(a) General texts.

(2) *Sources*. Diels *DG* 178 thought of a Stoic treatise *On Fate* similar to one purportedly used by the Peripatetic Diogenianus at Eus. *PE* 6.8, for 'singulari

quadam eruditione splendent capitula de fato'. No doubt he had in mind the doxai at chs. 1.27.5 and 1.28.3 with their book titles ἐν τῷ Περὶ φύσεως and ἐν τοῖς Ὅροις (but note that for ch. 1.28.3 he includes in A, and so prints in the right-hand column, the section that in our view is to be assigned to AD, which contains two more Chrysippean book titles). Clearly the Heraclitean and Platonic doxai of chs. 1.27–28 have been (re)formulated from a Hellenistic perspective, but we cannot now ascertain by what routes this information ended up in the *Placita* chapters.

C Chapter Heading

Attested in both P and S, and of the standard umbrella type 'about x', περὶ τοῦ δεῖναι (cf. above, ch. 1.3 Commentary C). The series of chapters 1.9–29 (plus 1.30) on the foundational concepts of physics are without exception introduced by headings of the umbrella type. The present chapter consists of a series of nominal definitions (cf. above, ch. 1.9 Commentary D(c) and (e)(2)) elucidating the meaning of 'fate', including its relation to necessity (§1, §3, §4), to the *liberum arbitrium* (§§2–3), and to providence (§5) or God (§6). The question type or category therefore is that of quality.

Unsurprisingly, this chapter heading is widely paralleled, namely as a book title for Xenocrates, for Epicurus, for the Stoics Chrysippus, Boethus, Posidonius, and Philopator, as the title of an extant Middle Platonist treatise attributed to Plutarch and of one partly extant by the learned Cynic Diogenianus quoted by Eusebius (and also as part of chapter headings elsewhere in Eusebius), as the title of a treatise of Alexander of Aphrodisias and of a chapter in the *Mantissa*, as part of a chapter heading in Origenes' *Philocalia*, as a title of a treatise of Plotinus, as a chapter heading in Nemesius, and as part of the collective title of six orations of John Chrysostom. For a full list see section E(b) Chapter heading.

D Analysis

a Context

For chs. 1.25–29 as a block see above ch. 1.25 at Commentary D(a). Calcidius in *Tim.* cc. 142–155 deals with fate (*fatum*) from, mainly, a Middle Platonist point of view, an account of which rather numerous passages are paralleled almost verbatim in the earlier ps.Plutarch *Fat.* c. 1, 568C–c. 6, 570E on εἰμαρμένη. Both these authors, just as Nem. *NH* c. 38 p. 109.10–18, distinguish between fate 'in actuality' (ἐνέργεια / *ex his quae agit et esse id et cuius modi vim habeat*) and 'in essence' (οὐσία / *substantia*). The οὐσία (/substantia) of fate is also the theme of ch. 1.28, but one is rather hard put to indicate anything in chs. 1.27–28 even vaguely corresponding to this ἐνέργεια, apart from ch. 1.28.2, *ubi vide*; see further

below at section D(c). In Calcidius this exposition is continued (after ch. 157 on divination) by chs. 158–159 on chance and fortune and in ps.Plutarch *de Fato* at ch. 7, 571E–572E on τύχη plus τὸ αὐτομάτον, both times in a sequential position comparable to that of A 1.29, ‘On chance’, following on after 1.27–28 on fate.

b Number–Order of Lemmata

Because of the procedure of S, who combines material from this chapter and the next, it is necessary to take the two closely linked chapters on εἰμαρμένη together. In P the two chapters show a striking parallelism, both commencing with Heraclitus, continuing with Plato and ending with Stoic doxai. The following table indicates the doxai of the two chapters in the order of the witnesses, taking P as our anchor point in the left column.

P	S	T
1.27.1 Heraclitus	1.5.15.2b Heraclitus	T1 Heraclitus
1.27.2 Plato	–	–
1.27.3 Stoics	–	–
1.28.1 Heraclitus	1.5.15.2a Heraclitus	–
1.28.2 Plato	1.5.15.3 Plato	–
1.28.3 Chrysippus	1.5.15.7 Chrysippus	T4 those after Zeno
1.28.4 other Stoics	–	T5 Stoics
1.28.5 Posidonius	1.5.15.4 Posidonius	–
–	1.5.15.1 Chrysippus	T2 Chrysippus
–	1.5.15.5 Zeno	T3 Zeno
–	1.5.15.6 Antipater	–

This table gives rise to two questions.

(1) Where should S1, S5 and S6 be placed? Diels puzzlingly located S1 (Chrysippus) as second lemma of the chapter in the right column after P for 1.27.1 (Heraclitus) in the left column, perhaps because its equation of fate and what has been necessitated is similar to the Heraclitean doxa. But it makes more sense to place it at 1.27.4, i.e. after the Stoic doxa at ch. 1.27.3 (not in S,T), which distinguishes between the two. It then forms a diaphonia by not differentiating between them. Zeno (S5) then follows on with the additional view that he too does not differentiate, but this time not between necessity and providence/nature. We note that if they are thus placed in ch. 1.27 as the final two doxai, the order of T's five doxai in relation to P is perfectly preserved. T is going down the list (of course he does not always do this).

(2) How can we explain the order in S? It is apparent that he did not follow his frequent practice of excerpting blocks of doxai (as basically happens in his

previous chapter on ἀνάγκη). Instead he weaves his own idiosyncratic dialectic, which bears little relation to that of A. It may be surmised that he starts with Chrysippus because there is a link with the previous chapter on necessity and it then includes a neat definition of what fate is. Heraclitus follows with a complementary description as given in ch. 1.28.1, after which the earlier doxa of the same thinker is coalesced with it. The Platonic doxa follows, as in ch. 1.28. It too speaks of λόγος. He then jumps to the final doxa ascribed to Posidonius, which has an interesting theological hierarchy (S is always interested in theology). In contrast to that doxa he then returns to the Zenonian doxa in ch. 1.27, which equates the three levels of hierarchy. Note however that his order for §§4–5 (lacking in P) is the same as that of T, so presumably reproduces A. The view of Antipater continues the theological theme. We have given thought to whether this lemma is better placed in ch. 1.7, but the position of θεόν before τὴν εἰμαρμένην is against this intervention (in ch. 1.7 words like θεόν invariably come after words like νοῦν). Antipater does not say that the god is fate but that fate is (a) god.

(3) Finally S presents the longest doxa of all with its interesting mythical details about the Μοῖραι at the end in order to round off the doxographical section, before moving on to no less than seven prose excerpts, including from Plato's *Republic* (1.5.21) and ps.Aristotle *De mundo* (1.5.22). This longest doxa is a combination of an excerpt from A (namely, ch. 1.28.3) with a series of excerpts from the works of Chrysippus which we should attribute to AD, see M–R 1.253–254 (= M–R 3.326) and the next chapter ad loc. For his probable motive to place this lemma in the final position see the next chapter, Commentary A(4).

On the basis of these considerations we can be reasonably certain of the basic contents and order of these two chapters.

c Rationale–Structure of Chapter

(1) *Diaphoniae*. Restricting the enquiry to ch. 1.27, we note a contrast in the first and another one in the second half of a gliding diaeretic scale. A third and complementary antithesis opposes §5 with §1. The first diaphonia holds between §1 Heraclitus: 'all things dependent on fate', and §§2–3 Plato plus the Stoics (resembling Plato): 'on the human level both what is fated and what is not'. Next we have a considerable difference of opinion among the Stoics themselves, namely from the nuanced view of §3 to the uncompromising stance of §4 (wrongly ascribed to Chrysippus) in favour of a total dominance of fate, and from there to §5, another nuanced view. According to §4 (just as according to §1) there is no difference between fate and necessity, while §5 does not mention necessity and identifies fate with providence and nature. This identification of

fate and providence is opposed to that between fate and necessity, presumably as a more mitigated view to one that is more inflexible; see below at section D(d) §§3–5.

(2) It should also be noted that the doxai have been (re)formulated and arranged the better to bring out the differences.

d Further Comments

General Points

The chapter has to be studied together with its companion piece on the οὐσία of fate, ch. 1.28. It has been pointed out above at section C that it consists of conceptual definitions. The crucial distinction between essential (i.e. real) and conceptual (i.e. nominal) definitions, for which see above ch. 1.9 at Commentary D(d)(1) and D(e)(2), fails to be mentioned in the parallel account of Calcidius, but surfaces in the pseudo-Plutarchean *De fato*. In c. 4 the author speaks of the ‘conditional’ (ἐξ ὑποθέσεως) nature of fate, which means that the consequences following from the exercise of our *liberum arbitrium* are fated and inescapable. At *Fat.* c. 4, 570B we read: ‘That fate is actually of this description is evident from its substance (οὐσία) and from its name (ἐκ τῆς προσηγορίας). It is given the name ‘fate’ (εἰμαρμένη ... προσαγορεύεται) for being a thing concatenated (εἰρομένη τις), and it exists (ὑπάρχει) qua ordinance and law, because it has laid down the consequences that follow upon occurrences, as in the legislation of a state’ (trans. after De Lacy and Einarson, LCL). This definition of the οὐσία insofar as it is to be distinguished from the meaning of its name, perhaps a more traditional one, differs considerably from the one that prevails in the *de Fato* (ch. 2, 568E–F, precisely paralleled at Calc. in *Tim.* c. 144), namely fate as the tripartite World Soul. This latter is not paralleled in A. See also below ch. 1.28 at Commentary D (d) general points.
